NOTE.--This publication contains all of the climatic data formerly printed in the MONTHLY WEATHER REVIEW.

SUBSCRIPTION PRICE: Monthly 30 cents and annual 50 cents per copy; yearly subscription, including monthly and annual issues, $4.00 domestic, $5.50 foreign. Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to "Superintendent of Documents, Government Printing Office, Washington 25, D. C."

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 1

JANUARY 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

January precipitation was featured by drought-relieving rains in the Far Southwest and heavy rains in the East which replenished soil moisture in most of the South and produced disastrous floods in the Appalachian region. In contrast deficient precipitation continued the drought in large areas of the central and lower Great Plains and prolonged the dry spell in Florida and southern Georgia.

Severe cold in northern regions, record-breaking locally, causing some damage to both crops and property was the main temperature feature of the month. The month, however, was abnormally mild in extreme southern areas, particularly in eastern Arizona and western New Mexico.

Other features of the month's weather included heavy snowfall in the central Rockies and the Northeast, a pronounced "January Thaw" in the Northeast on the 23d, an outbreak of tornadoes and severe thunderstorms from eastern Oklahoma to southern Kentucky on the 22d, damaging glaze in Oklahoma, Missouri, and Arkansas on the 26th to the 28th, extreme cloudiness in many southern areas, and an unusual frequency of heavy fog in Gulf coastal regions.

In general sunshine was normal to much above in the northern third of the country and in Florida and southern Georgia, but it was much below normal in an area extending from Kentucky southward to the Gulf and westward to southern California. Oklahoma City, Okla., had only 51 percent of normal which was the least for January there in 60 years of record. Albuquerque, N. Mex., had 69 percent of normal, also a new record. Other stations reporting near record low amounts were: Fort Smith, Ark., 49 percent of possible; Vicksburg, Miss., and Port Arthur, Tex., 43; Kansas City, Mo., 54; San Antonio, Tex., 55; and Los Angeles, Calif., 67 percent of normal.

Heavy fog, an unusual feature of the weather in several sections of the country, was particularly frequent in Florida and Gulf coastal areas. Fort Myers, Fla., reported heavy fog on 19 days which may be compared with the previous greatest number of 12 for January, and Tampa, Fla., reported 18 days when fog cut visibility to 1/4 mile or less which may be compared to the previous record of 10.

TEMPERATURE.--Temperatures for the month averaged above normal in extreme southern areas and below elsewhere. Positive departures were as much as 6° in parts of Arizona and New Mexico and 4° or more along the Gulf coast, while negative departures were 12° or more in north-central Montana and ranged from 6° to 8° in most other regions near the Canadian Border.

Abnormally cold weather lasted about 3 weeks in northern areas. The month generally was the coldest January since 1918 in parts of southern New England and generally since 1948 from Michigan and the Ohio Valley eastward. A few stations in Wisconsin and Upper Michigan reported their coldest January since 1929; most stations in Iowa, central and northern Illinois, and several in Wisconsin reported their coldest January since 1940. In much of the area from the northern Great Plains to the Pacific coast this was the coldest January since 1949.

Lowest temperatures in most areas east of the Great Plains occurred during the third week which in New England was the coldest week in many years. Subzero minima were recorded as far south as Richmond, Va., the Ohio Valley, and the northern portions of Missouri and Kansas; and subfreezing minima almost to the southern tip of Texas and well into central Florida, slightly damaging truck in both States. A number of stations in the Northeast recorded their lowest temperatures on record for January, among which were Hartford, Conn. (-17° on the 18th), Syracuse, N. Y. (-24.1° on the 15th), Providence, R. I. (9.4° on the 15th), and Burlington, Vt. (-29.6° on the 15th). Buffalo, N. Y., reported that the eastern end of Lake Erie froze over, and that fruit buds and some trees in the area were killed by the cold, with indications that the fruit crop may have suffered heavy loss.

The coldest weather in the Great Plains and Far West occurred during the last decade when subzero minima extended into Kansas, New Mexico, and Arizona. At Helena, Mont., temperatures for the fourth week averaged 36° below normal, the coldest week there in 77 years of record, and a low of -41.5° on the 25th was within 0.1° of the station's all-time low established on January 1, 1893. Frost penetration was 2 feet at Reno, Nev., and the deepest in parts of Wisconsin since 1936. The cold damaged some fruit buds in Washington's apple region and froze water pipes in Helena, Mont., Portland, Oreg., and several other northwestern cities.

The mild weather in southern areas was not particularly outstanding until the last few days of the month when temperatures rose to 15° or 20° above seasonable levels in Gulf coastal areas and the Southeast. At that time a number of stations recorded their highest temperatures on record for January, among which were Savannah, Ga. (84.4° on the 29th), New Orleans, La. (83° on the 30th), and Houston, Tex. (83° on the 31st). Owing to persistent above-normal temperatures in the Far Southwest, El Paso, Tex., had one of its warmest Januarys on record.

Extreme temperatures for the month ranged from -54° at West Yellowstone, Mont., on the 27th to 95° at Encinal, Tex., on the 10th.

PRECIPITATION.--Although precipitation generally totaled over an inch west of the Continental Divide, its benefits were greatest in California and the Far Southwest. Surface moisture was sufficiently replenished in California, where drought had prevailed since October, for growth of dryland crops. In an area including Arizona, Utah, southwestern Colorado, and western New Mexico, monthly totals generally exceeded 200 percent of normal and locally 300 to 450 percent. Prescott and Tucson, Ariz., reported monthly totals of 3.06 and 2.37 inches, respectively, the second greatest for January at both stations in about 100 years. Stream flow was above normal in most of Arizona at the end of the month.

Heavy rains in the lower Mississippi Valley and south of the Great Lakes also replenished surface soil moisture in most of the South sufficiently for fall crops to make good to excellent growth, and produced above normal stream flow in the Ohio Valley, West Virginia, Kentucky, and Tennessee. Monthly totals exceeded 4 inches in most of this area and ranged up to more than 8 inches in many localities of Tennessee and the lower Appalachian region.

The southeastern Great Plains also received good rains, most of which fell during the last decade. Monthly totals exceeded an inch in northeastern Texas, central and eastern Oklahoma, and extreme eastern Kansas. Surface soil moisture was greatly improved in these areas but subsoil moisture continued short.

The month's precipitation, although beneficial, was too light in Nebraska, eastern Colorado, western Kansas, the Oklahoma Panhandle, western Texas, and eastern New Mexico to bring more than temporary relief.

In southern Georgia and most of Florida, an area of prolonged dryness, precipitation was again less than 50 percent of normal, with totals less than 1/2 inch in most of the area and non-irrigated crops continued to suffer from lack of moisture.

SNOWFALL.--Snowfall was below normal generally in the extreme upper Mississippi Valley and northern Great Plains, but was well above normal in the Far West both in the mountains and at lower elevations, and also in the Northeast. The heaviest falls occurred in western Colorado where they ranged up to 147 inches. Grand Junction, Colo., recorded the greatest monthly total in its climatological history, 33.7 inches, and also measured its second greatest snow depth, 16 inches, on the 27th. In the Sierras and Cascades the snowpack, much below normal at the beginning of the month, was boosted by falls for the month ranging from about 30 inches in the lower Sierras to well over 100 inches in the northern Cascades. Many stations in the Central Valley and along the central and southern coast of California reported snowfall for the first time in several years.

In the Northeast monthly totals ranged up to more than 40 inches. Heavy falls occurred on the 3d to the 8th, 16th, and 29th. Portland, Maine, measured 35 inches, one of its greatest falls on record for January, and Buffalo, N. Y., reported 36.6 inches, the most there for January since 1945.

DESTRUCTIVE STORMS AND OTHER UNUSUAL PHENOMENA.--The worst outbreak of violent storms during January occurred on the 22d when tornadoes struck in many communities in an area extending from eastern Oklahoma into Tennessee and south-central Kentucky. Total damage exceeded $2,000,000 according to early estimates. Several persons were killed in Oklahoma. A tornado in Gans, Okla., dug several holes in the ground 10 feet in diameter and about 1-1/2 feet deep.

Glaze occurred on the 26th - 28th in northern Arkansas, southern Missouri, and parts of Tennessee. Damage, probably amounting to a few million dollars, was heaviest in the northeastern quarter of Arkansas.

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.

- • Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.
- + And also on a later date or dates.
- % Peak gust.
- ¤ Number of days maximum 70° or above for Alaskan stations
- Ø Station pressures apply to elevation shown in Table 10b of the annual issue of this publication.
- a Maximum hourly average.
- b Sun below horizon Jan. 1 to 23 inclusive.
- c Sun below horizon Jan. 1 to 16 inclusive.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JANUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IOWA Entire State	Entire month				4	56	5		Snow and cold	Snow-packed roads resulted in traffic accidents on most days of month in all parts of State. More than 115 separate accidents reported, many of them involving more than 1 vehicle.
COLORADO Western and southwestern portions	Most of month								Snow	Heavy snowfall, beginning early in month, continuing intermittently, resulted in record January snowfall at a number of points. Snowfall heaviest in extreme western portion and San Juan Basin. Crested Butte's fall totaled 146-1/2 inches, which is a record for January; Grand Junction had 33.7 inches, an alltime record. Many snowslides in Wolf Creek Pass, Red Mountain, and Loveland Pass areas closed passes and roads several times during month. No deaths or serious injuries reported, but many minor accidents. Unestimated amount of general damage to roads, buildings, vehicles, communication systems, and powerlines resulting from heavy drifts and snowslides. Many small communities isolated for several days at a time and some without electric power until damaged lines could be repaired.
KANSAS Western two-thirds	2	11 a.m.-5 p.m.							Wind and dust	Strong southerly winds of 20 to 30 m.p.h., reaching 40 m.p.h., occasionally, caused much blowing dust. Visibilities lowered to 1-1/2 to 6 miles reported from 11 a.m., until late in afternoon. Lowest visibility was 1-1/2 miles at Garden City.
	4									Minor storms reported at Anniston and Heflin, Ala.
CALIFORNIA Central coast, southern mountains, and coastal basin areas	4-6						1		Wind and rain	Only light precipitation occurred in central coastal areas, but heavy rain and snow fell in south, particularly in Ventura and Los Angeles Counties. Some flooding occurred in San Fernando Valley and La Tuna Canyon. No major damage. At Hall Canyon Reservoir rain gage recorded 1.70 inches in 13 hours.
PENNSYLVANIA Susquehanna Valley (lower portion)	6	Night			1	4	2		Snow	1-inch snowfall made roads slippery and caused many automobile accidents. In Lancaster area, 4 persons injured in an accident. Another man died from heart attack while pushing car stalled in snow. Storm moved eastward.
CONNECTICUT Entire State	6-7	P.m. 6th-p.m. 7th			1	7			Snow	Snowfall of 2 to 6 inches caused numerous skidding accidents on highways which resulted in 1 death and injuries to 7 persons in separate accidents.
RHODE ISLAND Entire State	6-7	P.m. 6th-p.m. 7th				3			Snow	Storm affected highway traffic, with skidding accidents injuring 2 persons. Another person injured in fall on icy sidewalk. Snowfall 3 to 6 inches.
NEW ENGLAND Northern and central portions	7	All day			6		4	1	Snow	6 to 12 inches of snow in east-central and northeastern Massachusetts, southern New Hampshire, and southwestern Maine delayed traffic and caused scores of injuries due to hazardous streets. Schools closed. 6 deaths attributed to coronary trouble brought on while embattling snow. Other areas received 1 to 5 inches of snow, except little or none in northern Vermont.
KANSAS Southern and eastern portions	9	5 a.m.-noon							Glaze	Freezing drizzle began about 5:30 a.m., over south and east, and by 8:30 a.m., Highway Patrol reported slick and icy roads from Marion County east and also in Dodge City-Garden City area. Accidents numerous, but most not too serious.
ILLINOIS Extreme northern portion	9	Evening							Snow	8 to 10 inches of snow in band from Dixon and Rockford to Wheaton and Arlington Heights.
	9									Minor storm also reported near Tucson, Ariz.
MICHIGAN (Lower) Southern third	9-10	Afternoon 9th-a.m. 10th						1	Snow	Heavy snow deposited 4 to 12 inches by early morning of the 10th. Highway and street travel greatly hampered and some highways closed. In several localities this storm resulted in heaviest single snowfall for 25 to 30 years.
NEW YORK	10	Midnight-noon			2				Snow	Low pressure area moved south of New York State, giving amounts of snow to slightly over a foot to some sections of western and central New York with lightest amounts in northern sections. At least 2 deaths occurred from heart attacks, 1 shoveling snow and the other from exertion of putting chains on his car. Many schools closed.
NORTH CAROLINA Western portion	10	Forenoon					4		Wind	Cold front crossing State caused gusty winds up to 50 m.p.h. 2 small aircraft damaged; widespread minor damage to powerlines and trees.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
VIRGINIA	10	9 a.m.-6 p.m.						1	Wind and electrical	Strong winds caused much minor damage to buildings in all sections of State. Shingles blown off, windows and a few plate-glass store windows broken, trees blown down or limbs broken, and some interruption of telephone and power services in cities. More than 3,000 homes in Richmond without electricity for 1 to 3 hours. 1 house, struck by lightning at Norton, sustained damages about $500. Metal silo overturned at East Stone Gap. Wind reached 67 m.p.h., at Roanoke and 73 m.p.h., at Norfolk. Storm moved eastward.
MARYLAND Chesapeake Bay area	10	11 a.m.-2 p.m.						1	Wind	Numerous persons stranded in duck blinds and were rescued. Oyster tonging boat damaged when gale winds snapped its mast off; 10- to 12-foot waves reported. At Friendship International Airport gusts up to 50 m.p.h., from west-northwest occurred at 12:21 p.m., and gusts to 68 m.p.h., from west-northwest at Andrews Air Force Base at 11:32 and 11:34 a.m.; at Annapolis Naval Academy gusts to 74 m.p.h., from northwest at 12:48 p.m.
NEW ENGLAND Northern and central portions	10	Day			3		4	1	Snow, sleet, and wind	3 to 8 inches of snow general, excepting little or none in northwestern Vermont, northern Maine, and southeastern Massachusetts coastal area. 3 deaths attributed to storm, 1 by automobile accident and 2 by exertion. Some injuries from accidents on slippery roads. Minor wind damage in some Massachusetts localities. Electric service outed by wind on Nantucket. Many schools closed.
ARIZONA Williams Air Force Base (near), Pinal County	10	2:55-3 p.m.			0	0			Tornado	Funnel cloud moving eastward touched ground in open desert.
DELAWARE	10							1	Wind	High winds snapped TV antennas, uprooted trees, ripped off signs, caused interruption of utility services, blew some roofs off, particularly on chicken houses in lower Delaware, ripped numerous shingles from houses, etc.
MARYLAND Lower Marlboro (near), Calvert County	10				1			1	Wind	Duck hunter drowned after he slipped off his 12-foot skiff which was overturned by gale winds.
	10									Minor storm also reported in Philadelphia, Pa., area.
OKLAHOMA Most of State	10-11	During night			2	Many		1	Rain and glaze	Glaze and sleet storm caused hazardous road conditions over most of State. 2 deaths and many injuries attributed to automobile accidents on icy roads.
WEST VIRGINIA Bluefield and vicinity, Mercer County	10-11	Night						1	Wind	Roofs blown off houses; billboards destroyed. Storm moved eastward.
WASHINGTON Columbia River Gorge, southern Clark and Skamania Counties	12-13						4		Wind	High wind through Columbia Gorge caused considerable property damage. Several persons narrowly escaped serious injury when tree blown down, demolishing their residence. Powerlines damaged in several communities.
CALIFORNIA Entire State	12-14						5		Wind, rain, snow, and electrical	Heavy rains occurred in central and south with heavy snow in Sierras above 4,000 feet. Some street flooding occurred in a few central towns, and some highways blocked by small slides in Santa Cruz Mountains. Large tree blown down at Pebble Beach, Monterey County, and more than double the normal number of traffic accidents occurred in San Francisco. In southern California underground telephone cables damaged by cave-in resulting from flooding of drain excavation, and $20,000 tractor buried in silt and mud. Another cave-in at Pacific Palisades broke sewer line, with estimated damage of $60,000. Elsewhere, heavy rains caused overflow of storm drains and a few mud slides in Santa Barbara area; some street intersections between Culver City and west Los Angeles flooded to as deep as 18 inches, and slides with rocks as large as automobiles blocked traffic on highway between Snow Valley and Big Bear Lake. Developing within main storm and probably associated with passage of cold front, severe thunderstorm developed in vicinity north of Lincoln, Placer County, prior to 2 a.m., on 13th and moved in apparent northeast direction, passing between Colfax and Nevada City. 25x45-foot roof section blown from barn about 6 miles north of Lincoln, and carried 150 feet, dropping on

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JANUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CALIFORNIA (Cont'd)										powerline and disrupting power at 2 a.m. High winds with gusts estimated at 70 m.p.h., occurred at Grass Valley, with thunder and lightning. 5 telephone cables burned. Home struck by lightning in Nevada City and another at Meadow Vista. Large locust tree uprooted at Grass Valley, and several large oak trees blown down at Auburn.
IDAHO North-central area	13-15								Snow	Snow began on 13th, ended evening of 15th, left 15 inches on ground at Grangeville, 5 inches at Lewiston. Several minor traffic accidents in and near Lewiston.
NEW YORK	13-20				3				Cold and snow	Some of coldest weather of many years spread through State during 13th with severely cold temperatures on morning of 14th and 15th and with cold daytime temperatures especially on 15th. During this period snow squalls occurred on night of 17th-18th in snow belts east of Lakes Erie and Ontario with second snow squall period on 19th. Damage from cold, mostly breaks in communications and electric wires as well as some breaks in gas mains. 1 gas main break cut off supplies to over 20,000 homes north of Syracuse and east of Lake Ontario. At least 2 deaths occurred from snow shoveling, and 1 man wandered out into severe cold and died of exposure.
OKLAHOMA Hughes, Okfuskee, and Seminole Counties	14-15	During night				Several		1	Rain and glaze	Glaze covered most of 3-county area, causing treacherous road conditions. Several injuries resulted from numerous automobile accidents.
NEW ENGLAND Northern and central portions	14-15				8		4	5	Freeze	Severe freeze killed peach buds and overtaxed and broke down numerous heating systems over entire area. Thousands of motorists stranded with dead batteries. Temperatures as low as -32° reported in Massachusetts. Deaths and numerous frostbite injuries resulted.
SOUTH CAROLINA Northern and central portions	15	Day			1	Several		1	Glaze	A number of wrecks, attributed to glaze, 1 fatality, several injuries, and several thousand dollars property damage .
NORTH CAROLINA Western portion	15				4	Several			Ice	Very little damage directly caused by this storm; most losses due either to slow-downs in traffic or to traffic accidents indirectly attributable to icy streets and highways. At least 4 persons killed in such accidents, and several others injured; motor vehicles, involved, damaged to the extent of $50,000. Many schools closed for 1 or more days.
VIRGINIA	15-16					14	3	1	Snow and ice	Snow and freezing rain caused extremely hazardous travel conditions on highways and streets. Traffic accidents accounted for 13 injuries, some of them quite serious. 1 person badly injured by fall. Numerous minor traffic collisions caused some damage to automobiles and trucks as well as slight personal injuries not included above. 1 injury occurred in Nelson County, 2 in Fluvanna County, 4 in Augusta County, and 6 in Floyd County.
CONNECTICUT Entire State	16	All day			1				Snow and cold	Although snowfall not heavy, 4 to 6 inches, storm was severe due to occurrence in midst of severe cold wave, which added to effects of storm. Numerous schools closed, meetings cancelled, and minor skidding accidents on slippery highways. Death of elderly man attributed to exposure and overexertion while shoveling snow.
NEW ENGLAND Northern and central portions	16	Day					4	1	Snow	4 to 8 inches of snow hit most areas, except less in Vermont. Traffic hampered by poor road conditions, with minor accidents occurring.
CALIFORNIA San Bernardino County	16						1		Wind	Dry north and northeast winds, with gusts to 68 m.p.h., in San Bernardino, Ontario, Fontana, and Chino areas. Tree uprooted and small shed roof blown off in San Bernardino.
IDAHO Lewiston (near), Nez Perce County	16				1				Cold	Man found frozen to death in ditch near his stalled truck.
SOUTH DAKOTA Central and western portion	16-17	5 p.m. 16th-5 p.m. 17th			3		4		Wind and snow	Visibility occasionally zero, with roads blocked by drifting snow in northern Black Hills. Wind overturned house trailer being towed 12 miles east of Pierre. Airplane accident resulted in 3 deaths, 8 miles northeast of Pierre, evening of 16th while ground visibility low due to snow squalls and blowing snow.
	19									Minor storm reported at Alva, Okla.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CALIFORNIA Entire State, except southeast desert	19-20					3	2		Wind, rain, and snow	Heavy rains, with locally strong winds in north. Heavy snow, with high winds in Sierras and northern mountains. Snow to depth of 2 feet closed Highway 99 for 6 hours between Redding and Dunsmuir. Heavy snow with high winds closed Highway 40 over Donner Pass for 8 hours. Boy lost in snowstorm near Big Bend suffered severe frostbite. 2 men overcome by exhaust fumes in stalled car near Cisco Grove required hospitalizing. High winds toppled trees, TV antennas, and power poles in Santa Cruz-Watsonville area. Up to 7 inches of snow fell above 3,000 feet in southern mountains, with winds to 40 m.p.h., in mountains and interior desert regions.
IDAHO Entire State	19-23				2	2			Snow and wind	Most widespread and heaviest snowstorm of winter. Most of snow fell between evening of 19th and night of 20th, but hazardous travel conditions continued through 23d, as strong winds caused drifting in several areas. Numerous minor traffic accidents reported and icy highways caused 2 deaths on 19th; near Lewiston, man killed when his car skidded into truck and on 20th, near American Falls, infant killed and 2 adults injured when a car skidded off highway into deep ditch. Reports of losses from property damage few, but near Caldwell 7 head of cattle killed when roof of loafing shed collapsed under 8-inch snowfall. Snow removal from city streets, highways, and county roads was major operation in nearly all parts of State, and schools were closed for a day or two in some northern counties and in eastern counties of Bonneville, Madison, and Jefferson. Delays in air travel common, many trains running behind schedule, and rural mail deliveries delayed.
OREGON Entire State	19-25					Several	5	2	Snow and rain	Snow depths from this storm in portions of Oregon's Columbia Basin east of Cascades greatest since 1950. Depths of 10 to 20 inches observed in Umatilla County, and 7 to 10 inches generally elsewhere in valleys of central and southeast. Willamette Valley maximum depths generally 3 to 6 inches; in coastal and southwestern valleys depths of 1 inch not usually exceeded. Schools closed in a number of areas and logging operations interrupted. Very hazardous motoring conditions created and a number of traffic accidents occurred over State. Snow generally beneficial to agriculture, as it afforded much-needed protection to fall-seeded crops and a welcome addition to soil moisture in valleys and snow pack in mountains. Storm moved eastward.
WASHINGTON Entire State	19-28								Snow and cold	Heavy snow over entire State on 19th and 20th. Snowfall ranged from 3 to 8 inches in west and from 8 to 10 inches in east. Highways remained open, but very slick, resulting in large number of accidents and persons injured. From 20th to 28th minimum temperatures from zero to 15° recorded in west and from -15° to -36° in east.
UTAH Salt Lake City, Salt Lake County	20	A.m.							Wind	Wind gusts to over 50 m.p.h., caused minor damage to trees and property.
	20									Minor storm also reported in St. Charles area, Mo.
COLORADO South-central area	20-21	Afternoon 20th-a.m. 21st							Wind	High wind during afternoon and night of 20th, and early hours of 21st, did considerable damage to powerlines, buildings, cars, trees, etc., in area from Colorado Springs southward. At La Veta, several head of cattle killed when barn blown down on them, also plate-glass window blown out, sign blown down, and TV antennas damaged. Old timers in La Veta said it was one of the strongest winds ever noted there. Powerlines and trees damaged in Colorado Springs, Pueblo, and Walsenburg.
TENNESSEE	20-Feb 1							1	Rain	13-day rainy spell resulted from stagnation of arm of Bermuda High over southeastern United States which channeled warm, moist, southwesterly winds into zone of stationary front over Tennessee. Rainfall amounts for period generally from 8 to 10 inches. Most severe flooding occurred on Little Pigeon River at Sevierville, Tennessee River at Chattanooga, Duck River at Shelbyville and Columbia, Elk River at Fayetteville, and Cumberland River at Nashville. At Sevierville thousands of dollars of damage reported as 300 families evacuated from their homes. About 50 families forced from their homes in Chattanooga and like number from combined cities of Shelbyville, Columbia, and Fayetteville. At Nashville

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JANUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE (Contd)										flooding of streets and basements was extent of damage. Across State, with exception of Cumberland Plateau, scattered reports of flooded lowlands and roads and washed-out bridges received. No estimate of total damage yet made.
MINNESOTA Northern half	21	A.m.-p.m.			2		3	1	Snow and wind	Moderate to heavy snow, new accumulation 4 to 7 inches, accompanied by high winds reduced visibility and made highway travel hazardous. Numerous traffic accidents occurred, resulting in 2 deaths. Storm moved eastward.
FLORIDA Broward and Palm Beach County areas	21	Throughout day					5	7	Rain and hail	Storm affected important winter vegetable areas of these 2 counties and isolated points in neighboring counties. Although area of destruction rather limited, numerous observers reported 6 to 9 inches of rainfall in several hours. Several points reported rainfalls of near 21 inches in less than 24 hours, 1 report of 15 inches in 5 hours. Rainfall caused flooding of a number of truck crop fields; water completely covered some mature as well as growing crops. Much replanting required. Most water removed from fields by pumping, but not until considerable damage done. Quality of produce from fields pumped considerably reduced. Sunny and abnormally warm weather following storm conducive to development of disease and further general lowering of crop quality. Hail accompanying this localized storm activity caused crop damage of $1,000,000.
OKLAHOMA Lincoln, Creek, Pawnee, Payne, and Oklahoma Counties	21	5 p.m.						1	Rain and hail	Hail size of marbles to 1-1/2 inches in diameter fell over scattered sections of 5-county area. Some roof damage resulted and 32 windows broken in school near Oilton. Star-shaped formations of ice, measuring 6 inches from tip to tip, fell near Avery, Lincoln County. Storm moved northeastward.
OKLAHOMA Warner, Muskogee County	21	6:55 p.m.	5	400	0	0	4	1	Tornado (suspected), wind, rain, and electrical	Tornado suspected, although little evidence other than loud roar and scattered debris. Wind caused destruction of service station, farmstead, and numerous outbuildings. Storm moved northeastward.
ARKANSAS Hatfield (2 miles south of) Polk County	21	9 p.m.						1	Electrical and rain	Barn destroyed by fire set by lightning. Power- and communication lines damaged by lightning.
	21									Minor storms also reported at Fayette, Liberty, Tina, Warrensburg, and northeast of Butler, Mo.; and south of Ada, Okla.
OKLAHOMA McClain and Cleveland Counties	22	2 a.m.						1	Wind, rain, hail, and electrical	Cold front which developed severe thunderstorm moved across central and eastern sections. Widespread damage to roofs, windows, TV antennas, trees, etc., caused by strong winds and hail over 2-county area. Hail as large as ping pong balls reported.
OKLAHOMA St. Louis to Ryal, Pottawatomie, Seminole, Hughes, Okfuskee, and McIntosh Counties	22	3:30-4:15 a.m.	60	450	0	0	4	1	Tornado, wind, rain, hail, and electrical	Several thunderstorms developed across central and eastern Oklahoma along cold front. Tornado skipped along 60-mile path from St. Louis, Pottawatomie County, through Wewoka, Seminole County, where most destruction occurred, through Wetumka, Hughes County, through Weleetka, Okfuskee County, to Ryal, McIntosh County. Although no funnel sighted, witnesses indicate rapid approach, passage, and fading away of terrible roar. Excessive lightning continuous. Considerable marble-sized hail fell along path. St. Louis received considerable damage to houses, utilities, etc., and many outbuildings destroyed. 1 house had porch blown off and another 50 feet away not disturbed. In Wewoka tile building burst outward, TV aerials twisted in knots, many outbuildings destroyed, and windows and venetian blinds completely disappeared from 1 home. In Wetumka 2 business buildings heavily damaged and damage to TV antennas and utilities extensive. Weleetka received damage to roofs, outbuildings, trees, etc. Last evidence of storm was near Ryal where farmstead almost completely demolished. Storm moved northeastward.
OKLAHOMA Haskell and Sequoyah Counties	22	6 a.m.	5	50	10	21	5	1	Tornado	Storm moving northeastward struck Hoyt in Haskell County, damaging 9 homes and several outbuildings. Damage estimated at $12,000. This may have been same storm that struck Gans less than 1 hour later. In Gans tornado struck with sudden fury, killing 8 persons and injuring 21. 1 person died after storm from heart attack and 1 of the injured died later. Path of storm narrow, but complete destruction resulted. 8 homes destroyed, 15 damaged, 12 other buildings destroyed and 6

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA (Cont'd)										damaged. 37 different families suffered losses. A peculiarity of tornado was as it bounced into community it dug several holes in ground about 10 feet in diameter and 1-1/2 feet deep.
ARKANSAS Hunt, Horse Head Lake, and Harmony areas, Johnson County	22	6:45 a.m.	14		0	0		1	Tornado, wind, rain, hail, and electrical	Several homes and other buildings damaged. Loaded, 1-ton truck rolled over several times. Storm moved east-northeastward.
ARKANSAS Bismarck (2 miles southeast of), Hot Spring County	22	9 a.m.	4	880	0	0	4	1	Tornado	2 homes destroyed, 8 damaged, 11 other buildings destroyed, and 10 damaged. Storm moved northeastward.
ARKANSAS Bono area, Craighead County	22	10:20 a.m.	2	440				1	Wind, electrical and rain	Barn destroyed by wind; 2 hogs killed by lightning.
LOUISIANA Princeton area	22	10:50-11:05 a.m.	1-7/10	180	3	9	4	4	Tornado and rain	Struck first 500 yards east-southeast of school and moved in general northeast direction on erratic path, lifting and dipping. Heavy rain obscured funnel at times. Heavy damage for 180 yards and lighter damage extending outward over area 7/8 mile. Driver stopped within 100 yards of funnel reported difficulty breathing and car moved up and down on springs; truck ahead thrown 100 yards with debris scattered over 1/4 mile. Livestock killed.
ARKANSAS Crossroads community, Craighead County	22	11:30 a.m.			0	0		1	Tornado, wind, rain, and electrical	Several barns destroyed, houses and other buildings damaged, grain elevator damaged. Power- and communication lines blown down.
MISSOURI Kennett, Dunklin County	22	11:40 a.m.	1	100	0	1	4		Tornado, wind, rain, and electrical	Man knocked unconcious when he came in contact with broken powerline. Major damage to 19 homes, minor damage to 100 homes. Storm moved northeastward.
PENNSYLVANIA Oil City, Venango County	22	All day							Rain	Heavy rain coupled with ice on Allegheny River and melting snow on ground, caused flooding in Oil City. Water approximately 1 feet deep at height of flood.
ARKANSAS Crossett (4 miles west of), Ashley County	22	1:15 p.m.	4	Narrow	0	0	4	1	Tornado, wind, and rain	House and outbuildings damaged; 300,000-board feet of standing timber and 700 cords of standing pulp timber damaged. Storm moved northeastward.
KENTUCKY Adairville (4 miles northeast of), Logan County	22	3:30 p.m.	1	880	0	0	°4	C	Tornado	Storm struck 2 farms about 4 miles northeast of Adairville. 6 farm buildings and residence damaged or demolished. Posts uprooted, trees blown down, utility lines knocked out. Included in losses were several hundred barrels of government stored corn, quantity of hay and other feeds, and farm machinery. Cloud described as "black as night." Storm moved northeastward.
MISSISSIPPI Charleston, Tallahatchie County	22	3:45 p.m.	**500	500			4	1	Wind	Several small houses and a church blown over; planing mill collapsed. Police chief said storm not a tornado. Wind blew west window in and east window out of 1 house. Storm moved east-northeastward.
TENNESSEE Nashville area, Davidson County	22	4:30 p.m.	15	20-100	0	4	6	1	Tornado, wind, and rain	Tornado moving east-northeastward struck Belle Meade suburb southwest of Nashville and moved in skipping fashion to suburb of Donelson. 1 house and 1 church destroyed, 10 houses heavily damaged and numerous houses received minor damage.
TENNESSEE Oakland School, Wilson County	22	5 p.m.			0	0		1	Tornado (suspected) and wind	Storm blew roofs off 2 houses and a barn, blew away garage, damaged outbuildings, and destroyed timber. Location and time of occurrence suggest that this storm may be remnants of earlier tornado at Nashville.
TENNESSEE Bethel community, Rutherford County	22	6:30 p.m.		10	0	0		1	Tornado (suspected) and wind	Barn demolished, roof removed from house, and 2 porches and roof damaged on second house. Storm moved northeastward.
TENNESSEE New Union, Summitville, Fredonia, and Vervilla communities, Warren and Coffee Counties	22	8:30 p.m.	5	30	0	0	5	1	Tornado, wind, and rain	20 to 25 homes, school, and barn damaged, chicken-coop factory leveled and several head of livestock crushed. Storm moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JANUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ALABAMA Summerfield, Dallas County	22	10 p.m.	Short		0	0	3	1	Tornado (suspected)	Sudden and very brief onrush of wind demolished 2 chicken houses and blew heavy 8-inch creosoted timber through fence.
ALABAMA Tuskegee, Macon County	22	Evening					4	1	Electrical	Fire, believed caused by lightning, destroyed church.
MISSOURI Kansas City, Jackson County	22				6				Snow	6 men died from heart attacks probably brought on by exertion during snowstorm.
	22									Minor storms also reported in Clifty community, Ark.; at Holcomb and Springfield, Mo.; and at Pauls Valley, Okla.
MICHIGAN (Lower) Southern portion	22-23	Early a.m. 22d-a.m. 23d				1	3	1	Electrical, wind, rain, and snow	Thunderstorms occurred during early morning of 22d. Lightning severely damaged home near Lapeer and high winds damaged factory at Paw Paw. Falling temperatures, freezing rain, and then snow followed thunderstorms later in day, leaving several inches of snow in many localities by morning of 23d.
WEST VIRGINIA Braxton, Clay, Kanawha, Lincoln, Wayne, Mingo, Logan, Boone, Fayette, Raleigh, Wyoming, McDowell, Mercer, Summers, and Monroe Counties	22-30				2	5			Rain	Heavy rains caused record and near-record local flooding of cities, towns, highways, and low-lying farmlands. Most low-lying communities suffered at least water in basements. Heavy damage reported to farmlands from erosion.
MARYLAND Baltimore area	23	7 a.m.-noon						1	Wind	High winds, with gusts exceeding 60 m.p.h., knocked down trees and limbs around city, shoved freighter in Patapsco River into construction equipment at harbor tunnel, postponed launching of 32,650-ton tanker at Sparrows Point Shipyard, ripped off roof of radio station transmitter building at Chesaco Park.
DISTRICT OF COLUMBIA Washington	23	7:18 a.m.-10:21 p.m.				14	4	1	Wind	Falling limbs damaged some automobiles, and brick wall downed by wind demolished several cars on parking lot; some shop windows blown out, and some powerlines downed; inaugural flags torn from 5th-floor moorings at District Building and their 5-foot masts snapped in some instances; nearly a dozen banners were missing.
	23									Minor storm also reported in Mercer County, N. J.
OKLAHOMA Most of State	23-31				Several	Many	5	1	Rain, sleet, and snow	Glazed conditions developed over most of State, except extreme northwest and Panhandle. Intermittent precipitation kept situation critical during entire period. Roads dangerously icy causing numerous automobile accidents which resulted in several deaths and many injuries. A number of broken bones reported from falls on ice. Property damage confined mostly to Durant area, Bryan County, where trees and utility lines badly broken, although surrounding counties reported similar light damage.
ILLINOIS Extreme northern portion	24-25	Night							Snow	6 inches of snow at Freeport, Rockford, and Marengo.
CALIFORNIA Entire State, except southeast desert	24-26				2		2		Straight-line wind, snow, and rain	Snowfall, widespread over north and central, caused minor traffic accidents. Highway 101 blocked by snow north of Cummings, Mendocino County. 2 cattlemen, lost in blizzard in mountains 30 miles east of Madera, found frozen to death when found on 29th. Moderate rain in Pasadena area caused minor traffic accidents. Snow level in mountains lowered to 5,000 feet. Angeles Crest road temporarily blocked. Wind damaged roofs in Llano area.
COLORADO Cumbres Pass	25-31								Snow and wind	3 trains, including a freight, a rescue train, and a work train, stalled by heavy snow of record proportions on and near Cumbres Pass, near Colorado-New Mexico border, isolating about 60 members of crews from 26th through 31st. First train stalled by very heavy snow which began on 25th, and rescue train and work train attempting to reach first train blocked by avalanches. Continuing heavy snow and high winds through end of month created severe, ground-blizzard conditions, hampering efforts to reach isolated men by Army snow weasels and helicopters.
	26									Minor storm reported at Salt Lake City, Utah.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ARKANSAS Northern half	26-28	Evening 26th-early morning 28th			4	5			Freezing rain or glaze	Considerable damage over entire area, with most severe damage in northeast quarter of State. Extensive severe damage to trees, shrubs, power- and communication lines, with some damage to buildings. Storm over northeastern quarter of State described as most severe in past 10 years. Damages amounted to several millions of dollars, but due to widespread nature of storm, accurate estimate of monetary loss not possible. The Southwestern Bell Telephone Company estimated its loss in northeastern portions about $250,000. Area is served by several telephone companies. Power companies suffered severe losses. Damage to trees staggering. In some cities streets impassable due to fallen trees and limbs. Highways also blocked. No possibility of estimating loss in timber, and valuable shade trees. Power and communication failures lasted several hours, and in some areas extended into one or more days. Considerable resultant loss in frozen food, due to extended power failures. Glazed highways resulted in many automobile accidents, some of which involved several vehicles.
KANSAS	26-31								Glaze and sleet	Sleet, freezing drizzle, and glaze reported on number of days latter part of month, but principally on the last 6. Many localities affected, especially in the south and east. Some places reported glaze 1/4 inch thick. Driving conditions became very hazardous. Accidents numerous, with several quite serious.
OKLAHOMA Madill, Marshall County	27							1	Electrical and rain	Lightning struck powerline and ignited 10,000-barrel oil-storage tank.
TENNESSEE Obion County	27-28				1	9		1	Ice	Fallen trees and limbs blocked highways, disrupted phone and electric services, damaged roofs, and interrupted operation of industries. Damage to phone system alone estimated at $50,000 to $75,000. Accidents resulted from ice-covered roads and sidewalks.
TENNESSEE Lake County	27-28					Many	5	1	Ice	Fallen limbs damaged roofs and powerlines and blocked traffic. 4 minor automobile accidents, with no injuries. Numerous minor injuries, due to falls on slippery steps and pavement. Hundreds of trees and shrubs ruined.
	27-28									Minor storms also reported in Dyer and Weakley Counties, Tenn.
MISSOURI New Madrid, Dunklin, and Pemiscot Counties	27-29						6		Ice	Many phone and powerlines downed. Trees and shrubs heavily damaged by weight of ice. Travel by highways disrupted; schools closed.
CALIFORNIA Central and southern portions	27-30				3	Many	3		Snow, rain, hail, and wind	Storm brought widespread snowfall to unusually low levels in central and south. Strong to gale-force winds occurred in mountain passes of south. Unprecedented snow caused widespread automobile accidents, 300 in Los Angeles County alone, causing 3 deaths and numerous injuries. Snow made many roads impassable, and caused closing of 15 schools in Saugus, Newhall, and Antelope Valley in southern mountains, and a few in mountainous areas of central. Accumulations of snow broke branches of some trees in citrus groves near Upland. Aside from a few minor traffic accidents, storm caused little damage in San Diego County, although snow ranged down to 2,000 feet on El Cajon Mountain. Streets flooded by torrential rains in southwest Los Angeles and snow heavy enough to break branches from trees in Woodland Hills area of North Hollywood. Hail fell at Long Beach. Winds tore awnings and battered trees in Whittier area. Thousands of automobiles and over 200 trucks stalled on mountain highways during storm.
ILLINOIS Central portion	28	All day							Glaze	Widespread light glazing in area bounded approximately by Alton, Jacksonville, and Olney. Some glazing at Kankakee.
TENNESSEE Ashport, Lauderdale County	28					1		1	Electrical	Lightning struck and ignited house, resulting in complete loss of house and furnishings.
	28									Minor storm also reported at Albertville, Ala.
MAINE Northern and central portions	29	Day					4	1	Snow, sleet, and glaze	Generally 2 to 5 inches of snow in southern portions and 5 to 10 inches in northern sections delayed highway traffic, but relatively few accidents reported. Sleet and glaze added to hazards in some southern areas.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NORTH CAROLINA Statesville area, Iredell County	29	5:15 p.m.	** 1,000	150	0	0	3		Tornado	Funnel seen. Statesville Airport hangar damaged, trees up to 10 inches in diameter broken off. Tornado moved eastward.
	29									Minor storms also reported in Carroll and Dade Counties, Ga.; and in Coffee, Fentress, and Giles Counties, Tenn.
WASHINGTON Bellingham, Whatcom County	31-Feb.1	P.m.31st-a.m.1st.					5		Wind	Strong, northerly winds caused some property damage in Bellingham area during night of 31st and morning of 1st. Logs and barges being towed in area damaged by waves and high wind.

° Includes crop damage.
C Crop damage included with property damage.
** Yards instead of miles.
† Storms are placed in categories varying from 1 to 9 as follows:

1	Less than $50
2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

JANUARY 1957

The most damaging floods during the month were the severe floods in streams in southeastern Kentucky, southwestern West Virginia and adjoining portions of Tennessee and Virginia. Record stages were reported on several of the streams. Flooding was almost entirely of the headwater type. The record flooding necessitated evacuation of several towns in the area.

ST. LAWRENCE DRAINAGE

Flooding occurred in several small streams and tributaries in southwestern New York on the 22d and 23d. The northern counties bordering Lake Ontario were effected most seriously with streams running as much as 3 ft. above bankful stage. Flooding also occurred in many poorly drained lowland areas. Tonawanda Creek which runs northward from Wyoming County to Batavia, N.Y., and thence westward into the Niagara River, flooded extensively on the 24th and 25th. The delayed flooding of Tonawanda Creek caused added hardship because of the near zero temperatures at that time. Flooding in some of the suburbs of Buffalo was the worst recorded. The flooding was caused by heavy rainfall and the rapid melting of a heavy snow cover. Just previous to the thaw Buffalo reported 19 inches of snow on the ground with even deeper snow cover southward over the hills. About 1 to 2 inches of rain was reported over southwestern New York on the 21st and 22d. The ground was not frozen in some sections, delaying the runoff to some extent. Another alleviating factor was the rapid drop in temperature with a heavy snowfall early on the 23d. The flood was directly responsible for one fatality. Damage was mostly restricted to the flooding of perhaps thousands of basements and in a few instances the first floors of residences. There were a few evacuations on the 22d and 23d, but more were forced from their homes on the 24th and 25th by the overflowing Tonawanda Creek. Highway traffic was disrupted throughout the area with many detours necessary. A few automobiles were trapped in flooded areas. Some road washouts occurred and a section of one railroad was so badly eroded that it may be abandoned.

ATLANTIC SLOPE DRAINAGE

The slight flooding in the Susquehanna River Basin in New York on the 23d was due to melting snow and light rainfall. The water equivalent of snow in the upper Chemung Basin was estimated at nearly 1 inch and in the lower Chemung Valley about 0.5 inch. The rainfall on the 23d averaged 0.4 inch in the Susquehanna Basin; the water equivalent of the snow cover ranged from 1.5 inches in the upper portion to 0.5 inch in the lower basin. The rainfall averaged 0.6 inch and the snow cover melted rapidly due to warm temperatures on the 22d and 23d. The snowmelt ended abruptly on the 23d when the temperatures fell rapidly below freezing.

The Ocmulgee River rose to 2.1 ft. above flood stage at Abbeville, Ga., on the 1st and continued in flood until the 4th. No damages resulted from the high water.

EAST GULF OF MEXICO DRAINAGE

There were two rises in the Tombigbee Basin in Alabama during January. The first occurred on the 9th and 10th and the second towards the end of the month. The heavy rainfall (1.5 inches) on the 5th over the upper watersheds of the Warrior and Tombigbee Rivers set off the first rise. The only point to exceed flood stage was in the lower portion at Whitfield, Ala. As the month ended this station was again above flood stage and rising.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--The monthly mean stage of the Mississippi River at Minneapolis, Minn., for January was 5.5 ft., 0.6 foot below the long-term mean. This is the lowest monthly mean January stage since 1950 when a mean of 5.4 ft. was recorded. One year ago the mean was 6.5 ft. At St. Paul, Minn., the monthly mean stage for the month was 2.4 ft., just under the 21-year January mean stage of 2.5 ft.

A comparison of snow depths on January 31 with that of other years is given in the following table:

COMPARATIVE SNOW DEPTHS (Inches)

STATION (Minnesota)	1957	1956	1955	1952
Bimidji	11	26	8	17*
International Falls	11	22	15	11
Fargo (N. Dak.)	2	7	3	--
Duluth	14	29	17	20
Alexandria	2	16	6	13
New Ulm	T	6	4	10*
Minneapolis	2	11	6	8
Rochester	1	10	3	7

*Estimated

A comparison of the frost penetration on January 31 with that of other years is given in the following table:

COMPARATIVE FROST DEPTHS (Inches)

STATION (Minnesota)	1957	1956	1955
Red Lake Falls	36	12	18
Virginia	24	18	3
Brainerd	42	24	36
Mora	48	40	36
Montevideo	36	22	14
Worthington	7	12	24
St. Cloud	36	30	22

Thickness of ice at Lake Pepin on the Mississippi River on January 26 was 23 inches. This compared to 20.5 inches reported on January 22, 1955.

Missouri Basin.--An ice jam in the Missouri River near Cascade, Mont., caused some flooding on the 27th, 28th and 29th. U. S. Highway No. 91 was flooded for about 2 or 3 days. There was no damage reported other than the inconvenience resulting from the detouring of traffic.

Ohio Basin.--The Allegheny River froze over throughout its length during the first part of January. Unseasonably high temperatures on the 21st and 22d resulted in some movement of the ice pack and an ice gorge developed near Oil City, Pa., on the Allegheny River and on Oil Creek. The snow cover over the upper Allegheny Basin varied from 5 to 25 inches and the runoff from snowmelt resulted in a serious threat to Oil City, Pa., as the ice gorge backed up the water in Oil

Creek and flooded the business sections of Oil City. Moderate to heavy rains fell over the upper Allegheny Basin on the 22d and 23d, averaging about 1.25 inches. This rainfall resulted in the ice moving out of the Allegheny River very rapidly and the threat of a serious flood at Oil City was relieved. Flood stages were exceeded by 2 feet at Olean, N. Y., on the Allegheny River and at Meadville, Pa., on French Creek. With a snow cover of 4 to 7 inches over the Cheat River Basin and rainfall averaging 1 to 1.2 inches on the 22d and 23d, flood stage was just reached at Parsons, W. Va. Snow cover over the remainder of the Monongahela Basin was negligible and rainfall averaging 0.5 to 0.75 inch resulted in minor rises in the Monongahela River. The Ohio River at Pittsburgh, Pa., exceeded normal pool conditions for a period of 93 hours, and crested at 21.6 ft. at noon on the 24th. Moderate to heavy rains (1.5 to 2.5 inches) on the 28th and 29th over the headwaters of the West Fork, Tygart and Cheat River Basins resulted in flood stages being exceeded by 0.5 to 2.5 ft.

Moderate to heavy rains on the lower Scioto on the 9th resulted in minor flooding on Paint Creek at Bourneville, Ohio, on the 9th and 10th. No damage resulted.

The flooding on the White River at Edwardsport, Ind., from the 24th to the 29th was due to rainfall concentrated over a 2 to 3 day period beginning on the 21st.

SEVERE FLOODS IN OHIO RIVER TRIBUTARY STREAMS OF SOUTHEASTERN KENTUCKY AND SURROUNDING AREAS OF VIRGINIA, WEST VIRGINIA AND OF THE UNCONTROLLED TRIBUTARIES OF THE TENNESSEE RIVER.

Prolonged successive rainy weather during the last 10 days of January and first 2 days of February with concentration of heavy showers and thunderstorms all night on January 28-29 resulted in severe flooding in headwater areas of the Guyandot, Big Sandy, Kentucky and Cumberland Rivers in Virginia, West Virginia and Kentucky. Localized flooding also extended into the upper New River Basin in West Virginia and Virginia and over the Powell and Clinch Rivers, headwater streams of the Tennessee Basin in Virginia and Tennessee.

Weather Bureau warnings for severe flash flooding were issued for headwater areas of the Kentucky, Big Sandy and Guyandot Rivers on the morning of January 29 when scattered reports produced evidence of greatly excessive headwater rainfall. Surveys by the U. S. Corps of Engineers and the U. S. Geological Survey, following the floods, in remote headwater areas of the Kentucky River indicate that at least 50 to 75 percent more rain actually fell over portions of the headwaters than was evidenced from measurements at the regular gaging stations. These surveys are summarized in later portions of this report. Weather Bureau officials inspecting the flood area found that advance warnings helped to prevent heavy losses in many cases. The rapidity of the flood rise in the extreme headwaters, however, precluded much, if any, advance precautions. Also, the extreme flood heights, with the main streets of some towns 10 feet or more under water, did not leave much to be done in the way of protection outside of complete evacuation. This was a flood which had not been approached in nearly 100 years.

The worst flood of record occurred on the Big Sandy River and tributaries from the headwaters downstream to near Paintsville, Ky. Pikeville, Ky., was the hardest hit of all towns in the Big Sandy drainage. The entire business district was flooded and approximately 50 percent of the residential section of this town with population of about 5,100 was flooded. Damage in the city was estimated in the millions of dollars. Detailed reports of flooding in the respective river drainages follow.

New River.--Flooding occurred locally in the New River watershed at and near Bland, Va., on Walker Creek. About the time Walker Creek was at its highest stage a dam on one of the smaller creeks, 1 mile upstream from the town, broke causing a large wave to move down Walker Creek washing 8 houses off their foundation; some were destroyed, and others were severely damaged. Flooding in the upper portion of the Elk River in central West Virginia caused damage at Sutton, population 1,070. In Sutton there was water damage to 6 business places and 11 houses. This flood produced highest stage, 31.30 feet, since the flood of July 1932 when a crest of 36.2 feet was recorded. Downstream from Sutton there was scattered flooding to the mouth of the river at Charleston, W. Va.

Guyandot River.--Rainfall in headwaters of the Guyandot River was not quite as heavy as in the headwaters of the adjacent Big Sandy drainage, but the resulting stages reached the highest ever known for a major portion of the stream. Many of the small towns and villages were flooded in low places, but none were completely covered with water. At Pineville, W. Va., in the upper portion of the basin the river exceeded the previous record flood of February 28, 1955, but damage was light. Two school girls were drowned while crossing a stream in a boat. At Logan, W. Va., about mid-point in the Guyandot Valley, the city water supply plant was flooded along with 200 homes and many automobiles. The large steam plant was flooded for the first time since it was built in 1939. The crest stage was 28.23 feet, obtained by leveling to the high water mark on a building; the mark was above the level of the top of the river gage. The damage was light for the remainder of the valley from Logan to the mouth of the river at Huntington, W. Va. The crest at Logan was 3 feet above the crest of the 1955 flood and 1.2 feet above the highest known. There were 4 people drowned in the vicinity of Logan during this flood.

Big Sandy River.--Heavy rain in the extreme headwaters on the night of January 28-29 produced the greatest flood in history in the Big Sandy River, surpassing the historic flood of 1862 by several feet from the headwaters downstream to near Paintsville, Ky. The Levisa Fork joined by the Russell Fork 100 miles upstream from the confluence of the Big Sandy with the Ohio is the major tributary in the Big Sandy Basin. Severe flooding occurred on the Russell Fork at Haysi, Va., population 476, where 95 percent of the business and 80 percent of the residential district flooded from a depth of 2 to 8 feet. The Pound River, a tributary of Russell Fork, flooded Pound, Va., with 75 percent of the town flooded and 125 houses damaged. On Levisa Fork above the mouth of the Russell Fork at Grundy, Va., population 850, the entire business section and most of the residential section was flooded. Extensive damage was reported to highways and roads in Buchanan County, Va. Downstream on Levisa Fork below the confluence with Russell Fork, Pikeville, Ky., was the hardest hit of all towns in the flood. The 1950 population was 5,154.

The entire business district was covered from a depth of a few inches up to 8 feet and approximately 50 percent of the residential section of the town was flooded. The Levisa Fork crested at 52.73 feet on January 30. This was the greatest flood in Pikeville's history exceeding the stage of 52 feet, according to a high-water mark in the February 1862 flood. Flood stage at Pikeville is 36 feet. The city water supply was flooded and 14 days after the crest had passed, drinking water was being shipped in. Damage at Pikeville was estimated in the millions. Downstream in the rural area between Pikeville and Prestonsburg, Ky., the valley was flooded from one mountain side to the other, including several small towns. Most of this area is in Pike County where damages were estimated as 30 million dollars, 2,375 houses damaged, 266 destroyed and 2,402 families evacuated in the rural area. In Prestonsburg, Ky., a town of 3,585 population, 85 percent of the residential section was flooded and the business section was flooded to a depth of 12 feet in the heart of the business area. All means of communications went out during the night of the 29-30th. Downstream at Paintsville, Ky., damage was severe and 85 percent of the residential section was flooded from a few inches to 10 feet in some places; the entire business section was flooded. Downstream from Paintsville to Louisa, Ky., loss was confined to small farms. At Louisa there was little damage and from Louisa to the mouth no damage was reported. On the Tug Fork which flows into the Big Sandy at Louisa damage was heavy with severe flooding in Matewan, Williamson, Welch, Iaeger and Litwar, W. Va. The crest of 43.0 feet at Williamson, W. Va., approached or exceeded the flood of 1862. At Welch, W. Va., the hospital was flooded to a 1-foot depth on the first floor.

Kentucky River.--The most severe flooding of record over the headwaters of the North, South and Middle Forks of the Kentucky River occurred on January 29-30, 1957. The North Fork reached an unprecedented crest height of 37.3 feet on January 29 at Hazard, Ky. The previous record stage of 36.3 feet in 1912 was accepted by the people in the community as the worst flood on record. Downstream from Hazard on the North Fork at Jackson, Ky., a cutoff completed during the past summer, is believed to have reduced the flooding in the Jackson area. Severe flooding occurred on the Middle and South Forks, exceeding most previous floods according to recollection of old time residents. At Booneville, Ky., on the South Fork, water overtopped the U.S. Geological Survey recorder house by about 2 feet. The North Fork below Jackson, Ky., did not reach record flooding as was also true of the main stem of the Kentucky. Severe overflow occurred in the Beattyville, Ky., area which is located near the junction of the North, Middle and South Forks. Heaviest damage in the area was the devastation at Hazard where preliminary damage estimates vary between 20 and 40 million dollars. Two people were drowned and six others lost their lives directly or indirectly because of the flood. Other heavily damaged areas on the North Fork were Whitesburg, Millstone and Neon, Ky. On the Middle Fork the principal town to suffer major damage was Hyden, Ky.; on the South Fork, Oneida and Booneville, Ky. Tabulated below are reports of unofficial rainfall derived from surveys by the U.S. Corps of Engineers and U.S. Geological Survey. This survey covered only the Middle Fork Kentucky River drainage basin and actual figures are subject to later adjustment. All accumulations include precipitation from the beginning of the storm on January 27 through January 31. The amount of precipitation occurring after flood peaks on Thursday evening (January 31) was about 1.5 inches.

Location	Amount of Rainfall (Inches)	Container	Basin
1. 3.5 miles from Haskinston, Ky., towards Harlan, Ky., where Bad Creek empties into Middle Fork.	9.57	Wash tub	Upper portion Middle Fork
2. 1.5 miles upstream from Haskinston, Ky.	a/12.4 at least	lard can	Upper portion Middle Fork
3. 2 miles downstream from Hyden, Ky. Accumulation period Jan. 27 to Feb. 2.	10.1	wash tub	Upper portion Middle Fork
4. Bowlingtown, Ky., on Middle Fork Kentucky River	b/ 8.74	wash tub	Upper portion Middle Fork
5. 1/2 mile from center of town of Buckhorn. Accumulation period Jan. 27 to Feb. 2.	5.0	fruit juice can	Lower portion Middle Fork
6. Sebastians Branch, Ky.	3.68	-	Lower portion Middle Fork

a/ Some rain ran out of pail. Pail was level and filled to brim.
b/ Tub overflowed.

Due to extreme headwater concentration of excessive rainfall, record flooding did not occur along the main stem of the Kentucky River. At Lock 14, Heidelberg, Ky., the crest was 33.5 feet, 2.1 feet below the February 1939 flood. Along the North Fork from Jackson, Ky., to Lock 14 and below on the main Kentucky, advance warnings allowed evacuation of people and protection of movable property at a number of towns and other small settlements downstream to and including a small section of Frankfort, Ky.

Green River.--Rainfall from the storm on January 28 and 29, averaging a little over 3 inches, produced the second rise of the month on the Green River and resulted in flood stages by the close of the month. Crests on this rise produced stages well above flood stage on the Green River and 14 feet above flood stage on the Barren River at Bowling Green, Ky. There was local damage, particularly along the smaller streams in the area above Bowling Green, Ky.

Cumberland River.--The heavy rains in the Cumberland Basin during the period January 21 to February 2, 1957, caused the worst flood of record in headwater areas at Corbin and Cumberland, Ky. Severe flooding was experienced in the Harlan, Williamsburg and Barbourville, Ky., area. About 500 families required evacuation in Barbourville and a large percent of the residential area was affected. At Williamsburg, the Cumberland River crested at 33.77 feet on January 31 just slightly below the 34.0 feet registered in the January 10, 1946, flood and 1.2 feet under the alltime high of 35.0 feet set in the March flood of 1886. Flooding over the Middle and Lower reaches of the Cumberland river was mostly minor to light.

Tennessee River Basin.--Heavy rainfall during the last 10 days of January and the first week of February caused floods over several of the uncontrolled tributaries of the Tennessee River and high flows in the main river. Damage was severe on the Clinch River in the vicinity of Clinchport, Va., where the worst flood since 1864 was experienced, with many homes suffering heavy damage. At Big Stone Gap, Va., the flood on the Powell River was the worst since January 1918. The Pigeon River rose to within one-half foot of the record stage of 1928 at Sevierville, Tenn., and a major portion of the town was flooded on January 31 and February 1, 1957. Heavy damages were sustained in this community. Nominal damages occurred at Chattanooga, Tenn., where the main Tennessee River was 2 feet above flood stage and remained so for several days. Damages elsewhere along the main river were negligible. Less damaging floods occurred at Fayetteville, Tenn., on the Elk River, Shelbyville and Columbia, Tenn., on the Duck River, and Knoxville, Tenn., on First Creek.

Ohio River.--Flooding was limited to minor overflow in lowlands along the lower Ohio River downstream from Evansville, Ind., and did not begin until the first week in February.

Precipitation values for the period of flooding are tabulated in Table 2 of this report. Complete data are published in the monthly Climatological Data by States and may be obtained on request from the Superintendent of Documents, Government Printing Office, Washington, D.C. That publication gives the location of the stations. Mass accumulation of rainfall from several representative recording gages are presented in figure 2. These data are provisional. Final figures will be published later in Hourly Precipitation Data.

Table 1, Representative Crest Stages of Jan.-Feb. 1957 Flood.

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

40	18	21,677	-57.3			
30	13	23,530	-57.7			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

30	15	23,805	-58.2			
20	6	26,404	-59.7			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

30-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

10						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Note: All observations scheduled at 0300, G.C.T. except at Mazatlan, Merida and Veracruz, where they are taken near 0200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

Solar radiation intensities, tabulated in langleys per minute on a surface normal to the direction of the sun.

Langley is the unit used to denote one gram calorie per dquare centimeter. An explanation of the formula used in computing the air mass values for each station listed in Table 30 appears in Monthly Weather Review, volume 75, No. 3, March 1947, p. 47.

SOLAR RADIATION DATA

JANUARY 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

JANUARY 1957

Date	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys	-11	6	33	*52	*9	*29	100	*69	*-26	**	**	77	65	55	*3	29	-5	41	44	89	*117	*77	*40	*63	*4	*62	*10	105	*84	*26	*10	43

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

** Radiometer inoperative.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of alfalfa. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

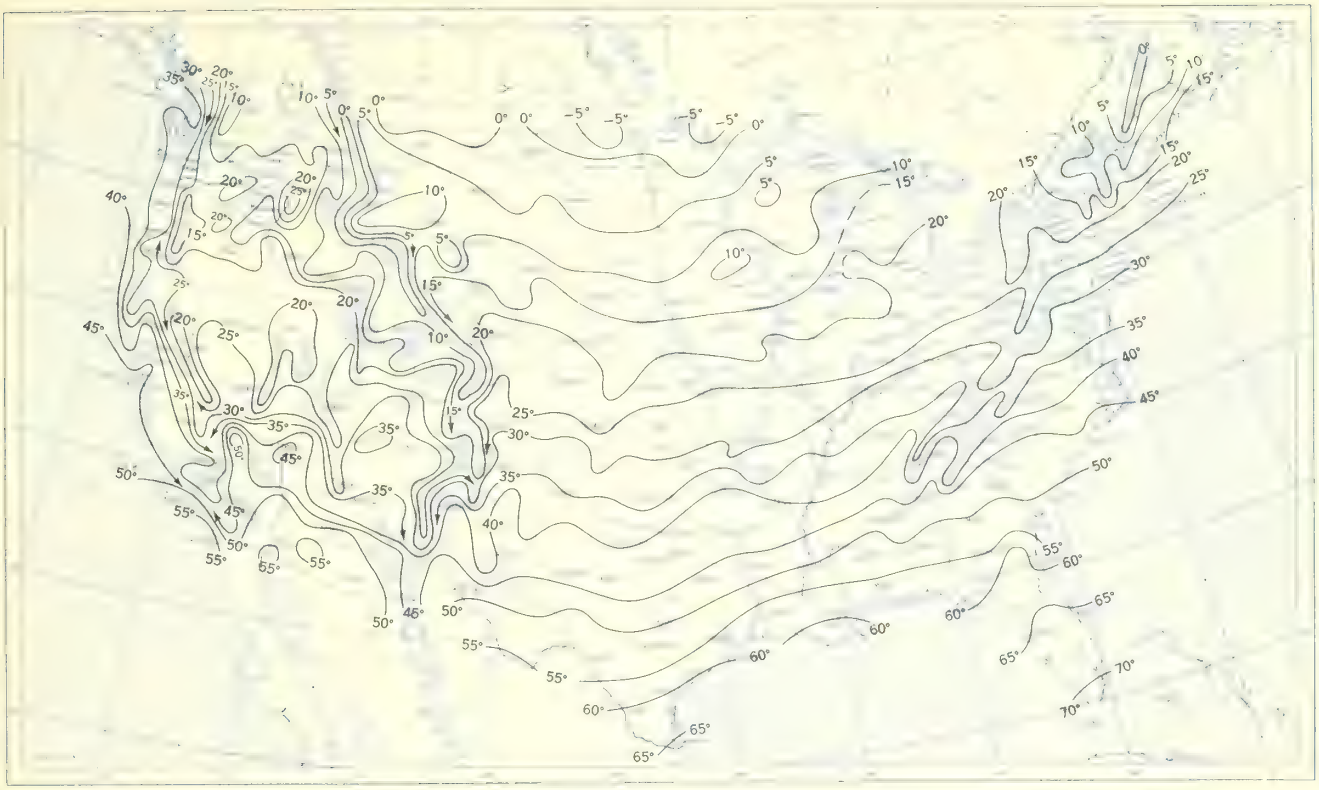
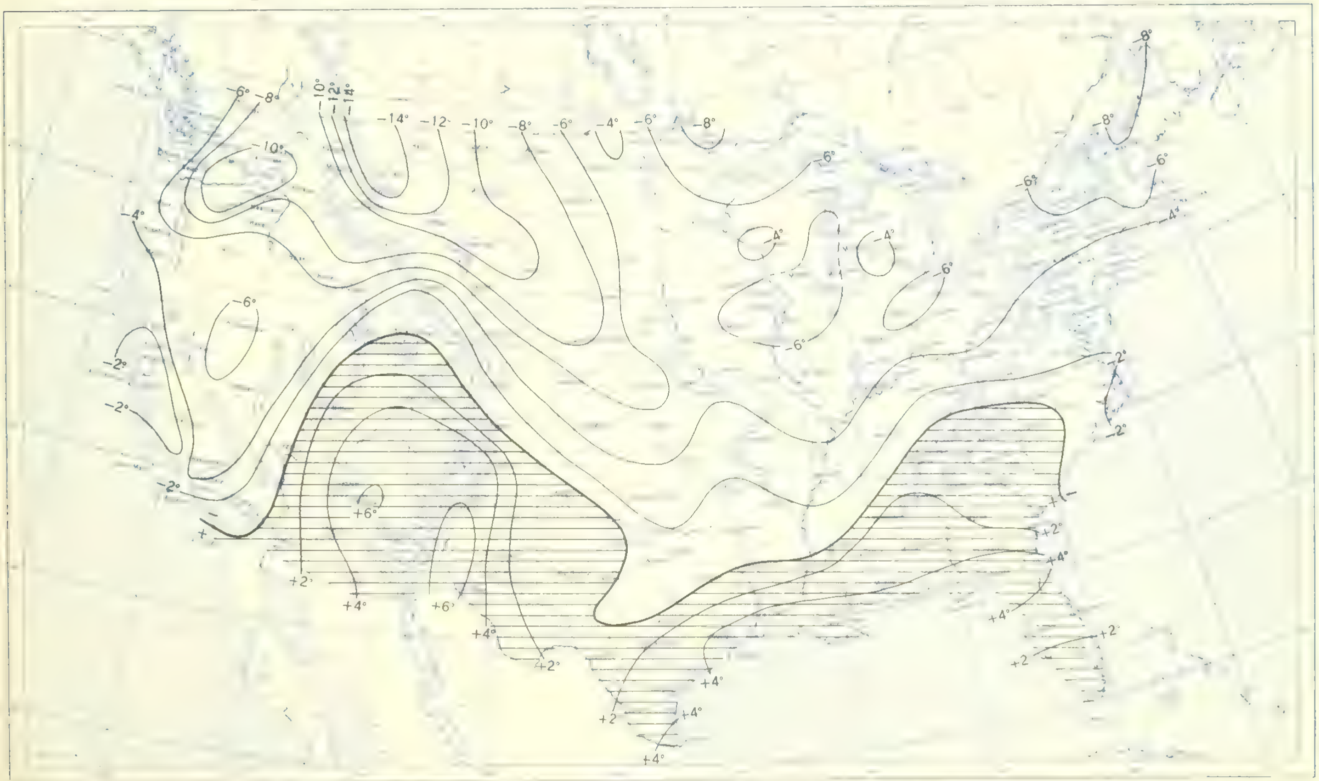
NWRC, Asheville, N. C. --- 3/4/57 --- 1900

Chart I. A. Average Temperature (°F.) at Surface, January 1957.

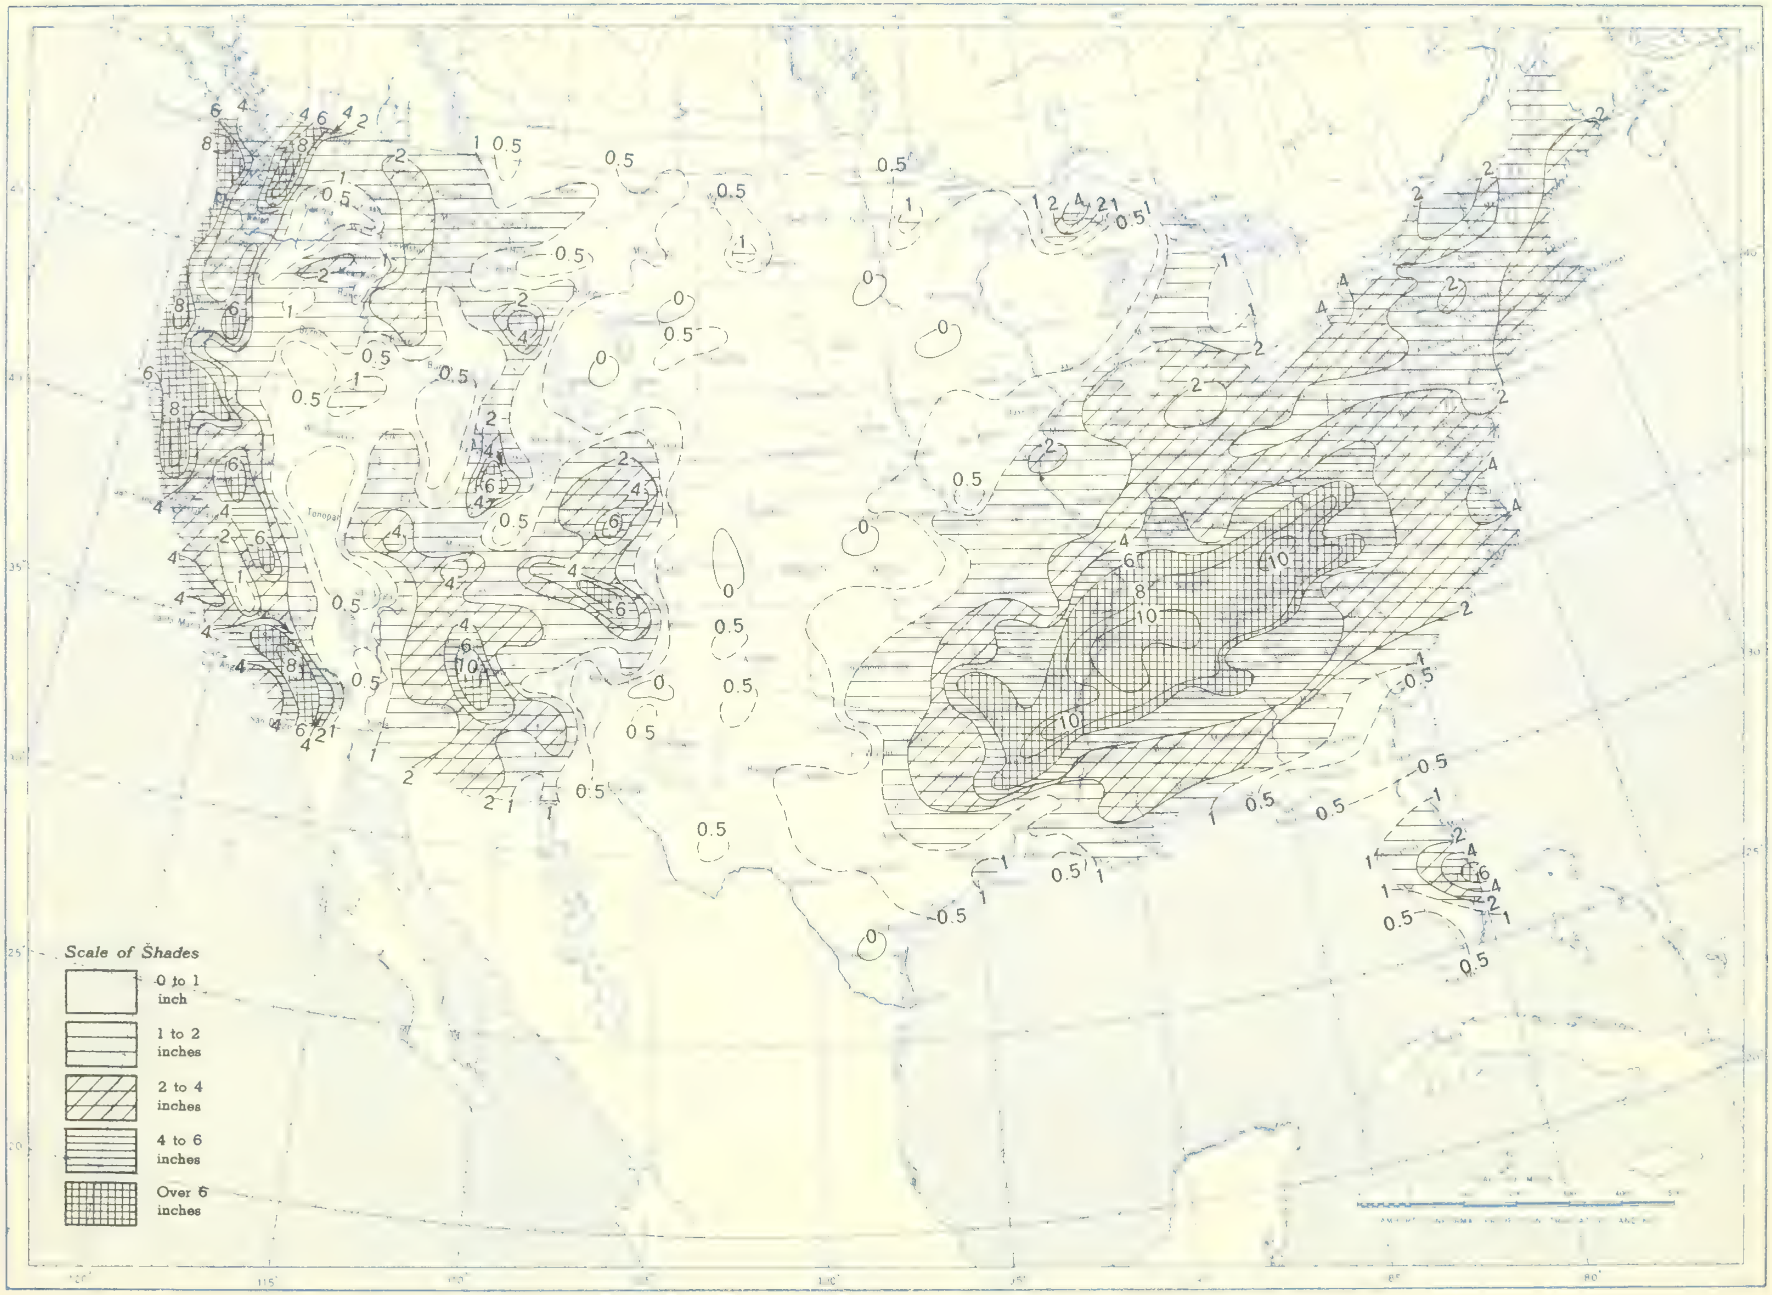


B. Departure of Average Temperature from Normal (°F.), January 1957.



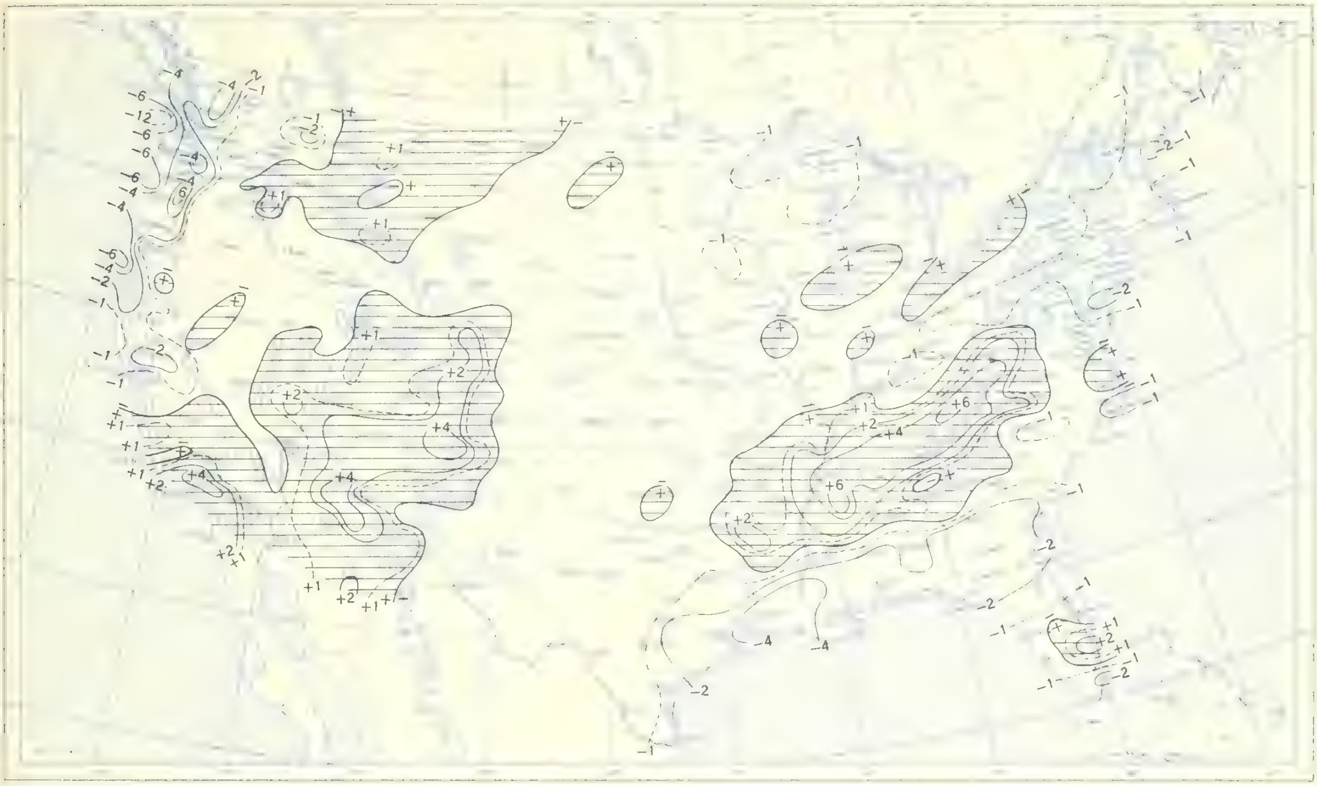
A. Based on reports from 800 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Normal average monthly temperatures are computed for Weather Bureau stations having at least 10 years of record.

Chart II. Total Precipitation (Inches), January 1957.

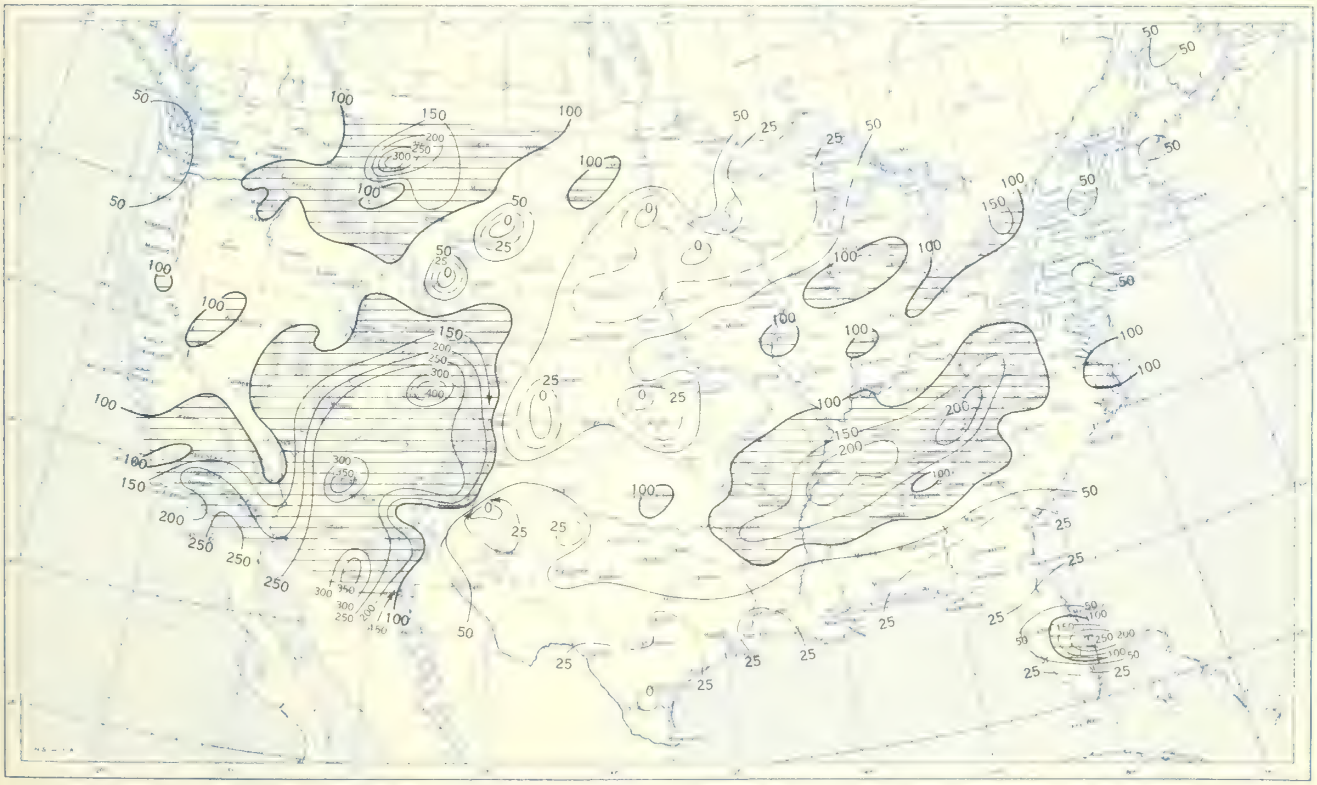


Based on daily precipitation records at 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), January 1957.

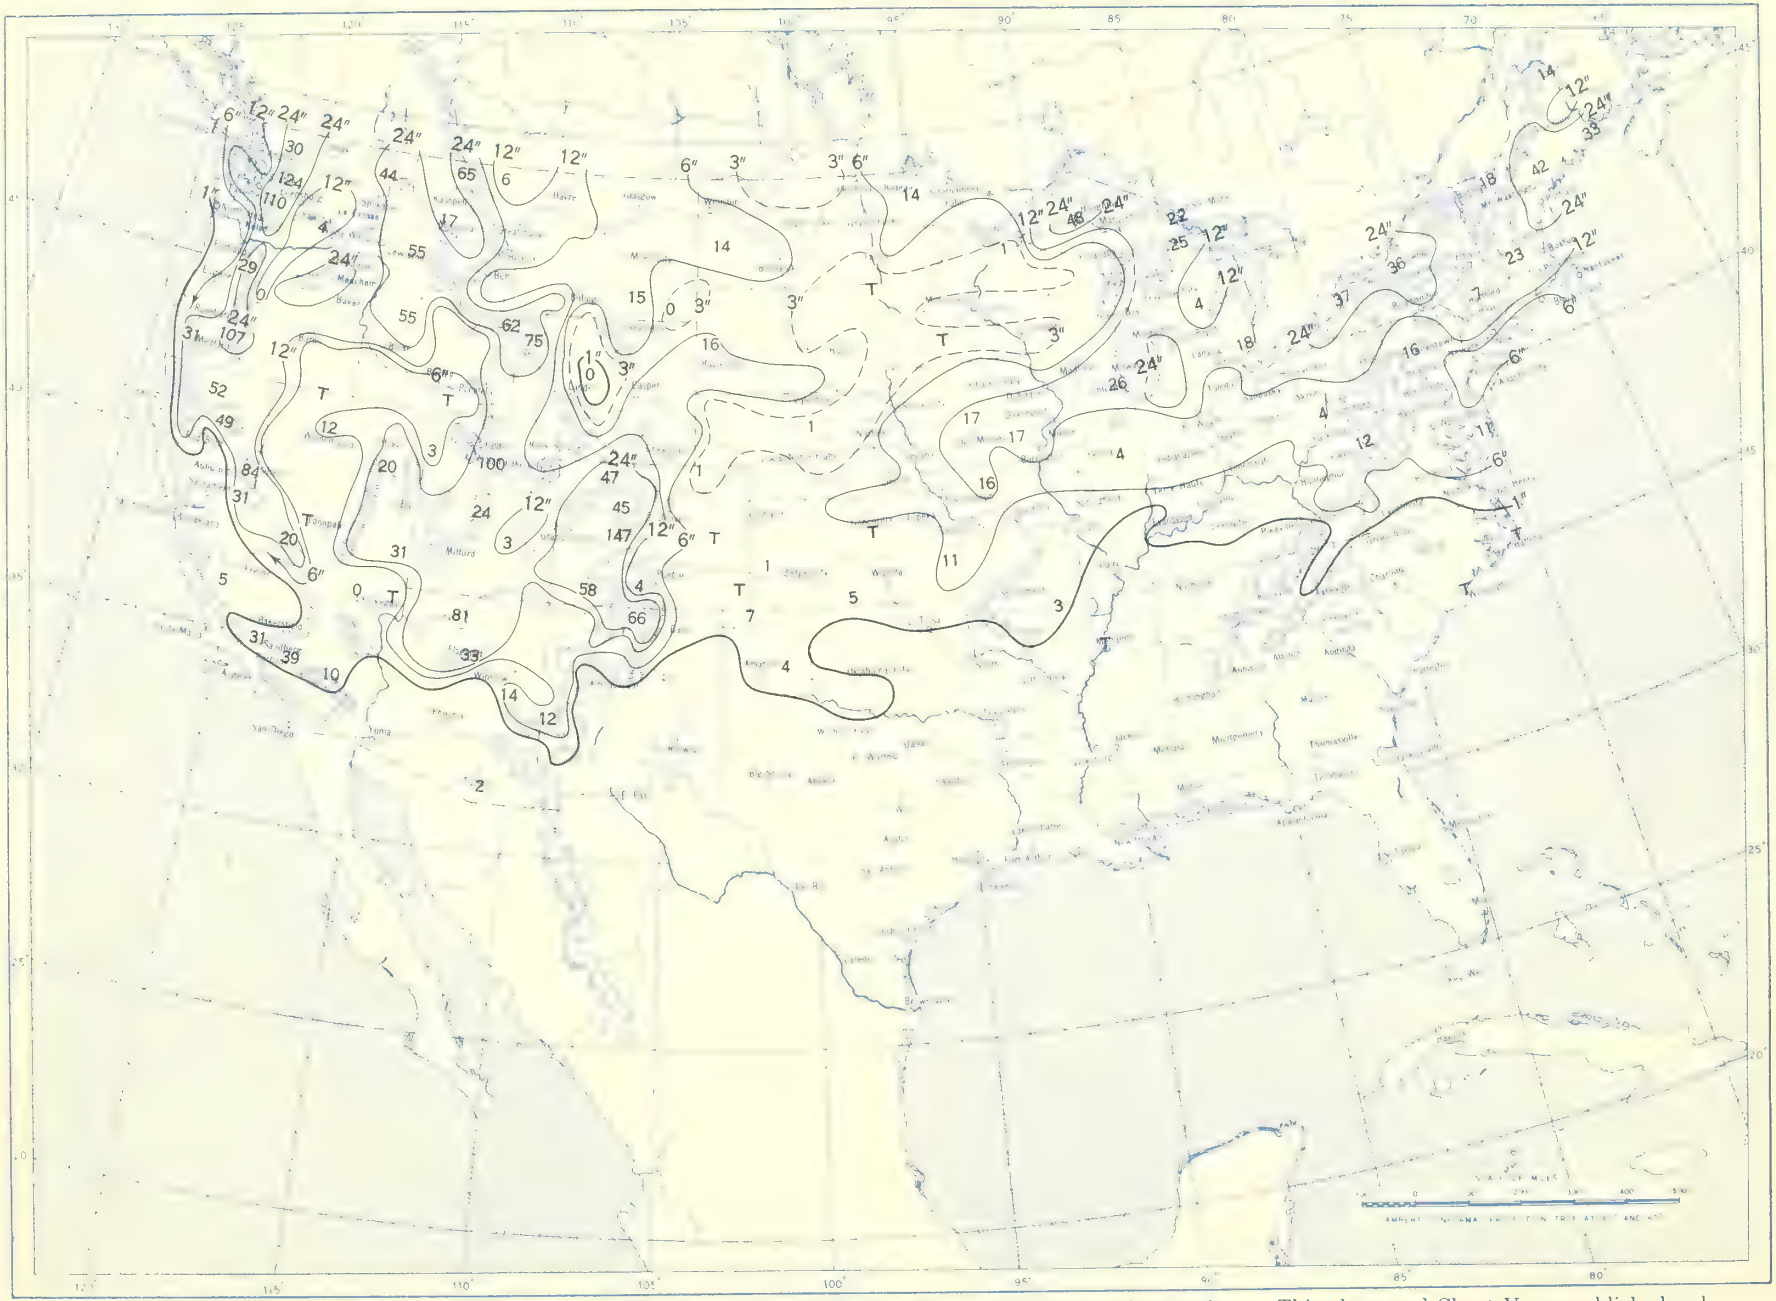


B. Percentage of Normal Precipitation, January 1957.



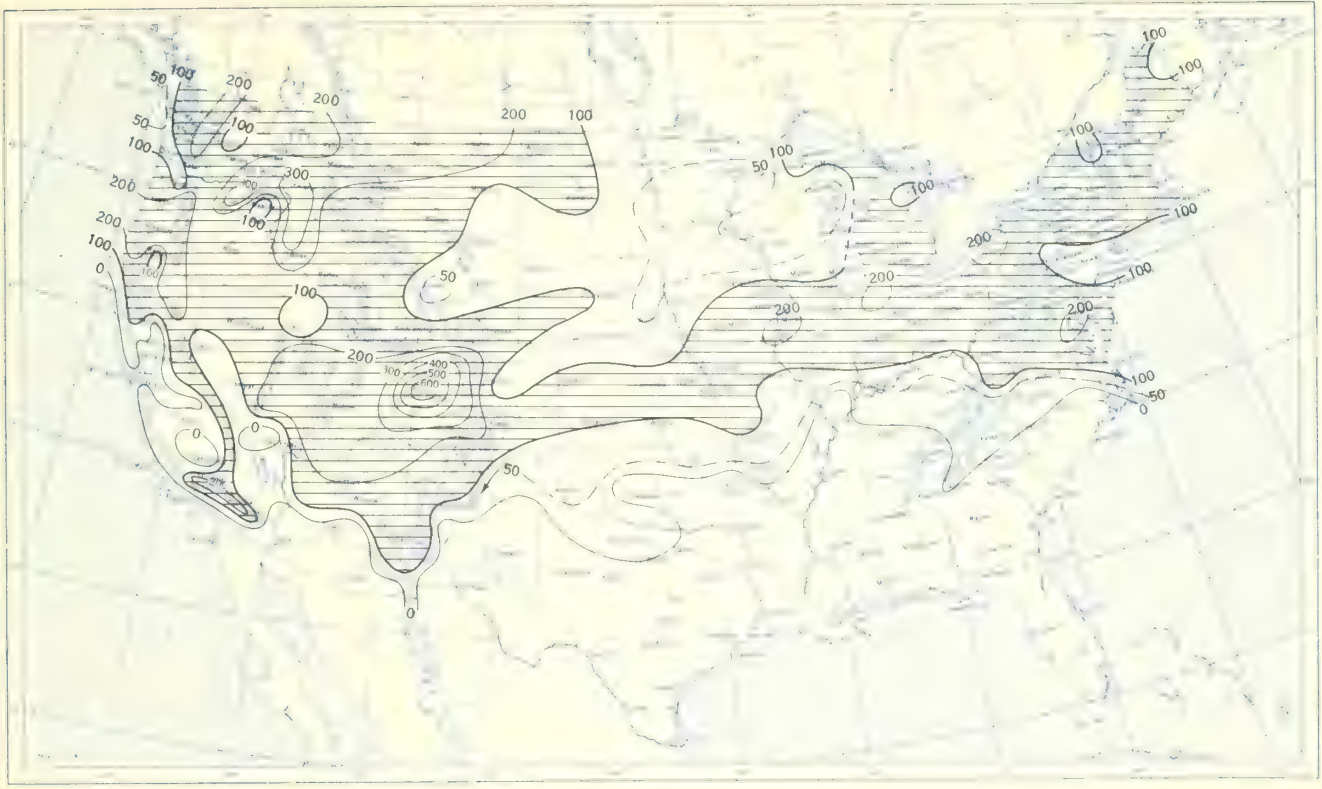
Normal monthly precipitation amounts are computed for stations having at least 10 years of record.

Chart IV. Total Snowfall (Inches), January 1957.

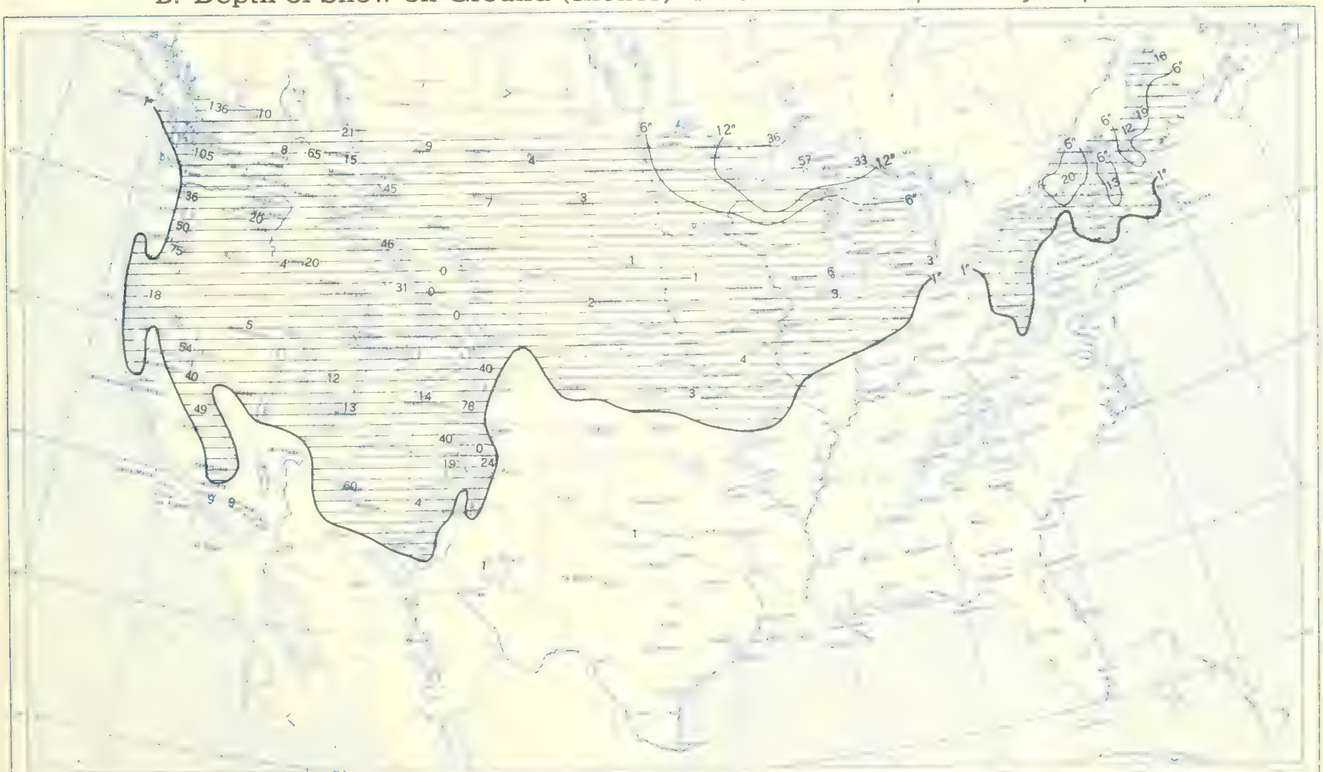


This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, January 1957.

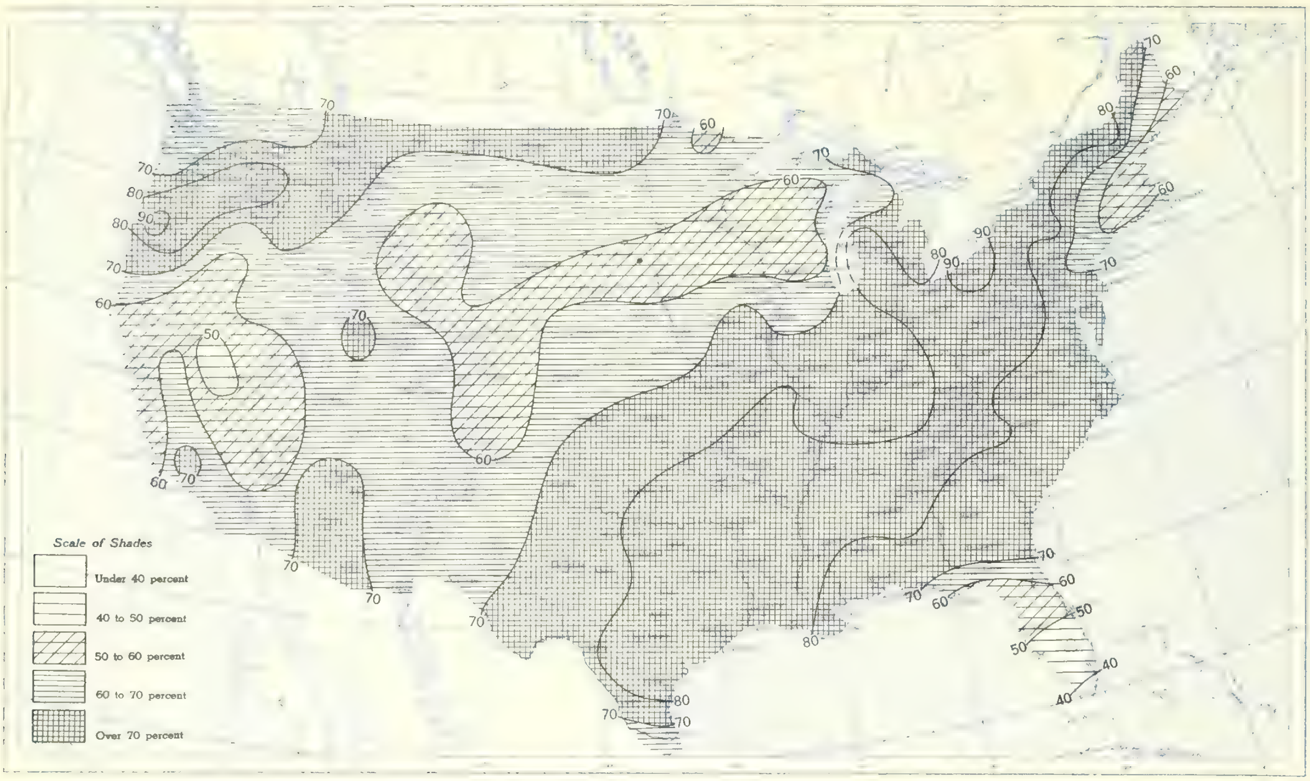


B. Depth of Snow on Ground (Inches). 7:30 a. m. E. S. T., January 29, 1957.

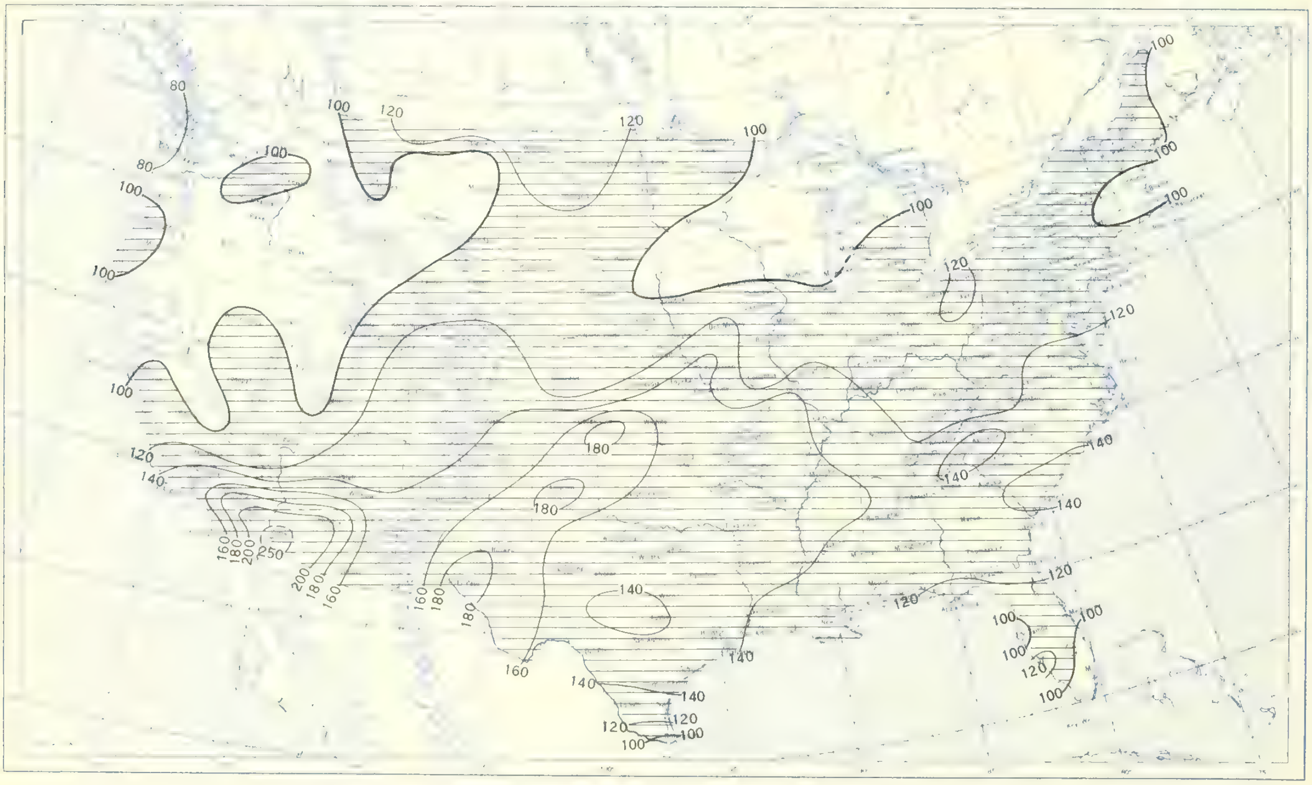


A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:30 a. m. E. S. T., of the Tuesday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, January 1957.

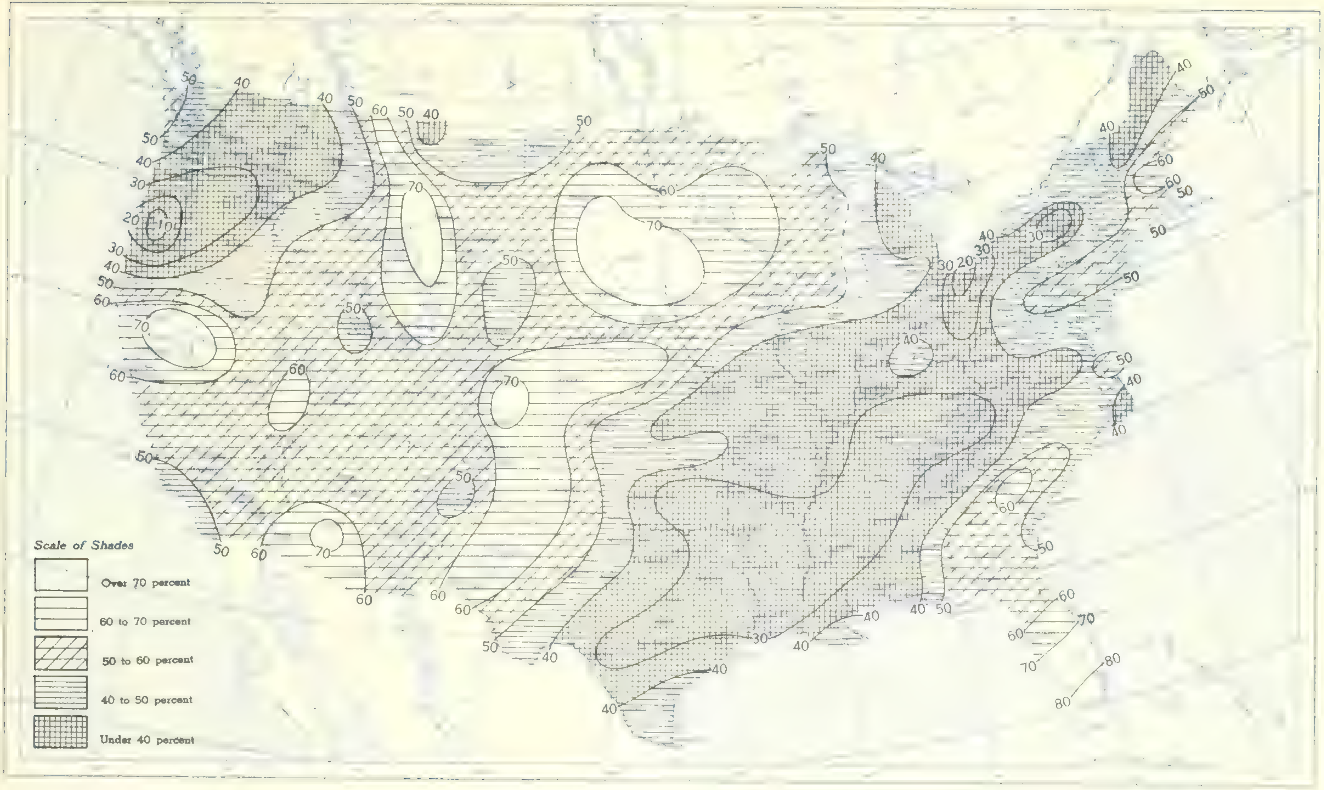


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, January 1957.

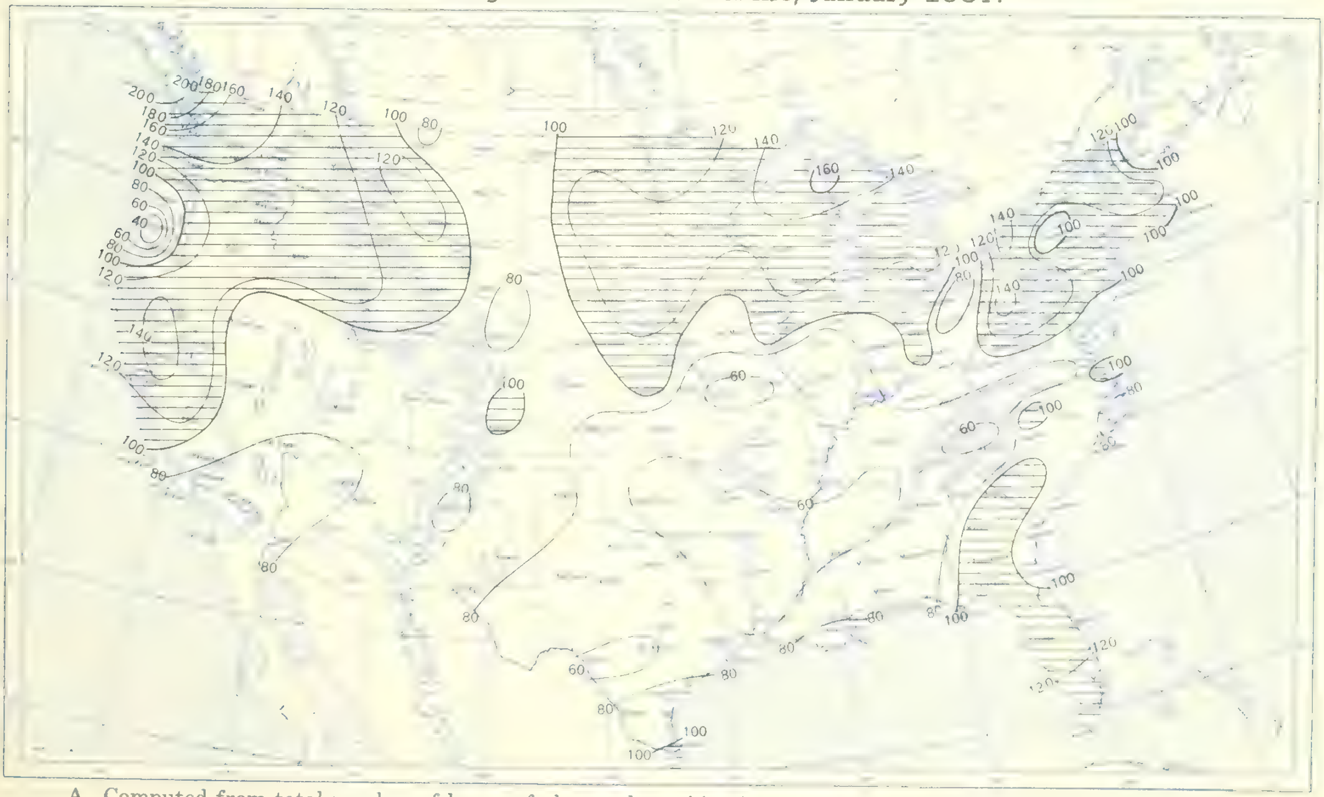


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, January 1957.



B. Percentage of Normal Sunshine, January 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, January 1957. Inset: Percentage of Mean Daily Solar Radiation, January 1957. (Mean based on period 1951-55.)

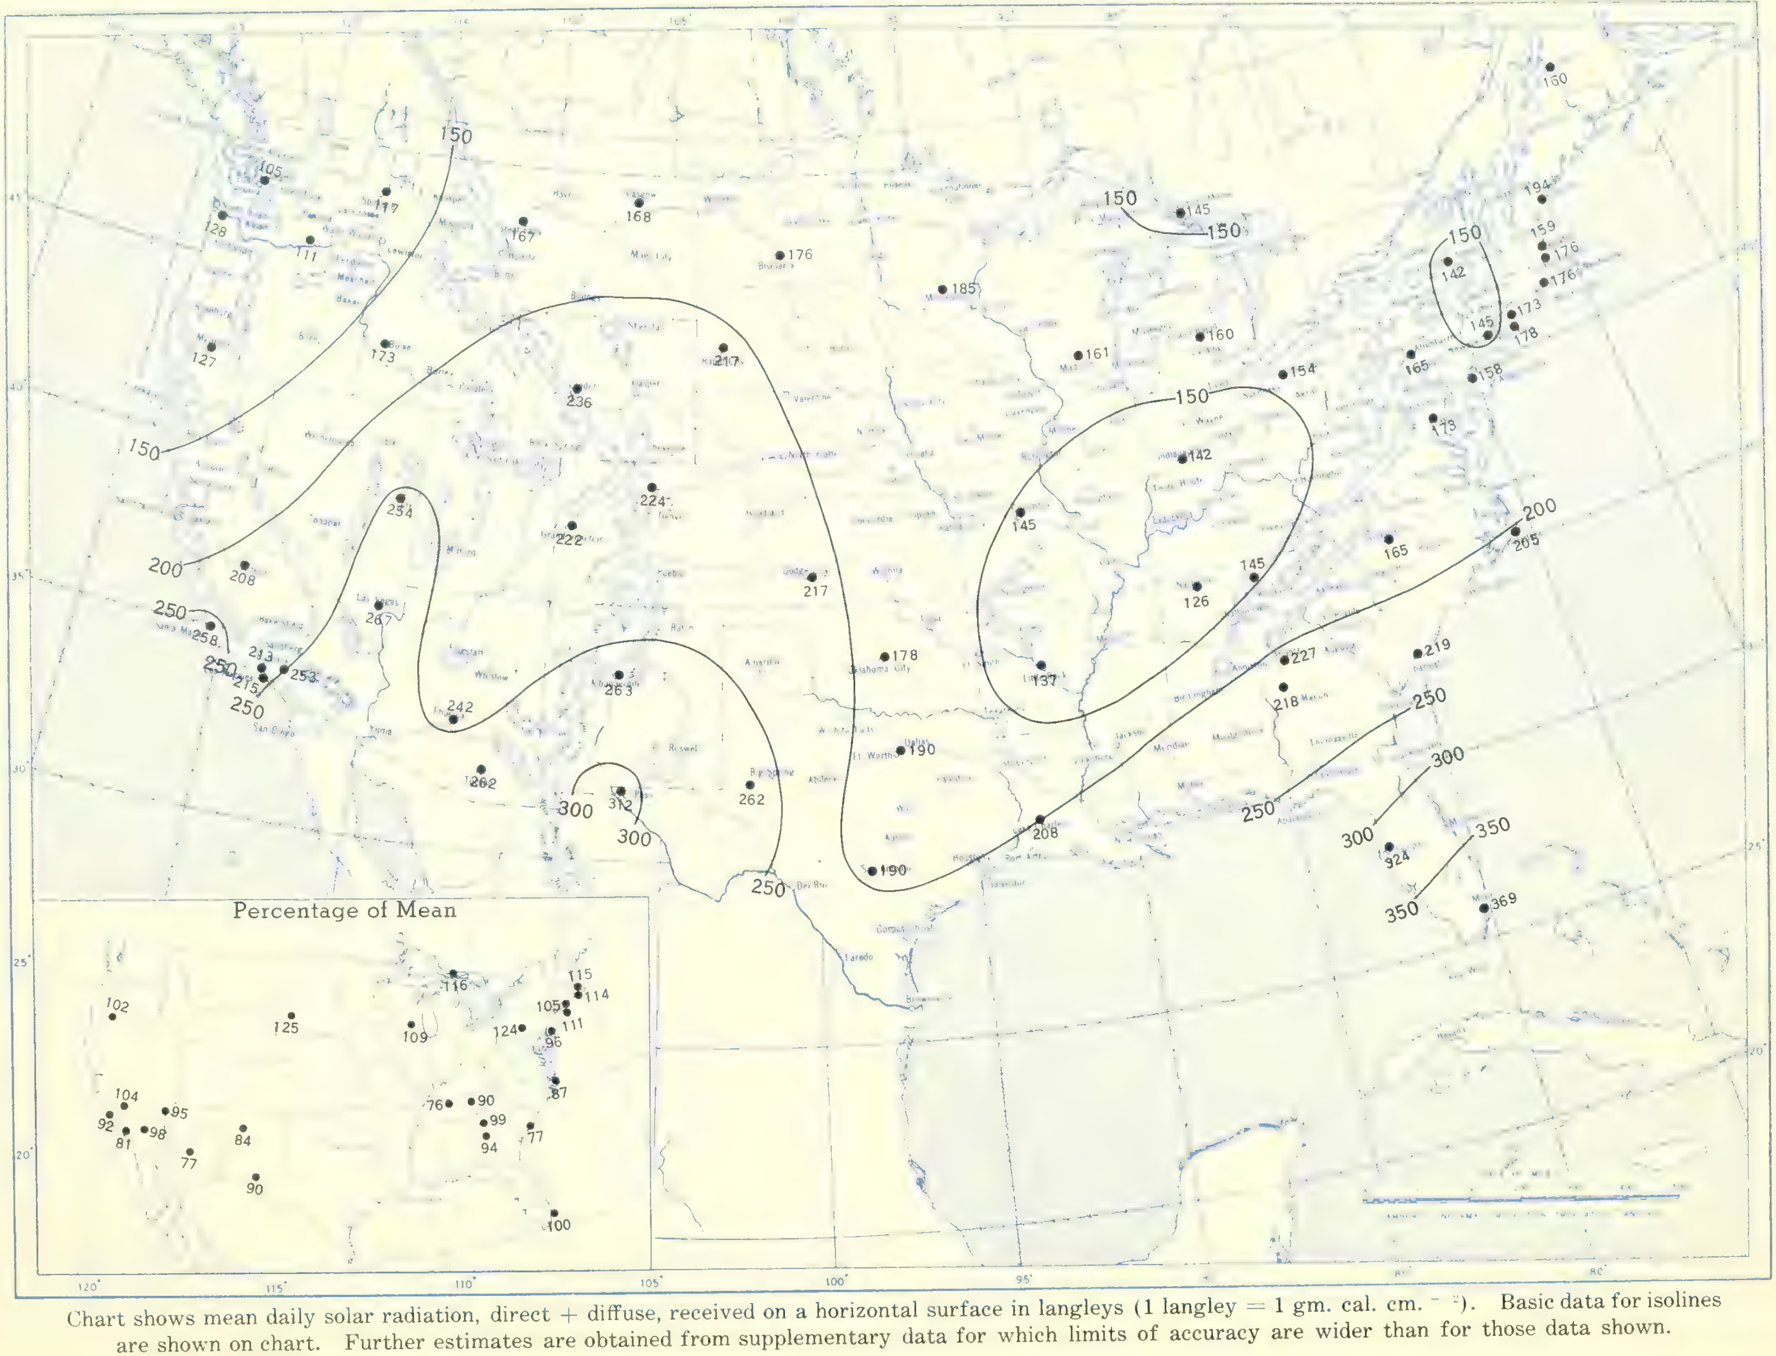


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.⁻²). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown.

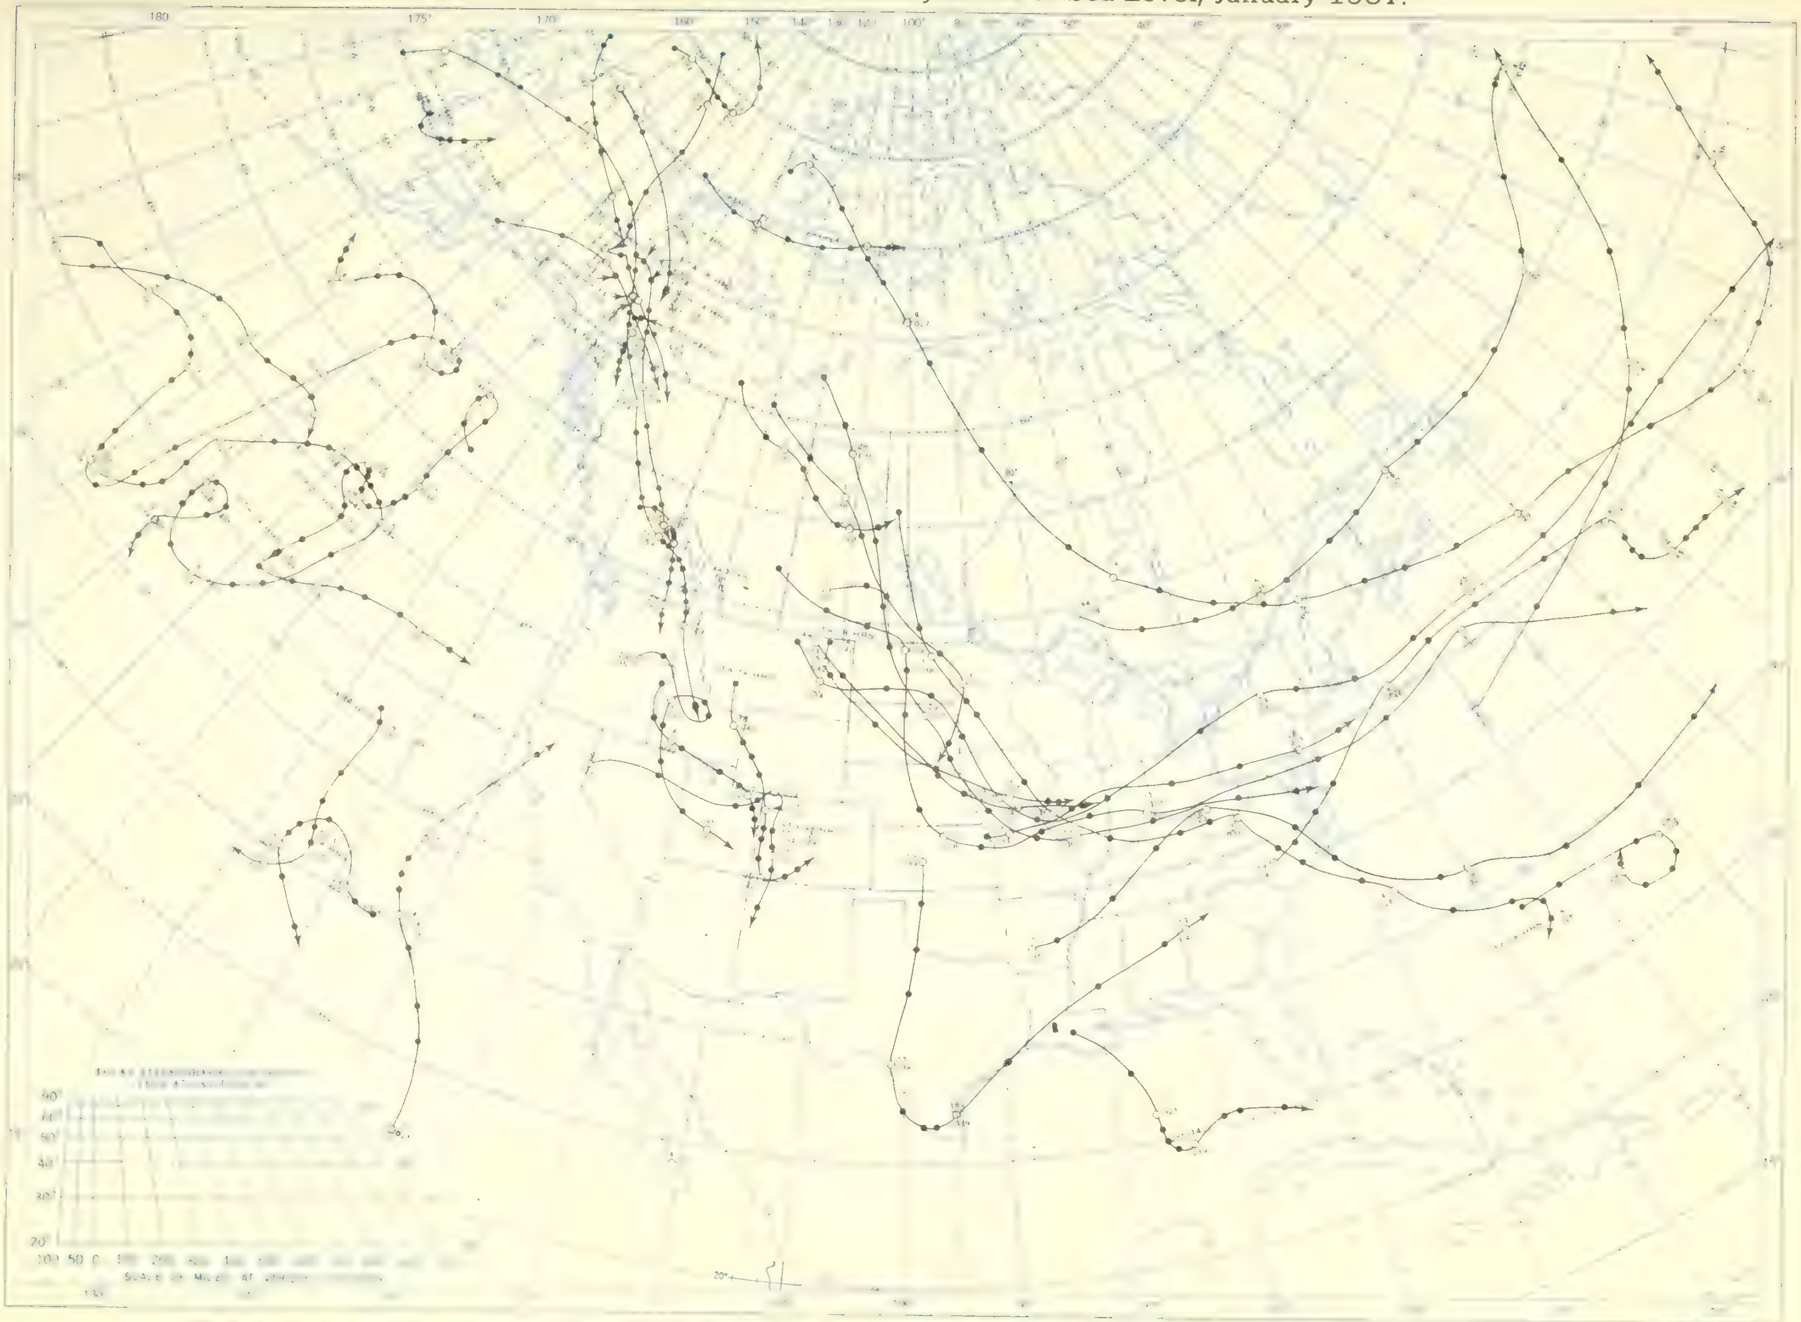
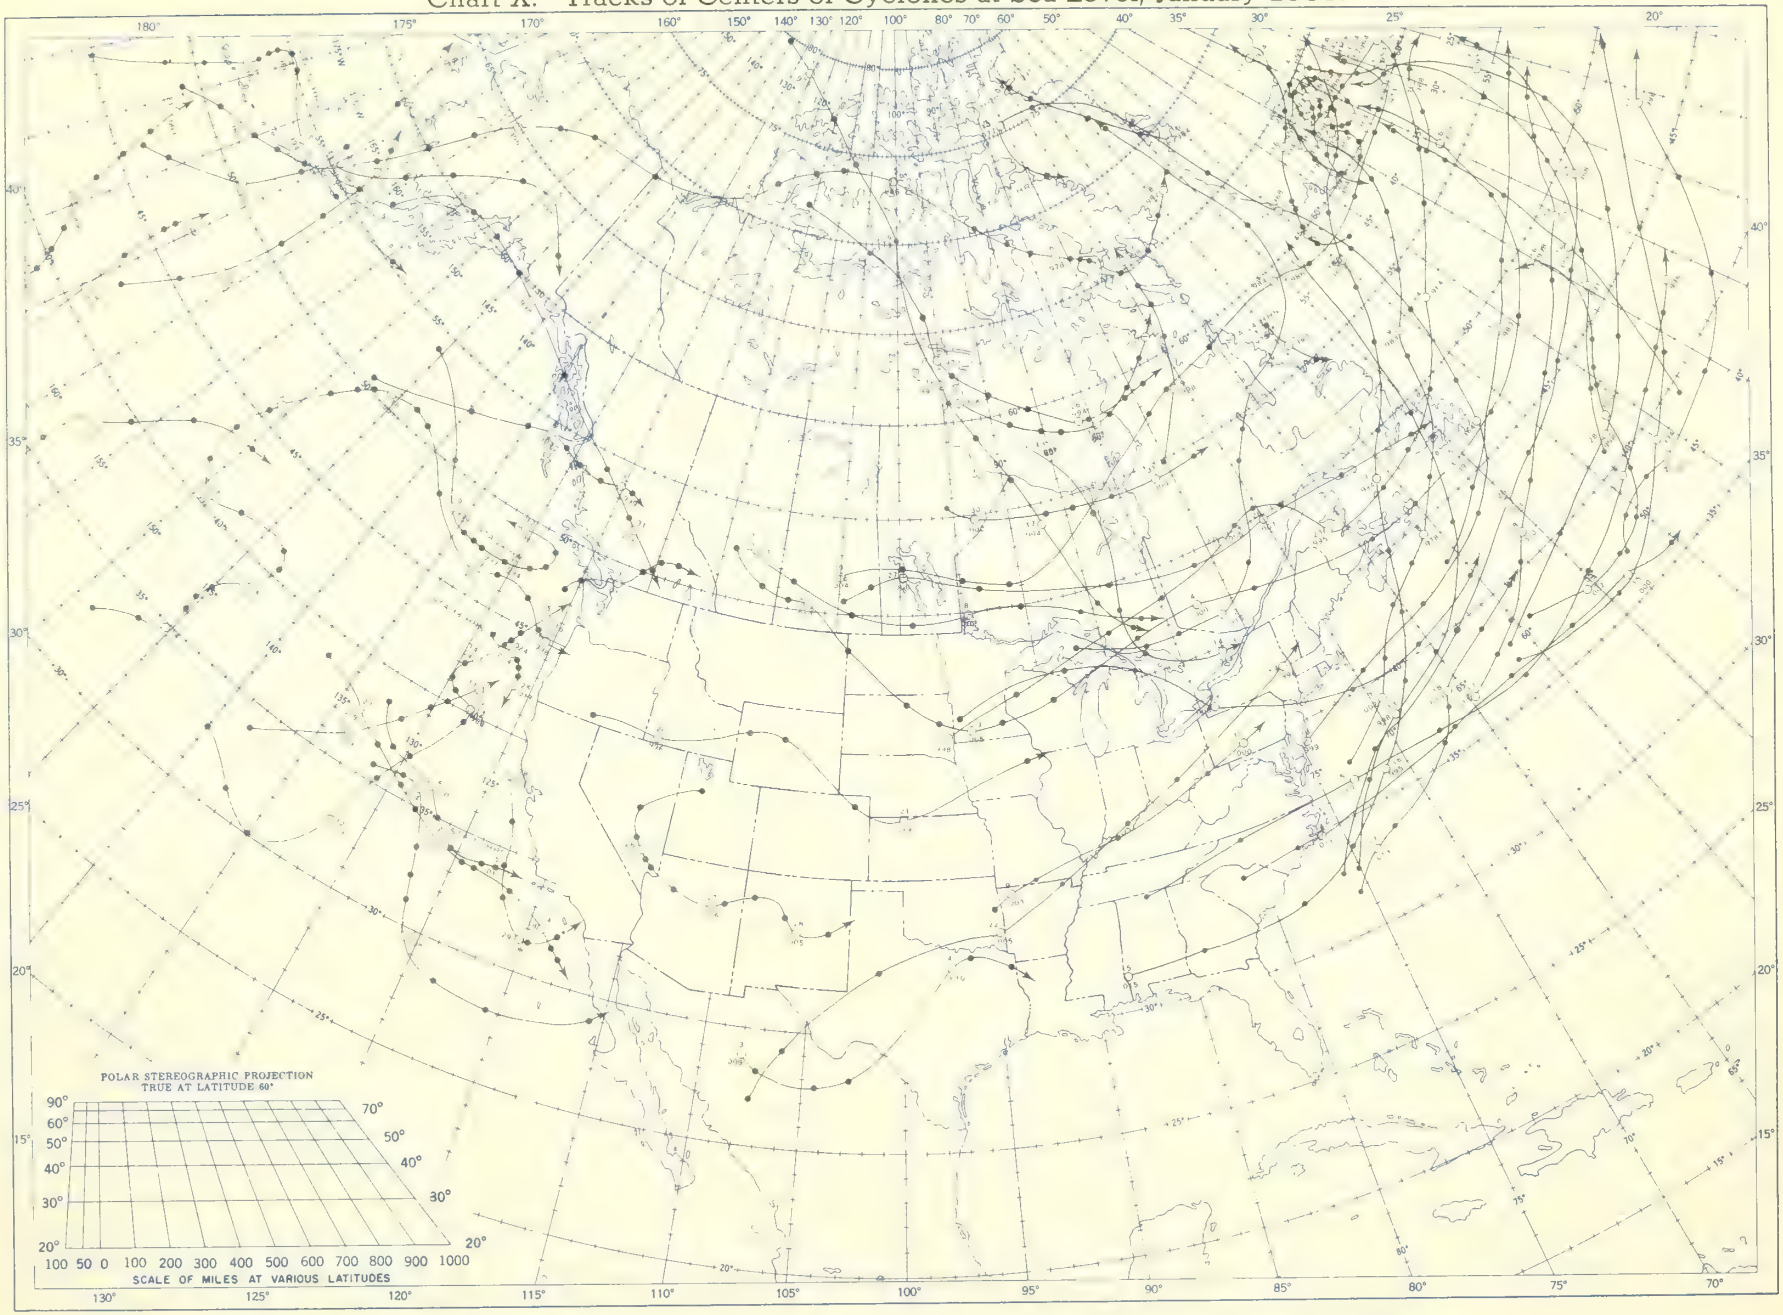
Chart IX. Tracks of Centers of Anticyclones at Sea Level, January 1957.



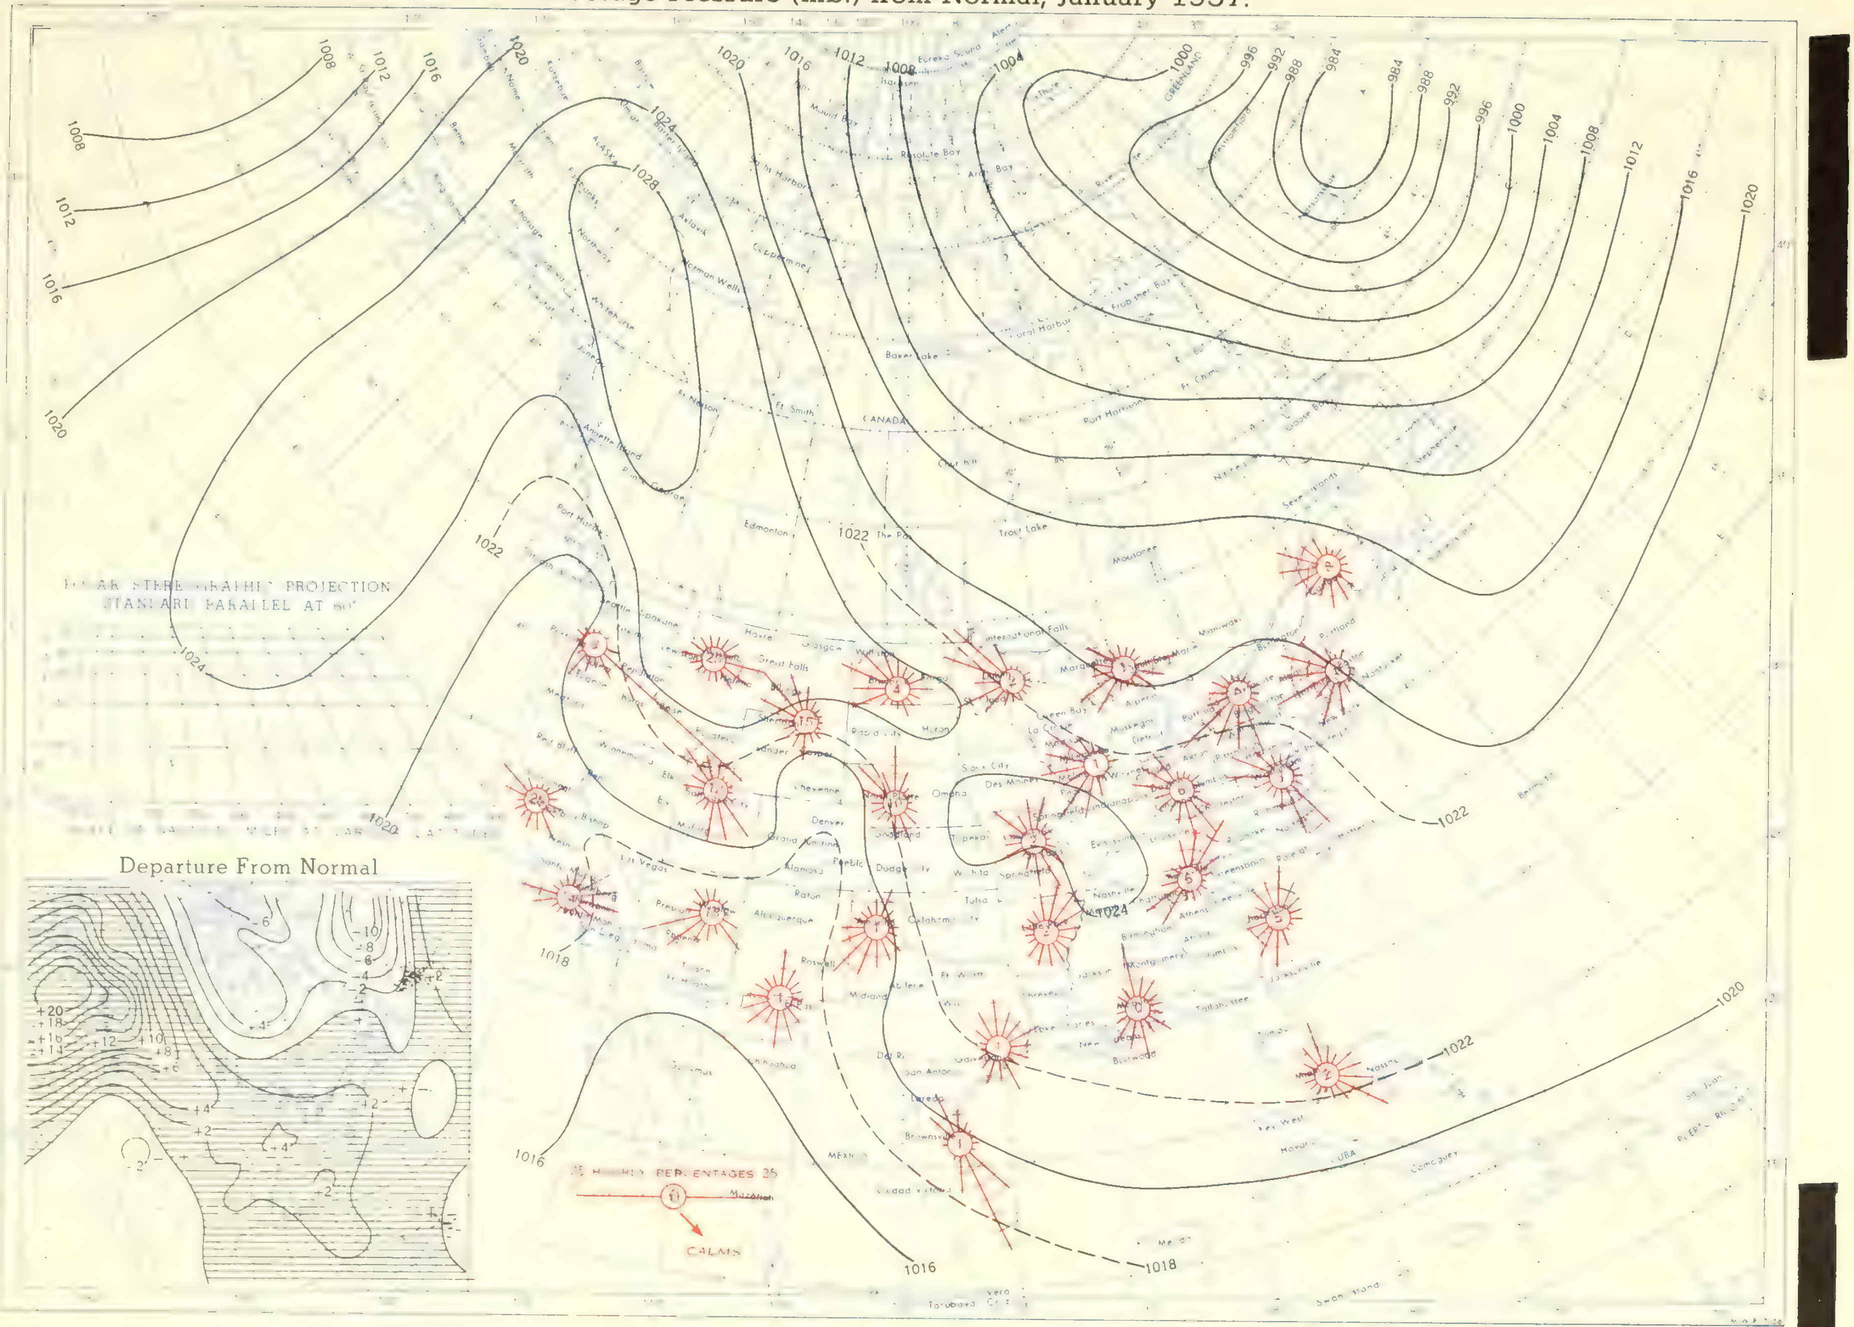
Circle indicates position of center at 7:30 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, January 1957.



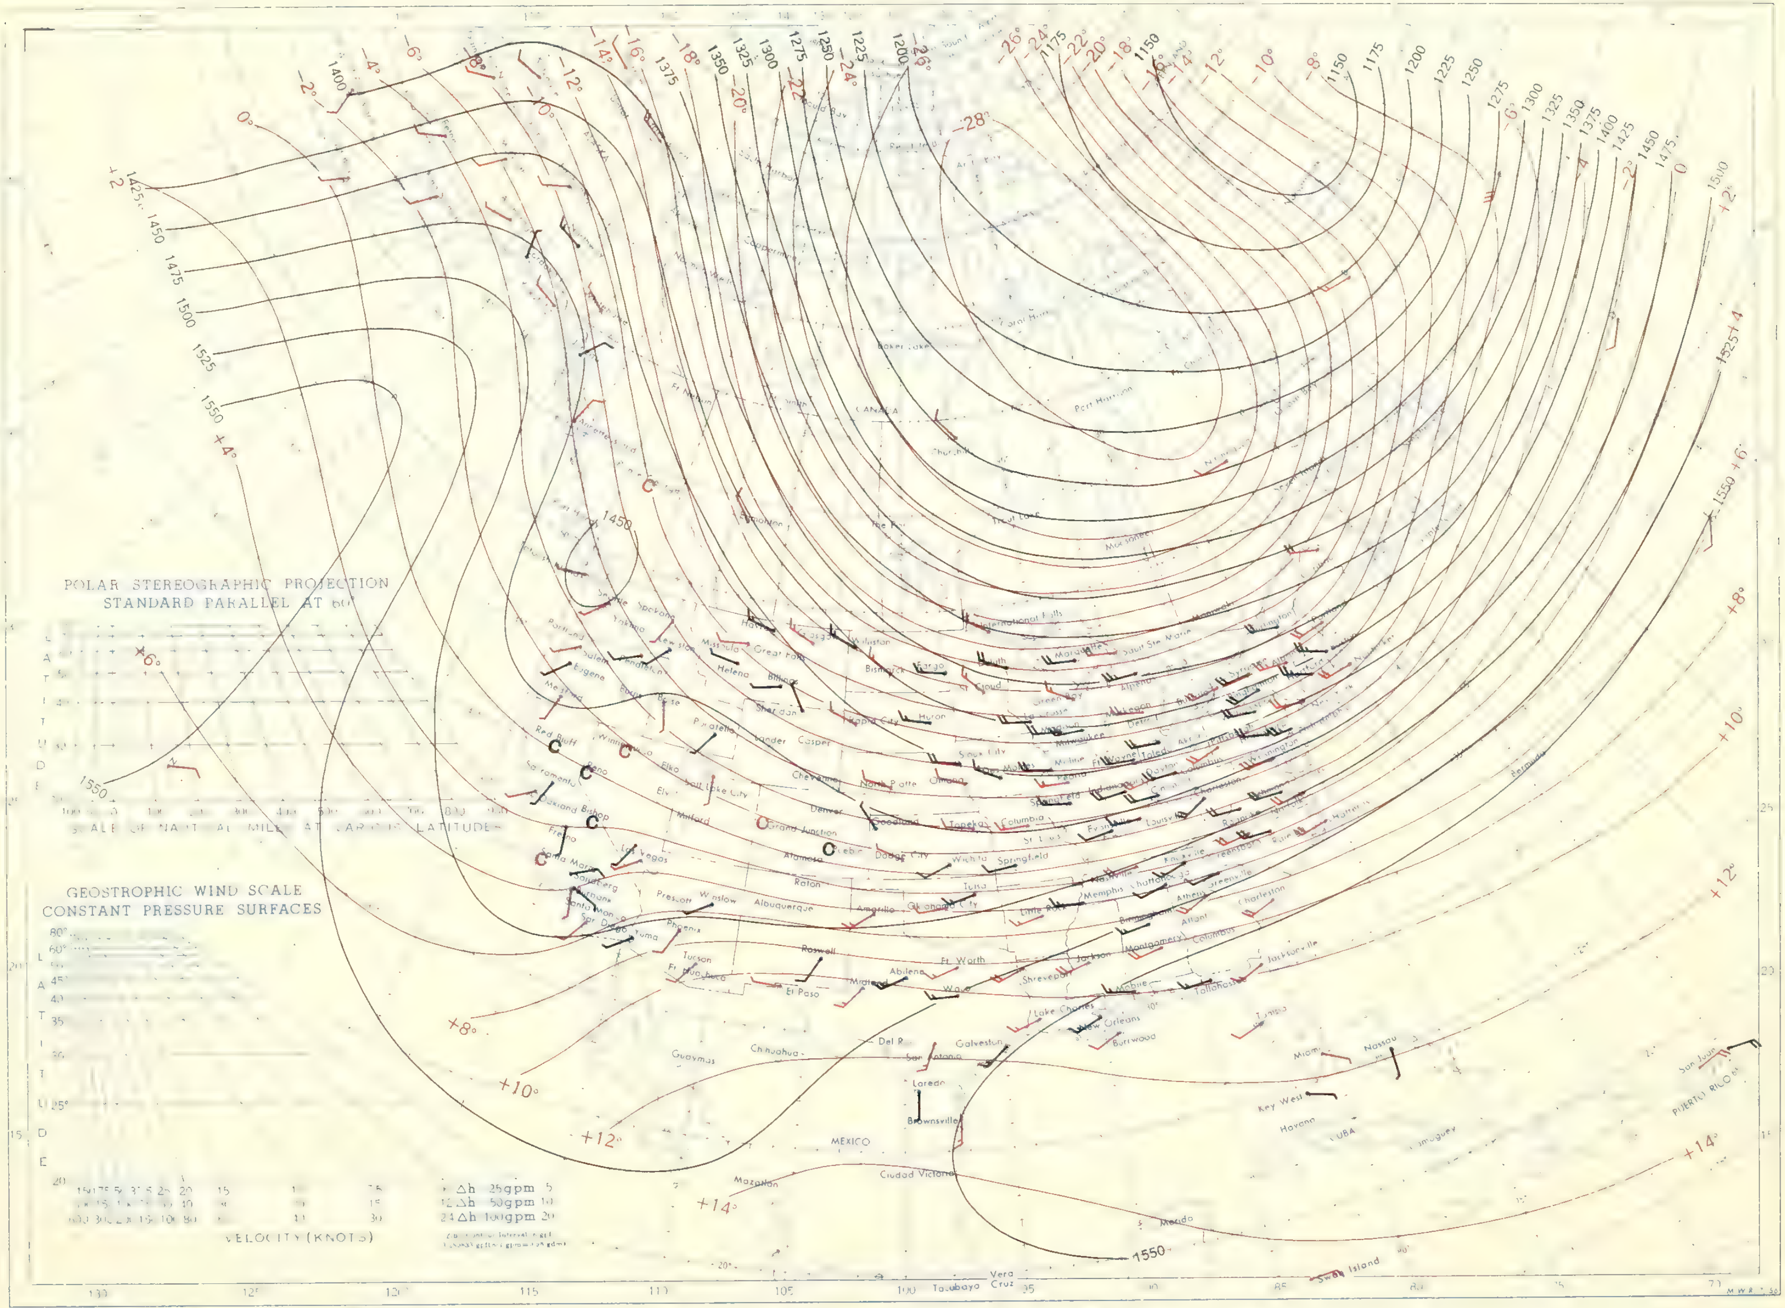
Circle indicates position of center at 7:30 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, January 1957. Inset: Departure of Average Pressure (mb.) from Normal, January 1957.



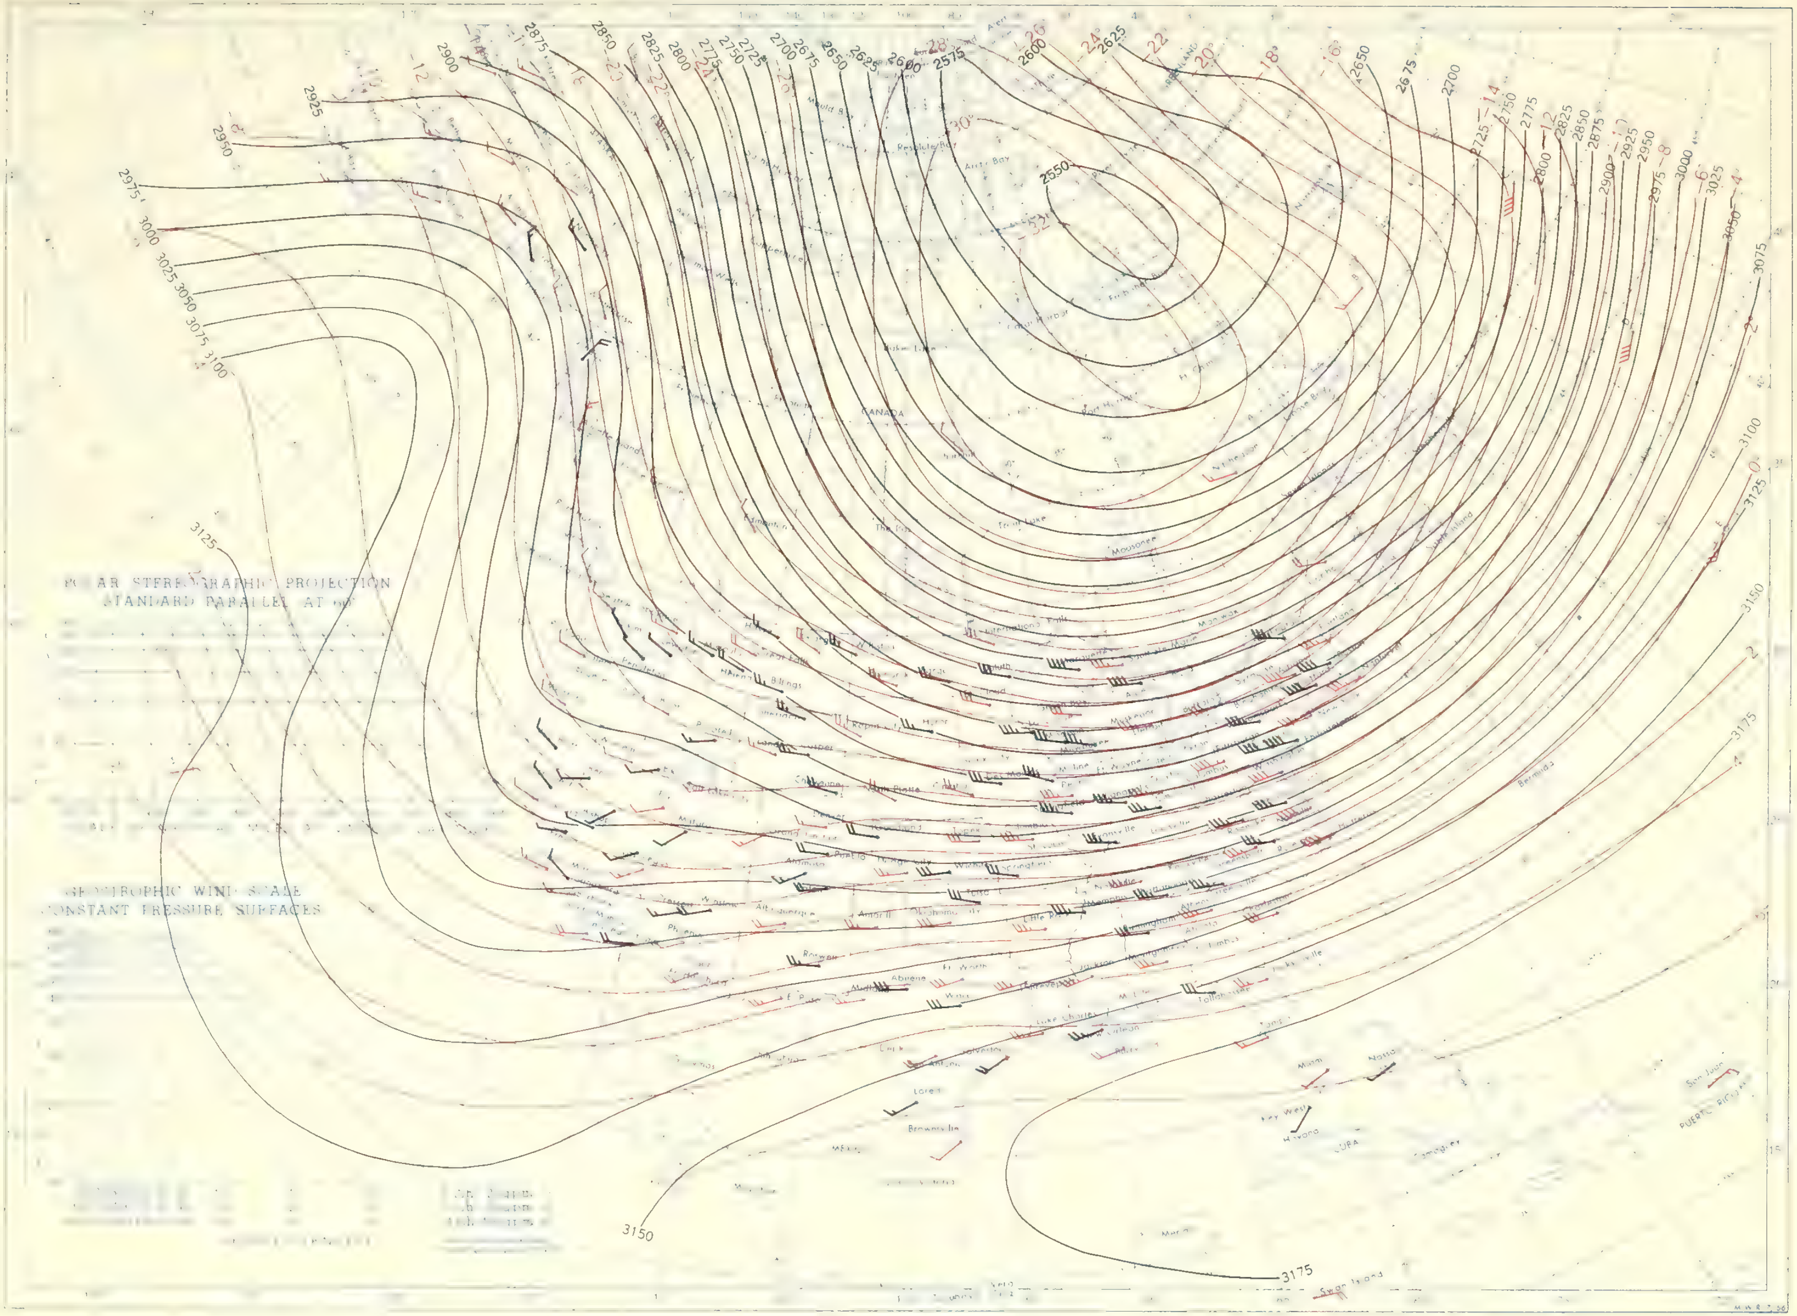
Average sea level pressures are obtained from the averages of the 7:30 a. m. and 7:30 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



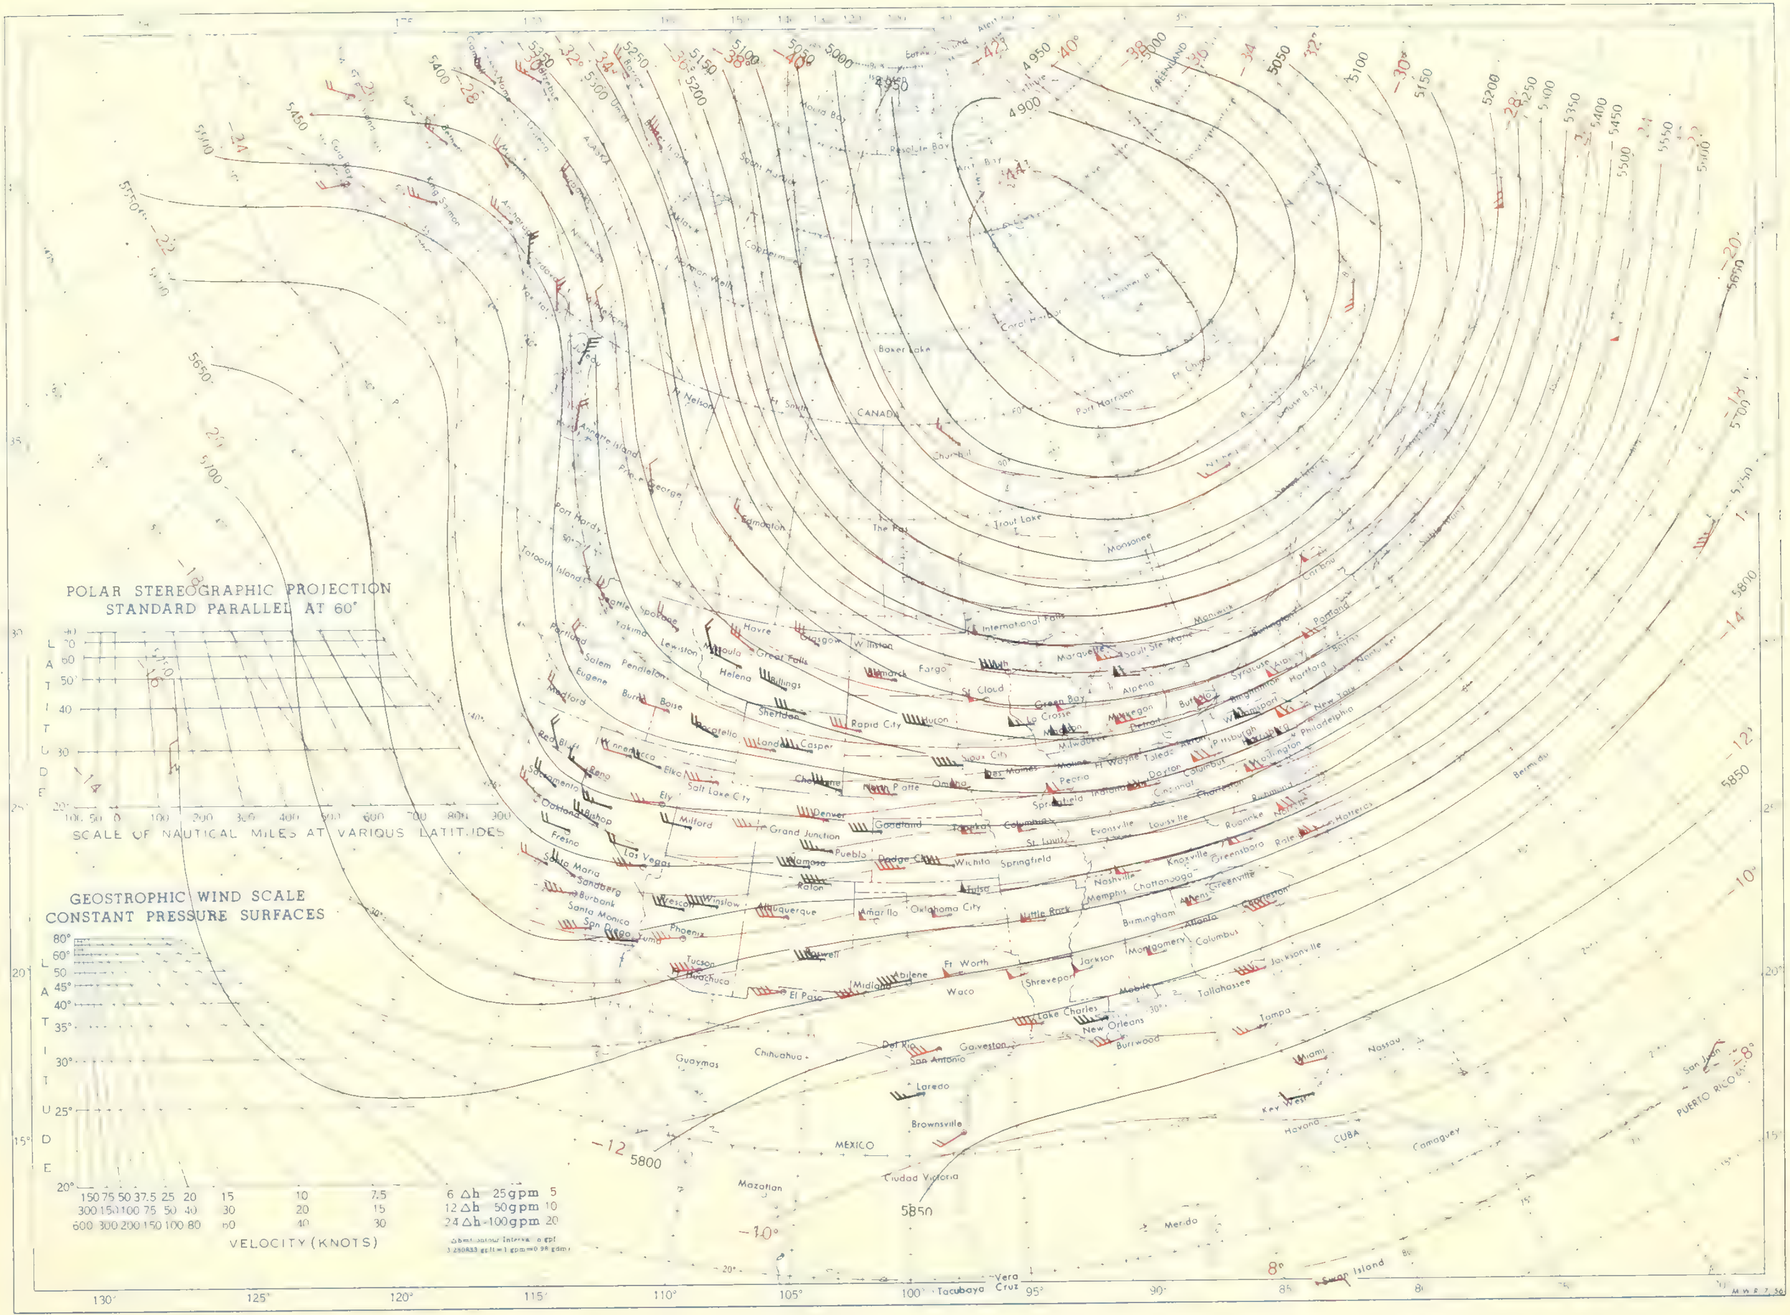
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Winds shown in red are based on rawins taken at the indicated pressure surface and time. Those in black are based on pibals taken at 2100 GMT and are for the nearest standard height level.

Chart XIII. 700-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



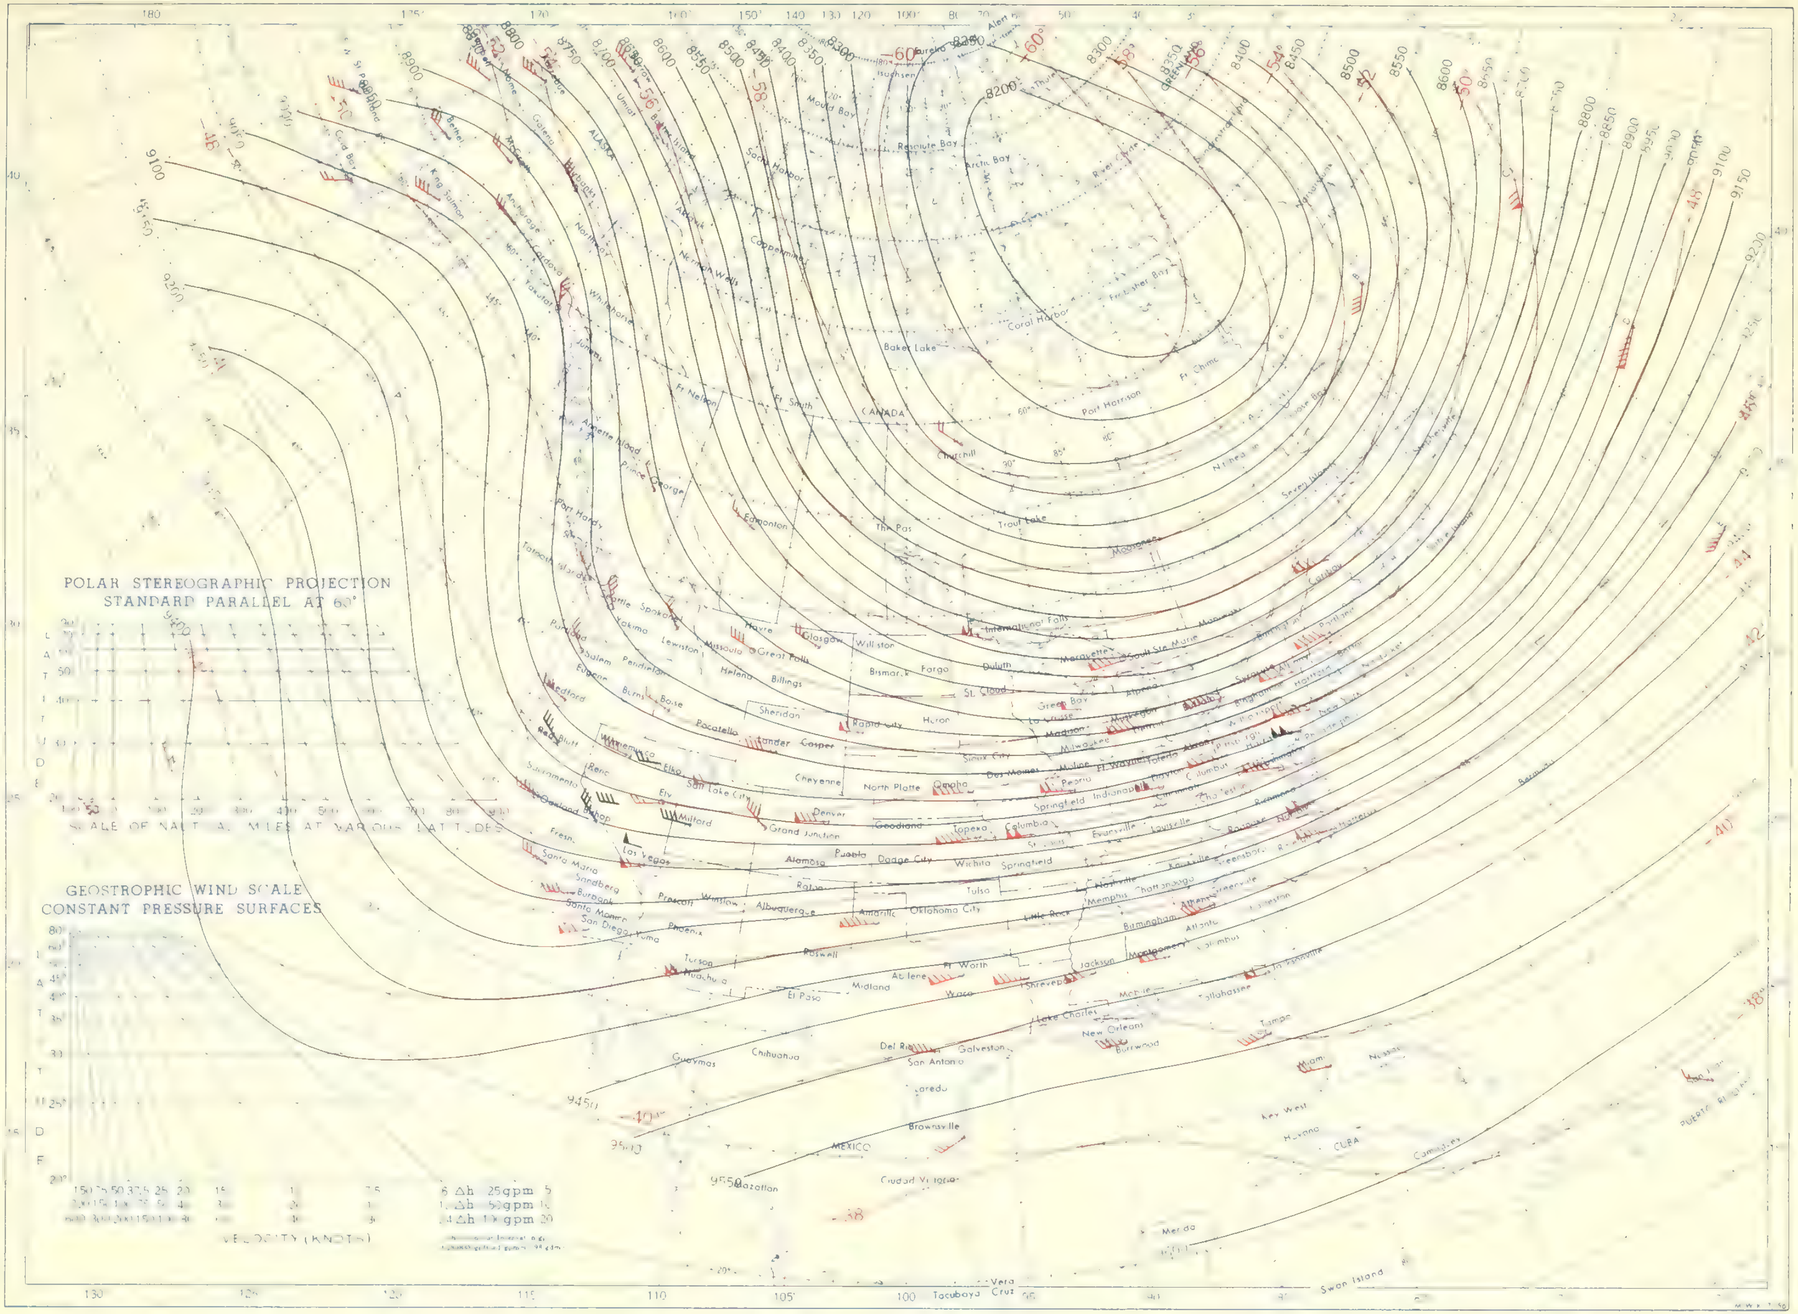
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



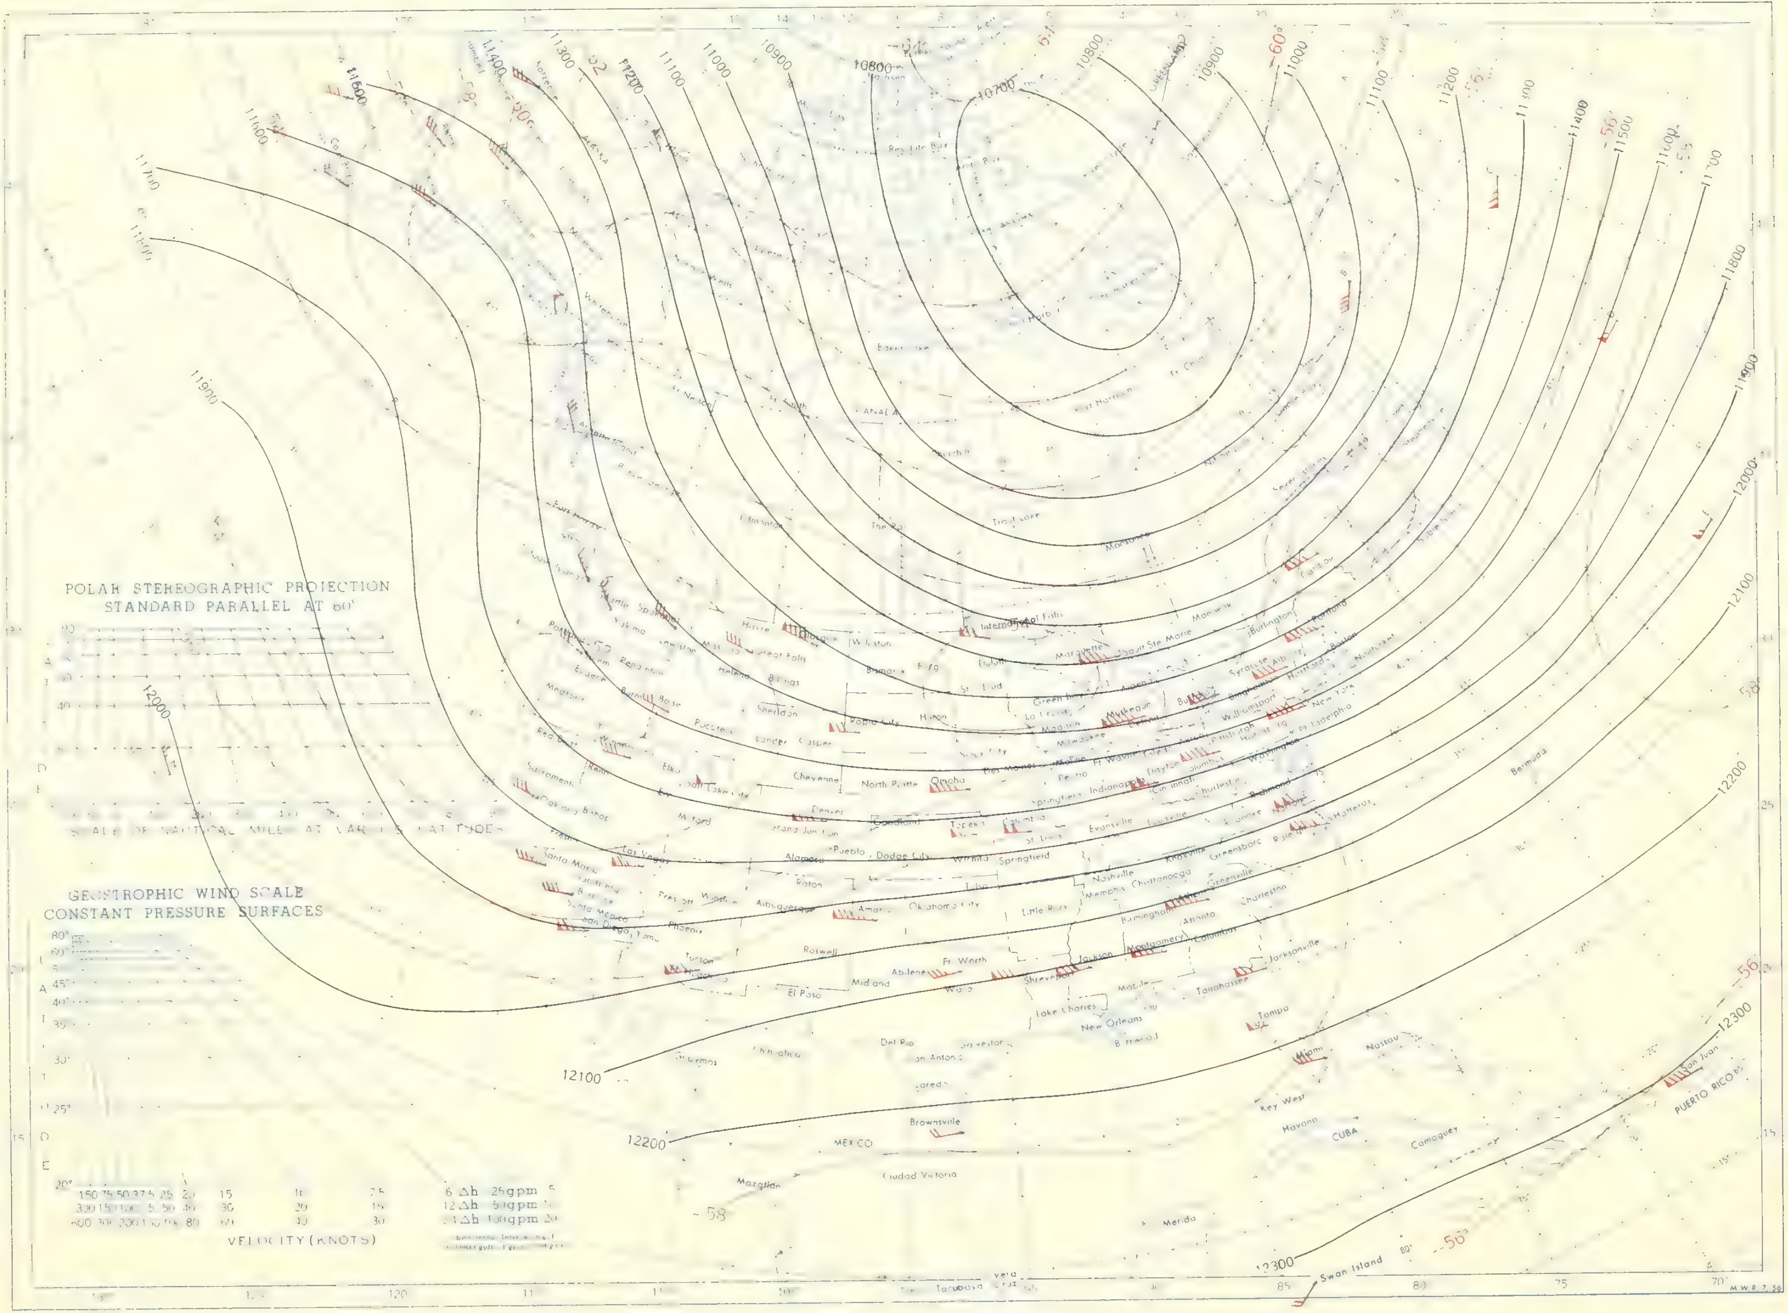
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



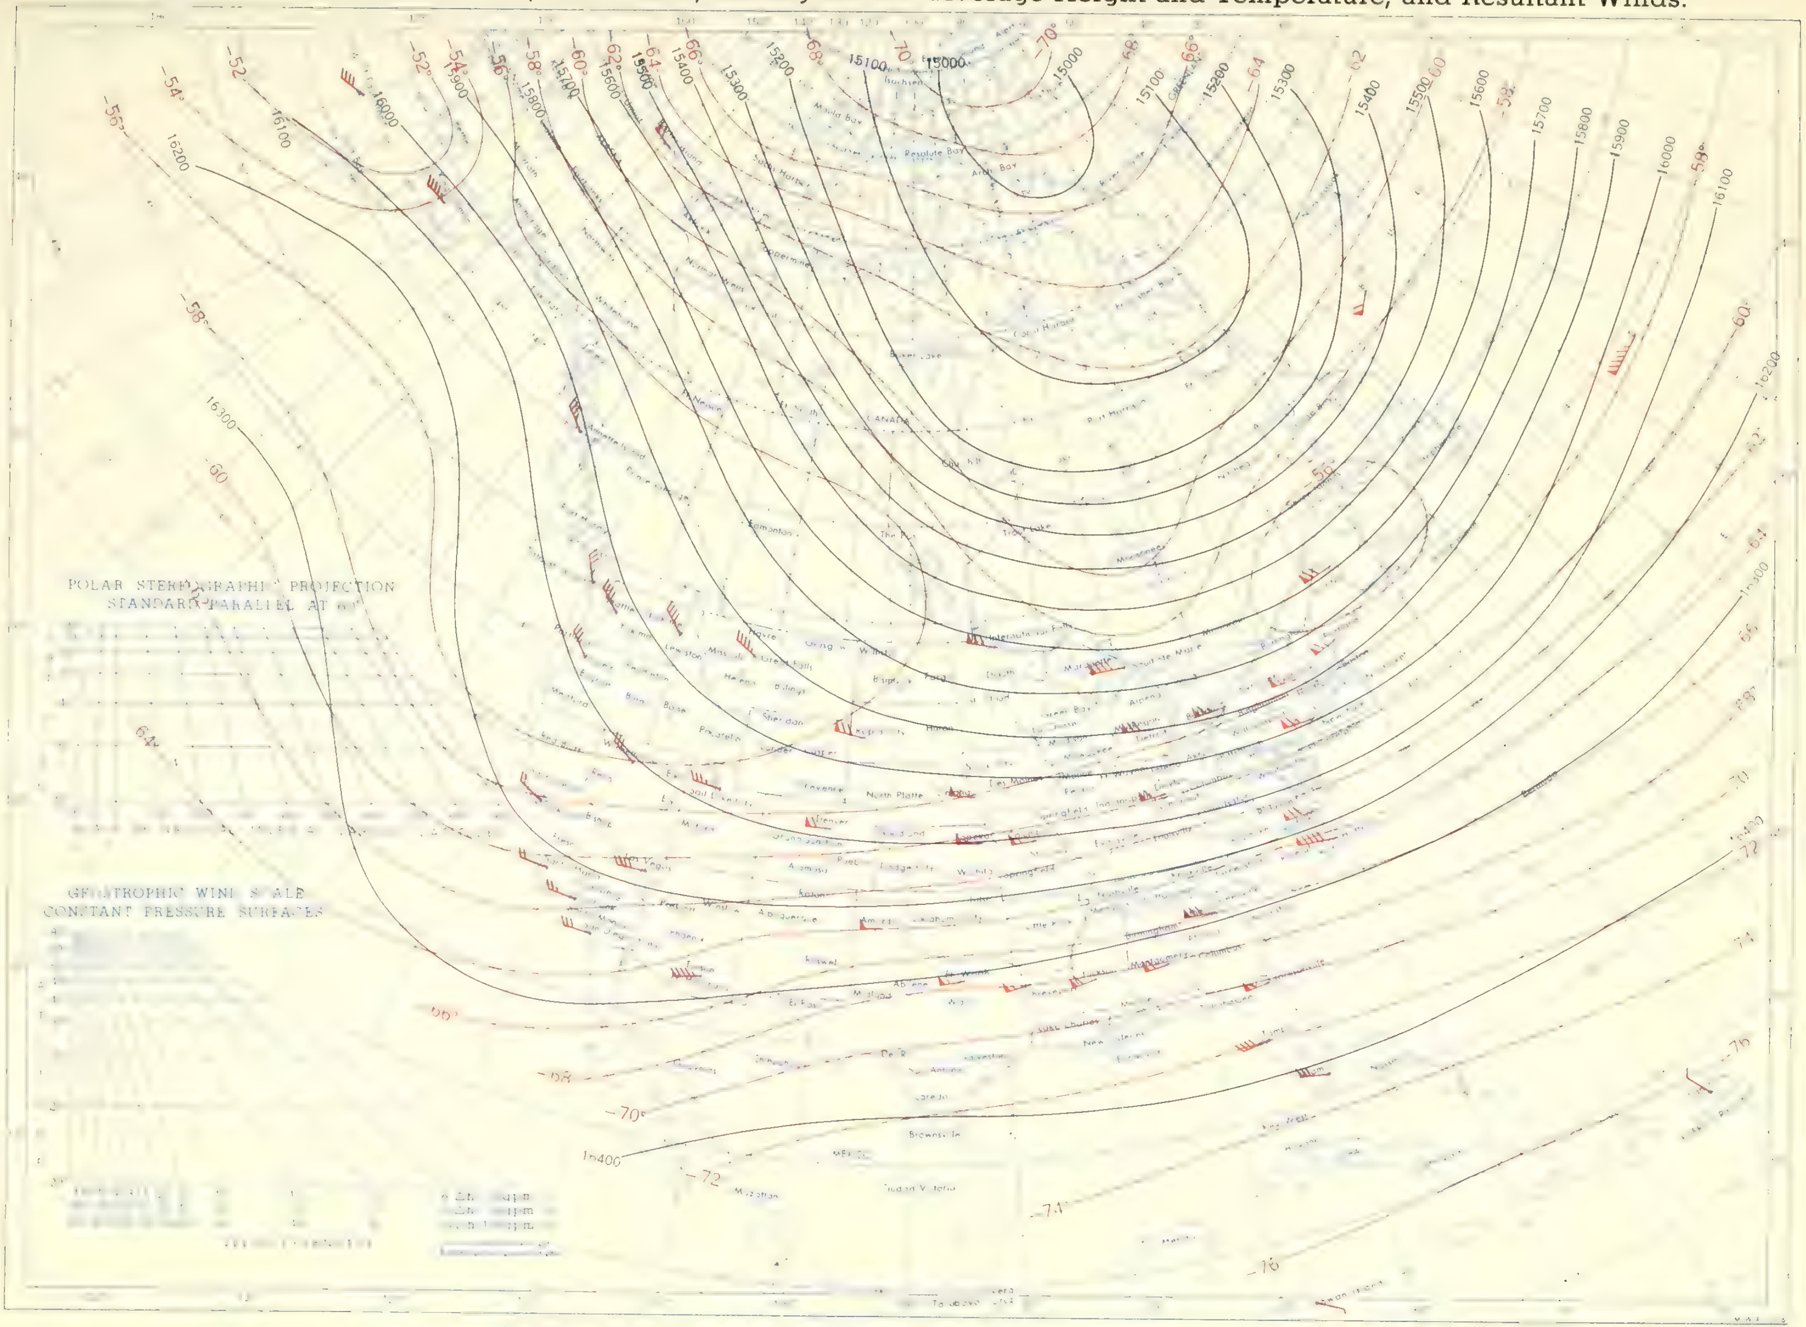
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

Chart XVII. 100-mb. Surface, 0300 GMT, January 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 2 FEBRUARY 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

Unseasonably mild temperatures in northern areas, the main weather feature of the month, were in sharp contrast to the extreme cold of January, but in the South temperatures were above normal for the third consecutive month and among the highest of record for February. Under the influence of mild temperatures the snow cover retreated to mountainous areas, and melting snow in the northern Rockies resulted in several snowslides and some flooding. The mild weather in the Great Plains drought area helped farmers stretch scarce livestock feed, but caused concern among southern fruit growers over the vulnerability of early development of buds and blooms to spring freeze damage.

Light precipitation furnished little or no drought relief to the central and southwestern Great Plains, but heavy rains produced some flooding in the Pacific Northwest. In the East a heavy belt of rainfall extending from the middle Atlantic coast to the southeastern Great Plains furnished further drought relief in the latter area, and caused additional floods in the lower Appalachians. Moderate to heavy rains which fell in Florida the latter part of the month reduced the necessity for heavy irrigation of citrus and raised ground water levels although they still remained below normal.

The month was relatively free of severe storms. No blizzards or unusually heavy snowstorms were reported.

TEMPERATURE.--Temperatures for the month averaged slightly below normal in Washington and eastward in a narrow belt along the Canadian Border to the Great Lakes. Elsewhere averages were well above normal, with departures ranging up to more than 10° in the lower Mississippi Valley and Far Southwest. The following southern stations reported their highest average temperatures of record for February:

Phoenix, Ariz.	61.4°
Prescott, Ariz.	46.7°
Tucson, Ariz.	61.1°
Albuquerque, N. Mex.	48.1°
Roswell, N. Mex.	52.2°
El Paso, Tex.	57.6°
Del Rio, Tex.	63.3°
Corpus Christi, Tex.	66.7°
Macon, Ga.	58.8°

The average for Tucson, Ariz., was the highest since 1867. Also, new February highs were established for many stations, among which were the following:

Prescott, Ariz.	76° on 13th
Tucson, Ariz.	92° on 14th
Yuma, Ariz.	93.7° on 14th
Jacksonville, Fla.	87° on 5th
Portland, Maine	64.3° on 26th
Wilmington, Del.	81° on 4th
Columbus, Ohio	73° on 25th

In most of the country the coldest weather occurred either during the first few days of the month or from about the 19th to 24th. During the first period subzero minima were recorded at many stations between the Great Lakes and the Cascades and freezing extended to the Mexican Border in Arizona, New Mexico and western Texas. During the second period two successive intrusions of cold air reduced temperatures to subfreezing levels well into southern areas east of the Rockies, and to subzero levels between the Great Lakes and the Continental Divide. On the 23d Baudette, Minn., recorded -37° for the lowest temperature of the month.

The remainder of the month was unusually mild. During the first 11 days of the month maximum temperatures in the Gulf Coastal areas ranged in the 70's and 80's and occasionally rose into the 90's at a few stations. On the 11th Eagle Pass, Tex., recorded 96° for the month's highest temperature. For the first time in more than 70 years of record, the temperature did not fall to the freezing level at Atlanta, Ga. Warm weather stimulated rapid crop growth in the South, and budding and blooming of fruit trees were recorded as far north as Meridian, Miss.

PRECIPITATION.--Very heavy rains fell in a belt extending from eastern Oklahoma and Texas northeastward to the middle Atlantic coast. Heaviest amounts fell in the lower Appalachian region where monthly totals ranged up to 17.71 inches at Sassafras Mountain, S. C.; 16.21 at Flat Top, Ga.; 15.55 at Haw Knob, Tenn.; 15.42 at Clingmans Dome, N. C.; and 10.11 inches at Ider, Ala. Heavy rains during the first decade were responsible for some flooding in southwestern Pennsylvania, southern Ohio, northwestern West Virginia, and in the lowlands of Kentucky. During the first few days of the month some flooding also occurred in northern portions of Mississippi, Alabama and Georgia as late January flood waters in the lower Appalachians moved downstream. Rains greatly relieved the drought in much of Texas and Oklahoma, furnishing sufficient moisture for small grain growth in both states and giving to central and eastern Texas the best early-season moisture in several years.

The Florida Peninsula received from 2 to over 4 inches of much-needed rain, and citrus irrigation which had been necessary for some weeks previously was largely discontinued. Northwestern Florida and southern Georgia received less than 2 inches of rain, leaving these areas in need of still more moisture.

Heavy rains fell over the Pacific States where the heaviest amounts occurred during a storm on the 23d. Excessive falls caused local flooding in northern California.

In most of the Great Plains outside Texas and Oklahoma, precipitation totaling less than 1/2 inch was less than 50 percent of normal, as was also the case in Iowa and southern Wisconsin. Winter grains in Kansas, Nebraska and Colorado needed moisture badly at the end of the month.

SNOWFALL.--Snowfall was below average, and due to mild weather, the cover by the end of the month had retreated to mountainous areas of the Far West and Northeast and the extreme upper portions of the Great Lakes and Mississippi Valley. The snowpack in the Western Mountains decreased slightly and was lighter than usual at the end of the month.

A number of slides occurred in the Rockies. At Wardner, Idaho, on the 5th a slide killed one person, injured 5 others, and caused damage estimated at $50,000. Probably the most notable storm of the month was that which on the 1st left 6 to 12 inches of snow on Long Island, N.Y., and lighter amounts in southern New England and parts of New Jersey, and eastern Pennsylvania.

DESTRUCTIVE STORMS.--One of the worst of the relatively few February storms was that in the Pacific Northwest on the 23d when high winds were responsible for a few deaths and light property damage over a large area. High winds also caused some damage in Missoula, Mont., on the 18th-19th, and caused a substantial loss of wheat acreage in the Nebraska Panhandle on the 11th.

Glaze caused some damage in northwestern Oklahoma on the 22d and 23d and in New Jersey and Pennsylvania on the 28th.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

FEBUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories[1]		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSISSIPPI Camden community, Madison County	1	7 a.m.	1	100	0	0	3	1	Tornado	Tornado moving northeastward smashed 1 home and damaged several others; funnel observed by several residents.
MISSISSIPPI Winona (4miles southeast of), Montgomery County	1	7 a.m.		30	0	0	2	1	Tornado (suspected)	Tornado moving northeastward lifted roof and carried it 300 yards; no other damage in area.
WASHINGTON northern Puget Sound area	1	A.m.					5		Wind	Strong, northerly winds caused some power and communication outages and damaged barges and boats in unprotected areas.
PENNSYLVANIA eastern half	1	Daytime			5	10	3		Snow	Storm caused hazardous road conditions, resulting in many automobile accidents in which 5 persons killed and 10 others injured. Storm moved northeastward.
ALABAMA Dothan, Houston County	1	Evening			0	0	2	1	Tornado (suspected	Building in back yard destroyed, with no other damage such as TV antenna or surrounding trees. Winds struck with "roar like airplane".
	1									Minor storms also reported at Collinsville, Miss., and at Williamston, N.C.
CONNECTICUT, entire state	1-2	P.m. 1st-a.m. 2d			1	4			Snow	Snowfall of 6 inches along coast and somewhat lesser amounts inland resulted in chaos on highways. Severity of storm increased by its occurrence at height of evening rush hours. A great number of skidding accidents occurred throughout State and resulted in 1 fatality and 4 persons injured. Very bad traffic jams, especially on coastal parkways leading to and from New York City area. Small plane made successful forced landing on Merritt Parkway, which further complicated traffic movement.
MASSACHUSETTS eastern portion	1-2	Night				2	3	1	Snow and ice	Hazardous driving and walking conditions prevailed, as new snow covered pavements already coated with ice. Many minor automobile accidents with 1 injury. 1 pedestrian injured by fall on ice.
IOWA	1-7					11	4	1	Snow	Slippery highways resulted in more than 20 traffic accidents.
NEW YORK southeastern portion, Long Island and Metropolitan New York City	2	Most of day			2				Snow	Coastal low pressure area moving northeastward brought 6 to 12 inches of snow. Traffic snarled, cars abandoned, and numerous injuries in automobile accidents. 2 sisters killed in automobile accident as car skidded into trailer-truck.
	3									Minor storm reported in Walsenberg area, Colo.
IDAHO Wardner, Shoshone County	5				1	5	4		Snowslides	First slide at 4 a.m., killed 1 man and injured his wife. 3 more slides in next few hours injured 4 more persons, damaged several houses. In all, 4 houses destroyed, 2 suffered major damage and 3 minor damage.
	5									Minor storm also reported in eastern Kansas.
	8									Minor storm reported at Mt. Pleasant, Utah.
MAINE	9	Afternoon and night				1	4	1	Snow	2 to 7 inches of snow disrupted transportation schedules and caused numerous highway accidents and 1 serious injury. Most roads cleared for travel on the 10th.
WEST VIRGINIA north-central counties	9-11							1	Rain	Flood-producing rains
IOWA	10-12					2	3	1	Snow	Slippery highways resulted in at least 6 accidents.
SOUTH DAKOTA central and western portions	11	Day							Dust	Winds blew soil from plowed and summer-fallow fields. In Tripp County, visibility cut to 1/2 mile with damage to winter wheat fields.
PUERTO RICO, Utuado	13	3-3:20 p.m.						4	Hail and rain	Tobacco ready to be harvested suffered most damage. Local convective cloud moved west-northwestward.
SOUTH DAKOTA northern and western portions	14-15	Afternoon 14th-evening 15th							Wind and dust	Winds blew considerable soil from fall-plowed and summer-fallow fields. Winter wheat damaged in Lyman County. Elsewhere in State, enough moisture from previous snow remained to prevent blowing.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Jasper, Newton, and McDonald Counties	15	4:30-6:30 a.m.					2		Rain and hail	1-to 2-inch rain with scattered hail.
	15									Minor storms also reported near Lenox and at Springfield, Mo.
TEXAS Harlingen (5 miles west of), Cameron County	16	1:30 p.m.	1-1/2	200	0	0	2	0	Tornado	Small column extended from ground to cloud base, had appearance of very strong dust devil. 3 service poles damaged and 1 small, poorly constructed garage demolished. moved northwestward.
NEBRASKA Brule (1 1/4 miles west of), Keith County	17	1:45 p.m.				1	3	1	Wind	Car blown from course into truck and wrecked; 1 occupant injured.
MONTANA Missoula, Missoula County	18	8 p.m.				1	3	1	Wind	Wind blowing out of Hell-Gate Canyon caused damage in downtown Missoula. Windows broken, a chimney damaged, and 1 man injured when blown against building. Storm moved westward.
	19-20									Minor storms reported in Dade, Broward, and Palm Beach Counties, Fla.
KANSAS	19-23				1	6			Rain and glaze	Freezing drizzle and freezing rain reported from many localities, greatest accumulation on 22d and 23d especially in east and southeast where glaze thickness on trees, wires, roads, etc., was from 1/4 to 1/2 inch. Many traffic accidents resulted from hazardous streets and roads. Cattle in Franklin County stampeded, trampling down fences during storm. Cows refused to give down their milk, apparently from fright. Glaze generally melted by evening of 24th.
SOUTH DAKOTA entire State	20-23					5	4		Snow and wind	Drifting snow cover of 4 to 8 inches caused local ground blizzards in central counties. Heaviest falls on 21st. Damage and injuries from highway accidents, due to icy roads and low visibility. A few motorists stranded temporarily, but most roads stayed open. Rapid thawing took place several days later.
OREGON northwestern portion	21-23	Late afternoon 21st - morning of 23rd	100-150	* 75-100		Several	5	2	Ice	Very light snow on 20th and 21st gave way to sleet, freezing rain late on 21st and continued as such until early morning of 23d. Built up substantial coats of ice on all exposed surfaces, creating very hazardous driving conditions in northwest particularly in Willamette. Numerous traffic accidents resulted. Trees broken across powerlines and lines themselves gave way under loads of ice. Storm moved eastward.
IOWA	21-25				2	8	4	1	Snow	Slippery highways resulted in 30 or more accidents.
CALIFORNIA coastal areas	22-23				9	Many	6		Wind, rain, and flood	One of series of storm system (20th-28th) originating over eastern Pacific Ocean and moving across State accompanied by strong winds and heavy rain caused extensive flood damage in Los Angeles Basin and wind damage in Santa Barbara, Carmel, and San Francisco Bay areas on night of 22d. Communities principally affected in southern California; West Los Angeles, Glendale, Burbank, Santa Monica, Inglewood, Torrance, Pasadena, Hollywood, Whitter, Terminal Island, and Santa Barbara. Intersections flooded 5 to 12 feet, automobiles and basements of businesses and homes flooded, traffic halted, hillside roads and streets blocked by mudslides, debris, and water. Burbank; 150 automobiles stalled, trailer court awash. Glendale; $7,000 flood damage to motion picture studio. West Los Angeles; $40,000 flood damage to sporting goods store. Terminal Island; $20,000 loss to 4 racing sloops. Santa Barbara; sailing schooner washed ashore and utilities disrupted various areas. San Francisco Bay area; pleasure craft damage in various harbors, utilities disrupted in various areas, and wind damage to trees, store windows. San Francisco; 33 false burglar alarms set off by wind. Automobile accident deaths attributed to weather or wet pavement; Long Beach 4, West Los Angles 1, San Fernando Valley 1, Salinas-Monterey highway 1, San Benito County 1, south of Carmel 1. Numerous injuries and minor traffic accidents. Moraga highway near Orinda partially closed by large landslide. Other areas: U.S. Highway 101 near Willits closed by mudslide; U.S. Highway 40 near Oroville closed by water.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

FEBUARY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA northwestern two-thirds	22-23				7	13		1	Rain and sleet	Northwestern two-thirds of State covered with coat of glaze and up to 2 inches of sleet was on ground in northwestern sections. 6 persons killed and at least 13 injured in automobile accidents and 1 person killed in plane crash believed to have been caused by icing. Considerable damage reported from Ponca City area, Kay County where trees, shrubs, and utilities quite badly broken.
WASHINGTON entire State	22-25						°6	C	Snow, wind, rain and flood	Series of storms associated with deep, low pressure system moved eastward through State from 22d to 25th. Snow, heavy precipitation, and high wind occurred as squall lines moved through Pacific Northwest during this period. Precipitation amounts in west ranged from 3 to 6 inches and from 1/2 to 1 inch over east. Runoff from rain and melting snow flooded basements, damaged highways, and caused serious flooding along small streams. Several of the larger rivers in west near or slightly above flood stage, however, flood damage along these streams rather small. High wind accompanied by heavy rainfall caused a large number of power and telephone failures. Landslides caused considerable property damage in Puget Sound area. Most serious flooding occurred in east as rising temperatures and rain caused rapid melting of snow cover. Residences and business establishments in low areas flooded when sewers, drainage ditches, small streams unable to carry runoff. Highways and railroad bridges damaged or washed out in several localities. Landslides also caused some damage in north. Greatest flood damage probably occurred along Crab Creek in Lincoln and Grant Counties. Entire population of Wilson Creek evacuated when flood water spread over town. Soil erosion in fields severe.
SOUTH DAKOTA Harding to Fall River Counties	23	Early morning-evening							Chinook	While temeratures were at subzero levels, a "Chinook" wind set in, causing rapid temperature climb to comfortable levels. At Rapid City it rose from - 3° to 59° in less than 12 hours, melting 3 inches of snow. At Deadwood a 9° rise in 10 minutes noted, while Lead had 43° rise in 7 1/2 hours.
IDAHO Sandpoint and Wallace, Bonner and Shoshone Counties	23	Throughout day							Rain and sleet	Ice to 1/4 to 1/2 inch thick on everything at Sandpoint. Roads slick in both areas; many minor traffic accidents.
OREGON coastal area and northwest	23-24	Late afternoon 23d-early morning 24th	200-300	*100-125	2		5	2	Wind	Very high winds particularly along north coastal area and considerable distance inland northwest reached speeds of 45 m.p.h., in gusts at Portland Airport, 62 m.p.h., at Astoria Airport, and considerably higher in some other areas on other than Weather Bureau anemometers. At Air Force installation at Naselle, Wash., 15 miles north of Astoria gusts of 150 miles obtained on Bendix T-451 anemometer taking observations every 5 minutes and with average speeds of 110-115 m.p.h., for several hours on late evening of 23d. Damage to trees, powerlines, and communication lines considerably increased by fact much of earlier ice was still on them when winds began. Communities full length of coast and considerable distance inland experienced power blackouts over areas of varying sizes, particularly extensive in Portland and surrounding suburbs. Considerable number of telephone outages. 2 men killed near Grants Pass when tree blown down across car in which they were riding. Storm moved northeastward.
OREGON entire State	23-26	Most of 4 days	300-400	*250-350	1		6	4	Rain and flood	Combination of warm winds, heavy rains, and sizable snow cover down to fairly low elevations over hills and mountains of east resulted in extremely heavy runoff. This came so rapidly huge quantities of ice were broken loose in headwater areas to be carried downstream forming ice jams against bridges and culverts. Hardest hit were Malheur, Baker, and Wallowa Counties. In Vale, greatest center of damage, water ran 4 feet deep through main street; 102 homes flooded; hundreds of head of cattle and sheep drowned in low-lying pastures and corrals in surrounding rural areas. Hundreds of thousands of dollars of damage to extensive irrigation systems. Man at Ontario died of heart attack while aiding in evacuations. Several homes and some businesses flooded at both Baker and Enterprise. Highways and bridges damaged in all 3 countries and to much lesser extent in other eastern and central areas. Some high water in western streams, but damage generally light, mostly confined to washing roads or causing slides. Farm land erosion in much of east extremely heavy. Storm moved northeastward.

See reference notes at end of table

STORM DATA AND UNUSUAL WEATHER PHENOMENA

FEBUARY 1957

Place	Date	Time	Length of path miles	Width of path yards	Number of persons Killed	Number of persons Injured	Estimated damage by categories † Property (exclusive of crops)	Estimated damage by categories † Crops	Character of storm	Remarks
FLORIDA Pensacola, Escambia County	25	Early a.m.			0	1	4		Wind and tornado (suspected)	Brief, localized, strong winds demolished drive-in theater screen and tipped over several house trailers in nearby trailer park. Storm moved northeastward.
SOUTH DAKOTA northern Black Hills, Lawrence County	26	Midnight-noon				1	3		Glaze	3 highway accidents, including an overturned gas tank truck, attributed to icy roads following rain and snow previous day.
FLORIDA Dade-Broward Counties	26	All day							Rains	Heavy rains caused local flooding in agricultural areas, disrupting harvest operations and causing considerable damage to crops in harvest stage, particularly to tomatoes and potatoes.
MAINE central and northeastern portions	26-27	Night						1	Glaze	Ice storm made travel hazardous in many areas; ice accumulation of 1/2 inch in Caribou, Presque Isle, and Ft. Fairfield sections damaged trees and utility lines.
TENNESSEE Knox County	27	Afternoon				1			Electrical	Lightning struck man, searing strip of skin from his body, melting 2-gallon zinc bucket in his hand, and knocking him unconscious.
PENNSYLVANIA statewide	28	Evening					4		Ice	Trees and utility lines felled by heavy coatings of ice. Streets and highways also made treacherous, resulting in numerous automobile accidents. Storm moved eastward.
CALIFORNIA southern portion	28						4		Rain, electrical and flood	Los Angeles Basin: Streets flooded, traffic and utilities disrupted, 20 utility pole fires started by lightning, some autos, businesses, and residences flooded. Principal communities affected: Culver City, Manhattan Beach, San Fernando, Torrance, North Hollywood, Hawthorne, Fontana, San Marino. Elsewhere, San Marcos Pass near Santa Barbara closed by rockslide, San Bernardino streets flooded and residential areas littered with debris and mud from overflowing creeks.
NEW JERSEY entire State, except extreme southeast coast	28-Mar.1	Late p.m.-a.m.							Rain, sleet and snow	Freezing rain, sleet, and snow during afternoon, night, and morning. Accumulation of sleet and snow up to 2 inches in north. Principal damage to trees, powerlines, telephone wires and poles. Many traffic accidents reported. Storm moved northeastward.
DELAYED REPORT										
CALIFORNIA San Diego and Mt. Soledad	Jan. 29	2:10-2:50 p.m.			0	0			Waterspout and tornado	Funnel cloud observed northwest of San Diego Airport by CAA Tower personnel and verified by Navy Aerology at North Island as waterspout Dissipated as it moved toward shore. Other calls from beach area residents, but no damage reported. Second funnel cloud reported in Mt. Soledad vicinity at 2:50 p.m.

* Miles instead of yards.
° Includes crop damage.
C Damage to crops.
† Storm damages are placed in categories varying from 1 to 9 as follows:

1 less than $50
2 $50 to $500
3 $500 to $5,000
4 $5,000 to $50,000
5 $50,000 to $500,000
6 $500,000 to $5,000,000
7 $5,000,000 to $50,000,000
8 $50,000,000 to $500,000,000
9 $500,000,000, to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

FEBRUARY 1957

Severe floods were reported in several small streams in the Snake River Basin during the latter part of February. The flooding on the Portneuf River in Idaho exceeded the previous floods of record. Flooding in central Washington was also severe as it occurred in an area that is generally arid to semiarid. Moderate to severe flooding occurred in several streams in the East Gulf of Mexico Drainage. Flooding elsewhere was mostly minor.

ST. LAWRENCE DRAINAGE

No damage was reported from the minor flooding on Black Creek at Churchville, N. Y., on February 27 and 28.

ATLANTIC SLOPE DRAINAGE

There were two periods of flooding in the rivers of eastern North Carolina during February. The first overflows were due to general rains during the last decade of January and the beginning of February. There was a large deficiency of rainfall until January 20, so that it was not until January 30 that there was sufficient runoff to cause streams to rise to above bankfull stage. The second overflows were due to heavy rainfall (1 inch) on the 25th-26th. Streams were at high levels before this storm due to intermittent rains during the middle of the month.

EAST GULF OF MEXICO DRAINAGE

Heavy to severe flooding occurred over the upper Oostanaula and moderate to severe flooding over the lower Oostanaula and upper Coosa Rivers during the first decade of February due to heavy rains. The heavy rains in northern Georgia and Alabama which reached a peak on January 31 were preceded by several days of shower and thunderstorm activity. Several stations reported rainfall on as many as 10 to 18 consecutive days. The rainfall was light to moderate on most days, with the heaviest rains occurring during the period January 30 to February 4. Both the Coosa and Oostanaula Rivers remained at high stages for over a week, and the flood waters receded rather slowly after the crests occurred.

Moderate to severe flooding occurred in the Tombigbee and the Black Warrior Rivers in Alabama and Mississippi during the latter part of January and the early part of February. The rains were nearly continuous from January 21 through February 7. In the upper Tombigbee at and above Columbus, Miss., several people were forced to leave their homes. There was damage to roads and dwellings in this area, but most of the damage was to agriculture and farmland.

The flooding in the upper reaches of the Pearl River in Mississippi was due to excessive rainfall on the 2d, 3d, 4th and 6th. No material damage was reported.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--The upper Mississippi River was steady throughout the month except for a slight rise near the end of the month due to premature melting of snow in the tributaries immediately above Dam 10. The monthly mean stage of the Mississippi River at Minneapolis, Minn., was 5.6 ft., 0.5 foot below the long-term mean. This was the lowest mean stage since 1950 when the mean was 5.5 ft. The mean stage of 4.5 ft. at La Crosse, Wis., was the lowest February mean stage since 1945. The stage of the Mississippi River at St. Louis, Mo., fluctuated between -3.0 ft. and +1.0 foot, and then began rising sharply in response to the storm of February 25 to 27, reaching a stage of 5 ft. at the end of the month. A 9-foot channel was available most of the month in the Mississippi waterway, and navigation conditions were the best since last September.

There was no substantial snowfall in the upper Mississippi Basin during the month and the accumulations on the ground continued to be generally deficient for the season. At the end of the month the snow cover was confined to the headwaters region of the Mississippi. The greatest water content reported was about 4 inches in the extreme upper sections of the Chippewa and Wisconsin River Basins.

A comparison of snow depths on February 28 with that of other years is given in the following table:

COMPARATIVE SNOW DEPTHS (inches)

STATION	1957	1956	1955
(MINNESOTA)			
Bimidji	14	22	25
International Falls	15	20	25
Duluth	22	28	27
Fargo, N. Dak.	1	7	6
Alexandria	4	12	10
New Ulm	0	6	7
Minneapolis	T	7	6
Rochester	T	6	1

The flooding of the Meramec and Bourbeuse River Basins in Missouri toward the end of the month and the beginning of March was due to heavy rainfall averaging 2.3 inches on the 26th and 27th. No damage resulted from the overflows.

Ohio Basin.--Moderate to heavy rains over the headwaters of the Monongahela Basin in West Virginia and Pennsylvania on the 9th and 10th caused overflows in streams in the basin between the 9th and 11th. Heaviest flood damage was reported from the West Fork Basin at Weston and Clarksburg, W. Va., where several hundred families were evacuated. Weston was completely isolated as all roads and highways were under water. Flood damage along the main stem of the Monongahela River was minor with navigation being disrupted for a short time.

This same storm caused flash floods in the Little Kanawha River in W. Va., on the 10th. The rainfall totaled 2 inches and fell on ground already saturated from previous rains. The stream rose rapidly during the night from a stage of 8.0 ft. at Glenville, W. Va., to a stage of 27.9 ft. by 7 a.m. on the 10th.

Minor flooding occurred on Paint Creek and the lower Scioto River in Ohio on the 10th and 11th from heavy rain on the 8th and 9th. No damage was reported.

Rain averaging more than 1 inch from the 6th to the 10th caused the White River to rise to a stage of 1.5 ft. above bankfull at Edwardsport, Ind., on the 12th and 13th. No flooding occurred as the area is protected by levees.

The high water on the Green River in Kentucky was due to rains during January plus an additional inch on the 1st and 2d. Crests were reached early in the month over the middle and upper reaches while over the lower section there was prolonged high water.

The flooding in the Cumberland Basin at Eddyville, Ky., was due to 4 days of heavy rainfall starting on January 28. Overflows continued at this point until February 18 with a crest 9.6 ft. above flood stage on the 6th.

The moderate to heavy rain over the French Broad Basin in North Carolina on January 30 and 31 and February 1 caused some minor flooding and minor damage. The rainfall ranged from 2 inches at Asheville, N. C., to 3.5 inches at Hot Springs, N. C., in the Laurel and Ivy River Basins. The Laurel River which empties into the French Broad River above Hot Springs, N. C., crested at an alltime record stage of 8.17 ft. The previous record was 7.94 ft. in March 1935. Four families in the Hot Springs area were evacuated. Also a considerable amount of highway equipment was moved in that area.

The flooding along the main stem of the Ohio River was confined to the reach at and below Dam 44, Leavenworth, Ind. Flooding continued for nearly 21 days with an average crest of 6.7 ft. above flood stage. Damage during this high water was at a minimum due to the time of the year. There was some loss of wheat, but this acreage was small compared to the total number of acres inundated. A number of county roads were washed out or flooded and there was some erosion to fields.

White and Red Basins.--The minor flooding in the lower White and Ouachita Rivers in Arkansas between the 2d and the 14th was due to moderate to occasionally heavy rains during the latter part of January and the beginning of February. Locally heavy thundershowers on the 25th caused a sharp rise of the Little Red River at Heber Springs, Ark., to slightly above flood stage. No damage resulted

Lower Mississippi Basin.--The flooding in the lower Mississippi Basin in Mississippi was due to rainfall that occurred during the last decade of January and the beginning of February. The rainfall during the period totaled approximately 9 inches over the Coldwater Basin, and 7 inches over the Yallobusha Basin. High stages were maintained on the principal tributaries of the Yazoo River throughout February, but the only flooding along the main streams was on the Tallahatchie at Swan Lake and the Coldwater at Sarah, Miss. Some flooding was reported in small headwater streams and on the Big Black River at Bovina, Miss., during the month, but no serious damage was reported. The high water on the Mississippi River at Caruthersville, Mo., from the 8th to the 20th was due primarily to the high flow from the Ohio River. Heavy rains in western Tennessee caused local streams to flood considerably before the Mississippi River lowlands in west Tennessee were flooded.

PACIFIC SLOPE DRAINAGE

California Coast Drainage.--Warm, moderate to occasionally heavy rains from the 20th to the 27th caused a sharp rise in tributary streams in the Sacramento Basin in California on the 23d and 24th with the major reservoirs rapidly rising into the established flood control space. Releases from Shasta Reservoir plus moderately high inflow below the reservoir brought the Sacramento River up to a level where overflow occurred at all eastside weirs into Sutter Bypass and at Fremont Weir into Yolo Bypass. Stations above Shasta Reservoir recorded between 15 and 17½ inches of rain during the 7-day period from the 21st through the 27th, while stations in the Sierra from the American River northward reported around 10 inches. There was a sharp cutoff in precipitation to the south of the American River--the Cosumnes and Mokelumne drainages received less than one-half of the precipitation recorded over the American.

The minor flooding on the Russian River at Gurneville, Calif., on the 24th-25th was due to moderate to heavy rains from the 20th to the 24th. Local flooding was reported in the reach above Gurneville in the vicinity of Geyserville and in the Alexander Valley area.

The flooding on the Eel River at Fernbridge, Calif., from the 24th to the 25th was due to moderate to heavy rains from the 20th to the 24th which continued until the 26th. Several thousand acres of farmland were under water at the peak of the flood.

Columbia Basin.--Flooding occurred in several streams in the Snake River Basin during the last 5 days of February due to a combination of snowmelt resulting from warm weather and ice jams. Precipitation during the period was light at Lava Hot Springs, Idaho, on the Portneuf River. The flooding was the worst ever known. The highway was cut and thousands of dollars damage was reported. At Topaz, Idaho, the crest on the 25th was 5.71 ft. (1020 c.f.s.) compared to the previous maximum of 902 c.f.s., April 1913. At Weiser, Idaho, on the Weiser River, Radio Station KWEI was completely surrounded by flood waters and would have been off the air if the flood had come up 3 inches higher. Parts of highways 30 and 95 were flooded in several places.

The Malheur River and Bully Creek in Oregon rose rapidly during the night of the 24th to produce 2 to 5 ft. of water and mud throughout the Vale area by the morning of the 25th. The crest was 14.6 ft. All stores, several hundred homes, and one school were flooded. A comparable flood was reported to have occurred in 1925. Damage was estimated at several million dollars. In the Ontario, Oreg., area about 20 square miles of farmland was covered with 2 to 5 ft. of flood water. Several homes were flooded. Three highway bridges were damaged, one of them a total loss. The total damage in this area was over 1 million dollars. At Harper and Juntura several million dollars damage was reported to homes, stores, irrigation ditches, roads and farms.

Heavy precipitation and warm temperatures produced slight flooding in streams in the Willamette Basin in Oregon during the latter part of the month. Flooding in central Washington was severe and was due to a combination of heavy rain and the melting of the entire snow cover on frozen ground. The area affected is generally arid to semiarid; consequently most of the towns and communities have been built in the lower parts of the general area. One of the towns hardest hit was Wilsonville in Grant County, Washington. Reports indicate that the Red Cross rushed bedding, food, milk and other necessities to some 300 people in this town who spent the night in schools, churches and homes after the town was covered with up to 5 ft. of water. Several people were also evacuated in the town of Wilson Creek. At Almira, Wash., Goose Creek ran 18 inches deep through the business district.

Grays Harbor and Puget Sound Drainage.--Heavy rain (up to 6 inches) and melting snow from the 23d to the 26th caused some minor flooding between the 25th and 27th along the Chehalis, Snohomish and Snoqualmie Rivers in Washington. Some lowland pastures and secondary roads in the Chehalis and Snohomish Valleys were under water, but only slight damage was reported.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

20-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

15-----																									5	27,996	-51.0			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

FEBRUARY 1957

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

15-----													7	27,959	-52.4															

Note: All observations scheduled at 0300, G.C.T. except at Mazatlan, Merida and Veracruz, where they are taken near 0200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

Solar radiation intensities, tabulated in langleys per minute on a surface normal to the direction of the sun.

NOTE: Beginning with February 1957, air mass values are computed from the formula $m = (p/p_0)\ (M)$, where m is air mass, p is long-time mean station pressure, p_0 is standard sea-level pressure of 29.92 inches of mercury, and M is air mass at sea-level, as shown in the Smithsonian Meteorological Tables, 6th revised edition, page 422. Values of p, based on data available to date, are the following: Albuquerque, N. Mex., 25.05"; Madison, Wis., 28.97"; Washington, D. C., 29.93"; Tucson, Ariz., 27.31"; Honolulu, T. H., 29.96"; Lincoln, Neb., 28.74"; Table Mountain, Calif., 23.03"; Blue Hill, Mass., 29.29".

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed in Table 30 appears in Monthly Weather Review, Volume 75, No. 3, March 1947, p. 47.

SOLAR RADIATION DATA

FEBRUARY 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero

** Radiometer inoperative.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. the value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

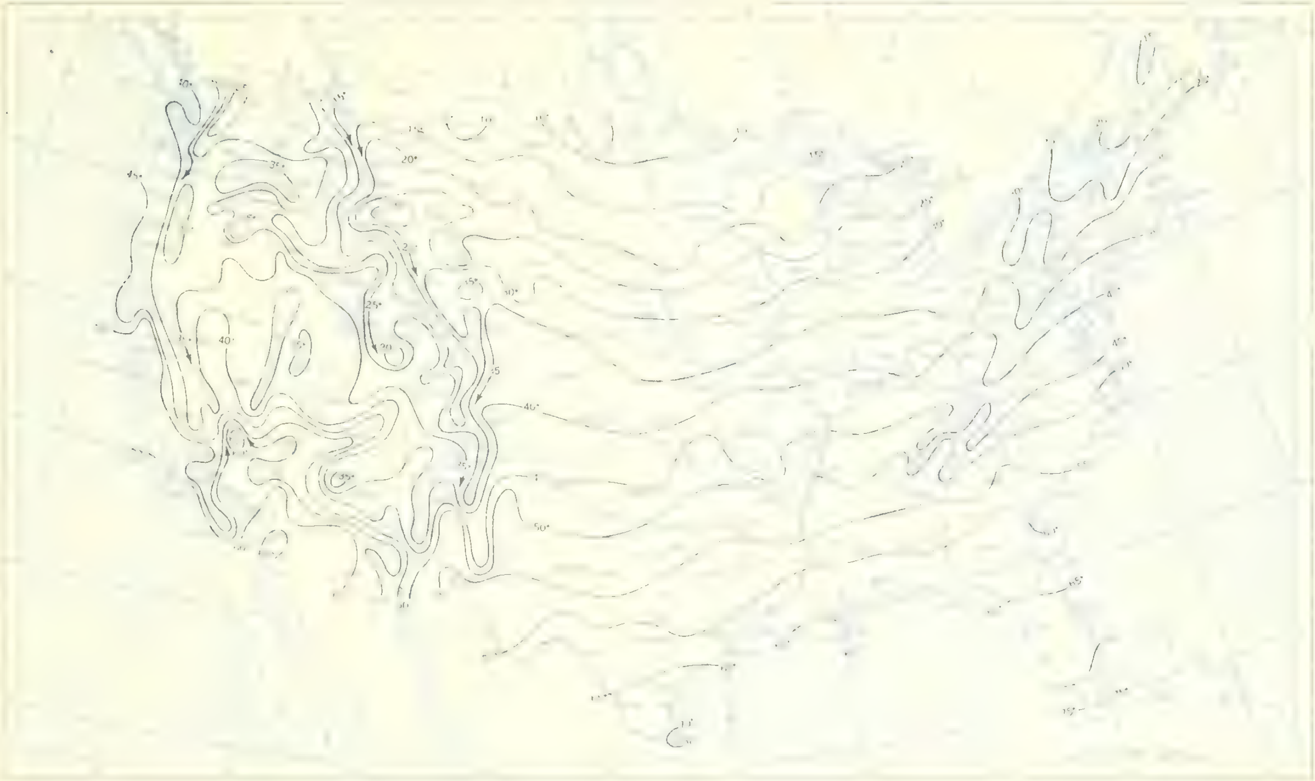
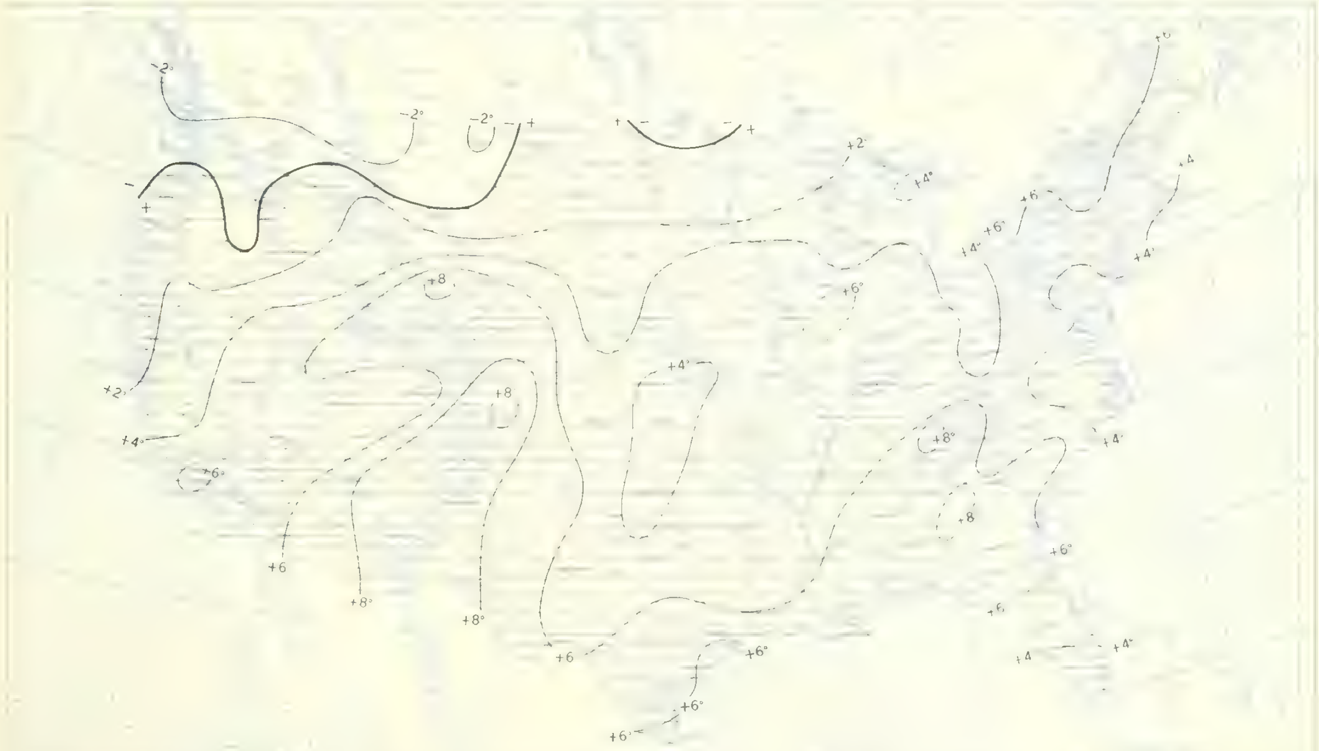
Chart I. A. Average Temperature (°F.) at Surface, February 1957.

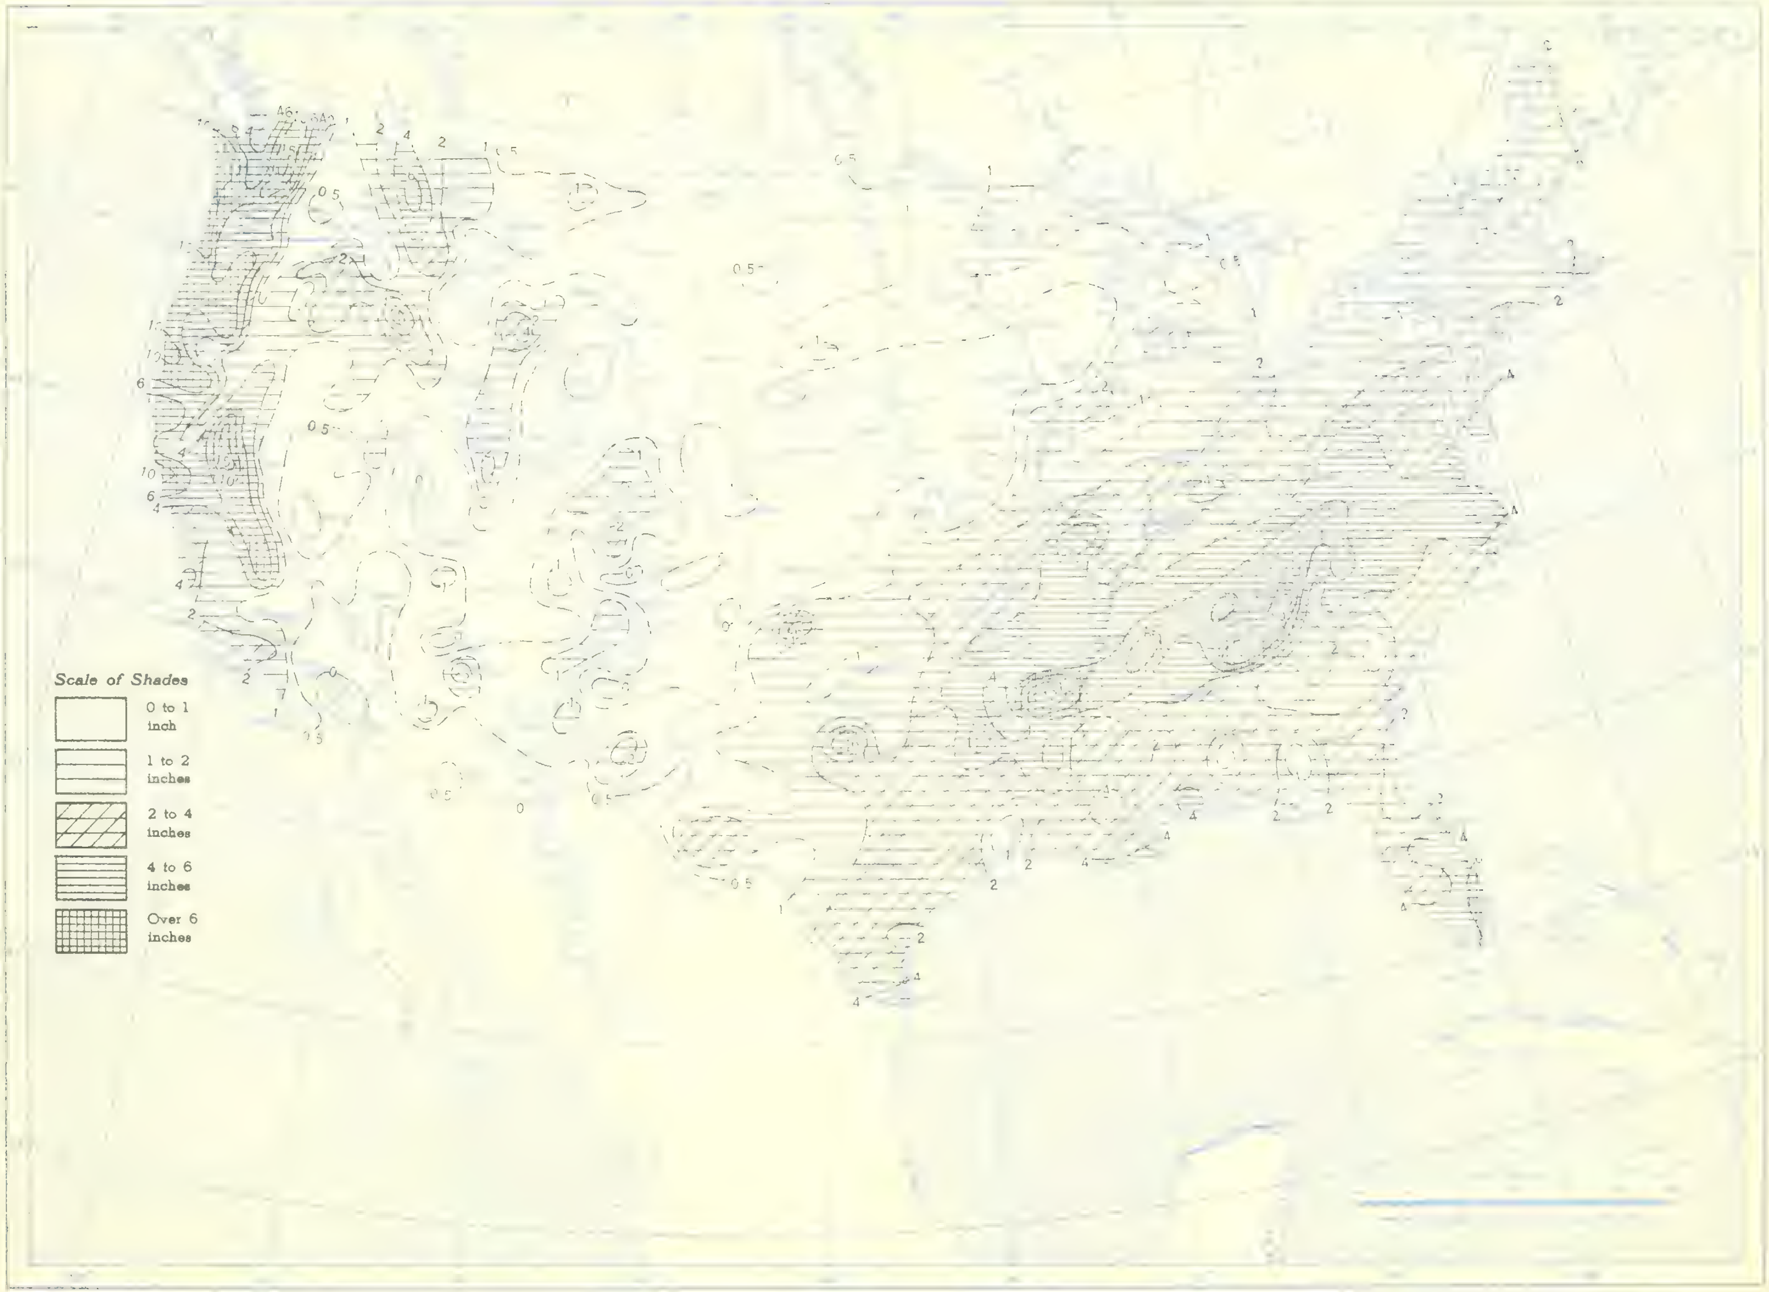


B. Departure of Average Temperature from Normal (°F.), February 1957.



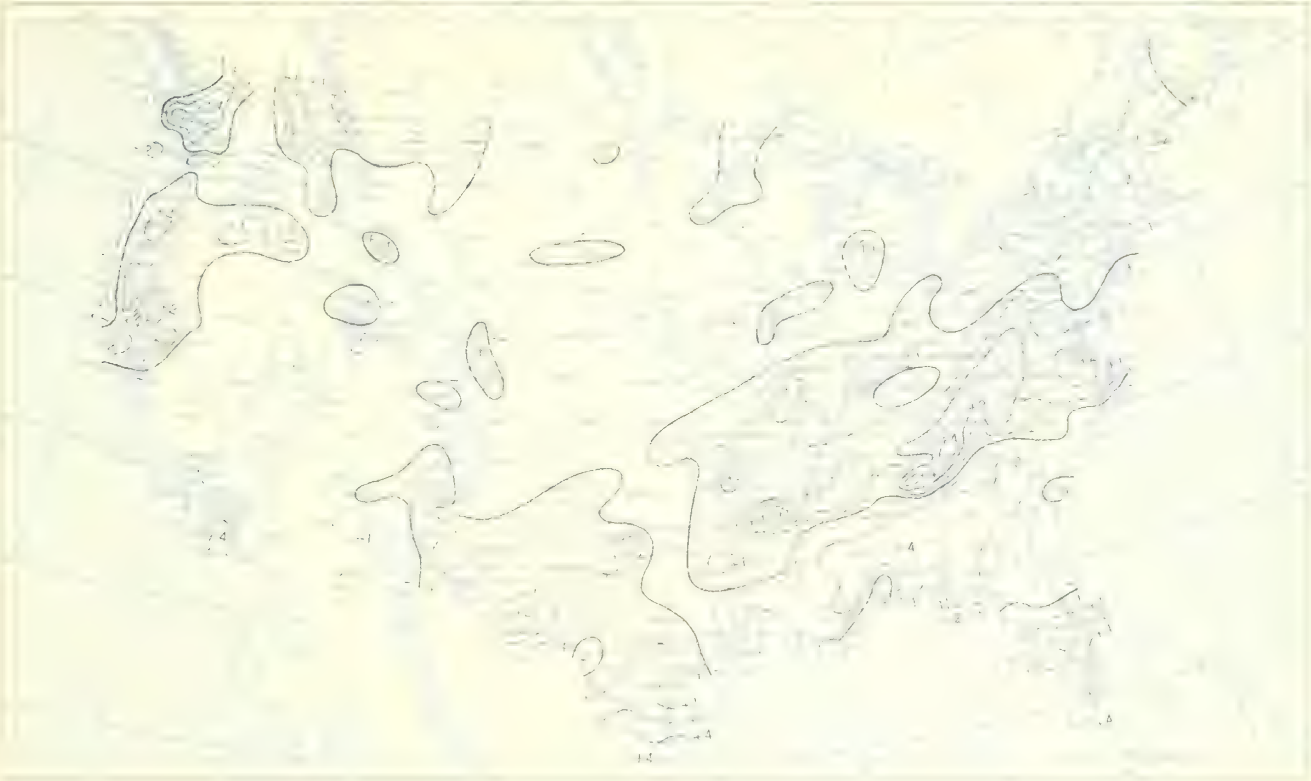
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), February 1957.

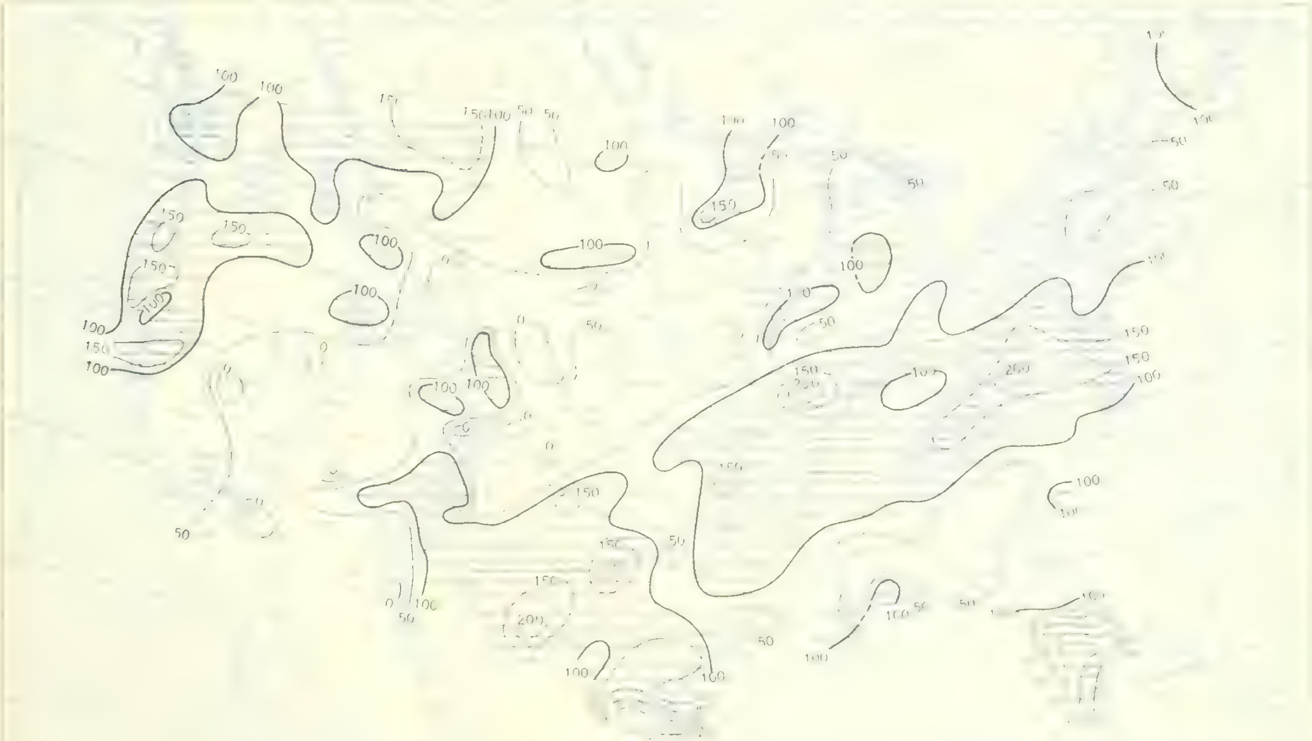


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), February 1957.

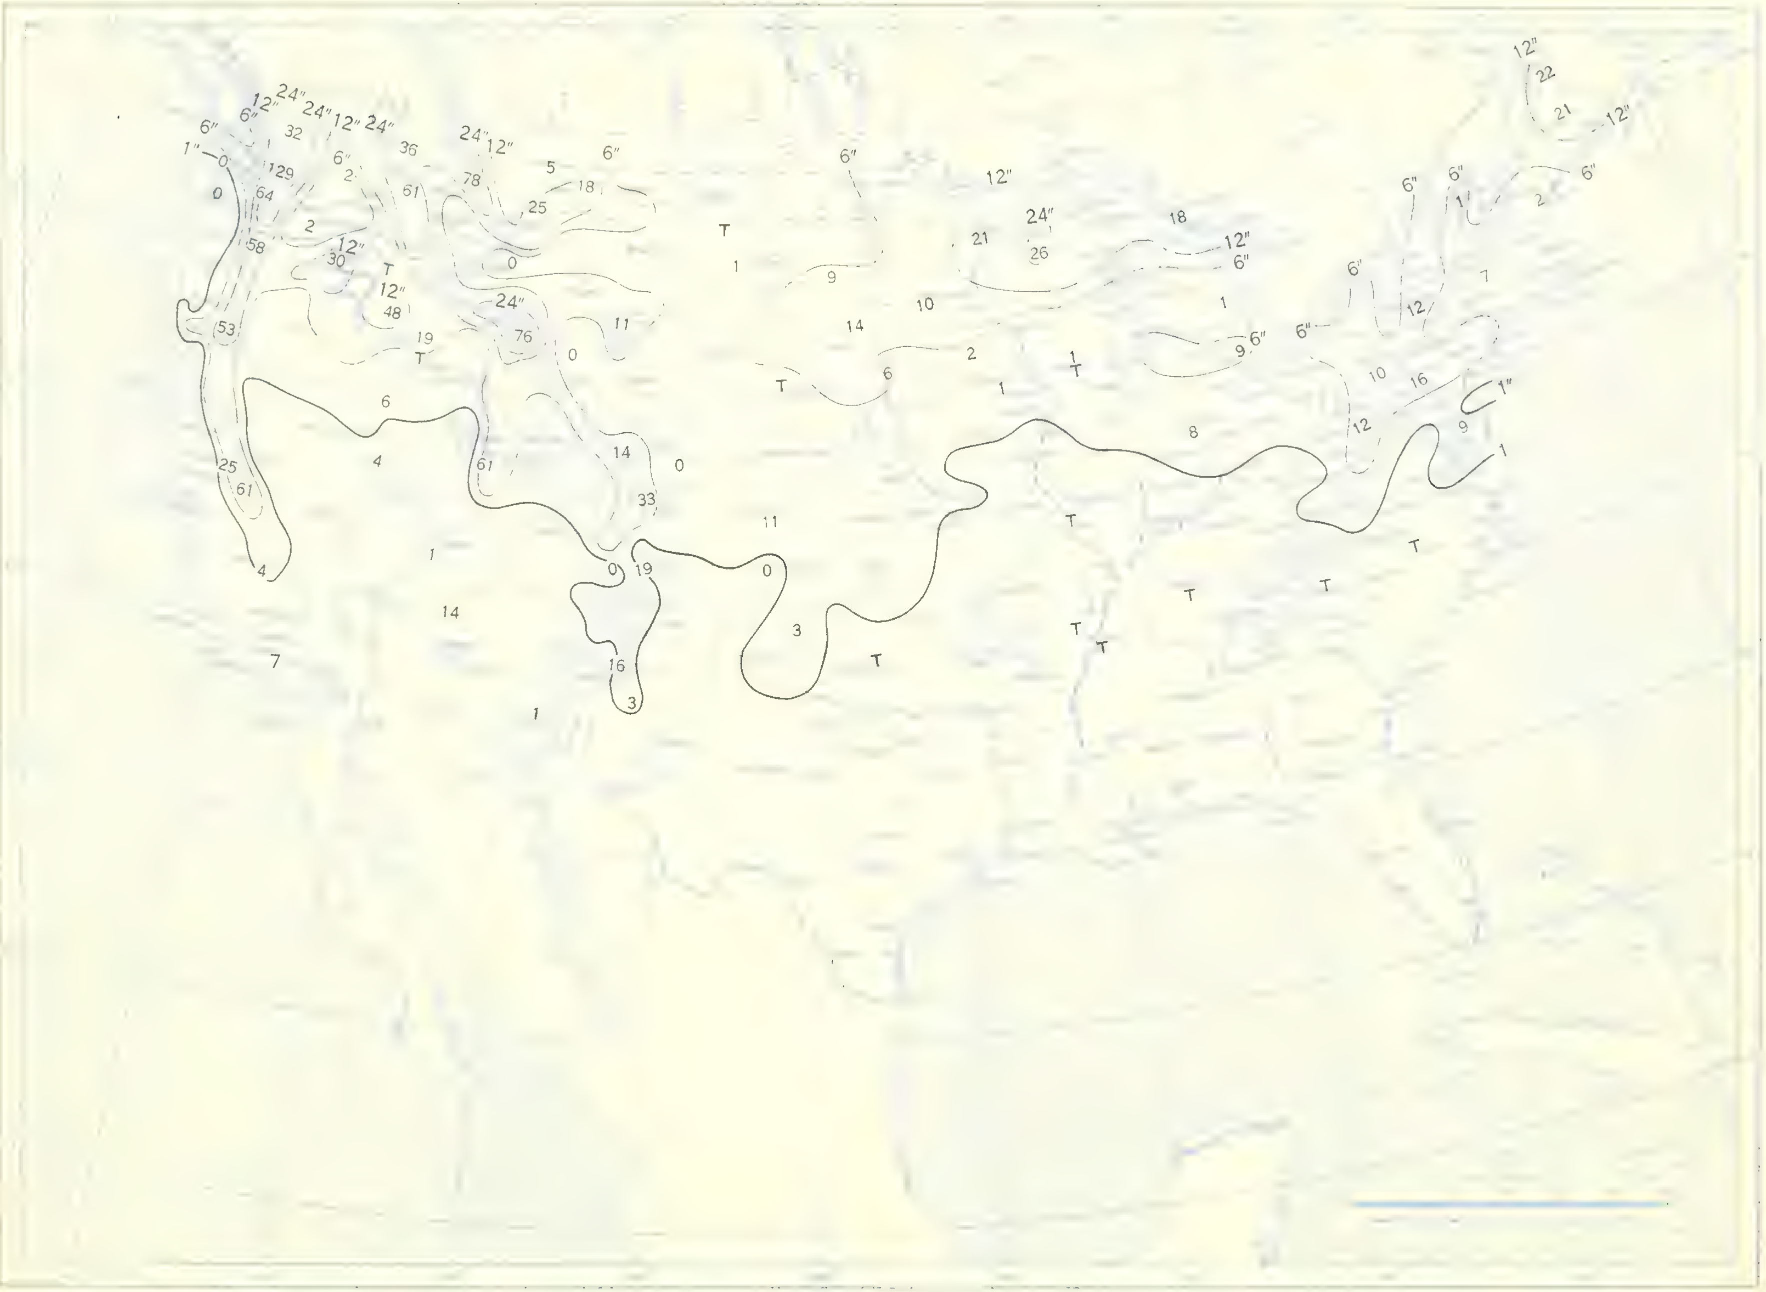


B. Percentage of Normal Precipitation, February 1957.



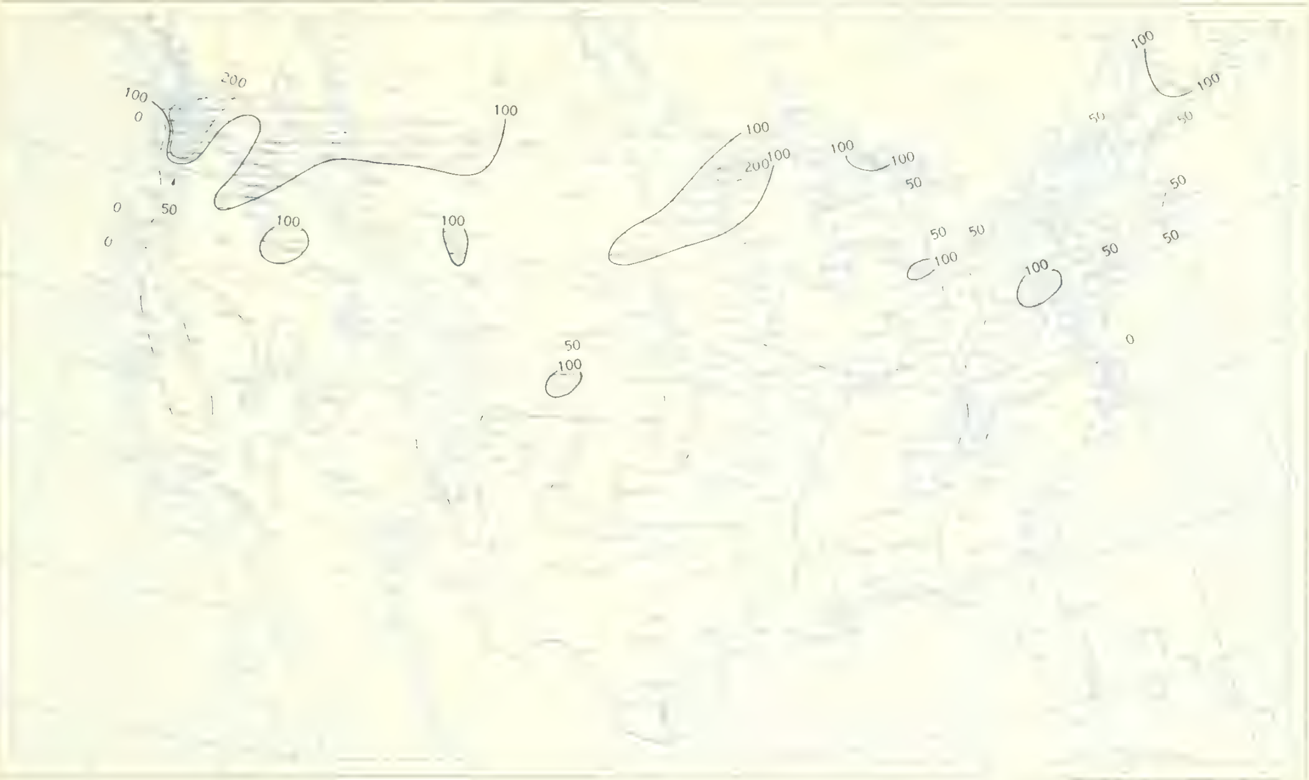
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart IV. Total Snowfall (Inches), February 1957.

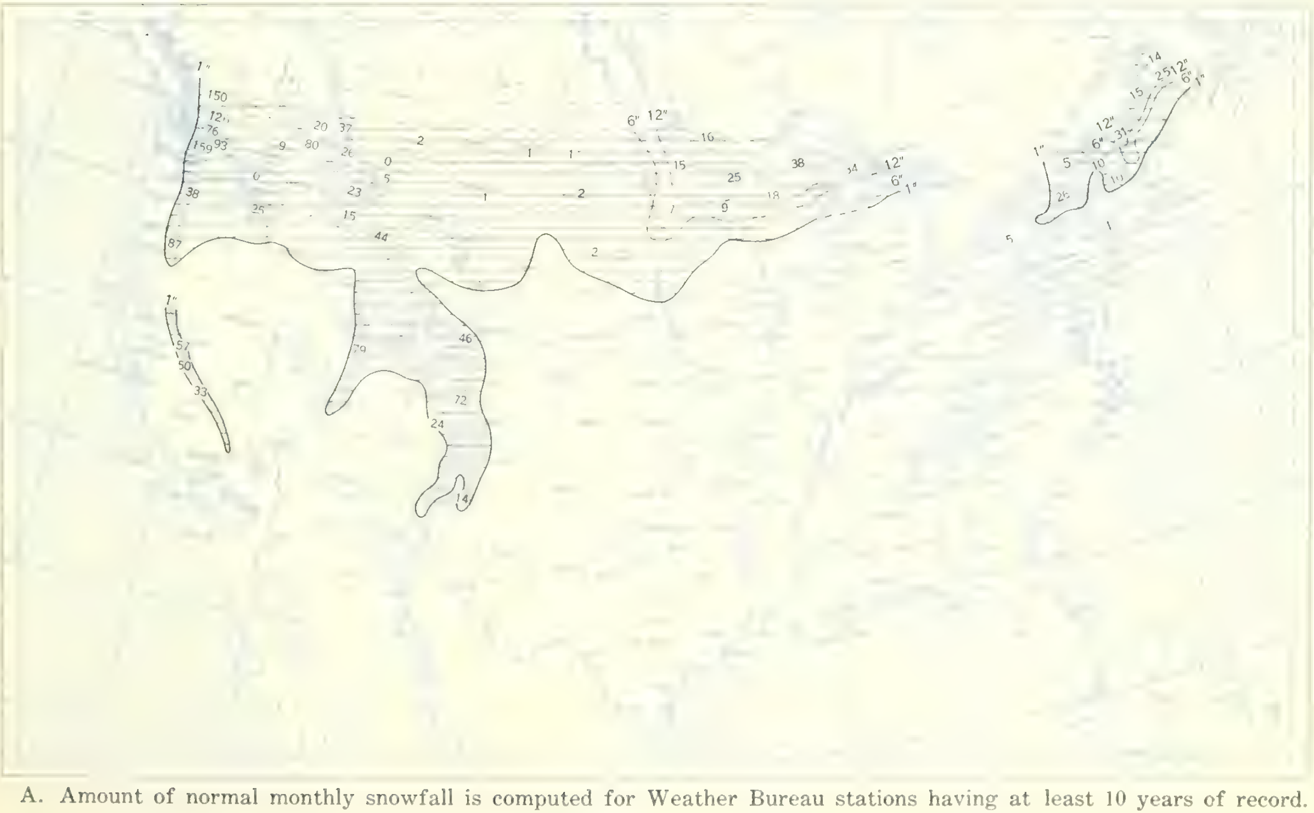


This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, February 1957.

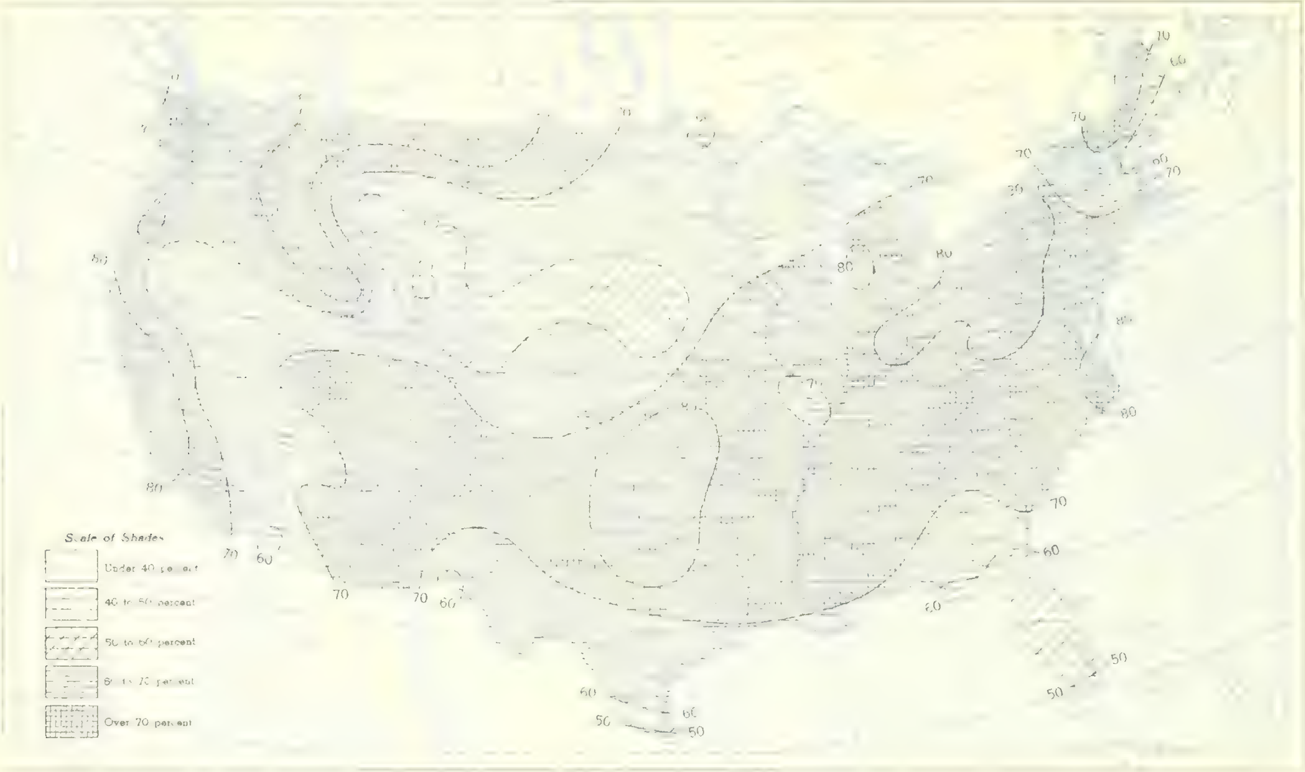


B. Depth of Snow on Ground (Inches). 7:30 a. m. E. S. T., February 25, 1957.

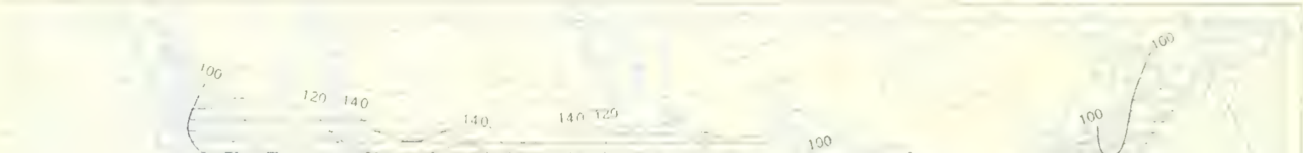


A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:30 a. m. E. S. T., of the Monday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, February 1957.

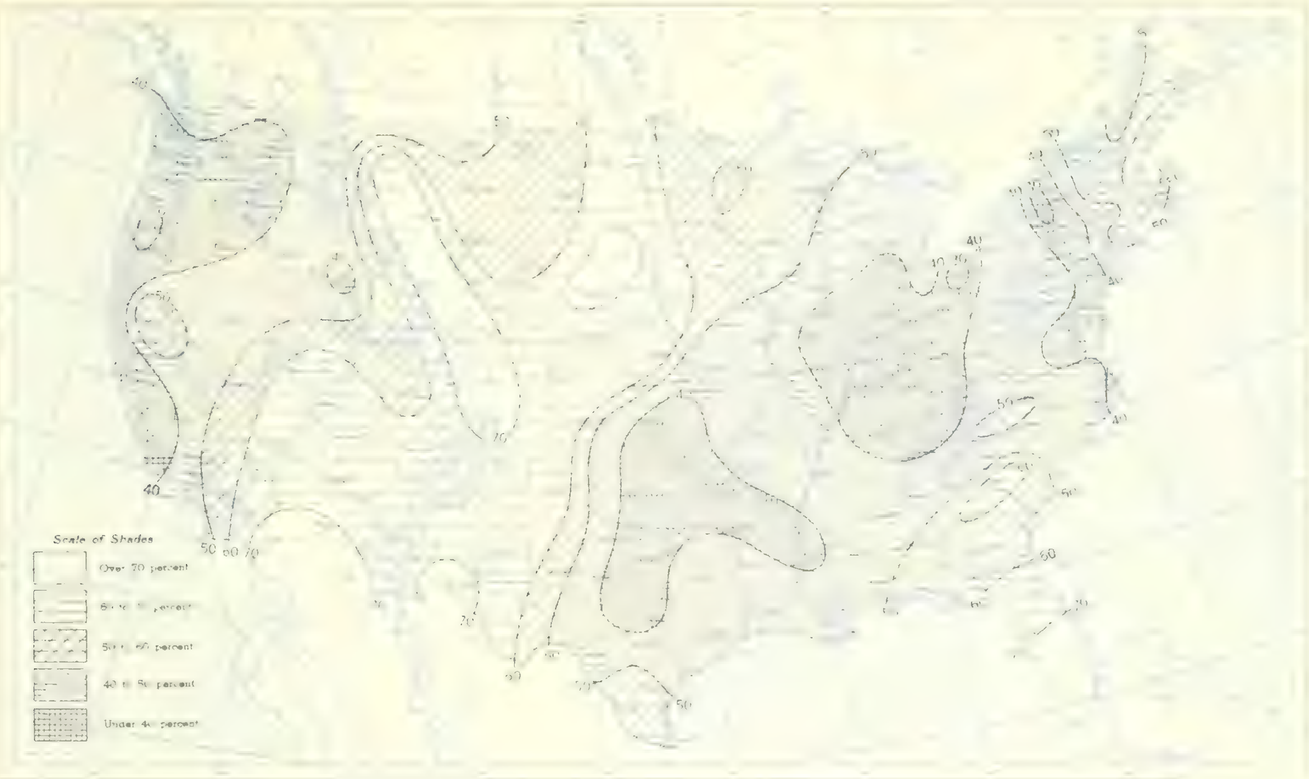


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, February 1957.

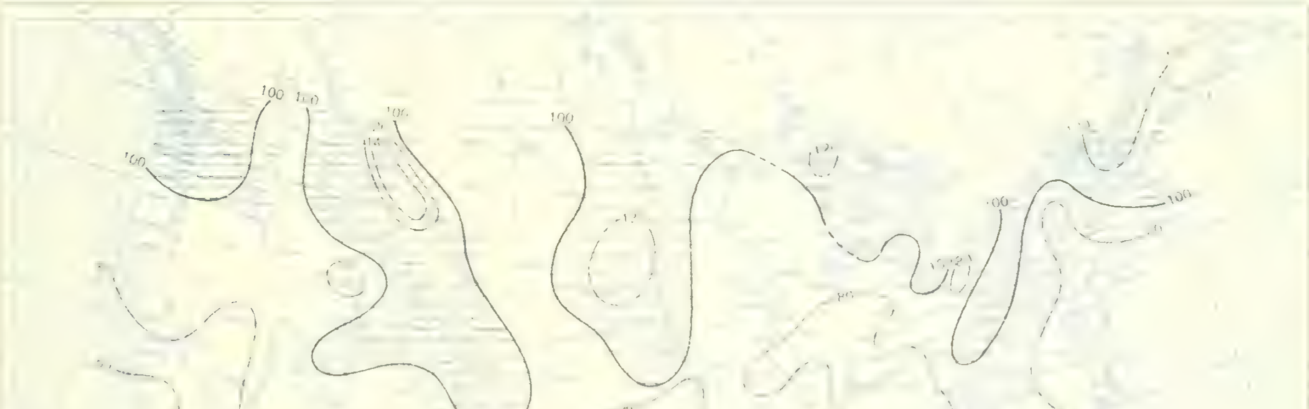


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, February 1957.



B. Percentage of Normal Sunshine, February 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, February 1957. Inset: Percentage of Mean Daily Solar Radiation, February 1957. (Mean based on period 1951-55.)

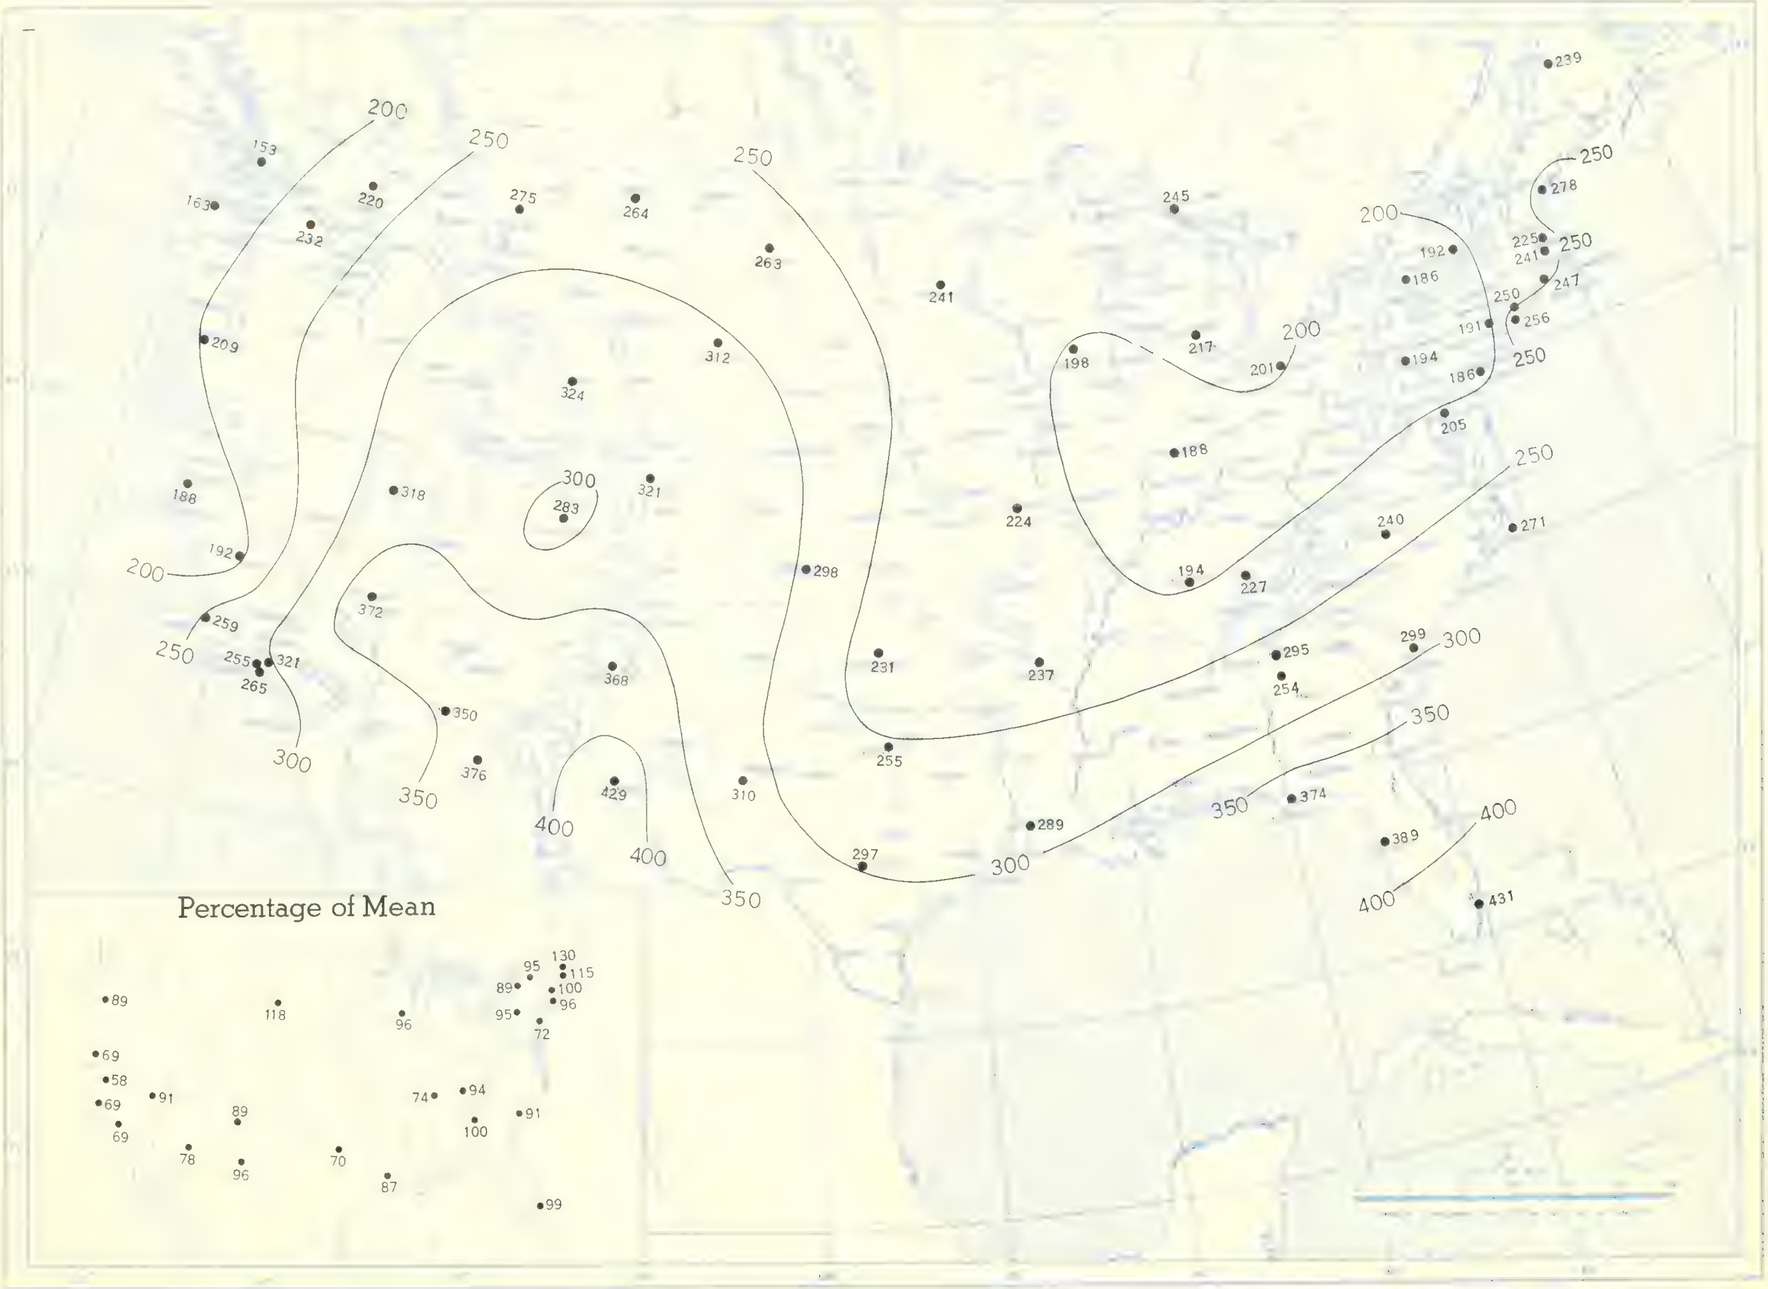


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

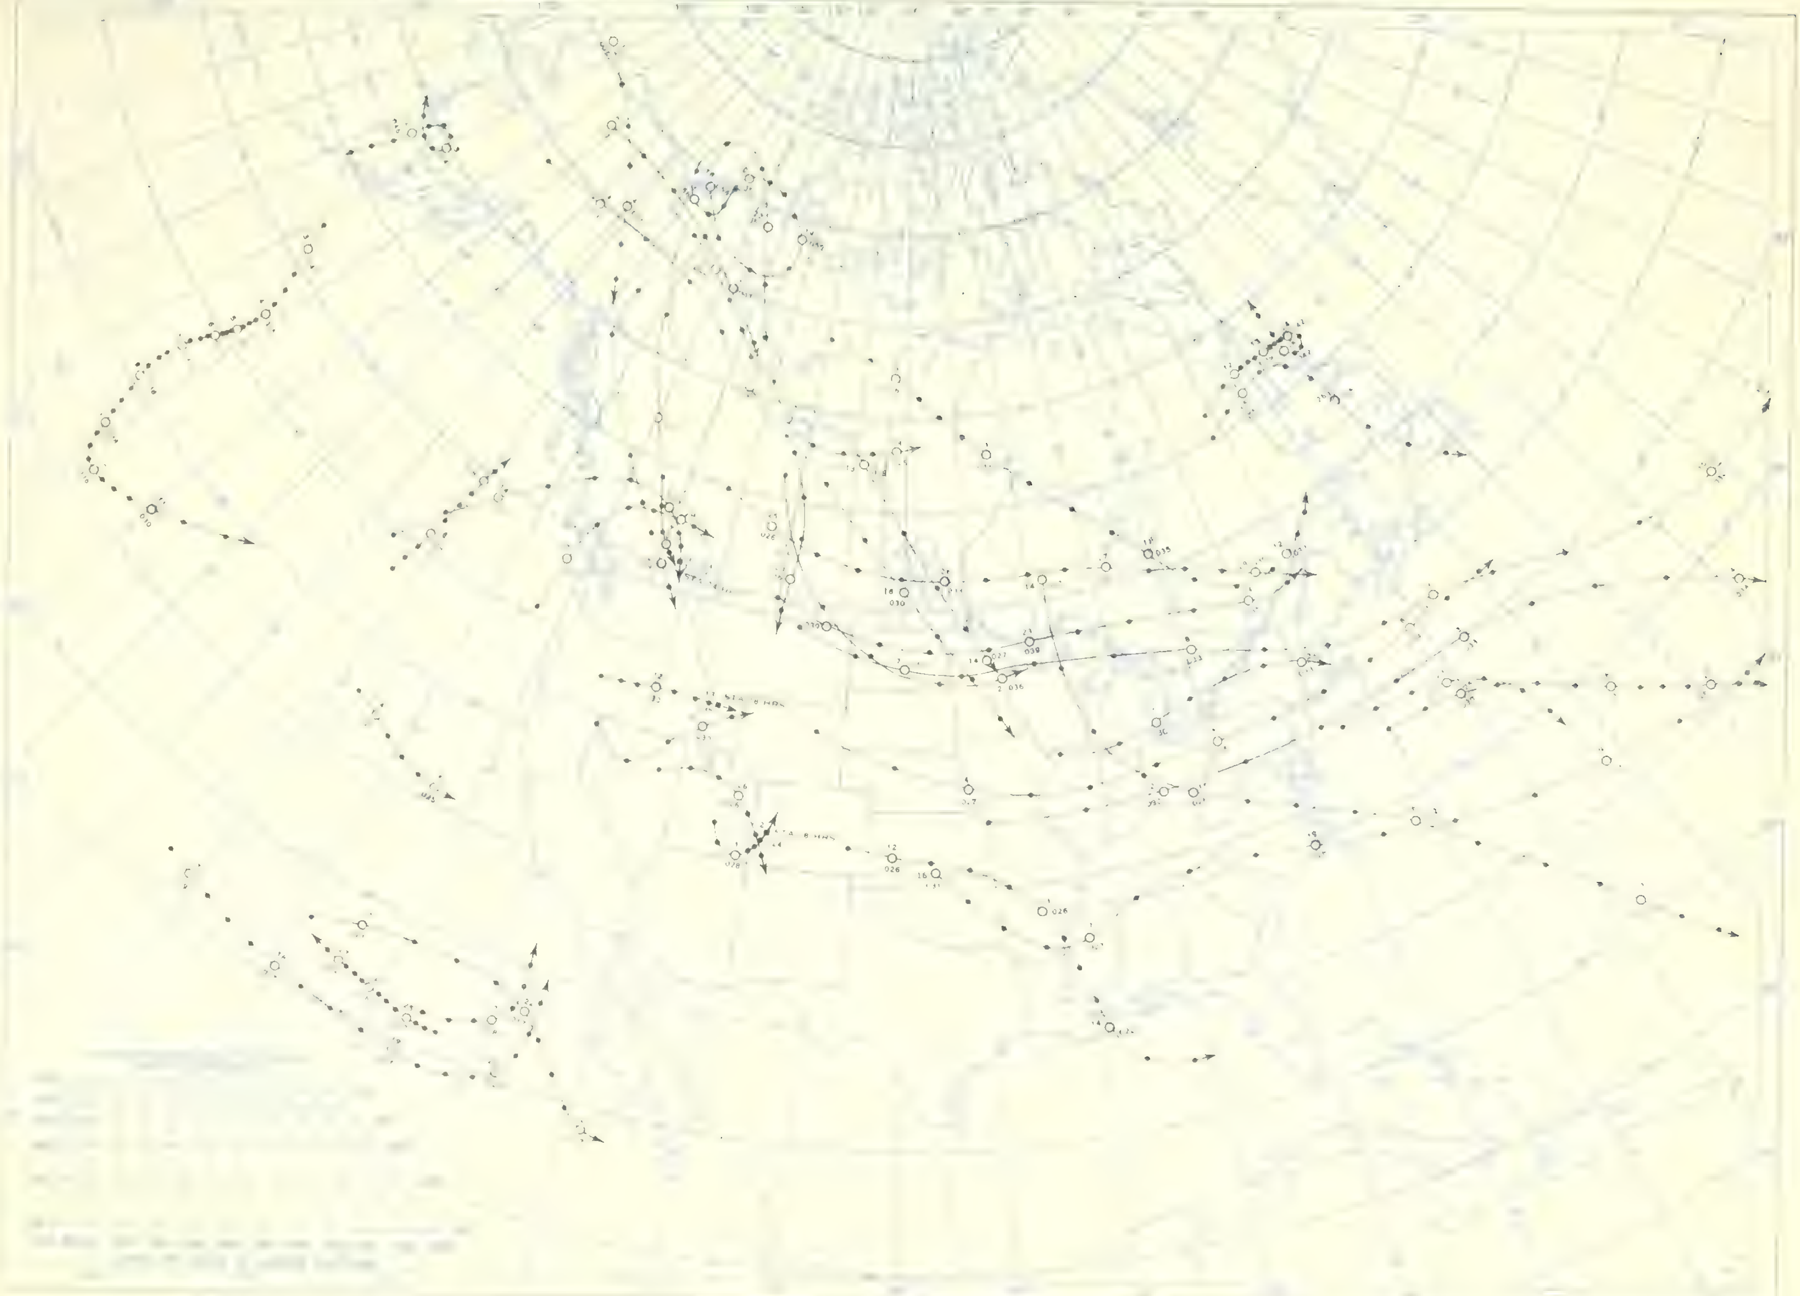
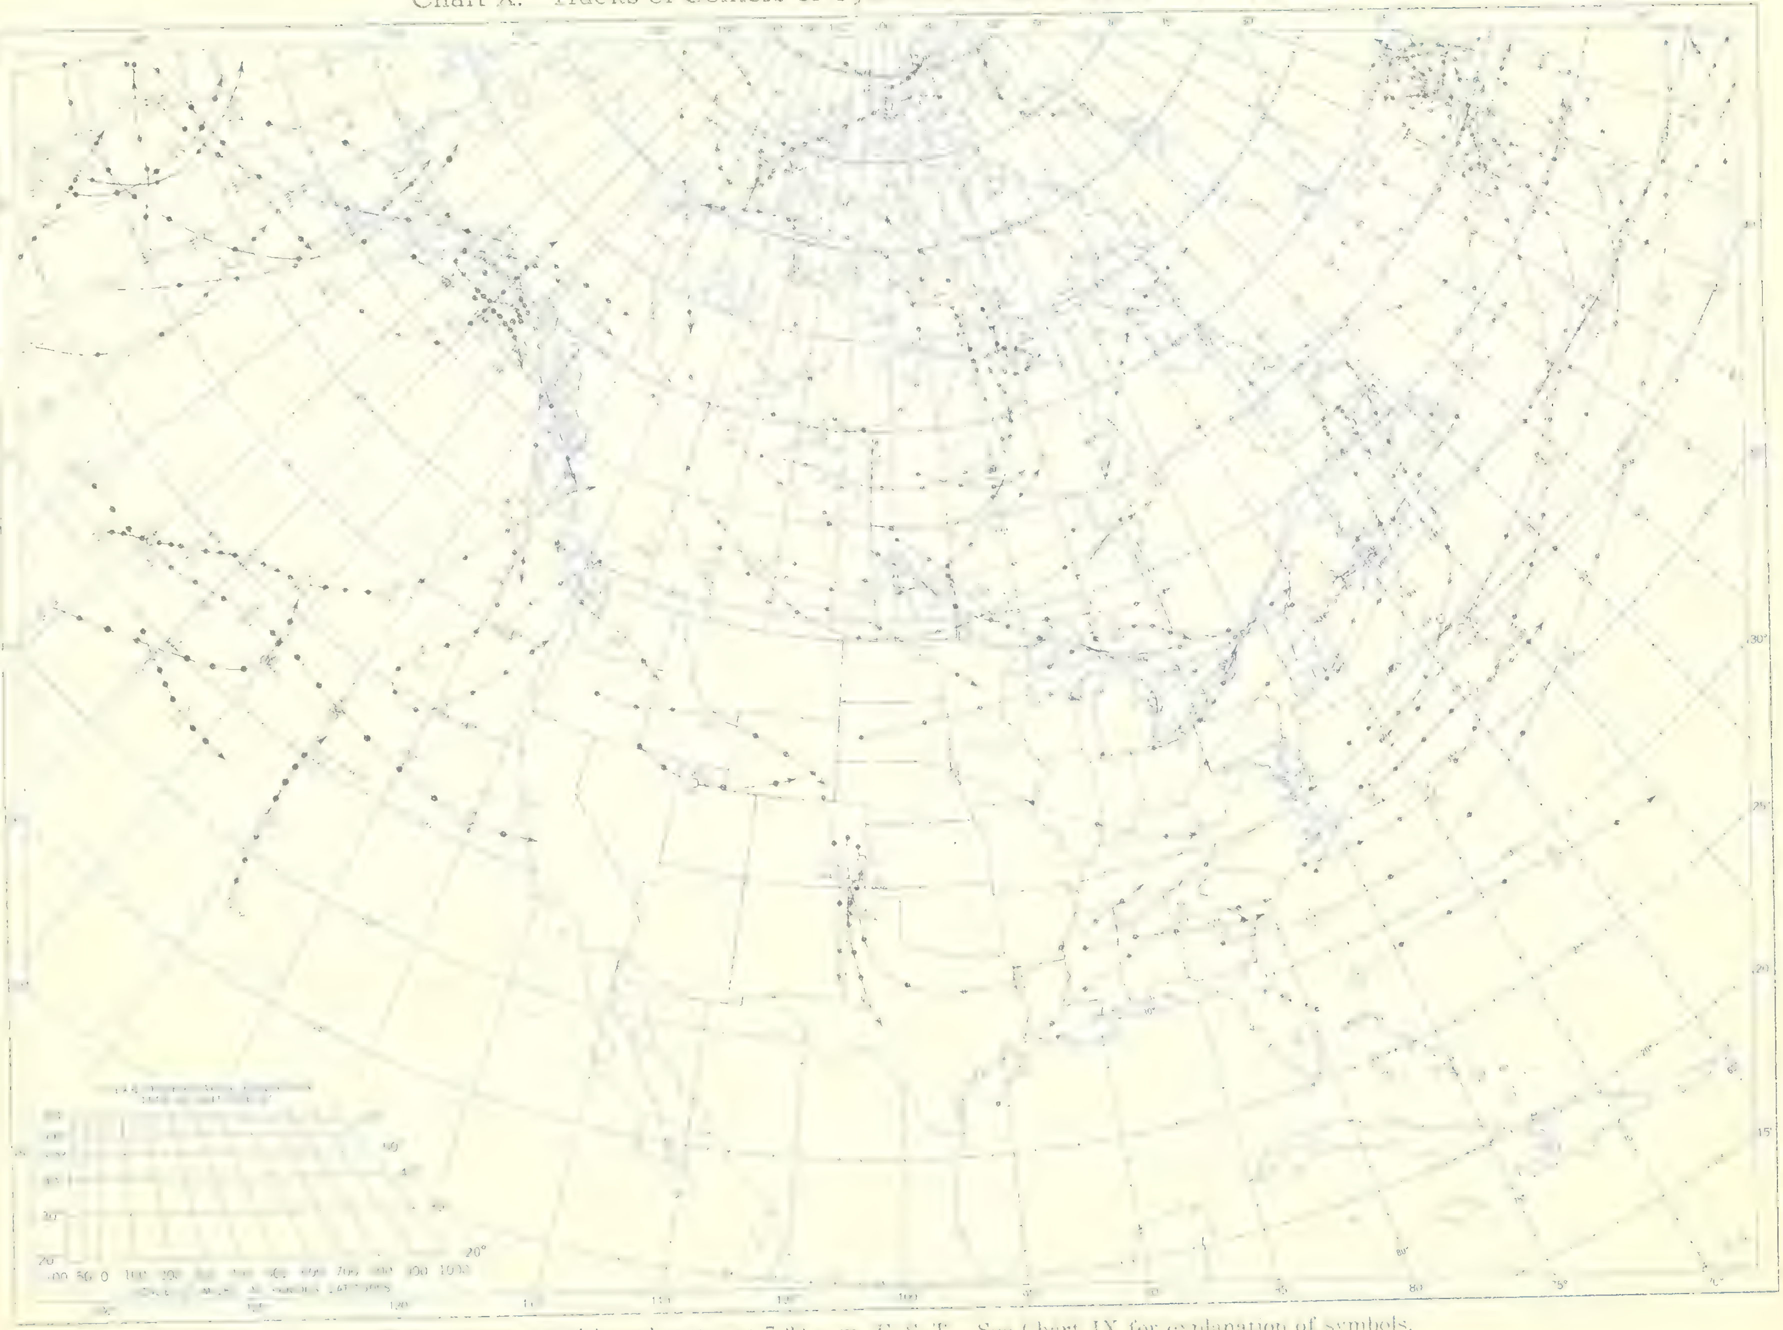
Chart IX. Tracks of Centers of Anticyclones at Sea Level, February 1957.



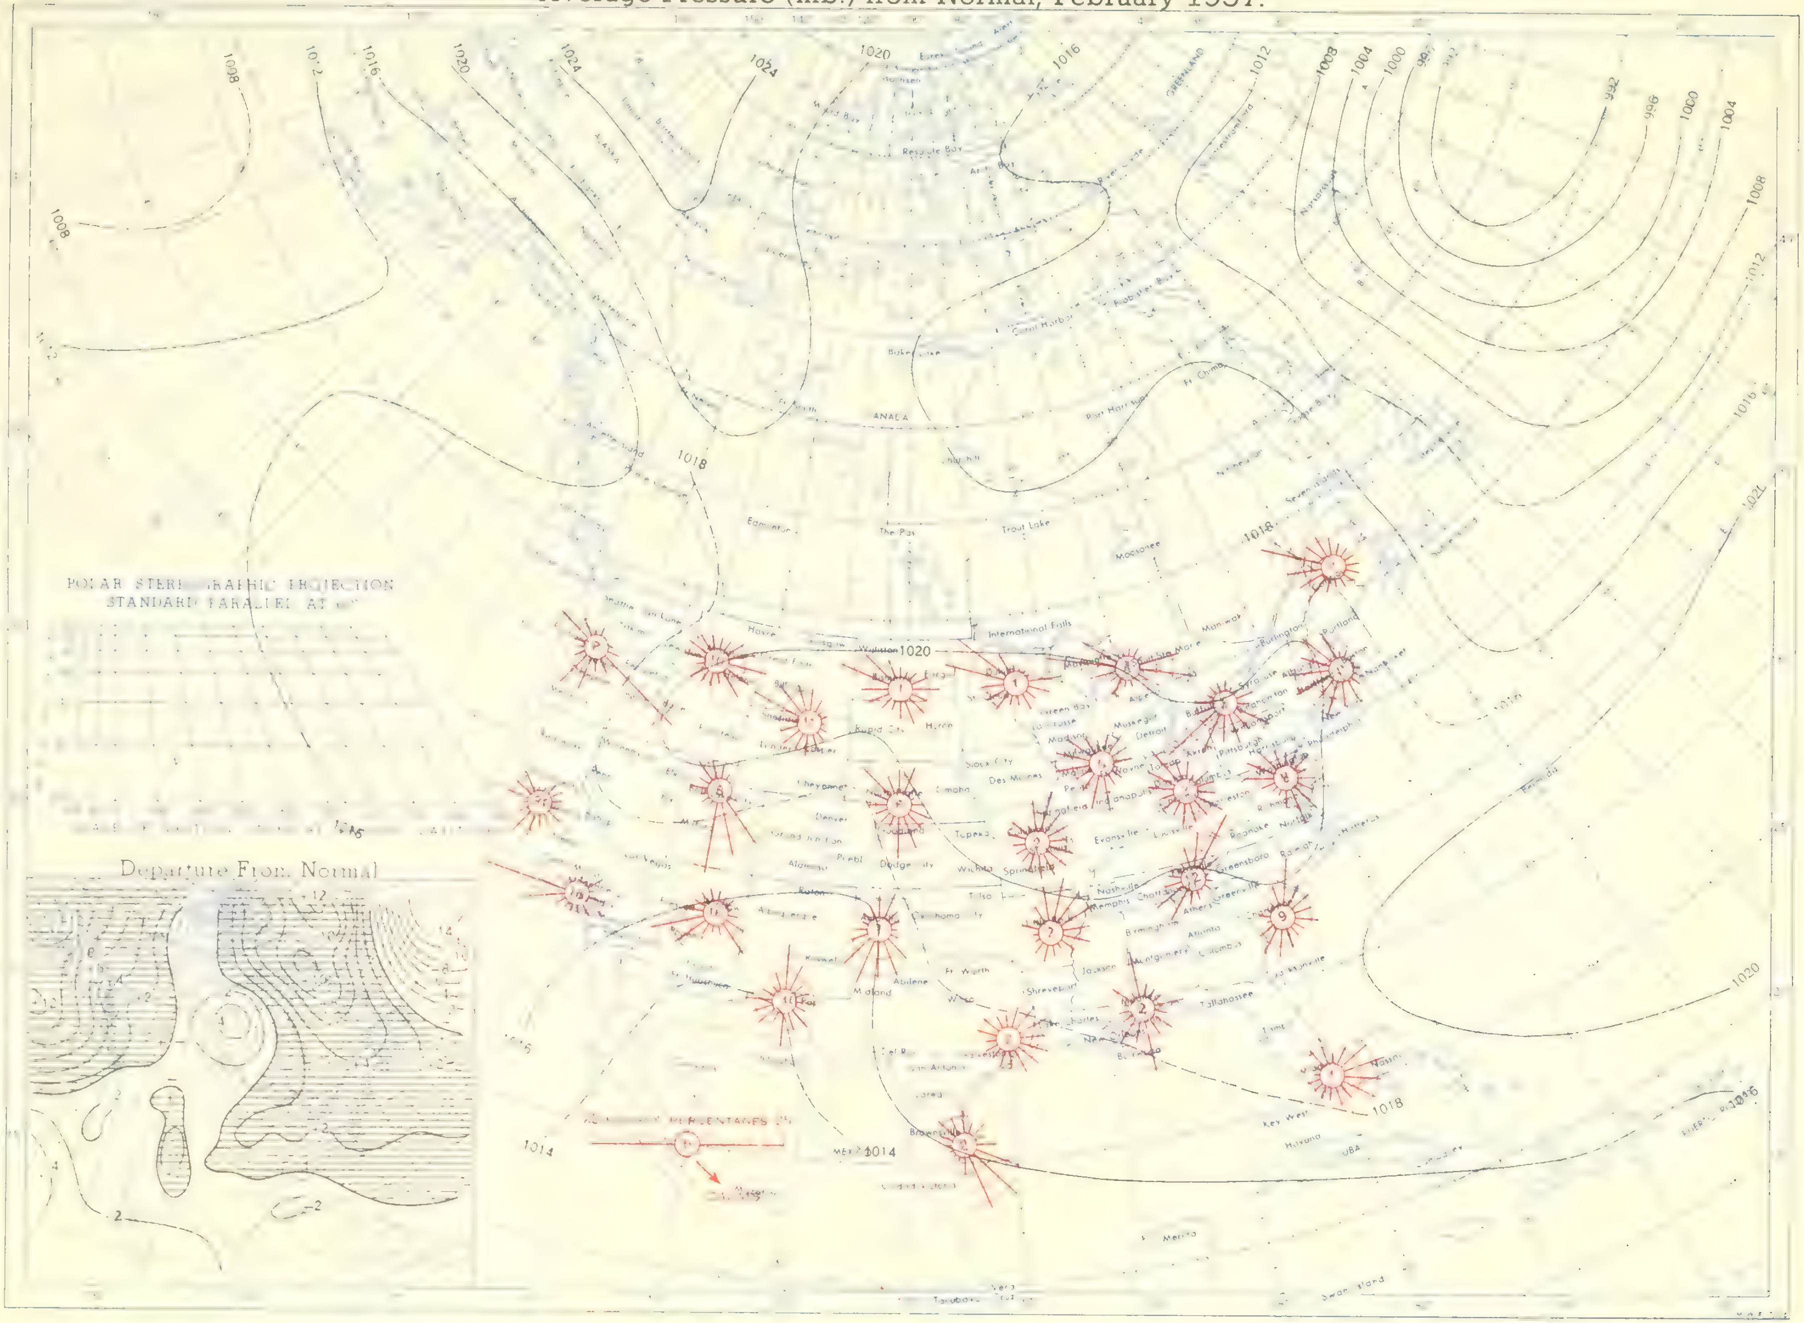
Circle indicates position of center at 7:30 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, February 1957.



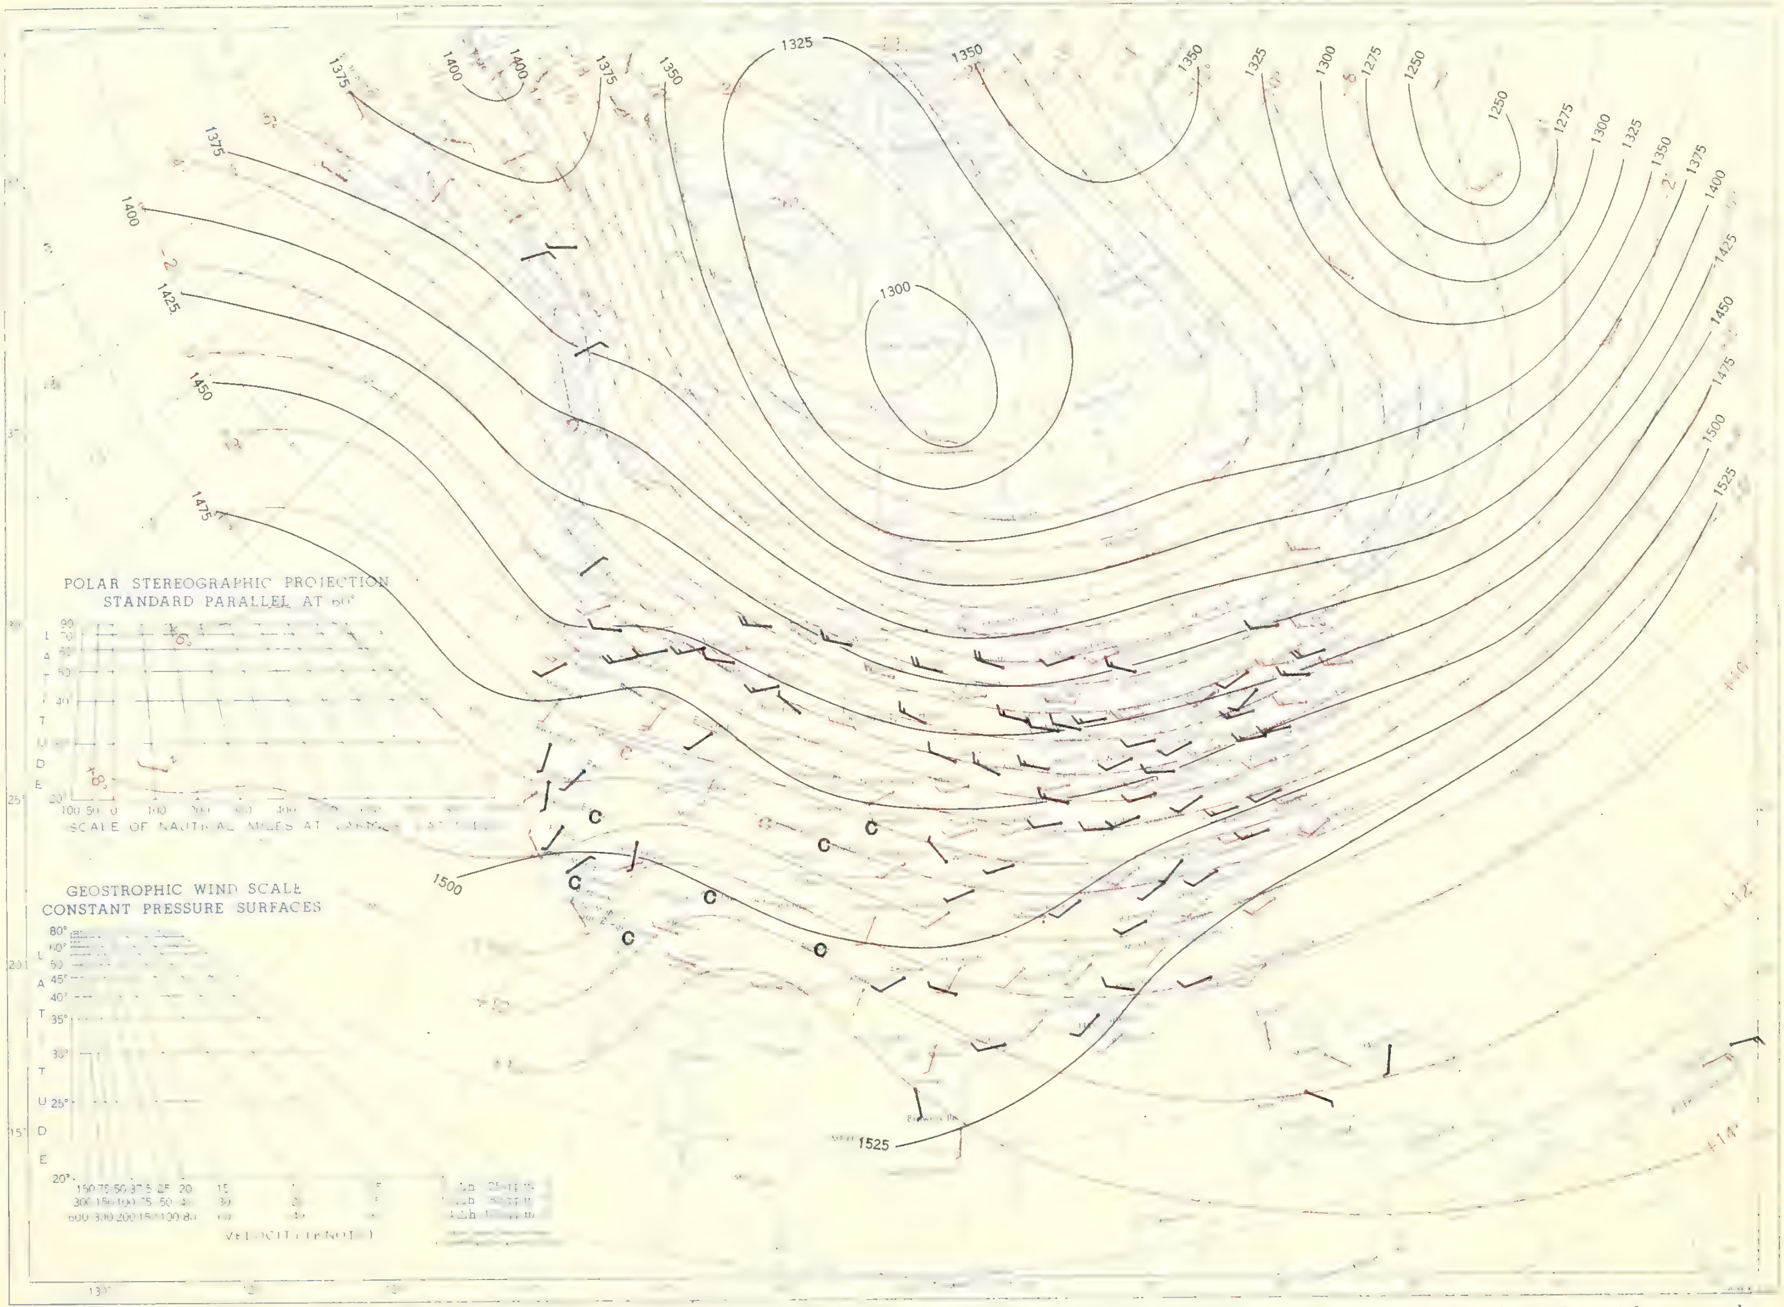
Circle indicates position of center at 7:30 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, February 1957. Inset: Departure of Average Pressure (mb.) from Normal, February 1957.



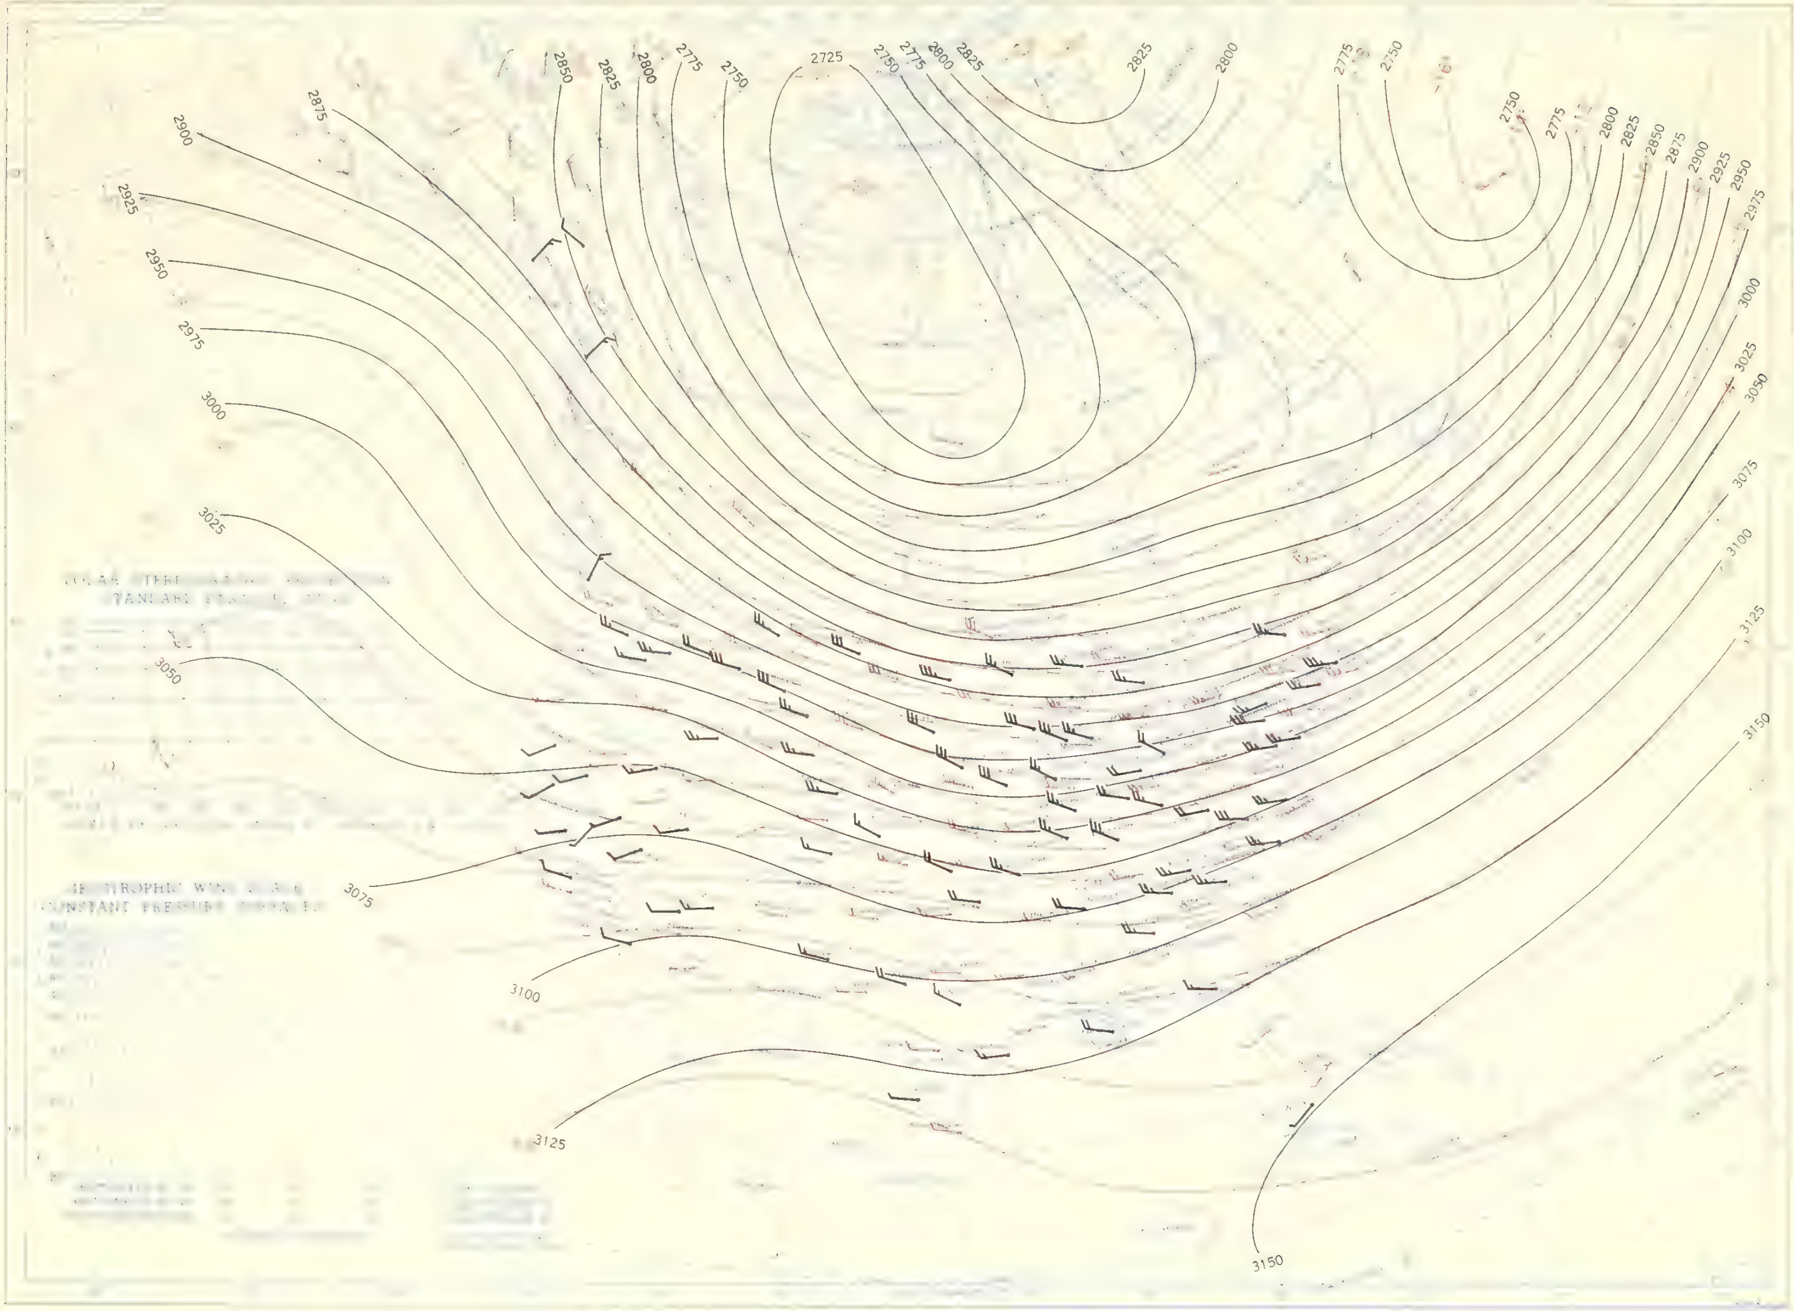
Average sea level pressures are obtained from the averages of the 7:30 a.m. and 7:30 p.m. E.S.T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



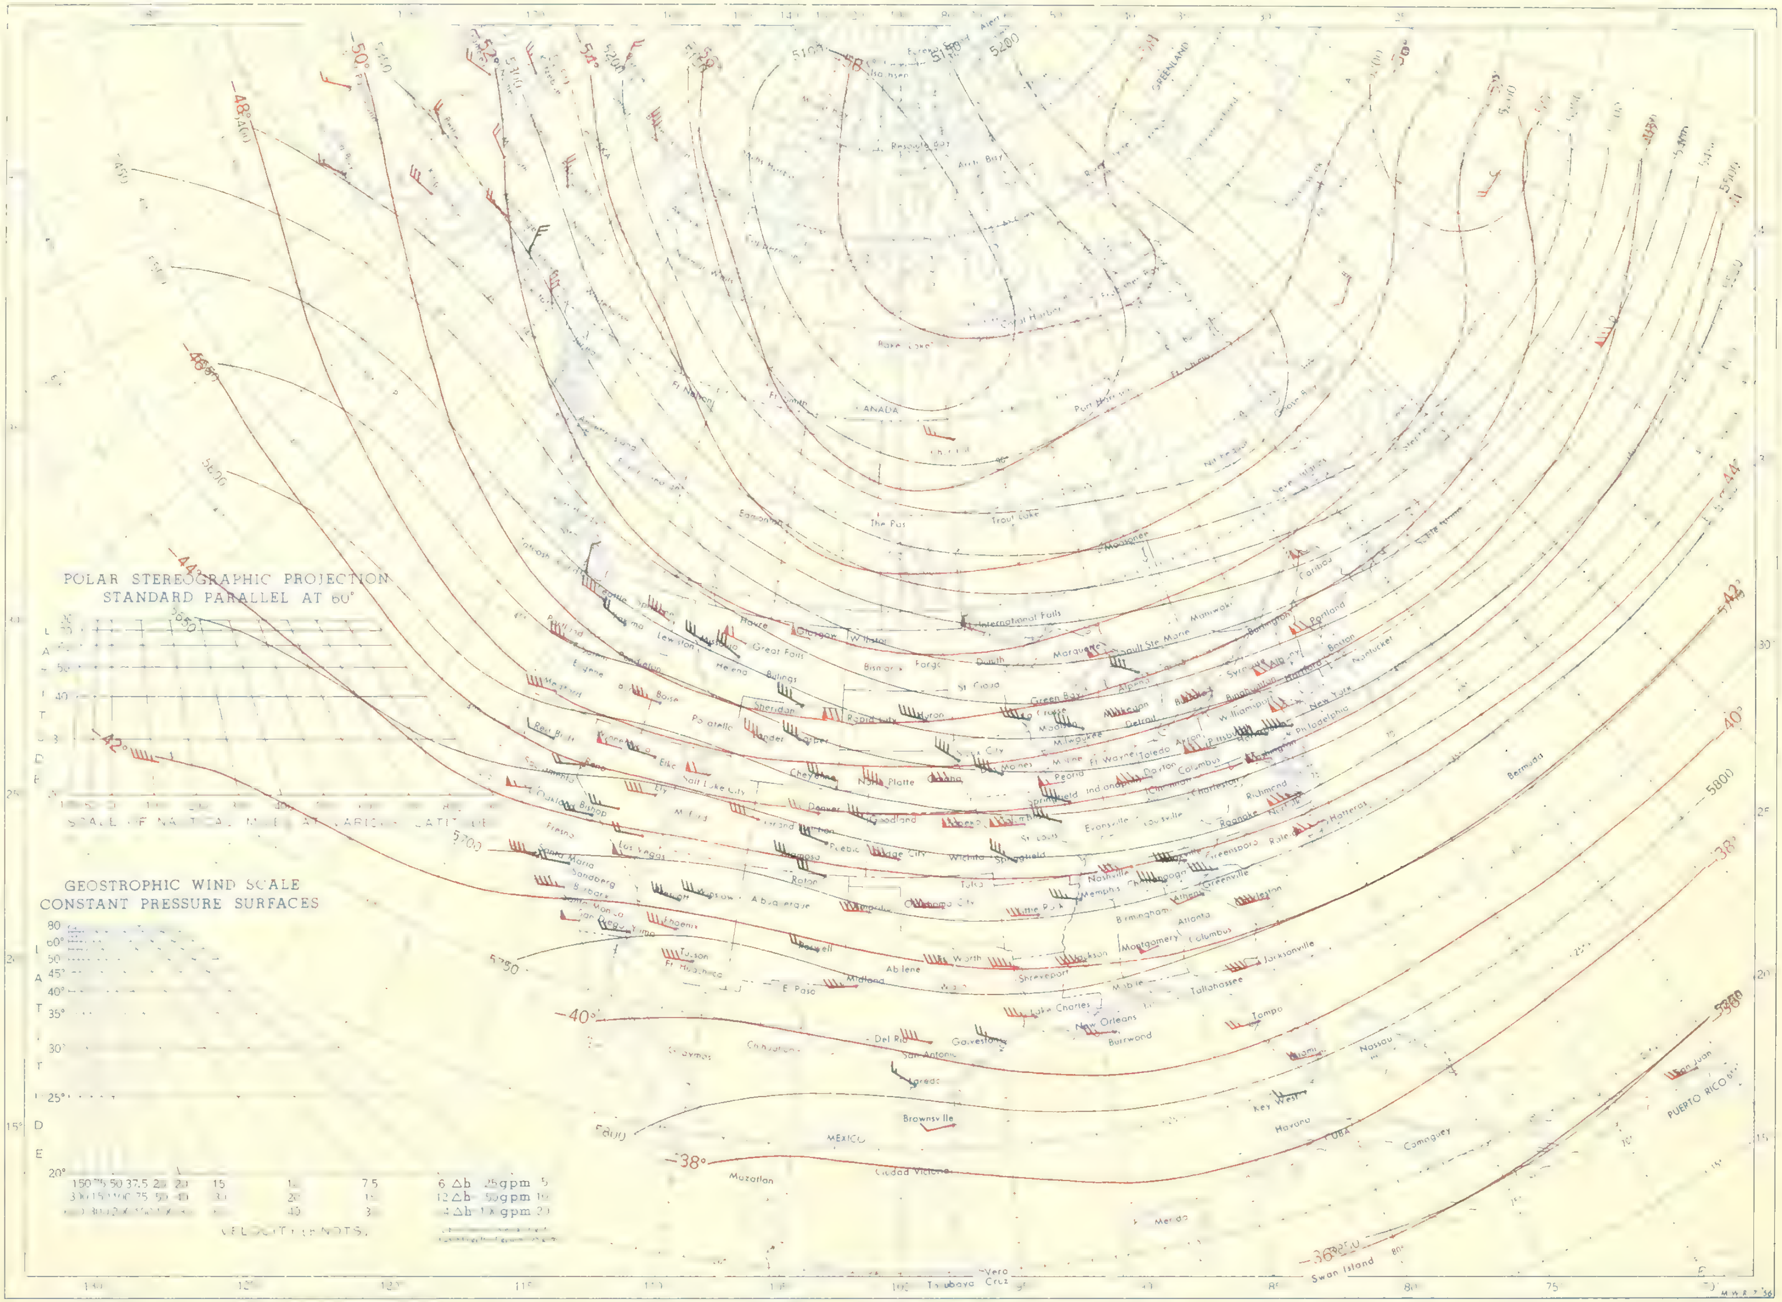
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Winds shown in red are based on rawins taken at the indicated pressure surface and time. Those in black are based on pibals taken at 2100 GMT and are for the nearest standard height level.

Chart XIII. 700-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



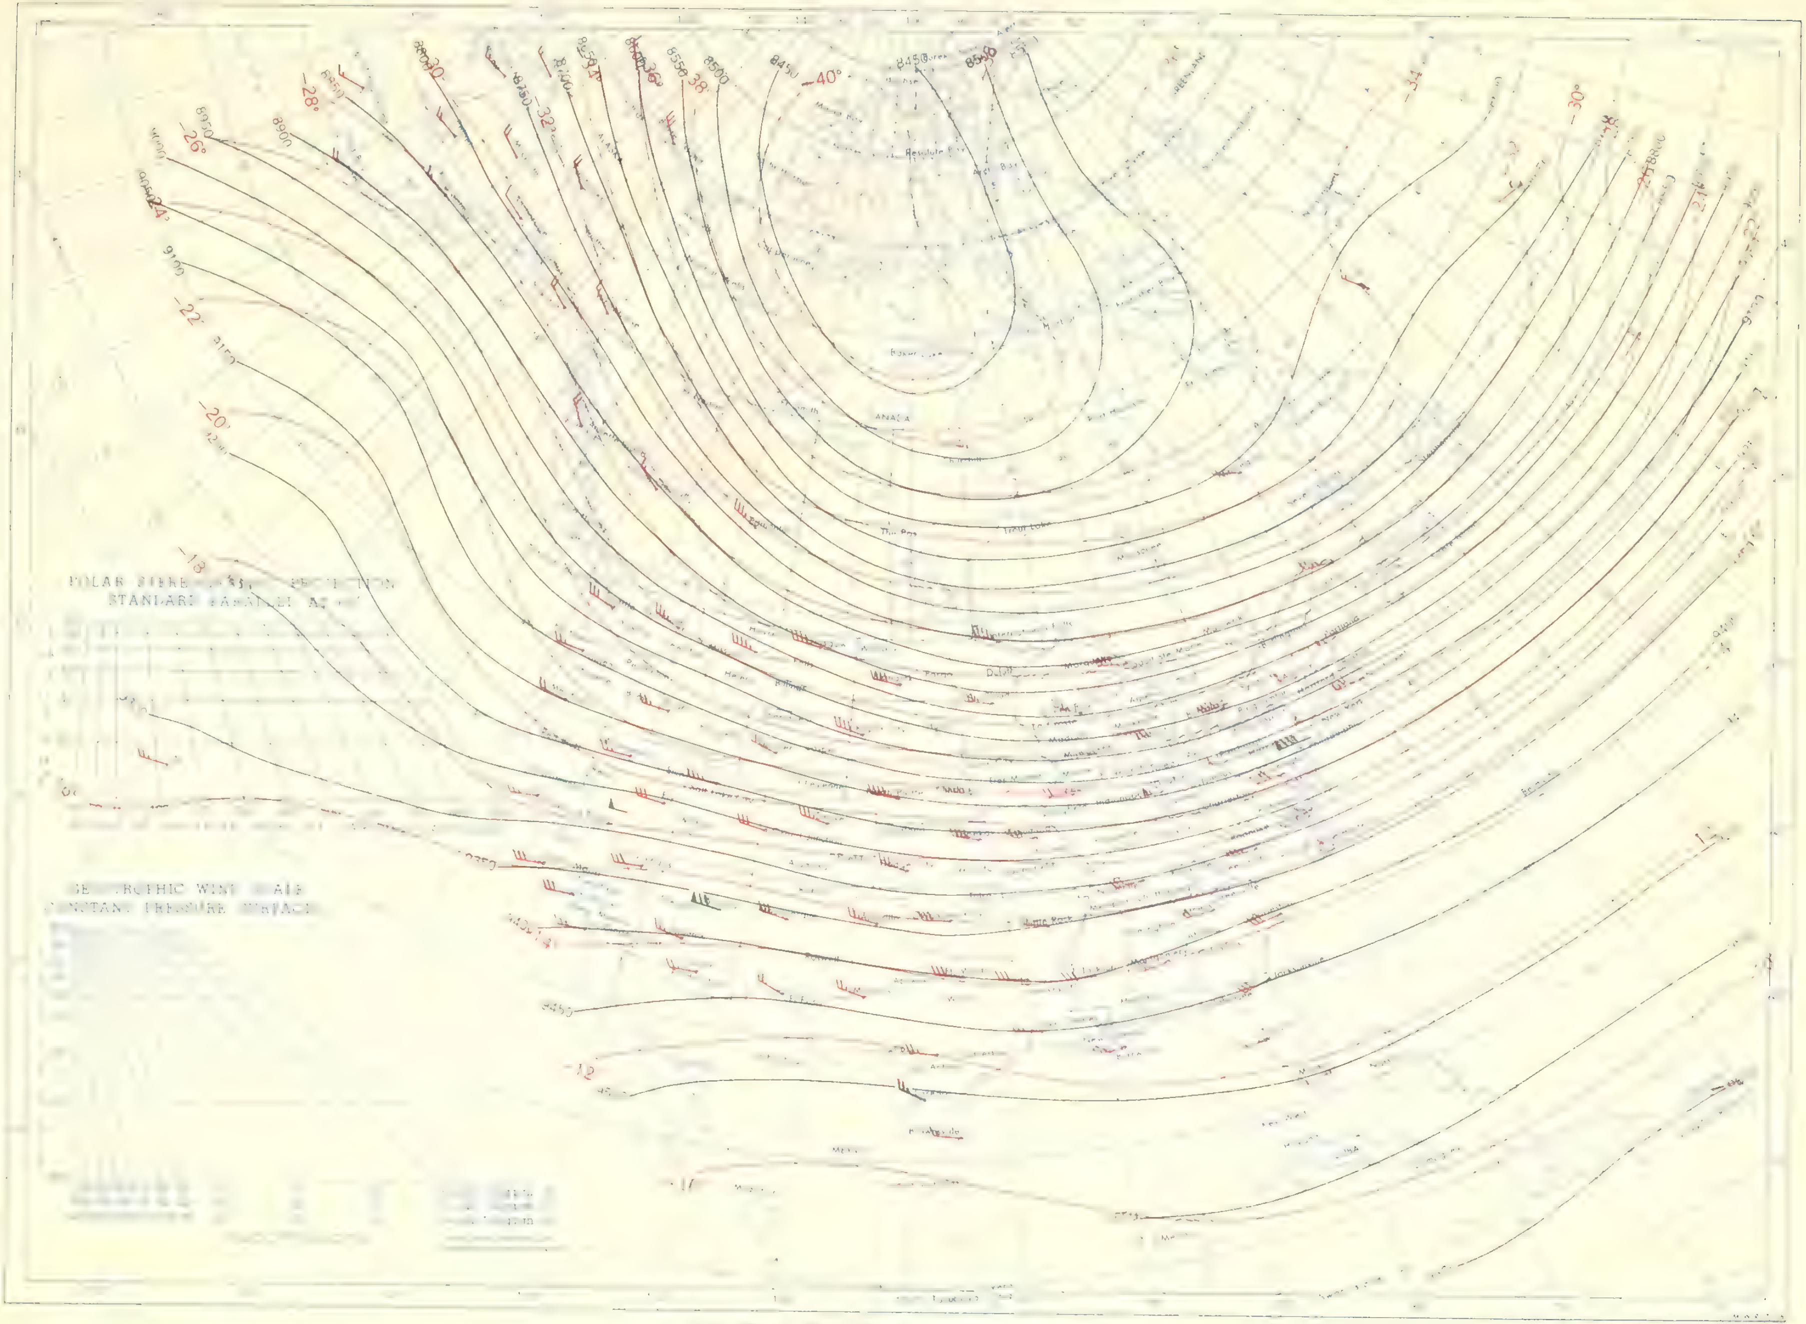
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



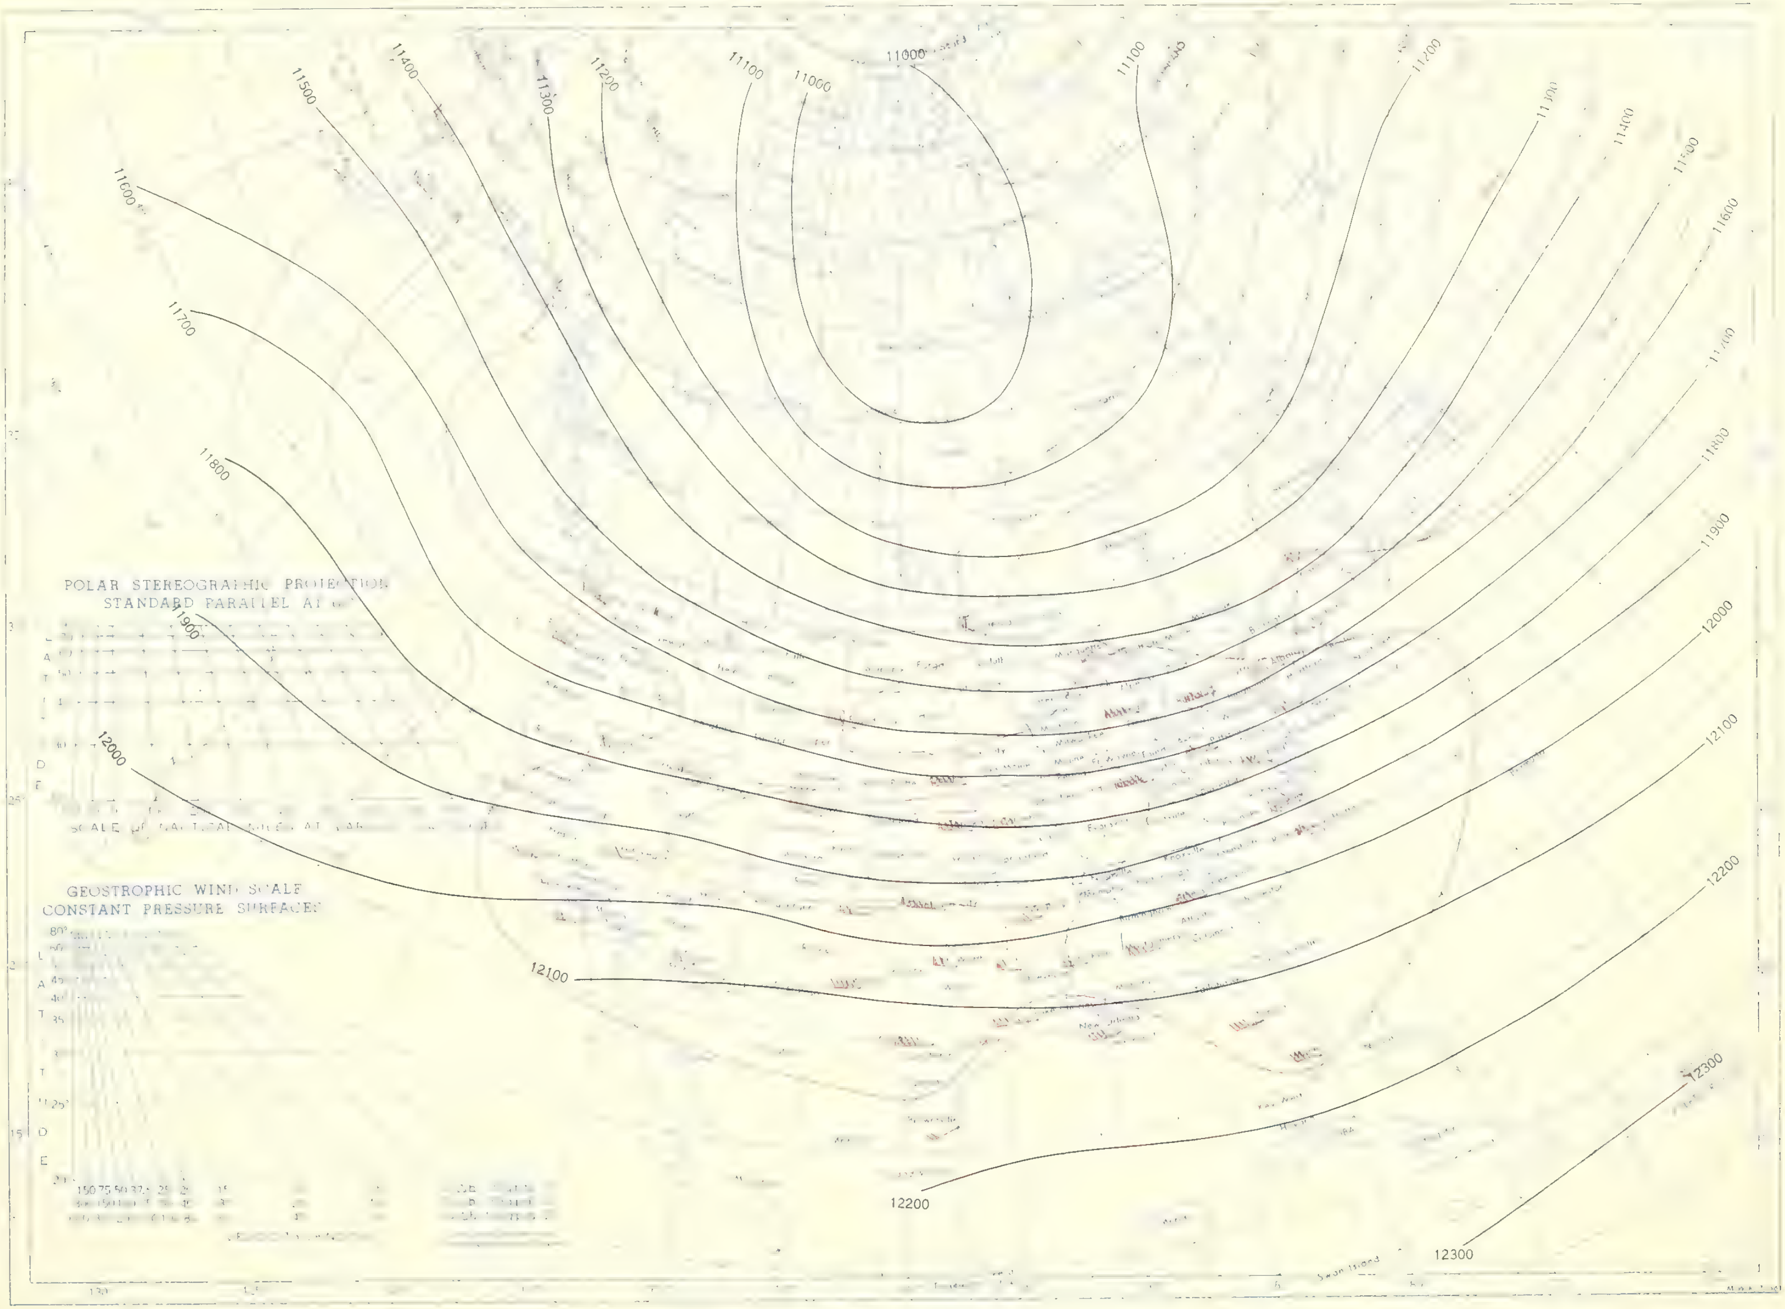
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



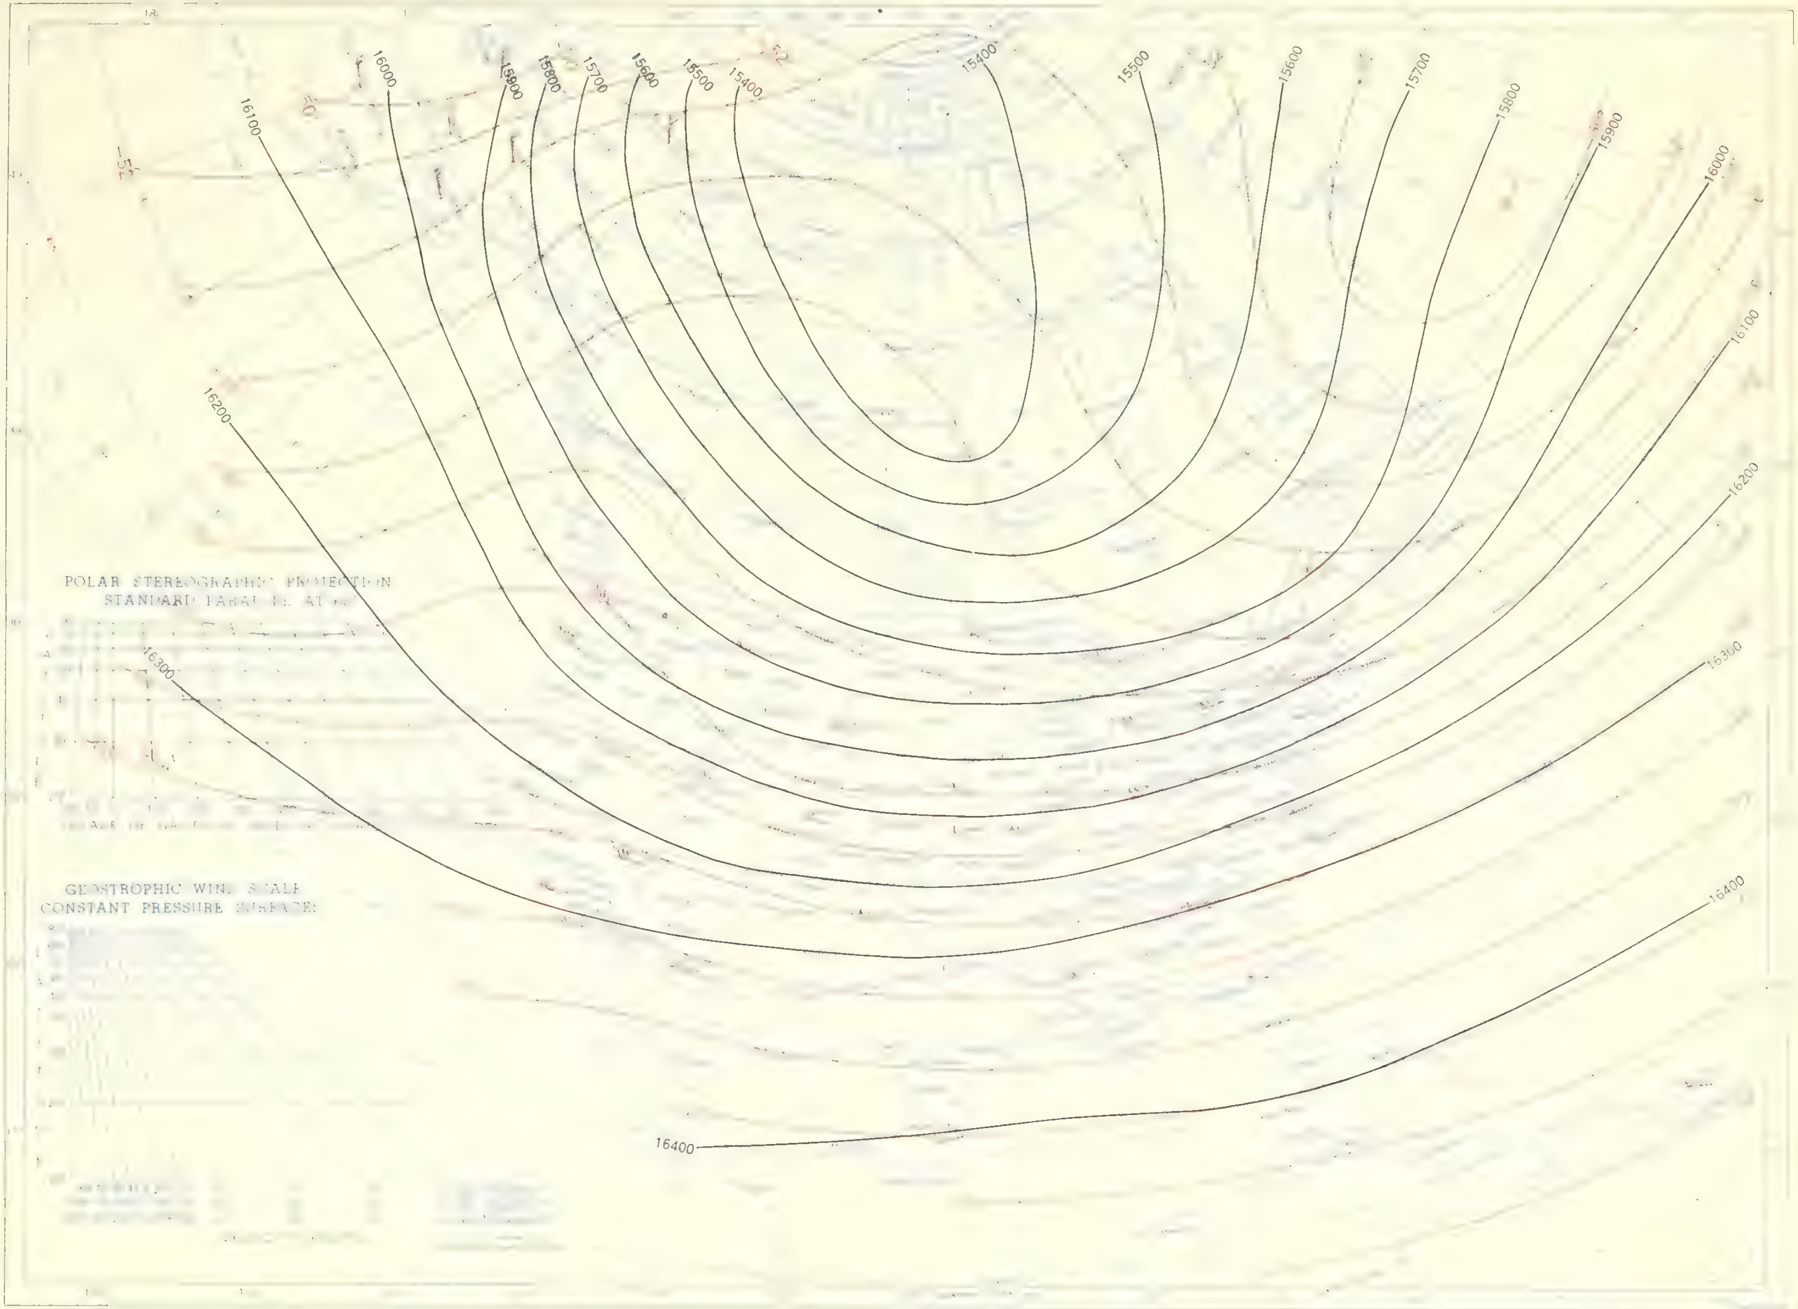
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

Chart XVII. 100-mb. Surface, 0300 GMT, February 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

NOTE.--This publication contains all of the climatic data formerly printed in the MONTHLY WEATHER REVIEW.

SUBSCRIPTION PRICE: Monthly 30 cents and annual 50 cents per copy; yearly subscription, including monthly and annual issues, $4.00 domestic, $5.50 foreign. Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to "Superintendent of Documents, Government Printing Office, Washington 25, D. C."

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 3

MARCH 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

For the country as a whole the rage of the elements, a typical characteristic of March, was conspicious by its absence. Nevertheless one of the worst spring snowstorms on record occurred in the southwestern Great Plains late in the month and numerous severe local storms occurred in Texas.

Precipitation was featured by above-normal amounts in the central and southeastern Great Plains and middle Mississippi Basin, areas plagued by drought in 1956. Generous amounts in the Pacific Northwest were also beneficial.

In most of the country temperatures for the month averaged within 2° of normal. Sharp temperature fluctuations were less frequent than usual, and extremes, with few exceptions, were well within the limits of former records. Although some freeze damage did occur in southern areas, it was mostly minor. At the end of the month the snowcover had retreated to the higher mountain ranges in the Far West and Northeast and some areas around Lake Superior. Navigation began in the Mississippi River at LaCrosse, Wis., on the 15th and at St. Paul, Minn., on the 19th. Ice was out of the River at Concord, N. H., by the 14th and ice in the Missouri River broke up at Bismarck, N. D., on the 26th.

TEMPERATURES.--Temperatures for the month averaged slightly below normal in Washington State, the central Great Plains and Southeast, and a little above elsewhere.

In most sections east of the Rocky Mountains lowest temperatures occurred from about the 6th through the 11th as an extensive cold air mass moved from Canada down through the mid-country to the Gulf and then drifted slowly out over the Atlantic. Freezing extended to the central Gulf areas and to the Everglades in Florida causing some local damage to early crops and tung in the latter area.

Lowest temperatures in much of the Far West occurred about the middle of the month when another cold Canadian air mass moved in behind a low pressure area moving out of the central Rockies. On the 15th Taylor Park, Colo., recorded -27° for the month's lowest temperature, and on the 17th freezing extended into Arizona where some fruit and crops suffered minor damage.

In the Great Lakes region and Northeast on the 13th and 14th, maximum temperatures rose into the 70's, setting new date records at several stations. Among these were Chicago, Ill., 70° and Lansing, Mich., 72° on the 13th; Buffalo, N. Y., 75° and Trenton, N. J., 74° on the 14th.

PRECIPITATION.--March precipitation was much above normal in the central and southeastern Great Plains and the Pacific Northwest, well below east of the Mississippi except near the Gulf, in the northern Great Plains and in the Far Southwest, and about normal elsewhere.

The month's precipitation was featured by the heavy amounts in the central and southeastern Great Plains, areas plagued by drought during the years 1952 through 1956. Monthly totals generally ranged from 2 to over 4 inches, most of which fell during the latter half of the month. March was the third consecutive month of generous precipitation in the southeastern Plains. At the end of the month some streams were flowing in southern and eastern Kansas, moisture conditions in Oklahoma were the best in several years and even subsoil reserves were building up in eastern Texas. In Kansas the lower subsoil continued dry, but topsoil moisture was ample in the east and greatly improved in the west. The month was the wettest March on record at Dodge City, Kans. (4.71 inches), and Houston, Tex. (11.42 inches).

Heavy rains in the Pacific Northwest improved range prospects in many sections but caused some flooding in western Oregon where Medford recorded a monthly total of 5.54 inches for the wettest March on record there. Streamflow was above normal in nearly all the Pacific Northwest.

SNOWFALL.--Snowfall was heavier than usual in central and northern portions of the Far West, but falls in the Cascades and Sierras were not sufficient to bring the snow pack up to normal there.

The outstanding snowstorm of the month occurred in the central and southwestern Great Plains on the 22d through the 25th. Falls from this storm greatly exceeded the March normals in many sections. At Dodge City, Kans., 18.5 inches of snow fell during the storm and a depth of 14 inches on the ground was measured on the 25th and 26th. About 11 inches fell at Amarillo, Tex., where a 10-inch depth was measured on the 25th, and at Omaha, Nebr., where an 11-inch depth was measured also on the 25th.

Another severe snowstorm occurred in parts of the northern Great Plains and upper Mississippi Basin on the 14th and 15th. A fall of 19.5 inches in 24 hours was recorded at Wadena, Minn. This storm, with temperatures below 20° and winds up to 50 m.p.h. or more, was a true blizzard in parts of South Dakota, Nebraska, Minnesota and Iowa. Drifts up to 7 feet high halted transportation and damaged overhead wires, isolating several communities in Minnesota.

In New York State and New England heavy snow accompanied by some sleet and glaze hampered transportation and damaged power and communication lines on the 8th and 9th. Travel was hampered and some lines damaged in Rhode Island and eastern Massachusetts again on the 20th when 4 to 12 inches of snow fell.

A trace of snow fell as far south as Mobile, Ala., on the 8th, and 0.7 of an inch at Birmingham, Ala., on the same date was the heaviest fall there since November 1950.

DESTRUCTIVE STORMS.--The outstanding storm of the month was the severe snowstorm in the southwestern Great Plains from about the 22d through the 25th. This storm, reaching blizzard proportions in many sections, was among the worst on record for so late in the season. Heavy snowfall, ranging up to 20 inches, was blown by winds up to 80 m.p.h. into drifts 15 to 25 feet high. Greatest losses consisted of livestock, but snow, glaze and wind also damaged power and communication lines. Total losses amounted to several million dollars.

Numerous storms occurred in Texas but they were relatively few elsewhere. In that State hail, wind and rain on the 20th caused damage in McLennan County estimated at more than a million dollars, and on the same date a similiar storm was responsible for damage in parts of Washington, Burleson and Grimes Counties of about a half million dollars. Austin estimated hail losses on the 11th at more than a quarter million dollars, and tornado losses on the 31st at several thousand. On the 5th hail and wind also caused about a quarter of a million dollars damage in southeastern Arkansas, most of it in the vicinity of Monticello.

CONDENSED CLIMATOLOGICAL SUMMARY

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.
* Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.
+ And also on a later date or dates.
% Peak gust.
a Maximum hourly average
# Number of days maximum 70° or above for Alaskan stations.
ø Station pressures apply to elevation shown in Table 10b of the annual issue of this publication

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW ENGLAND Northern and central portions	1				4		4	1	Snow	4 deaths and numerous injuries in automobile accidents resulted from heavy snowstorm. Street conditions most hazardous of the whole season in some areas. Bus service halted or delayed in Boston area. In addition to property damaged, over $300,000 spent for plowing and sanding of highways.
ALASKA Peninsula and southwestern mainland	1-2	2 p.m. 1st -midnight 2d	600	*300				1	Wind, rain, and snow	Widespread strong winds surrounding storm center as it moved from latitude 46° N., and 167° W., at 2 p.m., on 1st to 55° N., and 155° W., at 8 a.m., on 2d and thence to 59° N., and 170° W., at midnight on 2d. Port Heiden on 1st reported gusts estimated at about 110 m.p.h., from east, when 2 old buildings blown apart. Kokhanok Bay on 1st received winds from east and southeast with gusts estimated to 75 m.p.h., tearing props from windcharger. Winds continued strong here with gusts from southeast continuing to reach estimated peaks of 75 m.p.h., on 2d. Strong winds encompassed large area about low center. Kitoi Bay on Kodiak Island received strong easterly winds. On 2d, gusts reaching 55 to 60 m.p.h., in interior in Big Delta area, and Girdwood, just southeast of Anchorage, received gusts reaching 30 m.p.h., and were quite general over entire Cook Inlet area.
TEXAS Gardendale, La Salle County	3	12:15 p.m.							Hail	Hailstones 3/4 inch in diameter.
TEXAS Fowlerton, La Salle County	3	12:45 p.m.	26	*7			3		Hail	Hailstones baseball to golf-ball size. Storm moved eastward.
TEXAS Corpus Christi, Nueces County	3	3 p.m.							Hail	Hailstones 1 inch in diameter until 5 p.m.
TEXAS Premont, Jim Wells County	3	7:30 p.m.							Hail	Damaged roofs and broke windows.
	3									Minor storms also reported at Opelousas, La.; and Beeville, Tex.
FLORIDA Lakeland, Polk County	4	12:30 p.m.	Short	20	0	0			Tornado	Cloud moving northeastward touched ground over uninhabited area; funnel cloud observed.
ARKANSAS Drew, Bradley, and Ashley Counties	5	2-4 p.m.					°5	C	Hail and wind	Principal damage was in Drew County in vicinity of Monticello where hail up to size of golf balls caused extensive damage to roofs, windows, and signs. Some accompanying wind damage in city. Only reported monetary losses were in Monticello area and attributed to hail. In other sections of Drew County and in Bradley and Ashley Counties, hail 1/2 inch in diameter or less reported. Crop losses considered negligible. Fruit trees sustained no apparent damage. Storm moved northeastward.
	5									Minor storms also reported at Florence, Ala.; at Little Rock, Ark.; at Lake Providence and Norco, La.; and at Kosciusko and Louisville, Miss.
SOUTH DAKOTA Southwestern portion	5-6	1 a.m.5th-6 a.m.6th				3	3		Snow and glaze	21 automobile accidents in Rapid City and Deadwood where melting snow glazed streets. Snowfall in Black Hills 2 to 5 inches, little drifting.
TEXAS Refugio, Refugio County	6	5:30 p.m.					4		Hail, wind, rain, and electrical	Hailstones 1 inch in diameter damaged aircraft. 1-1/2-inch rain fell in 15 minutes.
TEXAS Corpus Christi (25 miles north-northeast of), Nueces County	6	6-6:30 p.m.			0	0			Tornadoes	3 funnels aloft sighted.
OREGON Northwest to north-central portions	7-8	Most of both days	150-200	*50-100			4	2	Rain	Heavy rains, particularly in Willamette Valley and as far up Columbia Gorge as The Dalles caused numerous small creeks to overflow their banks and minor flooding at scattered points along Willamette River. Reactivated several slides in residential areas of Portland and in scattered other areas of north. Several roads closed by slides and high water. Flooding of Johnson Creek in Portland continued to flood roads, a few houses, and small amount of business property. Storm moved eastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MARCH 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IOWA Central and northern portions	8	All day				7	4	1	Snow and sleet	Glazed highways caused nearly 100 traffic accidents.
NEW YORK Entire State	8-9				1				Snow	Snowstorm with moderate to heavy accumulations of wet snow caused numerous accidents on roads and downed tree limbs and wires. Woman killed by skidding into tree at Oneida. No reports of number of injured in traffic accidents. Numerous power and phone interruptions of service by wires downed.
NEW ENGLAND Northern and central portions	8-9				1		4	1	Snow, sleet, and wind	Excepting southern Massachusetts and coastal New England, where precipitation fell as rain, heavy, wet snow clogged many roads and made travel hazardous generally. Accidents attributed to storm caused a number of injuries, including 1 death in Massachusetts. High winds and, in many areas, sleet and glazing accompanied snow. Trees and branches toppled, breaking utility lines in several communities.
CALIFORNIA Entire State, except southeastern desert area	8-10								Rain and wind	Steep pressure gradient behind secondary front caused locally strong winds. Light to moderate rains occurred in north and central, scattered thunderstorms in central Sierras, and locally heavy rain in Los Angeles and San Bernardino Counties. Gusty winds reached 41 m.p.h., at San Francisco Airport, and winds in excess of 30 m.p.h., at Pt. Arguello and Pt. Piedras Blancas. Minor damage occurred in San Bernardino and nearby Elder Gulch area from local flooding. Storm moved southeastward.
IDAHO Entire State	9-10								Wind and snow	Within 36 hours, 2 storm fronts swept across State, accompanied by strong, gusty winds. Although damage minor in all sections, extreme winds of 52 m.p.h., recorded at Boise on 9th (all-time high for March), 47 m.p.h., at Pocatello and 55 m.p.h., at Lewiston on 10th and peak gust of 58 m.p.h., at Idaho Falls at 2:33 p.m., on 10th. Snow accompanied winds in some areas, particularly in north where near-blizzard conditions reported in several localities.
NEW JERSEY Entire State	10	All day				Several	°3	C	Wind	Strong, gusty, northwest and north winds, associated with intense northeastward moving storm, caused considerable damage throughout State. Telephone and powerlines downed, trees uprooted, and some roof damage sustained.
ILLINOIS Edwardsville, Madison County	10	Afternoon			1	2	2		Wind	Wind gust wrecked automobile traveling on superhighway. No thunderstorm at time.
	10									Minor storms also reported in Caddo and Kiowa Counties, Okla., and in Washington State.
	10-11									Minor storm reported in Lawrence County, S. Dak.
TEXAS Cameron, Milam County	11	2:10 a.m.							Wind	Strong winds blew down trees. Storm moved southeastward.
TEXAS San Antonio, Bexar County	11	3:30 p.m.	30	*2			3		Hail	Hailstones up to 2-1/4 inches in diameter fell on parts of San Antonio until 6 p.m. Storm moved north-northeastward.
TEXAS Austin, Travis County	11	7 p.m.	4	*1-1/2			5		Hail	Roofs, windows, neon signs, and aircraft damaged. Storm moved northeastward.
TEXAS Zunkerville, Karnes County	11	9 p.m.			0	0			Tornado	Hit in open country west of town.
CALIFORNIA Tehama and Shasta Counties	11								Wind and electrical	Strong winds blew trees down across highways and power- and telephone lines near Hatchett Mountain in Shasta County. Winds reached 43 m.p.h., at Red Bluff Airport and distant lightning observed. Storm moved eastward.
	11									Minor storms also reported in Mahaska County, Iowa; Ohio County, Ky.; at Alexandria, La.; and at Tonkawa, Okla.
KANSAS Most of State	11-15	Mostly during daylight hours							Dust and wind	Visibilities of 5 miles or less daily, winds attained speeds of 30 to 45 m.p.h., with gusts at times to 60 m.p.h., in connection with frontal passage and low pressure area centered to north of Kansas. On 11th, worst of storm located in northwest, with dust carried into east afternoon and early evening. Conditions on 12th were more intense in central part, but visibilities in east lowered to 2 miles or less. West and northwest

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MARCH 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS (Cont'd)										winds of 40 to 60 m.p.h., caused dust blowing in western third on afternoon and evening of 13th, with visibilities of 1 mile or less and at times zero. Dust most prominent in central and east in daytime hours of 14th. On 15th, 30-m.p.h., south winds raised dust over west and visibilities lowered to 1-1/2 and 3 miles in afternoon.
TEXAS Victoria, Victoria County	12	Afternoon			0	0			Tornadoes	6 funnel clouds sighted aloft, moving northeastward.
IDAHO Entire State	12								Wind and snow	High winds and snow again swept across State. In this storm as in that of 9th and 10th damage minor, being confined largely to some roof and window damage and toppling of utility poles and lines in a few places. Snow heavier than in earlier storm and rail and highway travel hampered.
	12									Minor storms also reported at Brownsville, Harlingen, and Los Fresnos, Tex.; and in Cache and Salt Lake Counties, Utah.
COLORADO Eastern portion	13	Afternoon							Wind, snow, and dust	Cold front caused sudden drop in temperature, scattered snow, and high wind. Blowing dust caused a few minor accidents, and did damage to fields. Heaviest wind damage reported in Lamar area. At Wiley, 2 large hay sheds blown down at National Alfalfa Company. 3 company trucks, a cutting machine, and office damaged. No actual estimate of damage made, but would run into thousands of dollars. Other damages include 1/2 mile of telephone poles blown down, roofs blown off small buildings, and trees and television antennas damaged.
OKLAHOMA Sallisaw, Sequoyah County	13							1	Electrical	Lightning struck home, causing considerable damage to electrical system and appliances.
	13									Minor storms also reported in Calhoun, Clay, and Lee Counties, Iowa; and at Hartshorne and in the Panhandle area, Okla.
SOUTH DAKOTA Eastern and south-central portions	13-14	2 p.m.13th -11 p.m. 14th			1	3	3		Snow and wind	Light snow began in west, became heavy in east on 14th. Northwesterly wind averaging 30 to 35 m.p.h., reduced visibility to few yards. At Sioux Falls, gusts reached 63 m.p.h. 3 inches or more snow fell east of line through Martin-Pierre-Aberdeen. 6 to 8 inches fell between Wagner and Flandreau, with drifts much higher. Schools closed and traffic virtually halted. Death near Gettysburg due to exposure after truck stalled. Property damage based on automobile collisions.
ILLINOIS	14	1:30 p.m.					4		Hail	Scattered damage to roofs and windows by hail, principally in area extending from Belleville to Effingham. Also scattered lighter hail damage in numerous thunderstorms in central and north on this date. Storm moved northeastward.
ILLINOIS Schuyler, Fulton, Peoria, and Marshall Counties	14	2 p.m.			0	0	4		Tornado and wind	Wrecked veterinary office and caused other damage at Rushville. Continuation of same storm northeastward either as tornado or windstorm caused scattered damage at Canton, Bartonville, and Lacon. Storm moved northeastward.
ILLINOIS Mason and McLean Counties	14	2:55 p.m.		100	0	0	4		Tornado and wind	Light to moderate damage to a dozen residences and farmsteads in eastern part of Mason City and northeastward. Continuation of same storm as tornado or windstorm caused scattered damage near Funks Grove and south of Bloomington.
ILLINOIS Sterling to Rockford, Whiteside to Winnebago Counties	14	3:05 p.m.					4		Wind	Strong, gusty winds measured to 70 m.p.h., moved northeastward from Sterling and Dixon to Rockford, causing scattered damage. Trucking company garage unroofed at Sterling. Newly-constructed, concrete-block, rear wall of 280-foot hangar at Greater Rockford Airport blown out with no apparent damage to roof or other walls. Hangar doors facing wind may have been open. Wall not anchored to floor or remainder of structure.
ILLINOIS Logan, McLean, and Ford Counties	14	3:10 p.m.			0	0	4		Tornado	2 farmsteads damaged at Latham by small tornado. Intermittent path appeared to extend northeastward for 85 miles as shown by damage near Bellflower, Saybrook, and near Piper City.
ILLINOIS Piatt, Champaign and Vermilion Counties	14	4:20-5:50 p.m.		30	0	0	4		Tornadoes	Some scattered damage also along 25-mile extension of path northeastward to Sidney and Ogden. Mostly light damage to about 10 farmsteads at Atwood and Parkville. Same storm probably accounted for pilot report of 2 funnel clouds aloft over Vermilion County at 5:50 p.m.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MARCH 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS McFaddin, Victoria County	14	5 p.m.			0	0			Tornado	Funnel sighted aloft.
ILLINOIS Joliet, Will County	14	5:32 p.m.			0	0			Tornado	Funnel cloud aloft.
MICHIGAN	14	Afternoon-evening				2	5	1	Wind and electrical	High winds caused scattered damage, mostly in central and southern Lower Michigan. Lightning destroyed large barn and contents in Isabella County and caused minor damage in several other localities around State.
IOWA Northwestern half	14	Afternoon-night			3	11	4	1	Blizzard	Traffic stalled and travelers stranded, schools closed, all surface transportation stopped, communication and powerlines downed, and towns isolated. Storm moved southeastward.
ILLINOIS Round Lake, Lake County	14	6:10 p.m.	2	35	0	0	3		Tornado	Small tornado moving northeastward caused light damage in 2 places about a mile apart.
INDIANA Fairbanks, Sullivan County	14	6-7 p.m.	5		0	0	4	1	Tornado, rain, and electrical	South of Fairbanks, tornado blew down barn and unroofed house and another barn. Damage in path about 1-1/2 miles wide from rain and lightning minor. Storm moved northeastward.
INDIANA New Chicago, Lake County	14	6:30-6:38 p.m.	10	30	0	0	4	1	Tornado	Tornado first struck at Schererville, damaging 3 buildings and 7 trailers. Roof of 1 trailer tossed 350 feet. Minor damage occurred to buildings in and near New Chicago. 10-mile path of destruction not continuous. Observer at Ogden Dunes reported peak wind gust of 67 m.p.h., at 6:39 p.m. Shortly afterwards small pebbles found at toll road interchange 2 miles south of Chesterton which were foreign to area, indicating that tornado may have traveled above ground to this point. Storm moved east-northeastward.
INDIANA La Porte, La Porte County	14	7:10 p.m.			0	0	3	1	Tornado	Northwest of La Porte, trailer demolished and house damaged. Trailer tossed 400 feet. This may have been a continuation of the New Chicago tornado. Storm moved east-northeastward.
INDIANA Spencer, Owen County		7:30-7:40 p.m.	1/10	30	0	0	2	1	Tornado	3 miles south of Spencer, tornado damaged porch and moved building from its foundation. Sounds "like a train" heard by occupants of house. Storm moved northeastward.
	14									Minor storms also reported in scattered areas and in the southeastern third of Iowa; at Milan, Mo.; and in Black Creek area of Florence County, S. C.
MINNESOTA Northern and central portions	14-15	A.m.14th-a.m.15th			6	Many	3	1	Snow, wind, rain, and electrical	Blizzard conditions; heaviest snow of season accompanied by 40- to 50-m.p.h., winds; drifts 6 to 7 feet high in west-central. Roads blocked, some communities isolated, many schools closed. Total storm snowfall accumulation at Wadena Weather Bureau substation 23.70 inches, 24-hour snowfall of 19.50 inches established new record at Wadena. Numerous traffic accidents. 6 fatalities attributed to weather. 2 deaths in Minneapolis from heart attacks after shoveling snow. Freezing rain downed many telephone and powerlines in south. Lightning struck rural school near Austin, knocking down teacher and 2 pupils, no serious injuries. Part of school roof damaged by resulting fire. Storm moved northeastward.
ILLINOIS Extreme northwestern portion	14-15	Early evening				1	4		Wind	Scattered damage mostly in Moline-Freeport area resulted from 40- to 50-m.p.h., squally winds caused by very deep low-pressure center near Rochester, Minn. Strong winds continued through night and part of 15th.
FLORIDA West Palm Beach, Palm Beach County	15	10:35 a.m.			0	0			Tornado	Funnel remained aloft.
CALIFORNIA Central coast, southern coastal basin, and southeastern interior areas	15-16								Wind and rain	Light rains in central California coastal area caught apricot blossoms at critical stage - may result in crop reduction. Brief, but torrential rain in southern coastal area caused temporary flooding in San Fernando Valley, and several minor mud slides on Coast Highway north of Santa Monica. Strong, gusty winds blew down 11 trees in Los Angeles area, 1 tree falling across roof of parked automobile. Winds up to 70 m.p.h., caused extensive damage to powerlines from Hoover Dam in area 13 miles north of Needles. Storm moved southeastward.

See reference notes at end of table.

	16									Minor storm reported at Buckeye, Ariz.
ALASKA Peninsula and southwestern mainland	16-17		400	200				1	Wind	Rather widespread cyclonic circulation about storm center affected upper Alaska Peninsula and inland to Cook Inlet and to lesser degree central Alaska. Kokhanok Bay received damages to greenhouse on 17th; Port Heiden had 75 feet of dock structure washed away by high, wind-tide action same day. Palmer, in upper Cook Inlet area had northwest and northeast winds on 16th from 28 to 35 m.p.h. Big Delta received 35 to 40 m.p.h., winds on 17th. Storm moved north-northeastward.
TEXAS Galveston County	17	9 a.m.-10 p.m.			1	7	6		Tornadoes, wind, and rain	Series of thunderstorms from 9 a.m., to 10 p.m. Small twisters imbedded in thunderstorm activity at Arcadia 1:30 and 2 p.m.; Texas City about 1:55 p.m.; San Leon about 3 p.m.; Boyd Ranch, Crystal Beach, and Gilchrist areas between 4:30 and 5 p.m. Wind damage $100,000; flooding $800,000. Excessive rains up to 13 inches occurred.
TEXAS Rule, Haskell County	17	11:30 a.m.			0	0			Tornado	Unconfirmed report of funnel cloud aloft.
TEXAS Miles, Runnels County	17	11:40 a.m.			0	0			Tornado	Funnel cloud sighted aloft.
TEXAS Alvin, Brazoria County	17	3:18 p.m.	5	400	0	0	5	3	Tornado and rain	Tornado killed 4 cows, loss $600, and caused property losses of $50,000. Rain losses of $5,000. Storm moved eastward.
TEXAS Jefferson County Airport (4 miles east of)	17	5:50 p.m.	** 265	100	0	0	3	1	Tornado	House deroofed and 2 garages damaged; 1 lifted and turned 60° cyclonically. Storm moved north-northwestward.
	17									Minor storm also reported at Lee's Summit, Mo.
SOUTH DAKOTA Southern portion	17-19	1 p.m. 17th -3 a.m. 19th					3		Snow	Very wet snow with little wind or drifting. Most fell between 6 p.m., 17th and 8 a.m. 18th. 2 to 6 inches of new snow in southwest and south-central, heavier in southeast. Locally 14 inches in Bonesteel-Tyndall and Alexandria-Bridgewater areas. Unthawed snow from previous storm increased these depths with accumulations reaching 15 to 18 inches in Alexandria-Sioux Falls area and near Tyndall. Sioux Falls building roof collapsed from heavy weight. Most traffic stopped. Moisture badly needed in storm area. Amounts negligible north of Rapid City-Pierre-Brookings.
IOWA North-central and northeastern portions	18	All day				2	3	1	Snow	Glazed highways resulted in numerous accidents.
GEORGIA Mitchell, Colquitt, Brooks, and Lowndes Counties	19	4:30-6 p.m.					2	4	Hail	Severe hailstorm of short duration. Hailstones from 1/2 to 1 inch in diameter accumulated in drifts to depths of 3-1/2 feet and remained on ground more than 15 hours. Hardest hit was northeast of Moultrie in Colquitt County. Crop damage primarily to tobacco beds and truck crops. Storm moved southeastward.
	19									Minor storm also reported at Santa Barbara, Calif.
TEXAS Crane (east of), Crane County	20	9:45-11 a.m.					2	1	Wind, hail, and electrical	Hail 1 inch in diameter. Wind 30 to 40 m.p.h., knocked down power- and phone lines.
TEXAS Seminole (5 miles northeast of), Gaines County	20	11:30 a.m.			0	0			Tornado	Funnel sighted aloft.
MASSACHUSETTS	20	All day			3		4	1	Snow and wind	4 to 12 inches of snow hit eastern Massachusetts, causing 3 deaths from exertion. Hardest hit was Cape Cod and adjacent areas in southeastern Massachusetts where trees laden with wet snow blown over onto utility lines. Many communities there without power for up to 12 hours and hundreds of phones out. Many automobiles abandoned on Cape highway. Scores of minor automobile accidents occurred due to slippery conditions. Snow removal costs estimated to exceed $100,000.
RHODE ISLAND Entire State	20	All day			2	6			Snow	One of heaviest snowfalls of winter resulted from coastal storm with up to 8 inches. Automobile accidents on slippery highways resulted in 1 death and 6 persons injured. Other death due to heart attack while shoveling snow. Storm caused

RHODE ISLAND (Cont'd)										cancellation or delay of airlines and arrival of aircraft carrier.
TEXAS Big Spring (10 miles west of), Howard County	20	12:45 p.m.			0	0			Tornado	Funnel sighted aloft.
TEXAS Midland (20 miles northeast of), Midland County	20	12:50 p.m.			0	0			Tornado	Funnel sighted aloft.
TEXAS Abilene (40 miles east-southeast of), Callahan County	20	2:35 p.m.			0	0			Tornado	Funnel sighted aloft.
TEXAS Del Rio, Val Verde County	20	3:36-3:48 p.m.					3	1	Hail and wind	Hailstones 1 to 2 inches in diameter damaged roofs. Storm moved east-southeastward.
TEXAS Kerrville, Kerr County	20	4:15 p.m.	5				4		Hail and wind	Hailstones to hen-egg size damaged roofs, greenhouses, and gardens. High winds followed hail. Storm moved southeastward.
TEXAS Beeville (15 miles north of), Bee County	20	6 p.m.	3/4	75	0	0	2	1	Tornado	Flattened all vegetation and burned grass in path. Storm moved southwestward.
TEXAS Austin, Travis County	20	6 p.m.	6	*3			5		Hail and rain	Hail up to 3 inches in diameter fell in southeastern Austin, damaged roofs, windows, and sidings. Heavy rains flooded downtown stores. Storm moved east-southeastward.
TEXAS Lee County	20	7:10 p.m.	14	*15	0	2	5	4	Tornado, hail, and rain	1/2-inch hailstones in Lincoln, Loebau, and Mahaw communities; church destroyed and roofs damaged. 3-inch rain in 20 minutes. Storm moved northeastward.
TEXAS Dime Box (5 miles south of), Lee County	20	7:45 p.m.	15	300	0	2	4	2	Tornado, wind, and hail	Gardens, pasture grass, and crops ruined. Wind 75 to 80 m.p.h. Hail covered ground to depth of 6 to 12 inches, average size that of ice cubes. Storm moved northeastward.
TEXAS Giddings, Lee County	20	7:45 p.m.	10	*8	0	0	5	1	Tornado, rain, and hail	Gardens ruined, homes and outhouses destroyed, roofs and windows damaged. Storm moved northeastward.
TEXAS Austin (south of), Travis County	20	8:12 p.m.			0	0			Tornado	Unconfirmed pilot report of funnel aloft.
TEXAS Washington, Burleson, and Grimes Counties	20	8:12 p.m.	30	*12		3	5	4	Hail, wind, and rain	Entire Washington County affected, also Somerville, and Navasota. Some hailstones size of hens' eggs. Field crops and livestock damaged. Roofs of buildings damaged by heavy hail. Storm moved eastward.
TEXAS Sisterdale, Kendall County	20	Evening			0	0	3		Tornado and rain	Unroofed 100-foot chickenhouse, twisted windmill, and caved in sidewall of rock dwelling. Accompanied by heavy rain.
LOUISIANA Lafourche, Terrebonne, and Jefferson Parishes	21	6 a.m.	2	100	0	2	4	2	Tornado and hail	Between Montegut and Bourg, 2 homes demolished and several others badly damaged; 1 house lifted up and turned around and smashed into another house. Heavy hail covered ground in area. Power interrupted also from Golden Meadow to Grand Isle in Lafourche and Jefferson Parishes. Storm moved northeastward.
FLORIDA San Antonio, Pasco County	21	7:30 p.m.	6	75	0	0	3	3	Tornado (suspected)	Some evidence of tornadic winds, as citrus trees twisted off and/or uprooted. No funnel cloud observed. Storm moved eastward.
	21									Minor storm also reported in central Iowa; and at Lake Charles, La.
CALIFORNIA Southern coastal basin	21-22								Wind	Strong, Santa Ana type winds, with gusts of 36 to 52 m.p.h., following frontal passage. 80 trees uprooted. 6 homes and 3 parked automobiles damaged by falling trees. Powerlines downed over widespread area, and streets littered with debris, requiring major cleanup job. At Culver City, 6,000-pound aluminum canopy shed, 80x40 feet, blown distance of 60 feet into vacant lot. Damage estimated $10,000. Several olive trees uprooted in San Bernardino area.
FLORIDA Waverly (near), Polk County	22	4-5 a.m.						5	Hail	Hailstones of golf-ball size hit citrus groves in 2-square-mile area, stripping trees of foliage and knocking large amounts of fruit from trees.

See reference notes at end of table.

FLORIDA (Cont'd)										Many oranges split open, some grapefruit completely penetrated by hail but left hanging on trees.
TEXAS El Paso, El Paso County	22	Afternoon					3	1	Wind and dust	Damage mostly to trees. Fastest mile 50 m.p.h. Visibility reduced to 1/2 mile.
SOUTH DAKOTA Western half	22-23	A.m.22d-p.m.23d							Snow and wind	On 22d, rain started in Black Hills then changed to snow with 3 to 13 inches on higher elevations. Spread eastward during night with 1 inch in northwest to 2 to 5 inches in southwest. Despite wetness, winds caused drifting at Lead, Faith, and Martin. Snow changed to rain in vicinity of Missouri River. High winds followed snow on 23d with rapid thawing. Wind 50 m.p.h., at Rapid City. Blowing soil at Newell where little snow fell.
NEW MEXICO Entire State	22-24				1				Wind, snow, and dust	Unusually severe storm moved down eastern slopes of Rocky Mountains on 22d. This storm produced high winds over most of the State and one of the most severe blizzards in many years in northeastern corner. Blizzard conditions confined primarily to Union and eastern third of Colfax Counties, but heavy blowing dust reported over most of eastern plains and in many other sections of State. Winds abnormally strong in east and persisted for almost 3 days. Weather Bureau Airport Station at Raton reported gusts up to 85 m.p.h., and estimates of speeds from 70 to 80 m.p.h., were common on eastern side of State. Snow began falling in northeast on afternoon of 22d and continued intermittently until late on 23d. Snowfall not abnormally heavy, but because of extremely high winds and severe drifting, measurements were very difficult. Reports of depths ranged from 2 to 16 inches during storm, but most of this was swept off level plains and piled into huge drifts. Many oldtime residents reported this one of worst storms they could remember. Drifts up to 10 feet blocked highways and railroads and stranded motorists and trains. Power off in many communities as winds broke powerlines and blew down poles. Estimates obtained from New Mexico Cattle Growers Association, based on reports from reliable sources, place loss of livestock between 12,000 and 15,000 head. Also considerable wind damage to light structures, windmills, and farm buildings. In Raton, loss from wind estimated to be 30 to 35 thousand dollars. Severe soil erosion and wind damage to ranges reported from most of east. No estimate of total damages available. 1 death from exposure resulted from storm.
KANSAS Most of State	22-25	Morning of 22d-evening of 25th			10				Snow, wind, and rain	Severe snowstorm began as fog, light rain, and drizzle about 8 a.m., of 22d in extreme northwest, progressing south and east through day and beginning in south from 6 to 8 p.m. The rain changed to rain and snow mixed about midnight of 22d and 23d in north, about daybreak of 23d in central part, and in afternoon or evening in southern part of western third. With temperatures near freezing, rain and snow mixed continued several hours, gradually changing to mostly heavy snow on 23d. As temperatures dropped below freezing, volume of snow increased. Early in morning wind velocity began to increase, blowing from north and northeast. Speeds increased to more than 30 m.p.h., by 6 a.m., of 23d at Goodland, Garden City, and Dodge City and by evening at Russell, and it was evening of 24th before wind dropped below 30 m.p.h., at these stations. Gusts during this time reached 50 to 60 m.p.h., or higher and were recorded above 45 m.p.h., during afternoon and night of 23d and early morning of 24th. Blowing snow reduced visibility to zero much of time and high wind plastered heavy, wet snow against all objects. Practically all stations in western third recorded from 5 to 20 inches of snow with totals these days of 14 inches or more from Lakin and Dodge City north to Rawlins County and from Wichita County east through Rush County. Drifts commonly reported 10 feet deep and not a few were 25 or 30 feet deep. Remnants of these large drifts were still in evidence on April 15. All traffic ceased and several hundred automobiles, busses, and trucks were caught in storm. 3 trains stranded with their passengers. Heroic rescue measures undertaken especially for the sick. Miles and miles of telephone, telegraph, and powerlines broken or blown over and out of operation from Norton County to Pratt County and from Lane County to western Rice and Reno Counties. Snow and ice accumulated on wires from 4

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS (Cont'd)										to 6 inches in thickness, and weight estimated at 7 pounds or more per foot. Livestock smothered by storm and some cattle drifted as much as 15 to 25 miles. Livestock losses in 26 western counties estimated at 23,000 head with valuation of $1,333,000. 10 persons lost their lives by exposure, overexertion, or from carbon monoxide poisoning. Monetary loss to communication and powerlines, loss of worktime due to lack of power, spoilage of food stuffs, in addition to livestock losses estimated to run into millions of dollars. Lack of severe cold prevented greater losses and suffering. Rain and heavy, wet snow falling on warm ground forepart of storm provided considerable moisture for fields.
COLORADO Eastern portion	22-25						6		Snow, rain, wind, and dust	Severe storm began on afternoon of 22d as rain, changing to snow and continuing on 23d, 24th, and early hours of 25th. High winds up to 75 m.p.h., preceded and accompanied storm, causing blowing dust and snow which built up drifts 12 to 15 feet deep. Many motorists trapped in their cars or snowbound in small towns. Many minor accidents and a few injuries, but no deaths reported. Roads blocked, trains halted, schools closed , powerlines damaged, and heavy loss of livestock occurred as result of 60-hour storm. Livestock became caked with mud and many died of suffocation. Estimates run as high as 12,000 head of cattle and sheep killed, with valuation well over a million dollars. Baca County estimated loss of around $800,000 in cattle and loss appears to range from one-third to one-half of total cattle numbers. Valuable topsoil blown away and winter grains and grass badly damaged. Over a million acres of cropland and near 900,000 acres of rangeland damaged.
NEBRASKA Most of State	22-25				3	Few	5	2	Snow and wind	Wet snow freezing on wires and strong winds caused heavy damage to power- and telephone lines. Storm brought badly needed moisture; generally beneficial to agriculture.
OKLAHOMA Northwest and Panhandle areas	22-25				5		5	2	Snow and wind	Up to 10 inches of snow and winds up to 80 m.p.h., caused blizzard conditions and drifts 10 to 25 feet deep. All forms of transportation halted and communication and utility lines badly damaged. 5 persons died, 4 from carbon monoxide gas in stalled truck and 1 from heart attack from overexertion. Hundreds of motorists marooned. Livestock losses reported at about 4,000 cattle and calves, over 1,000 sheep, and over 300 hogs. Strong winds blew snow into attics and barns, causing additional damage. Storm moved south-southeastward.
TEXAS Panhandle section	22-25				10		°6	C	Wind and snow	Winds up to 80 m.p.h., with snow. All transportation facilities halted, about 4,000 persons marooned, heavy losses of cattle and livestock. Storm moved southeastward.
ARIZONA Phoenix, Maricopa County	23	Afternoon			0	0	2	1	Dust devil	Dust devil damaged roofs and cinder-block wall in residential section.
LOUISIANA Baton Rouge, East Baton Rouge Parish	23	5:07 p.m.			0	0			Tornado	Funnel aloft reported to east of city by Weather Bureau observers.
LOUISIANA Baton Rouge, East Baton Rouge Parish	23	5:30-6:30 p.m.			0	0			Tornadoes	2 funnels aloft reported.
	23									Minor storm also reported at Port Sulphur, La.; and at Jet, Okla.
ALABAMA Clark, Tallapoosa, and Chilton Counties	24	Noon-4:15 p.m.	160	*2-3			3	4	Hail and rain	Hail, with stones up to 1 inch, from Coffeeville area, Clark County, through Thomasville, Pine Hill, Millers Ferry, Craig Field, Autaugaville, a few miles northwest of Prattville, and into Tallapoosa County. Hail preceded rain shower which reported heavy by some observers. Observer northwest of Prattville, Autauga County, reported heavy fall of 1-inch hailstones out of very dark cloud close to ground with not much lightning and with no rain or wind. In Tallapoosa County, where last hail reported in this storm, stones smaller and path spread out over rather wide area. Light hail with stones up to 3/4 inch fell in south-central Chilton County in another storm between 3:30 and 4:15 p.m. Storm moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Vernon County	24	4 p.m.							Rain, hail, and electrical	Heavy rains, up to 3 inches, accompanied by hail and frequent lightning over most of county. Hail reported to cover ground in many parts of county, with up to 3 inches on ground near Metz.
MISSOURI Butler, Bates County	24	4:15 p.m.							Hail	Hail 1 inch in diameter.
GEORGIA Columbus, Muscogee County	24	7-8 p.m.					2	1	Electrical, wind, and hail	Severe thunderstorm with wind gusts to 51 m.p.h., caused general minor damage in Columbus area. Electrical and telephone services interrupted because of downed lines.
TENNESSEE Eaton community, Gibson County	24	9:15 p.m.							Wind, rain, and electrical	2 barns destroyed; several homes damaged, trees uprooted, power- and telephone lines blown down.
MISSOURI Northern quarter	24								Snow	3 to 10 inches of wet snow fell, blocking roads, causing some damage to tree limbs, power- and phone lines.
	24									Minor storms also reported at Beaumont, Miss.; at Marshall, Mo.; in Aiken and Georgetown areas, S. C.; and at Rutherford, Tenn.
IOWA Southern third	24-25				1	5	5	1	Snow and wind	Closed highways stopped all travel; power- and phone lines downed, and towns isolated.
ILLINOIS Northern portion	25	Morning-noon							Snow	4 to 8 inches of heavy, wet snow covered northern half of State, except that northern 2 tiers of counties had only about 2 inches. Traffic seriously hampered and a great number of schools closed. Numerous automobile accidents resulted. Storm ended about noon and highways were near normal by evening.
OREGON Portland	25	3:45 p.m.	**80	20	0	0	3	2	Whirlwind or dust devil	This freak whirlwind or dust devil on otherwise comparatively calm day moved through cold frames of commercial greenhouses in southeastern Portland, picking up, then dropping about 60 glass sashes.
INDIANA Sullivan County	25						4		Electrical	Lightning and resulting fire burned garage.
TEXAS Waco, McLennan County	27	5:02 p.m.					°6	C	Hail, wind, and rain	Gusty winds damaged roofs, windows, windshields, exterior paint, and house furnishings. Shrubbery and gardens damaged. Storm moved southward.
	27									Minor storms also reported at Sedalia, Mo.; and at Willis, Okla.
MASSACHUSETTS Franklin, Worcester, and Middlesex Counties	28	12:50 p.m.	1/2	12	0	0	3	1	Dust devils	At east Shelburne, demolished garage and damaged barn and farm trailer. Other dust devils reported, one near Fitchburg and one at Ashland, also shortly after noon, but with no damage reported. Storm moved eastward.
CALIFORNIA San Joaquin Valley, Mojave Desert, and southern coastal basin	29-Apr. 2								Wind	Steep pressure gradient behind frontal passage on 29th caused strong northerly winds in lower San Joaquin Valley on 30th, in Mojave Desert on 30th and 31st, and in Los Angeles Basin on April 1 and 2. Strong winds at Lindsay in Tulare County blew down several TV antennas on 30th. Near Lancaster on 31st, winds at Edwards Air Force Base reached 80 m.p.h. At cooperative observer's station at Lancaster, instrument shelter blown over and all thermometers broken.
TEXAS Boerne (2 miles northwest of), Kendall County	31	7:55-8 a.m.	15	880	0	0	3		Tornado	Trees uprooted, roofs torn off, barns, sheds, TV antennas, and telephone lines damaged. Storm moved northeastward.
TEXAS Austin, Travis County	31	9:05 a.m.	1/2	100	0	0	5		Tornado	Over small area on northern edge of town, extensive roof damage and windows broken. Storm moved north-northeastward.
TEXAS Pflugerville, Travis County	31	10:30 a.m.			0	0	4		Tornado	Tore 40-foot-wide gap in wall of all-brick school. Trees and antennas downed. Storm moved north-northeastward.
TEXAS Normangee, Leon County	31	11:58 a.m.-12:08 p.m.			0	0			Tornado	Funnel aloft sighted.
TEXAS Huntsville, Walker County	31	12:30-12:40 p.m.	2	100	0	2	4		Tornado	In Huntsville and portions of Walker County. Storm moved northeastward.
TEXAS Blessing, Matagorda County	31	1:30 p.m.	1-1/2	30	0	0	3		Tornado	Medium-size trees broken off 2 or 3 feet above ground and roofs blown off. Storm moved eastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

					Killed	Injured	Property (exclusive of crops)	Crops		
LOUISIANA Robson, Caddo Parish	31	2:10 p.m.					3	1	Hail	Hailstones up to 1 inch covered ground.
MAINE Starboard, Washington County	31	2:30 p.m.	1/4	10	0	0		1	Waterspout	Crossed part of Machias Bay between Starboard, Maine, and Ingalls Island. Occurred on clear day and would have been only dust devil if over land. Unconfirmed news item reported spout capsized small boat. Storm moved southeastward.
LOUISIANA Lake Arthur, Jefferson Davis Parish	31	4 p.m.	8	300	0	0	4	1	Tornado	Moved northeastward from about 4 miles west to 4 miles north of Lake Arthur; destroyed several farm buildings, uprooted trees, and damaged roofs.
MISSISSIPPI McComb (3 miles north of), Pike County	31				0	0	2	1	Tornado	Pilot reported funnel cloud aloft; treetops reported twisted off. Storm moved northeastward.
TEXAS College Station, Brazos County	31	4:10-4:15 p.m.	1	200	0	0	3	1	Tornado	Minor surface damage as funnel touched ground intermittently in Bryan area and eastward. Funnel ill-defined; moved east-northeastward.
OKLAHOMA Ringling, Jefferson County	31	4:25 p.m.			0	0			Tornado	Pilot reported funnel cloud aloft.
LOUISIANA Between Reserve and Laplace, St. John the Baptist Parish	31	6 p.m.	2	1,000	0	0	3	2	Tornado (suspected)	Power poles blown down for distance 3,000 feet; path northward over open farmland.
TEXAS McNeil, Travis County	31	9:15-9:30 p.m.			0	0	2	1	Tornado	Windmill, chickenhouse, and sheds damaged.
LOUISIANA Boothville, Plaquemines Parish	31	10:15 p.m.	1	100	0	3	4	1	Tornado, wind, and rain	Several homes demolished and some damaged. Winds estimated at 80 m.p.h., from Boothville to Port Sulphur attended squalls over area with heavy rains and tornado at Boothville. Storm moved northeastward.
LOUISIANA Nairn, Plaquemines Parish	31	10:30 p.m.	1	200	0	0	4	3	Tornado (suspected)	Lifted several homes off foundations, unroofed packing plant, and downed power poles. Storm moved northeastward.
ALABAMA Mobile area, Mobile County	31	11:30 p.m.	1	70	0	4	4	1	Tornado	Tornado was followed by heavy thundershower. Storm occurred 6 miles southwest of center of city; moved northward.
ALABAMA Mobile, Mobile County	31	11:30 p.m.			0	0			Waterspout	Reported in swamp north of Mobile Bay. It was well to right of projected path of tornado at that time which occurred southwest of Mobile. Since there could have been error in estimating distance away of formations observed by light of occasional lightning, it could have been either the tornado which occurred southwest of Mobile or a separate storm.
TEXAS Goliad (10 miles west of), Goliad County	31						4		Electrical	3 oil tanks set afire by lightning.
TEXAS Baytown, Harris County	31				0	0	4	1	Tornado	Damaged at least 3 houses and knocked down 295-foot radio tower.
	31									Minor storms also reported at Georgetown and Taylor, Tex.

* Miles instead of yards.
** Yards instead of miles.
° Includes crop damage.
C Crop damage
† Storm damages are placed in categories varying from 1 to 9 as follows:
1 Less than $50
2 $50 to $500
3 $500 to $5,000
4 $5,000 to $50,000
5 $50,000 to $500,000
6 $500,000 to $5,000,000
7 $5,000,000 to $50,000,000
8 $50,000,000 to $500,000,000
9 $500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

MARCH 1957

All flooding reported during March was minor and very little damage was reported.

ATLANTIC SLOPE DRAINAGE

Minor flooding occurred during the first week of March at a few points on the Neuse, Cape Fear and Roanoke Rivers in eastern North Carolina as a result of rains which fell mainly during the last week of February. The Roanoke River at Williamston was above flood stage at the beginning of March, and continued in minor flood through the 15th. No damage was reported.

The heavy rains over the Yadkin and Upper Pee Dee Rivers in South Carolina during the latter part of February caused flooding over the Rocky River, a tributary of the Yadkin, and along the main stem of the Pee Dee River. The flooding along the Pee Dee was minor. The Rocky River rose rapidly from a stage of 5.7 feet at 8 a.m. on February 28 to a crest of 21.4 feet at midnight. There was some damage in the vicinity of Norwood, N. C., but the extent of damage had not been ascertained at the time of this report.

General rains occurred over the Santee River System near the end of February causing light to moderate rises on all streams. Crest stages were generally below flood stage, except the Broad River near Blair, S. C., which crested 0.6 foot above bankfull stage on March 2. The flooding on the Santee River at Rimini, S. C., throughout the month was due to backwater from the reservoir at Lake Marion which continued to fill from the rains during March. No damage was reported from the overflows.

Minor floods on the Ocmulgee and Oconee Rivers in Georgia towards the end of the month did not cause any damage.

EAST GULF OF MEXICO DRAINAGE

The only flooding in the East Gulf of Mexico Drainage was on the Apalachicola River at Blountstown, Fla., during the last 5 days of March, and on the Pearl River at Jackson, Miss., on the 26th. The high water on the Apalachicola River was due to the heavy rains on the 21st and 23d to 24th, totaling 1 to 2 inches in the upper reaches and 3 to 5 inches in the middle and lower areas. The water was not high enough to cause damage or work stoppage. On the Pearl River, locally heavy rain over the Pelahatchie Creek watershed above Jackson, Miss., produced a brief sharp rise to above flood stage at Jackson, Miss. No damage resulted.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--Light flooding occurred along the mouth of the Rum River at Anoka, Minn., due to an ice jam in the Mississippi downstream from Anoka on March 28 and 29.

The ice in several tributaries of the Upper Mississippi Basin began to break up during the month. The streams involved and dates are given in the following table:

Comparative Ice Breakup

River and Station (Minn.)	Date and Time	
Yellow Medicine: Granite Falls	24	Afternoon
Redwood: Marshall	21-22	during night
Redwood Falls	28	11:30 a.m.
Cottonwood: New Ulm	26	6:00 p.m.
Rum: St. Francis	25-26	during night
Mississippi: Fort Ripley	28-29	during night
Minneapolis	22-23	during night

The 1957 navigation season opened on the 14th at Guttenberg, Iowa, and La Crosse, Wis., and on the 29th at Minneapolis-St. Paul, Minn.

The flooding on the Meramec and Bourbeuse Rivers in Missouri during the latter part of March was due to heavy rainfall (1.75 inches) during the 24-hour period ending on the 25th. No damage resulted as no crops had as yet been planted.

Missouri Basin.--Near bankfull stages occurred on the lower Rock River at Rock Valley, Iowa, on the 25th due to the melting of the heavy snow cover (12 to 18 inches) which occurred from the 14th to the 18th. A similar rise occurred on the Big Sioux at Sioux Falls, S. Dak., on the 24th, which was produced by runoff from the Skunk, Willow and other creeks in the Sioux Falls area. The combined runoff was sufficient to make the Big Sioux about three-fourths bankfull from Hawarden to Sioux City, Iowa. This was the largest rise that had occurred on the Big Sioux since June 1954.

The Missouri River was held at low stages below Yankton, S. Dak., by reservoir control and the ice gradually melted away during the last half of March without any pronounced ice breakup. The Missouri River ice began to shift at Chamberlain on the 23d and at Mobridge, S. Dak., on the 22d. The breakup was of no consequence and was completed by the end of March.

Ohio Basin.--The only overflow in the Ohio Basin during March occurred on the Wabash River at Lafayette, Ind., on the 1st. Flood stage at this point was exceeded by less than one-half foot and no damage was reported.

Red Basin.--Flood stage was reached but not exceeded on the Ouachita River at Arkadelphia, Ark., late in the evening of the 18th. This rise was due to heavy thundershowers over the upper portion on the evening of the 17th, in the vicinity of Lakes Hamilton and Catherine which necessitated a sharp increase in the discharge from Remmel Dam on the morning of the 18th. No damage occurred.

The minor flooding on the Little River at Whitecliffs, Ark., and on the Sulphur River at Naples, Tex., beginning on the 21st was due to heavy rain on the 17th and 18th. The rainfall ranged from 0.85 inch at Wolfe City, La., to 3.96 inches at De Queen, La., with most stations reporting amounts over 2 inches. No damage resulted from the overflows.

Lower Mississippi Basin.--Flood stage was reached or slightly exceeded on the St. Francis River at Fisk, Mo., on two different occasions during the month. The first overflow from the 1st to the 4th was due to moderate rains from February 25 to 27. The second rise to flood stage on the 29th was due to moderate rains from the 24th to the 26th. Overflow was confined to areas (primarily wooded) inside local levees in the Fisk vicinity and covered an estimated 2,500 acres. Damage was negligible in both floods.

WEST GULF OF MEXICO DRAINAGE

The heavy rains on the 18th, 21st and 24th caused the Calcasieu to rise to flood stage at Kinder, La., on the 27th. No significant flooding occurred and no appreciable damage was reported.

Minor flooding occurred on the Navidad River at Ganado, Tex., from the 19th to the 23d due to moderate to heavy showers from the 17th to the 19th. Very little if any damage occurred as most of the overflow was confined to grazing lands.

PACIFIC SLOPE DRAINAGE

California Coast.--Precipitation during the period from February 20 to March 6 caused the Sacramento River to rise to a high level with some overflow occurring at all eastside weirs of the Sacramento and at Fremont Weir into Yolo Bypass. Relatively high releases were maintained from both Shasta and Folsom Reservoirs for the first several days of the month, which combined with natural flow, maintained the major rivers at levels sufficiently high to be of concern to many interests.

Columbia Basin.--A series of rather intense storms moving inland over the Pacific Northwest during the period March 6-9 deposited heavy rains over the Willamette Valley which resulted in some local flooding of tributary streams and near bankfull on the main stem of the Willamette as far downstream as Corvallis, Oreg. In the Portland, Oreg., area, heavy rains during the night of the 7th-8th resulted in a moderate overflow of Johnson Creek on the morning of the 8th, and heavy rain in the Columbia Gorge caused some mud and rock slides in that area, delaying main line trains on the Union Pacific Railroad for several hours.

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

MARCH 1957

15-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

* Obs. near 0500 G.C.T.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

10						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

* 7 mb, 5 obs., 32,793 m., -48.2°C.

Note: All observations scheduled at 0300, G.C.T. except at Mazatlan, Merida and Veracruz, where they are taken near 0200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

Solar radiation intensities, tabulated in langleys per minute on a surface normal to the direction of the sun.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed in Table 30 appears in Monthly Weather Review, Volume 75, No. 3, March 1947, p. 47.

SOLAR RADIATION DATA

MARCH 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg
Date	5	6	7	8	9	10	11		12	13	14	15	16	17	18		19	20	21	22	23	24	25

Note: Langley is the unit used to denote one gram calorie per square centimeter.

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

MARCH 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	*55	190	90	133	*90	*5	*91	*53	131	195	228	165	117	*121	*157	233	212	*33	*136	196	232	*-13	**	*146	*-12	*95	*237	234	239	247	288	144

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

** Radiometer inoperative.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Table 33.--Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

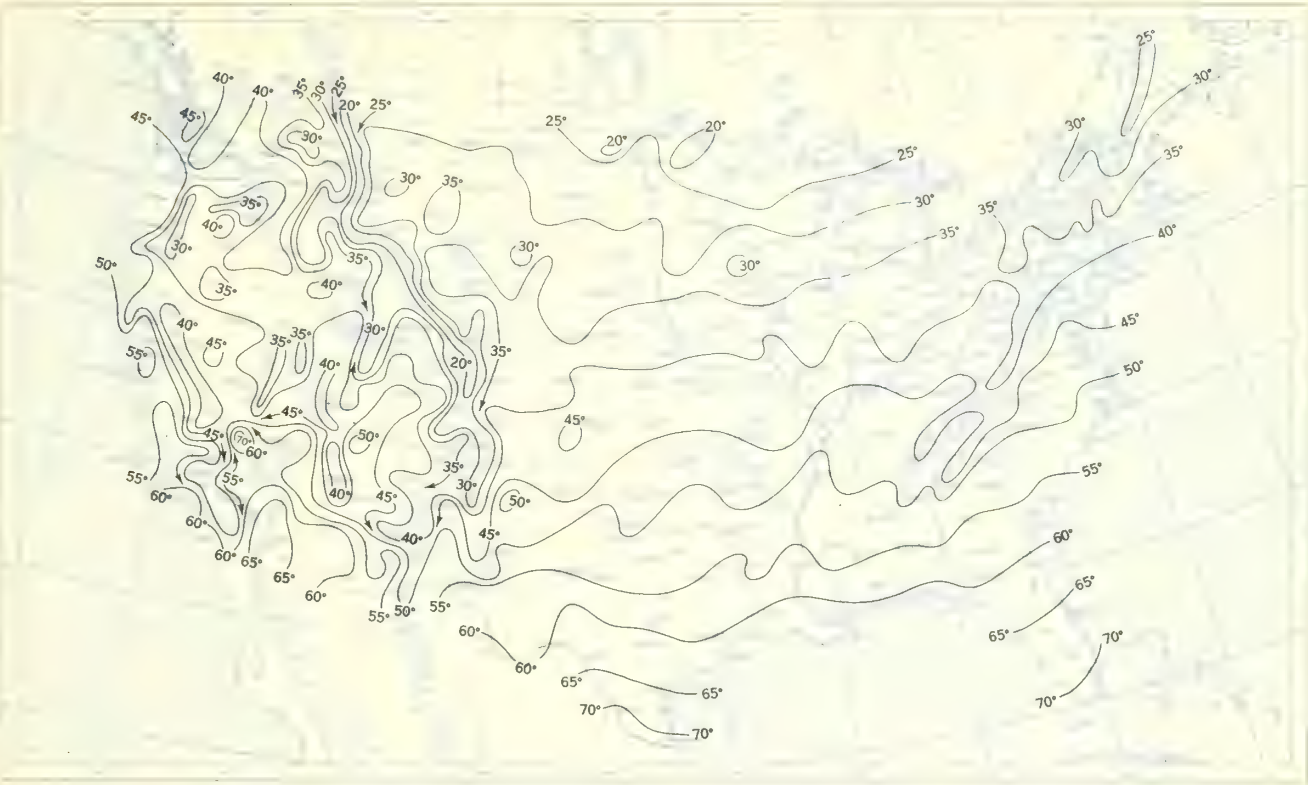
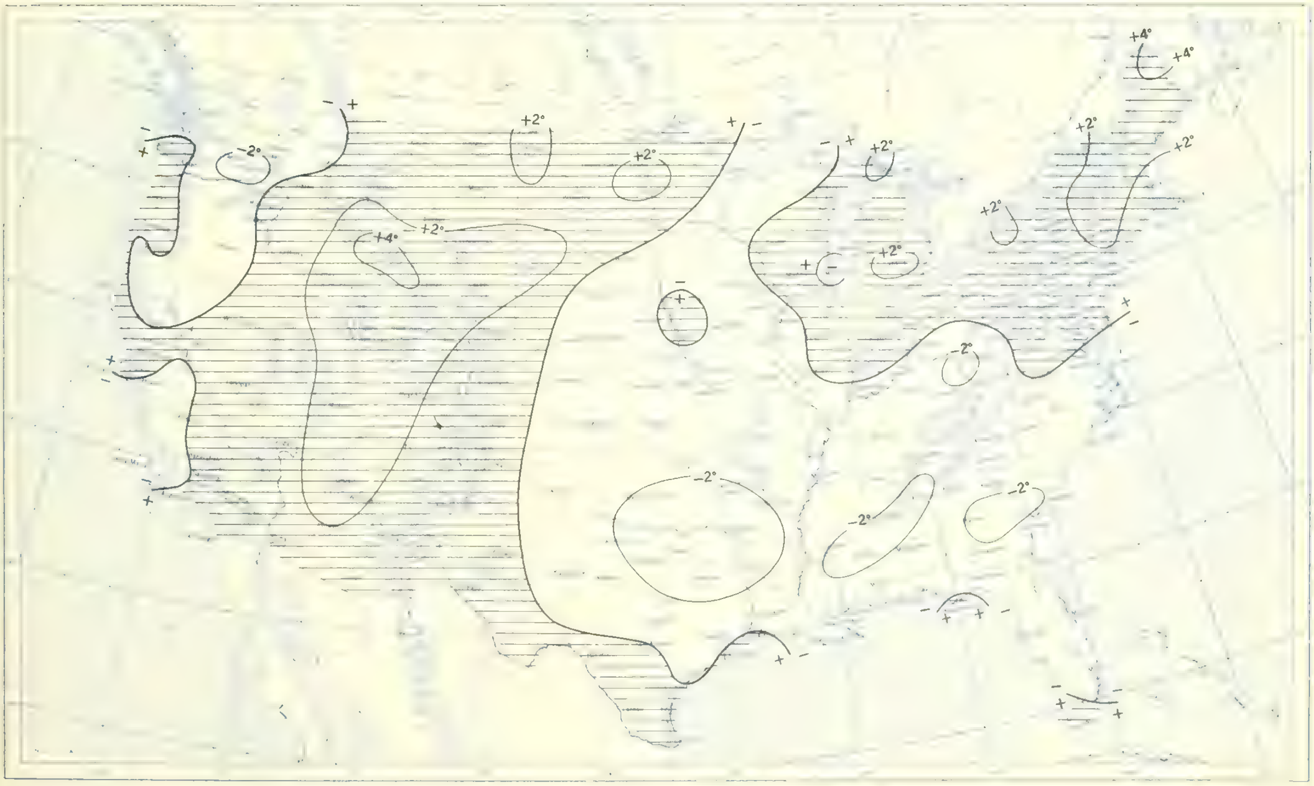
NWRC, Asheville, N. C. --- 6/7/57 --- 1900

Chart I. A. Average Temperature (°F.) at Surface, March 1957.



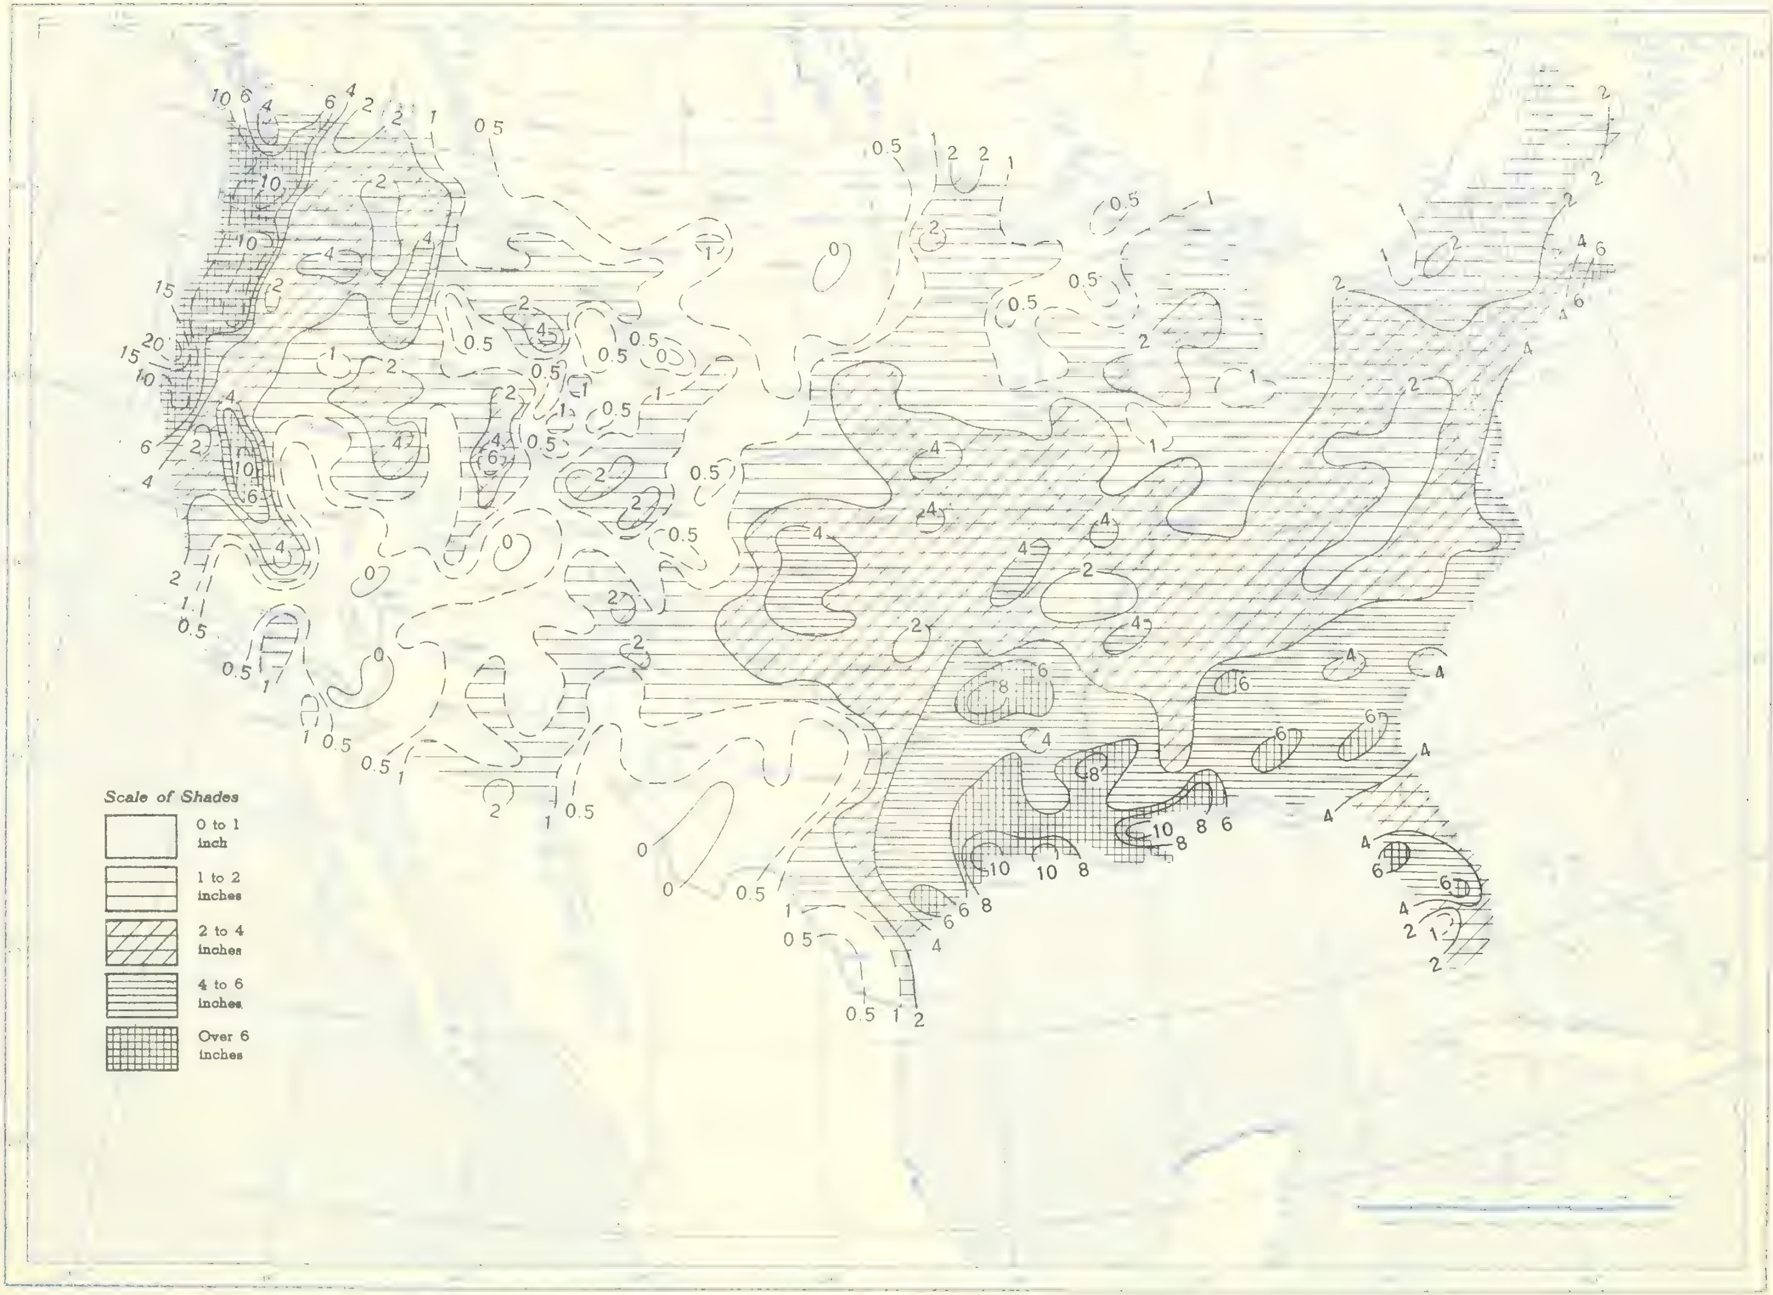
B. Departure of Average Temperature from Normal (°F.), March 1957.



A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.

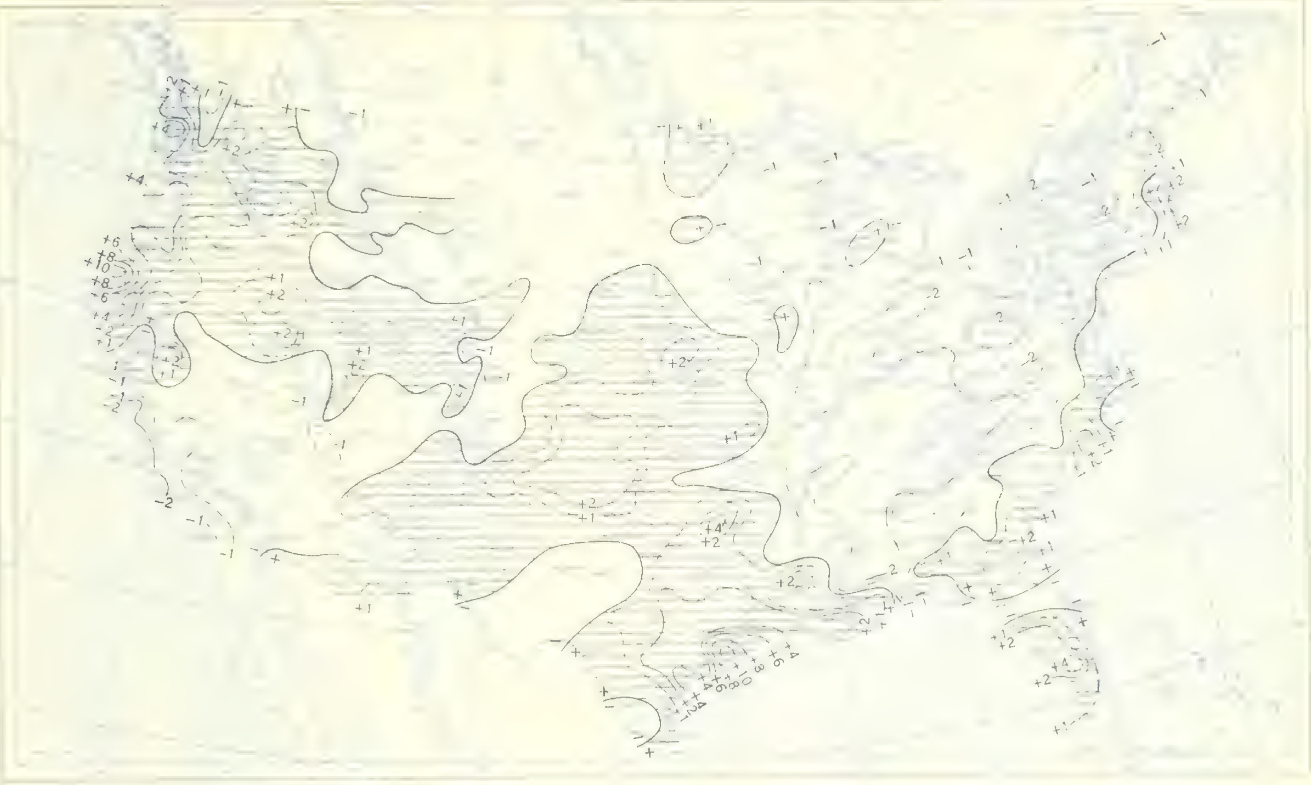
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), March 1957.

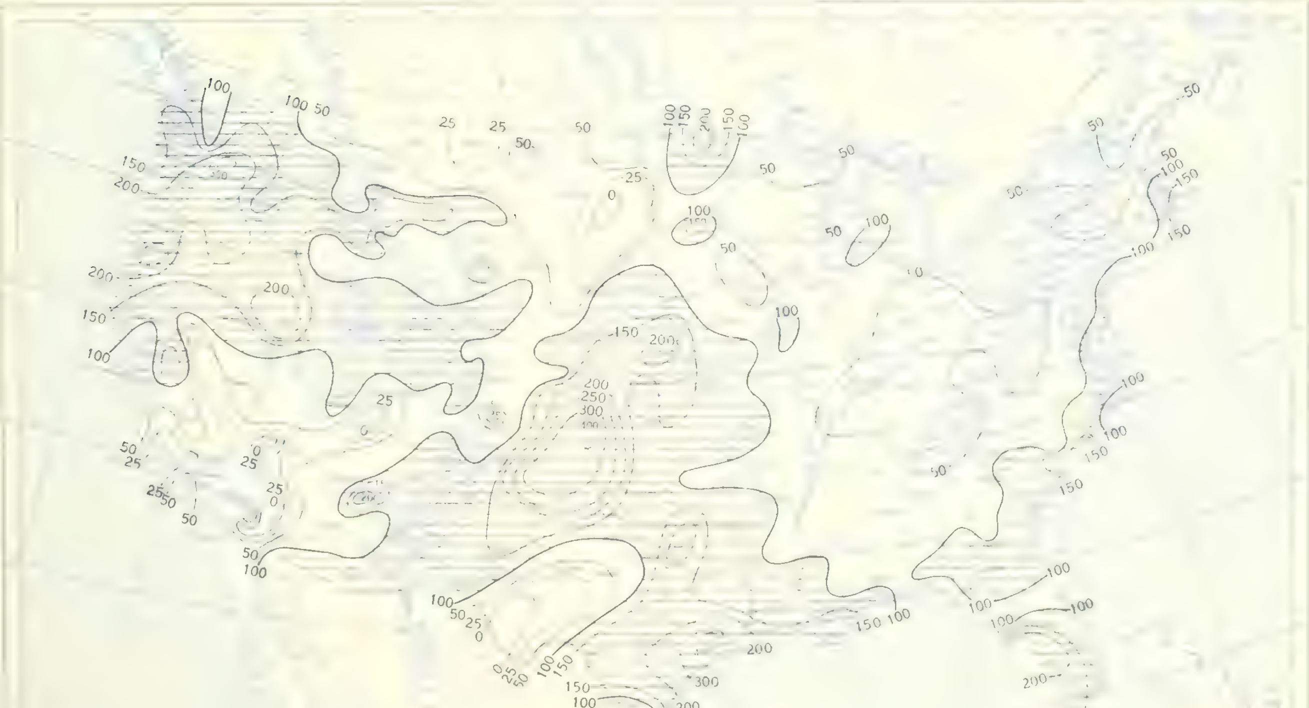


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), March 1957.

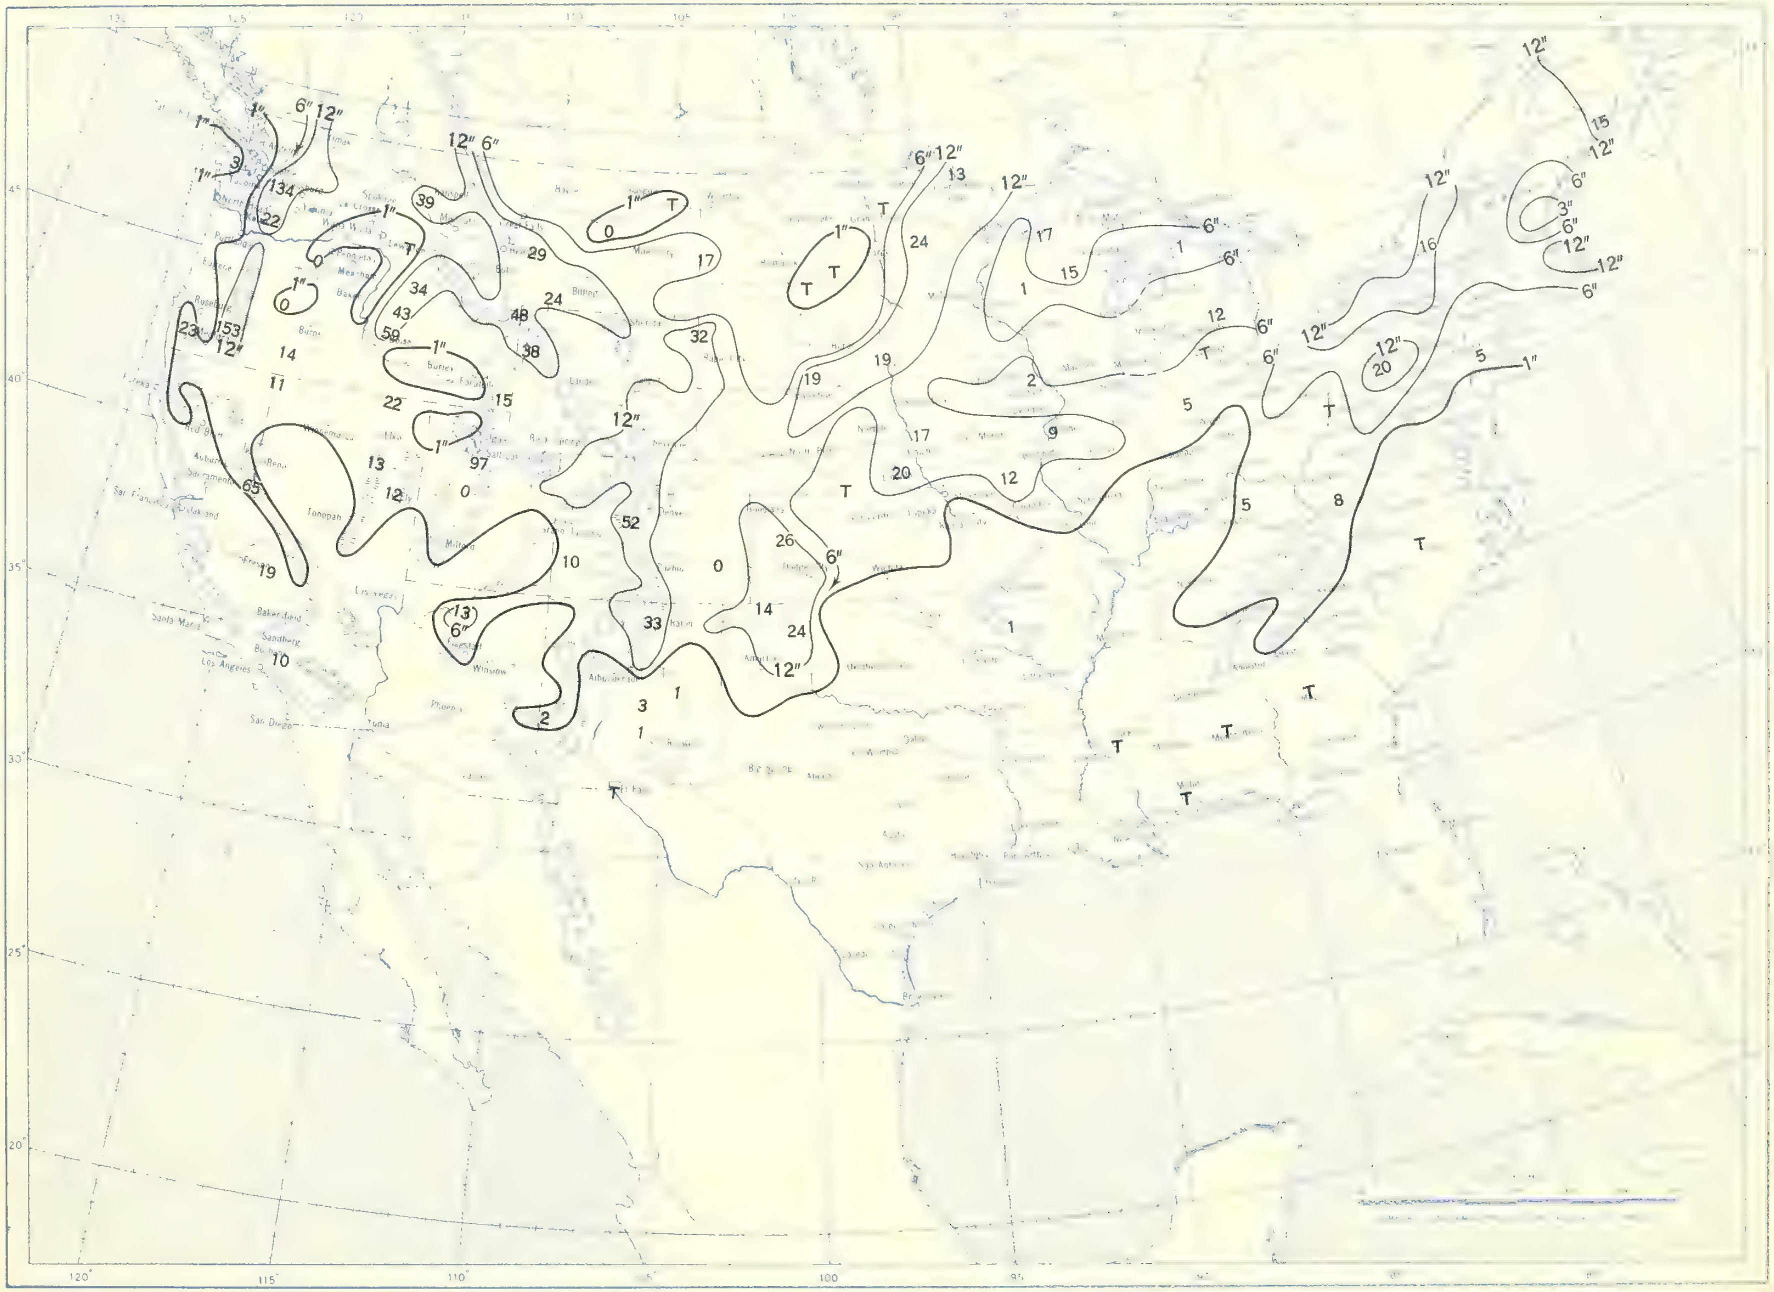


B. Percentage of Normal Precipitation, March 1957.



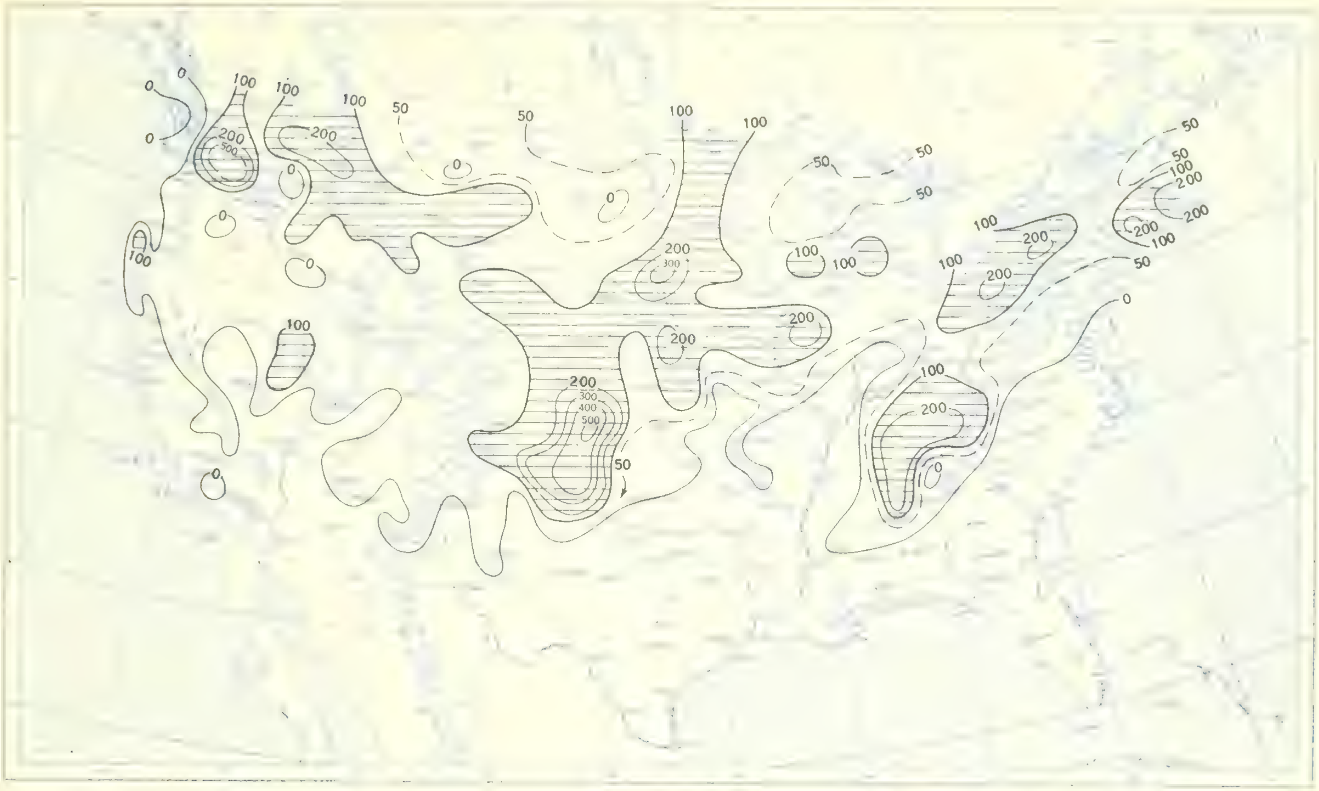
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart IV. Total Snowfall (Inches), March 1957.

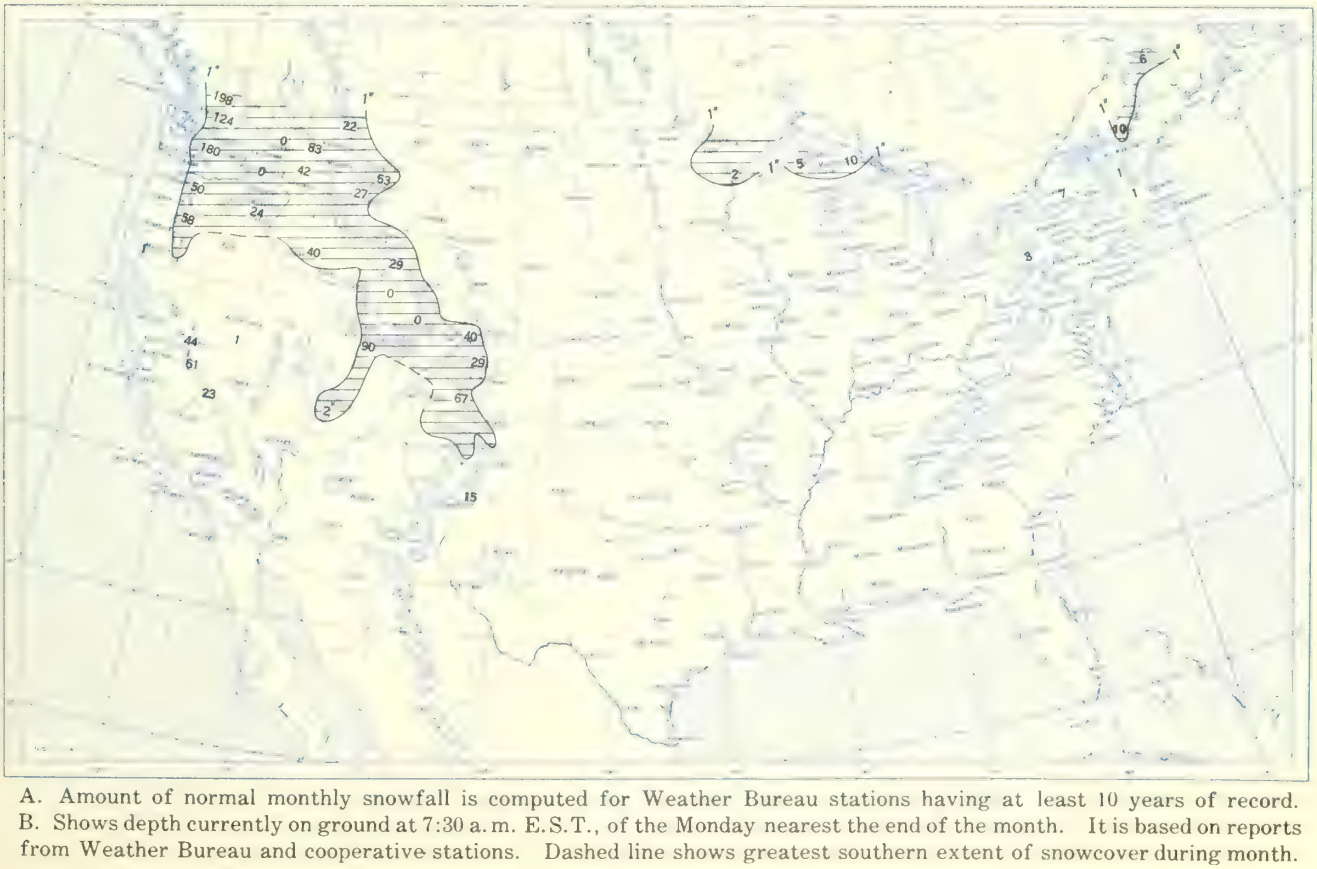


This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, March 1957.

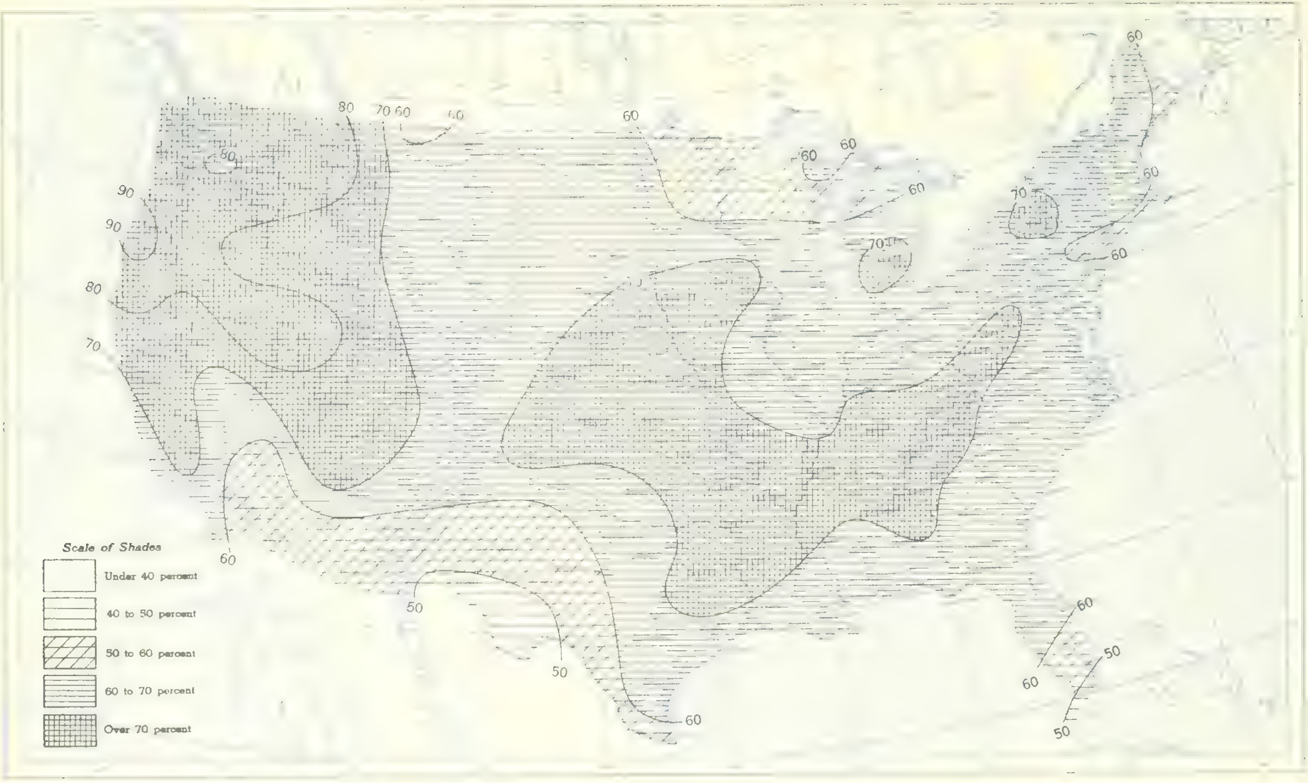


B. Depth of Snow on Ground (Inches). 7:30 a. m. E. S. T., March 25, 1957.

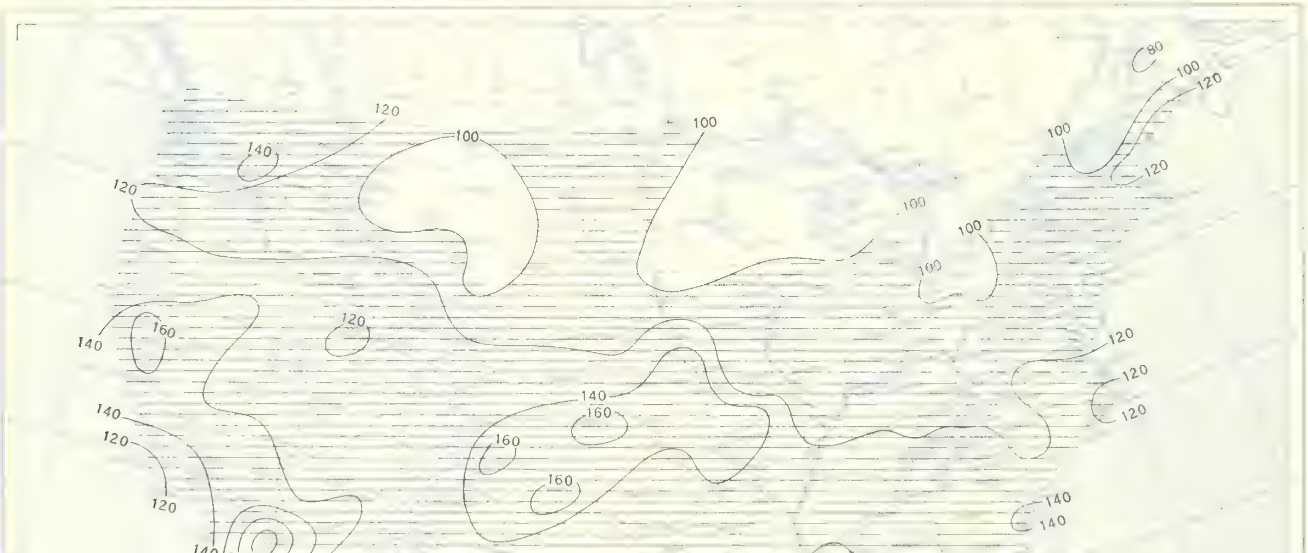


A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:30 a. m. E.S.T., of the Monday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, March 1957.

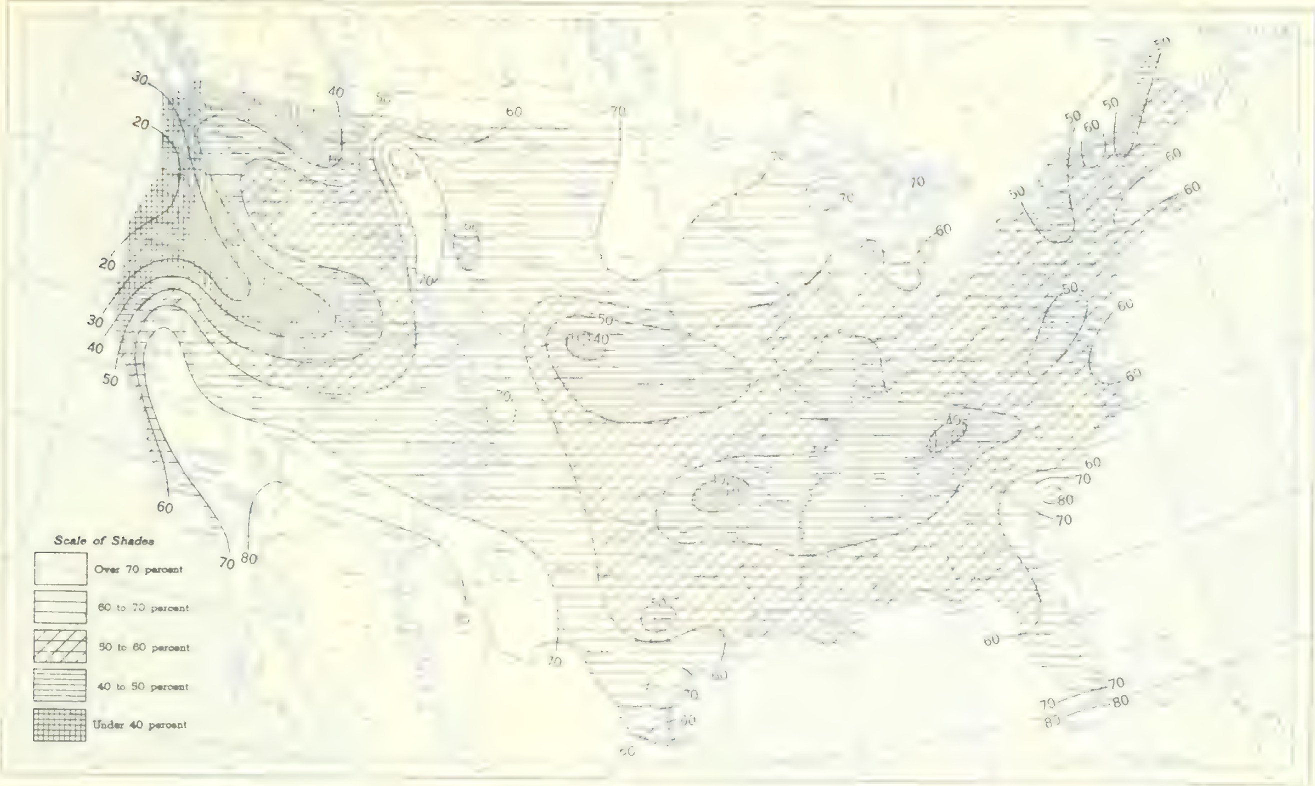


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, March 1957.

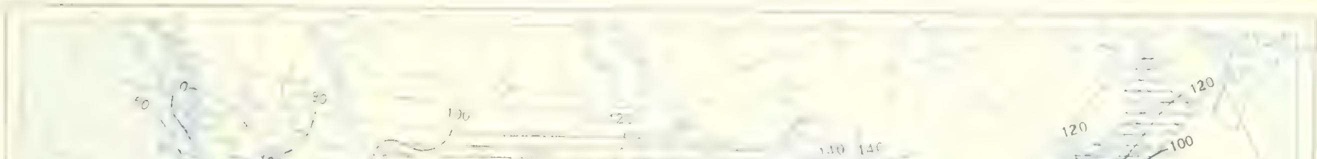


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, March 1957.



B. Percentage of Normal Sunshine, March 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, March 1957. Inset: Percentage of Mean Daily Solar Radiation, March 1957. (Mean based on period 1951-55.)

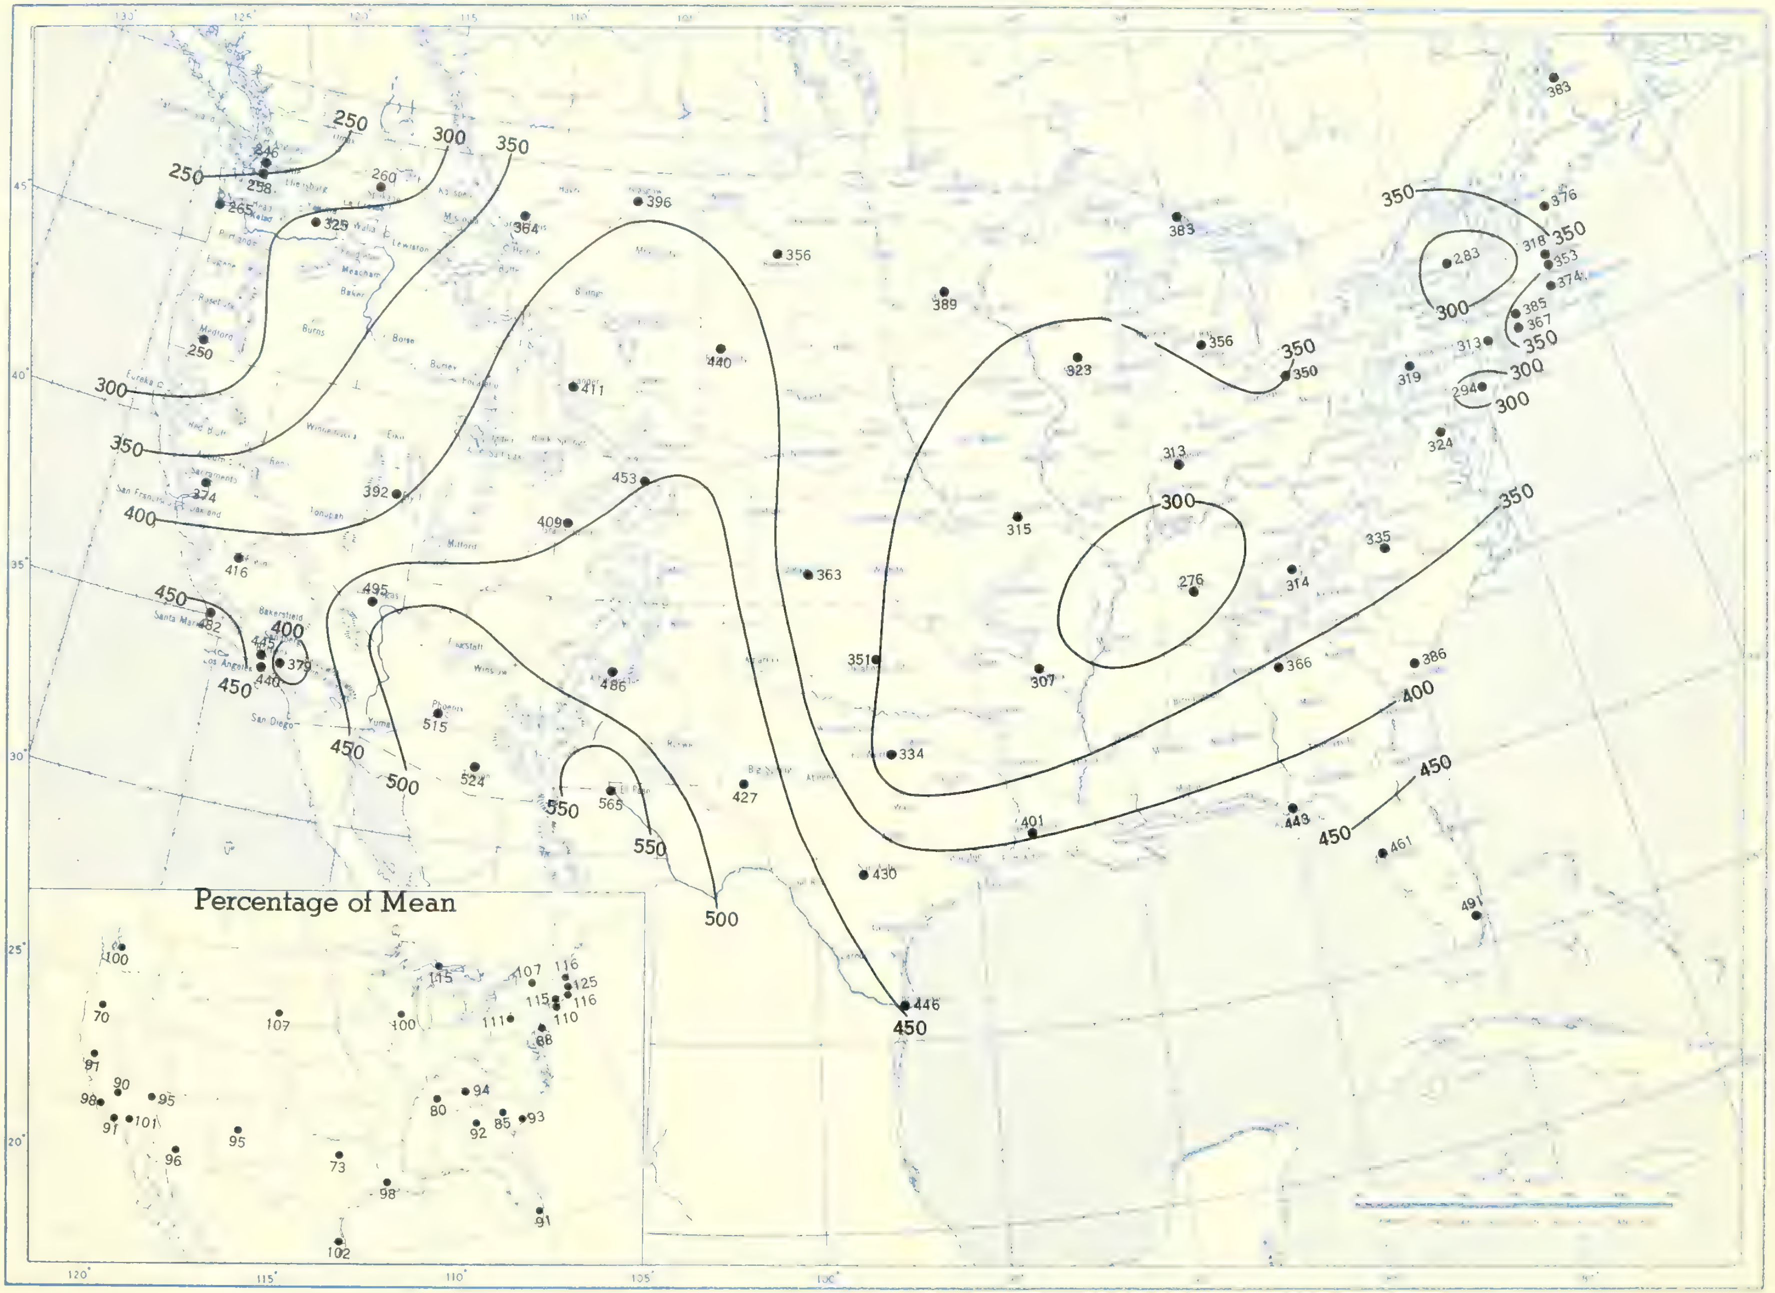


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm. $^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

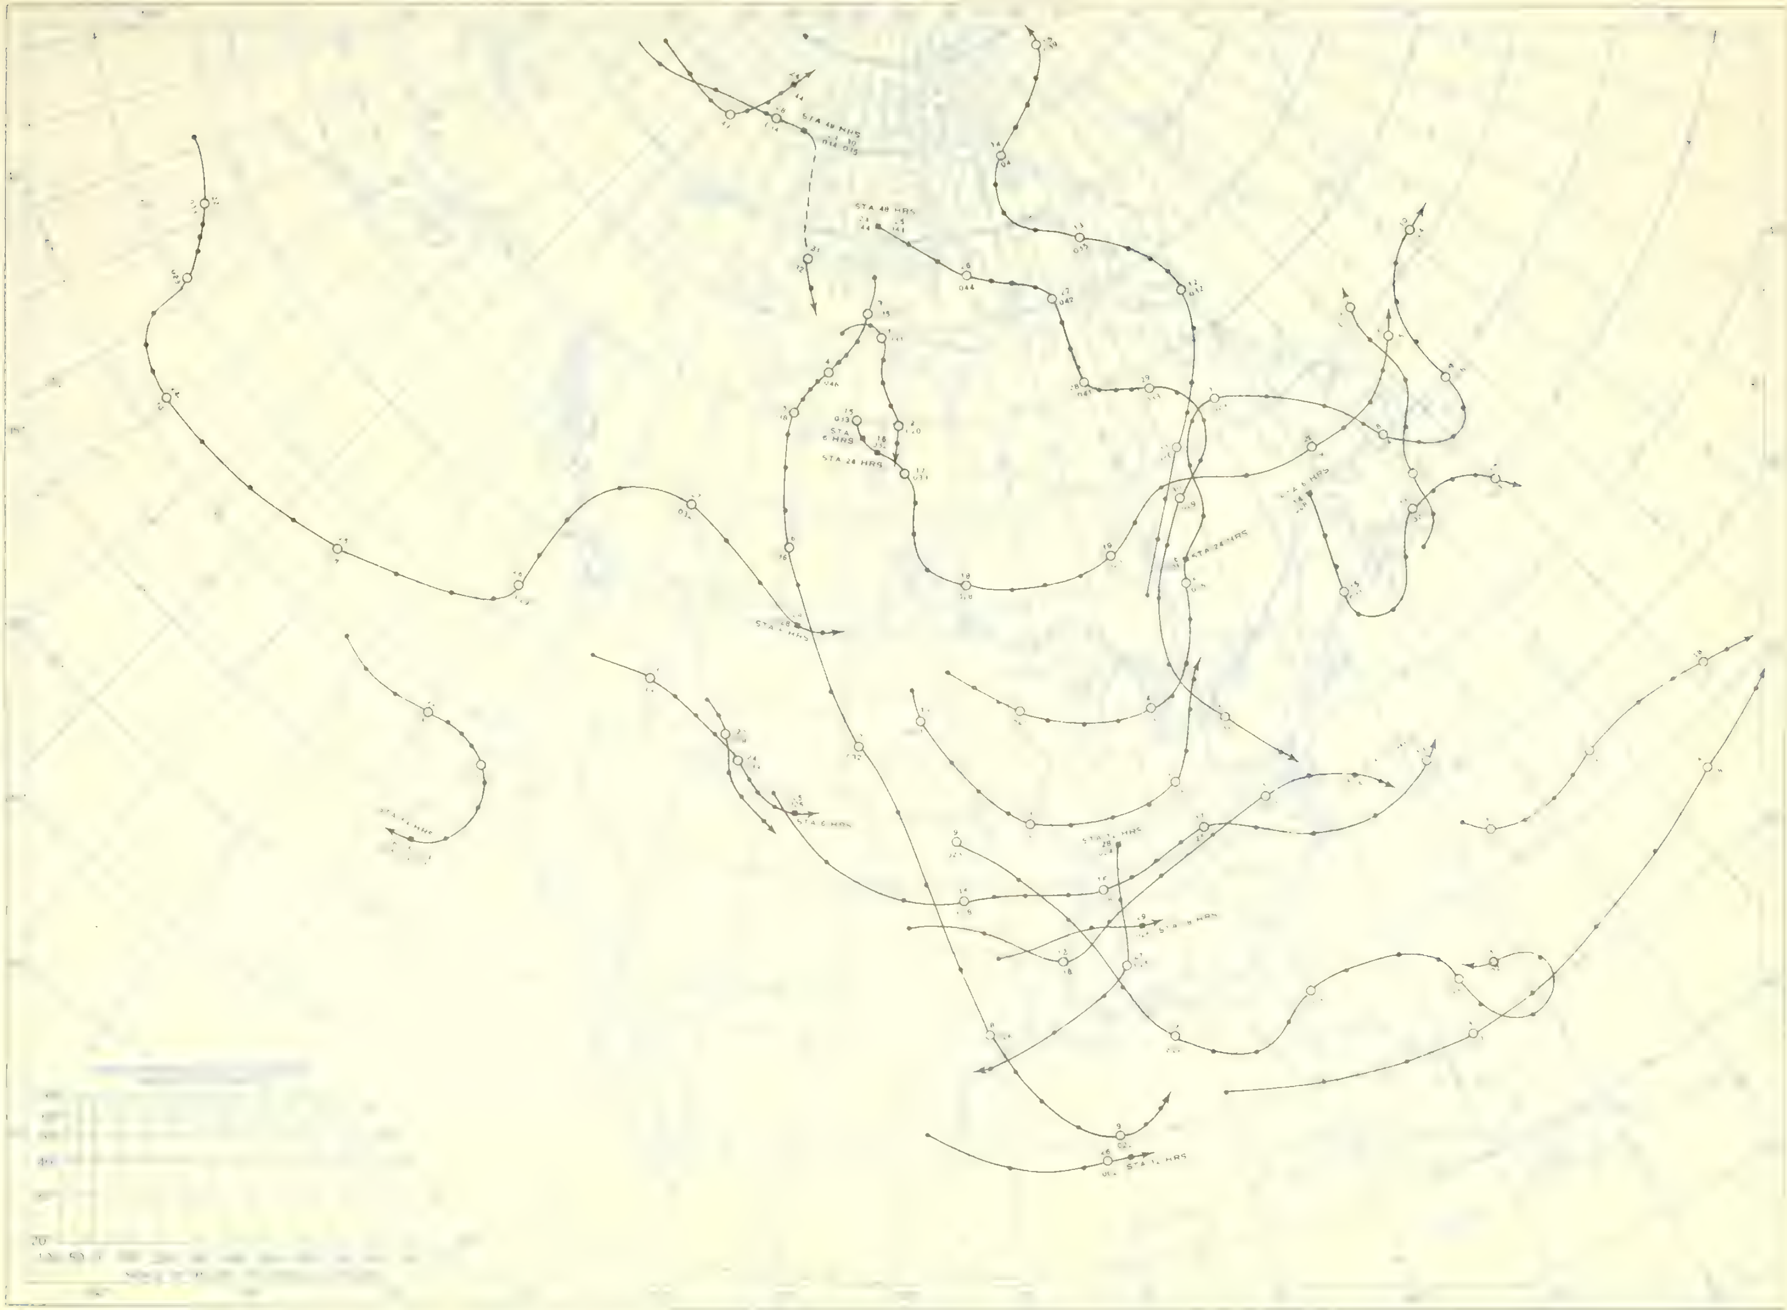
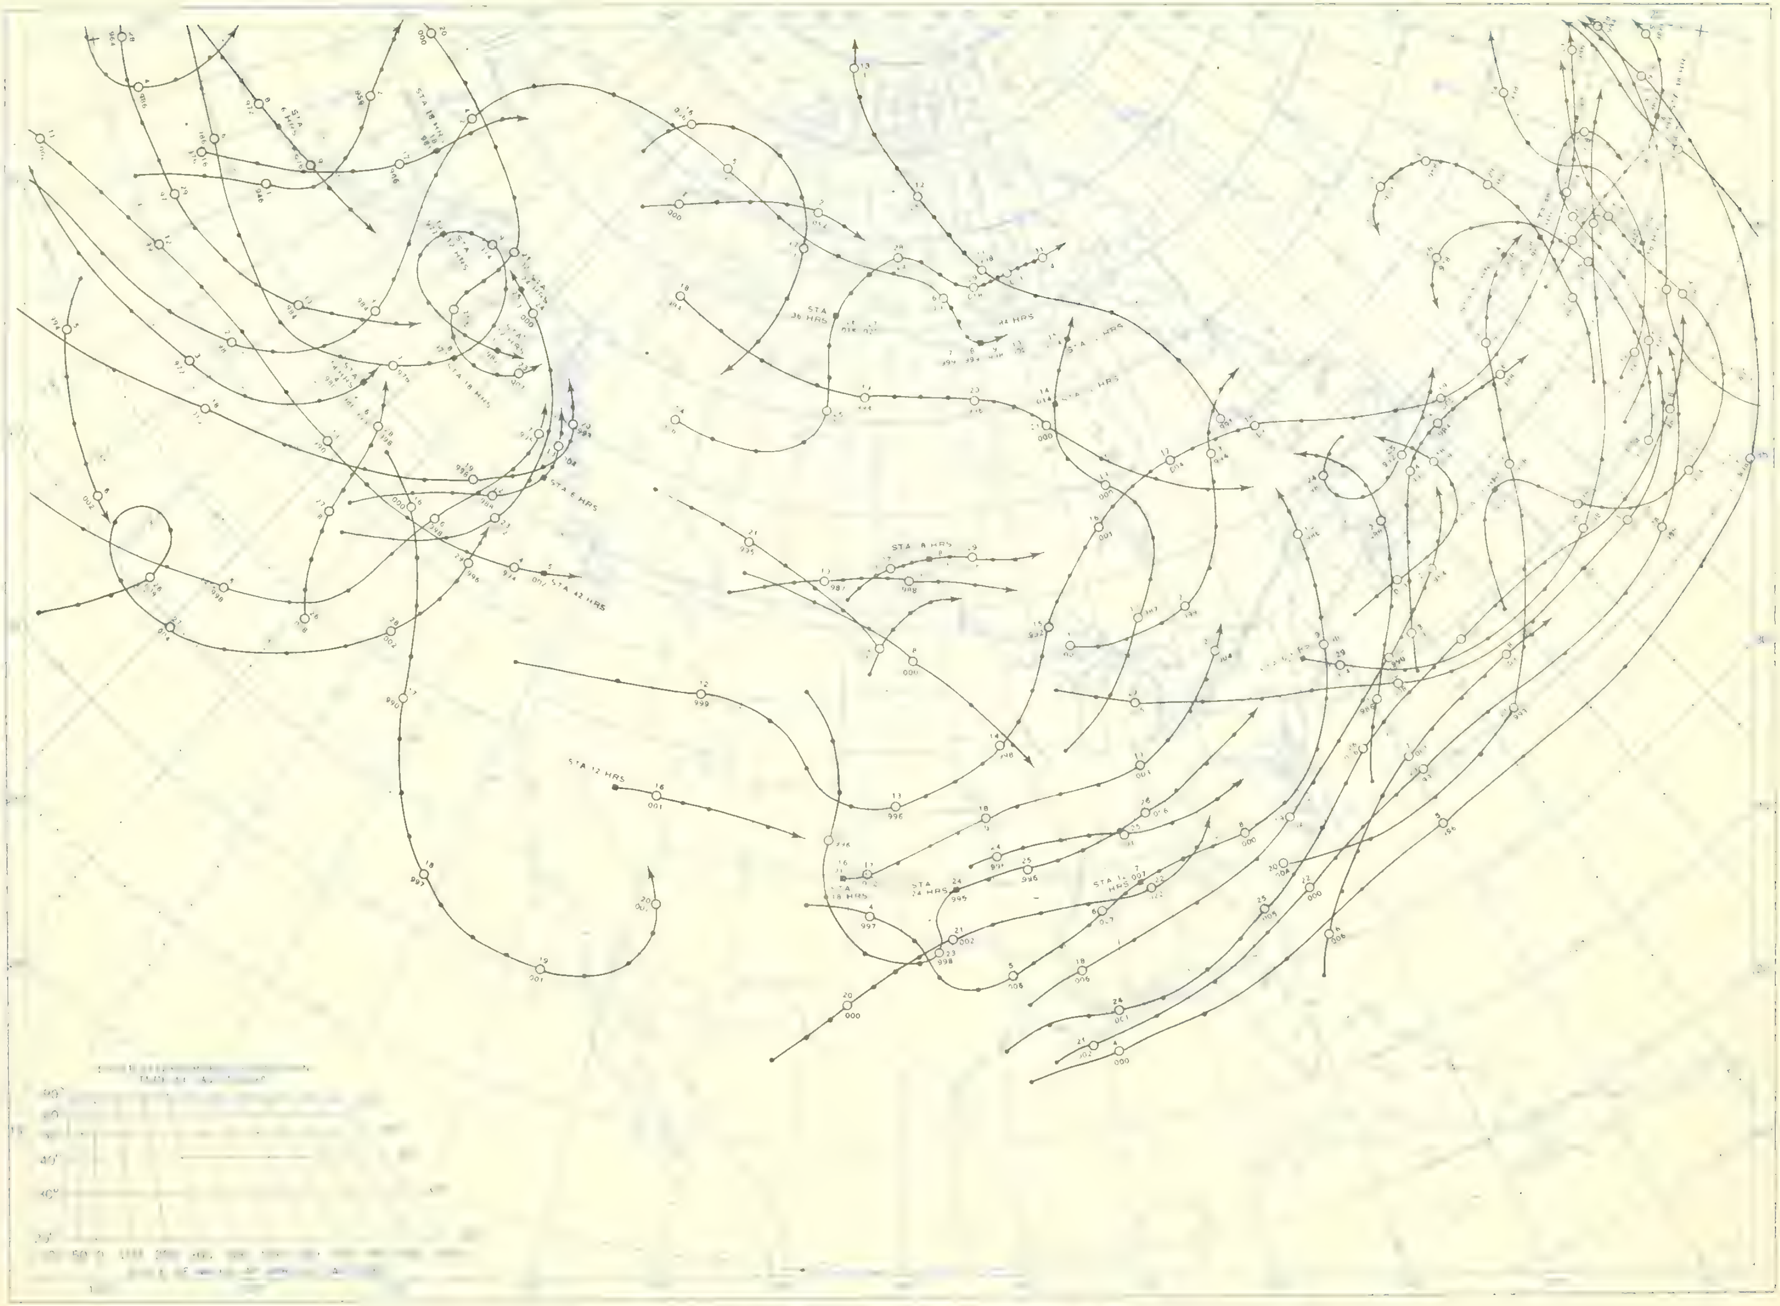
Chart IX. Tracks of Centers of Anticyclones at Sea Level, March 1957.



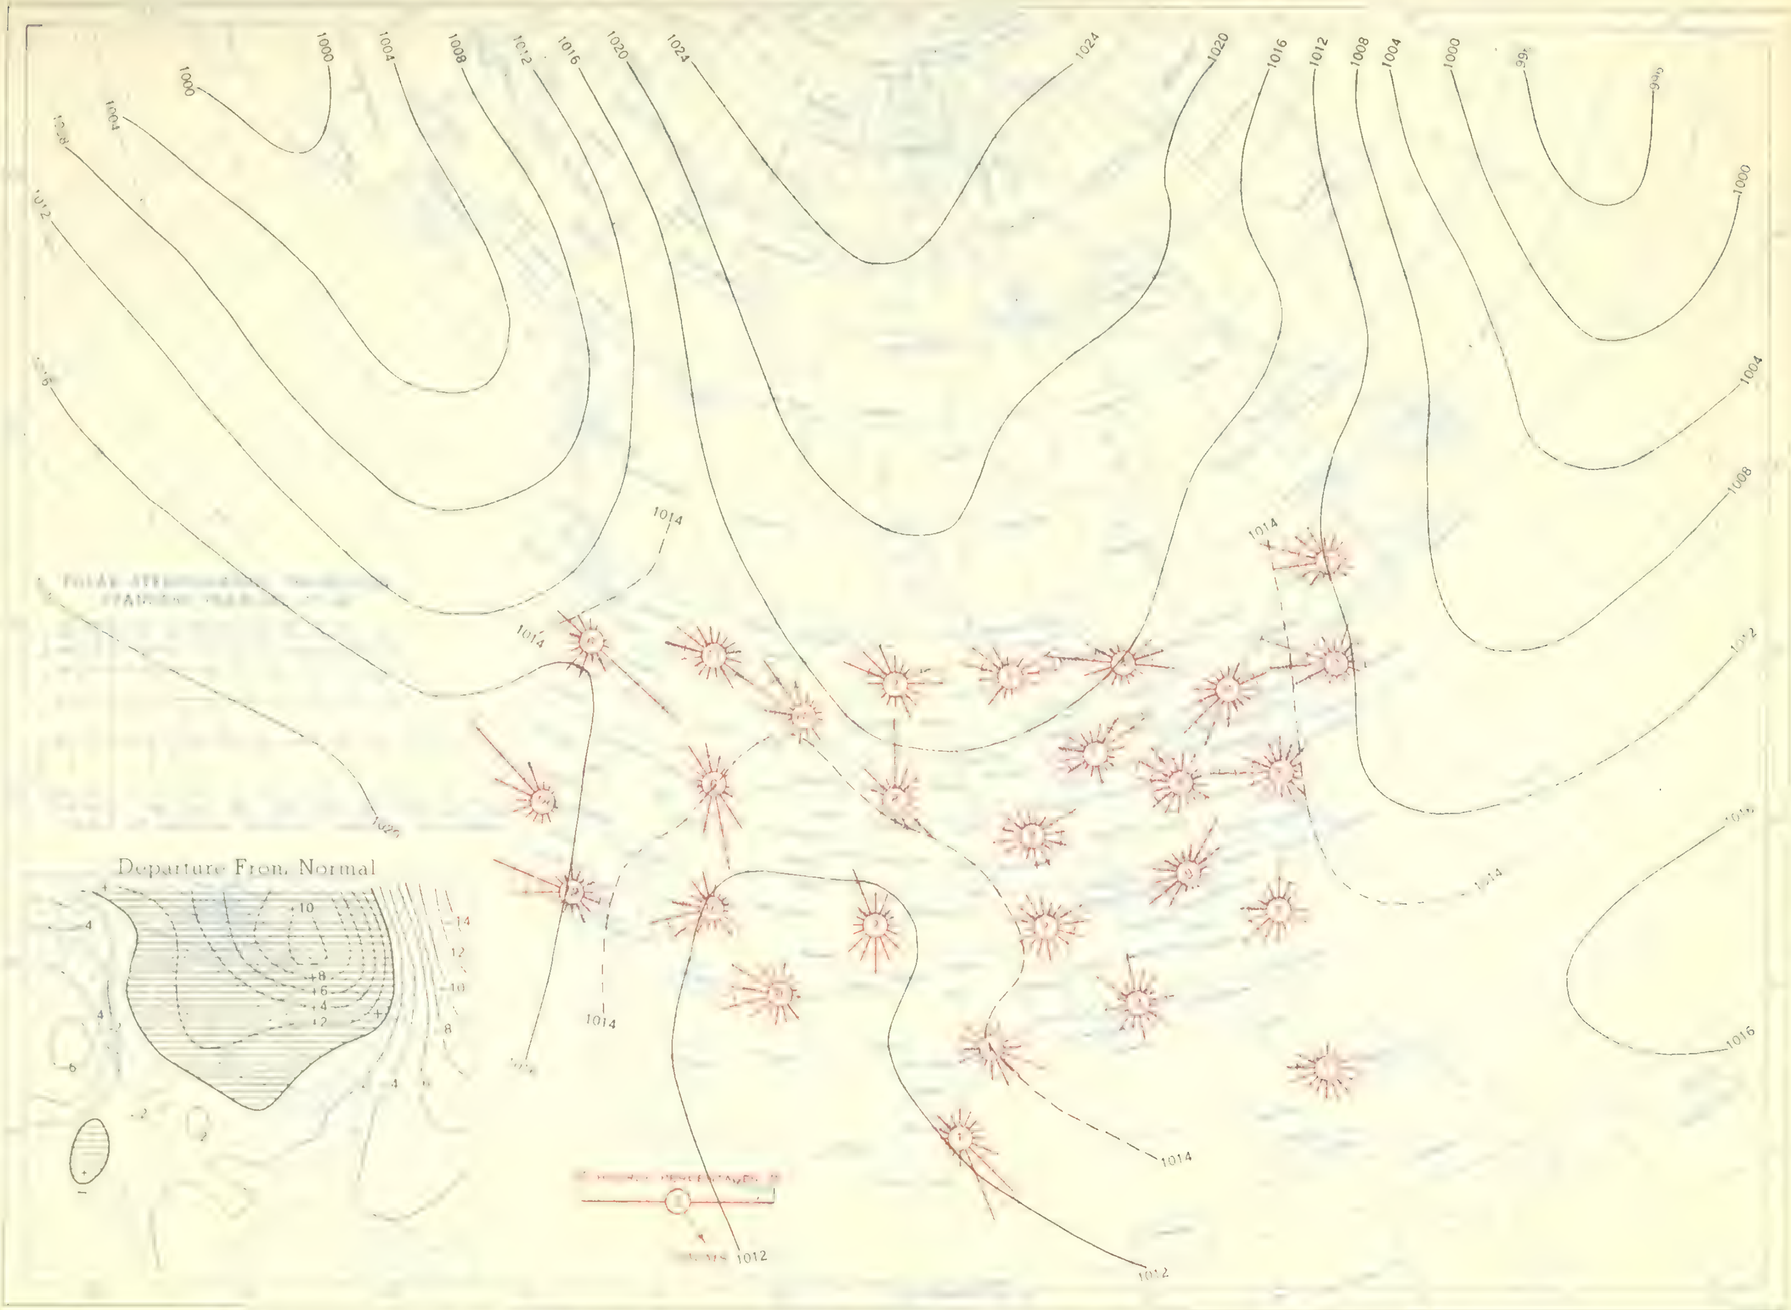
Circle indicates position of center at 7:30 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, March 1957.



Circle indicates position of center at 7:30 a. m. E. S. T. See Chart IX for explanation of symbols.

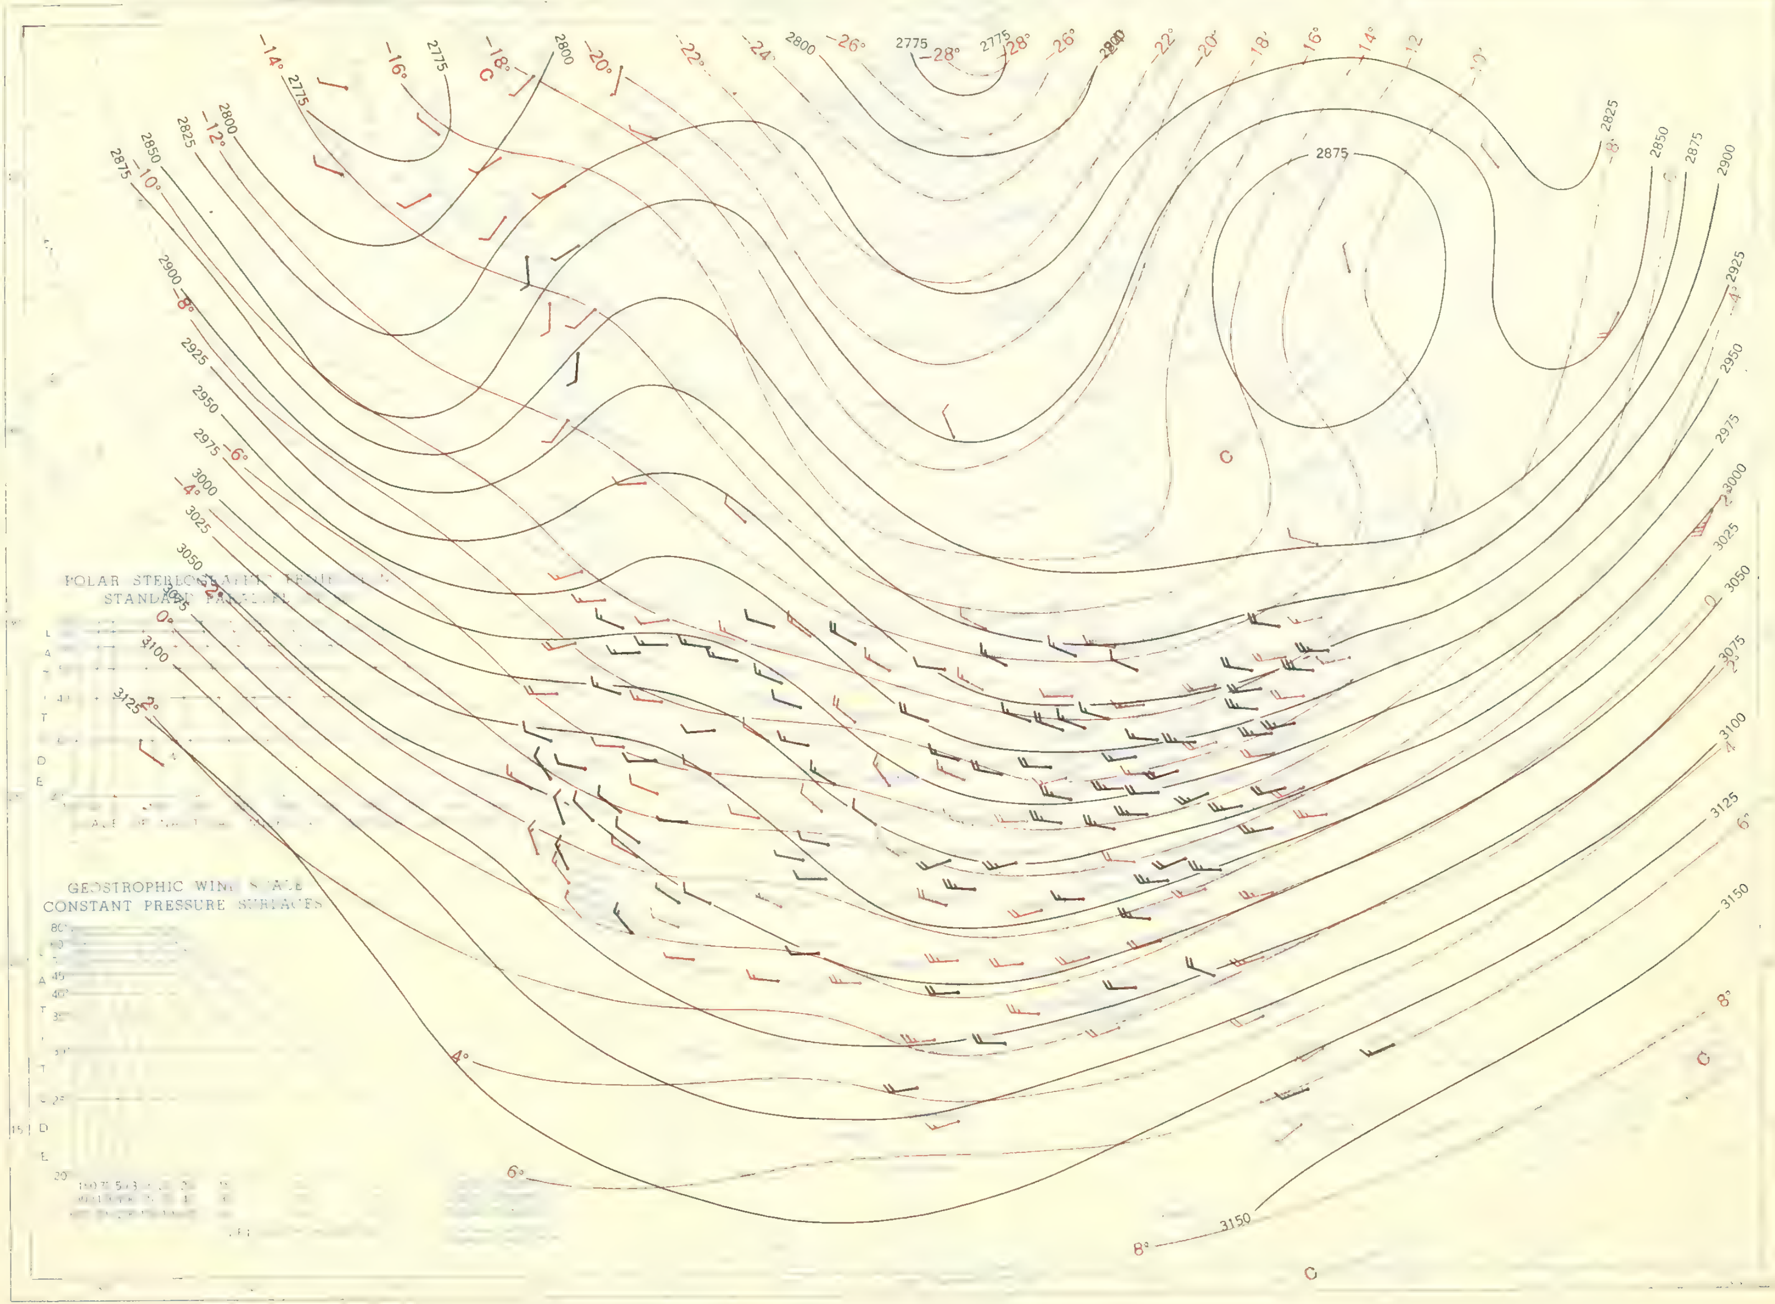
Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, March 1957. Inset: Departure of Average Pressure (mb.) from Normal, March 1957.



Average sea level pressures are obtained from the averages of the 7:30 a. m. and 7:30 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

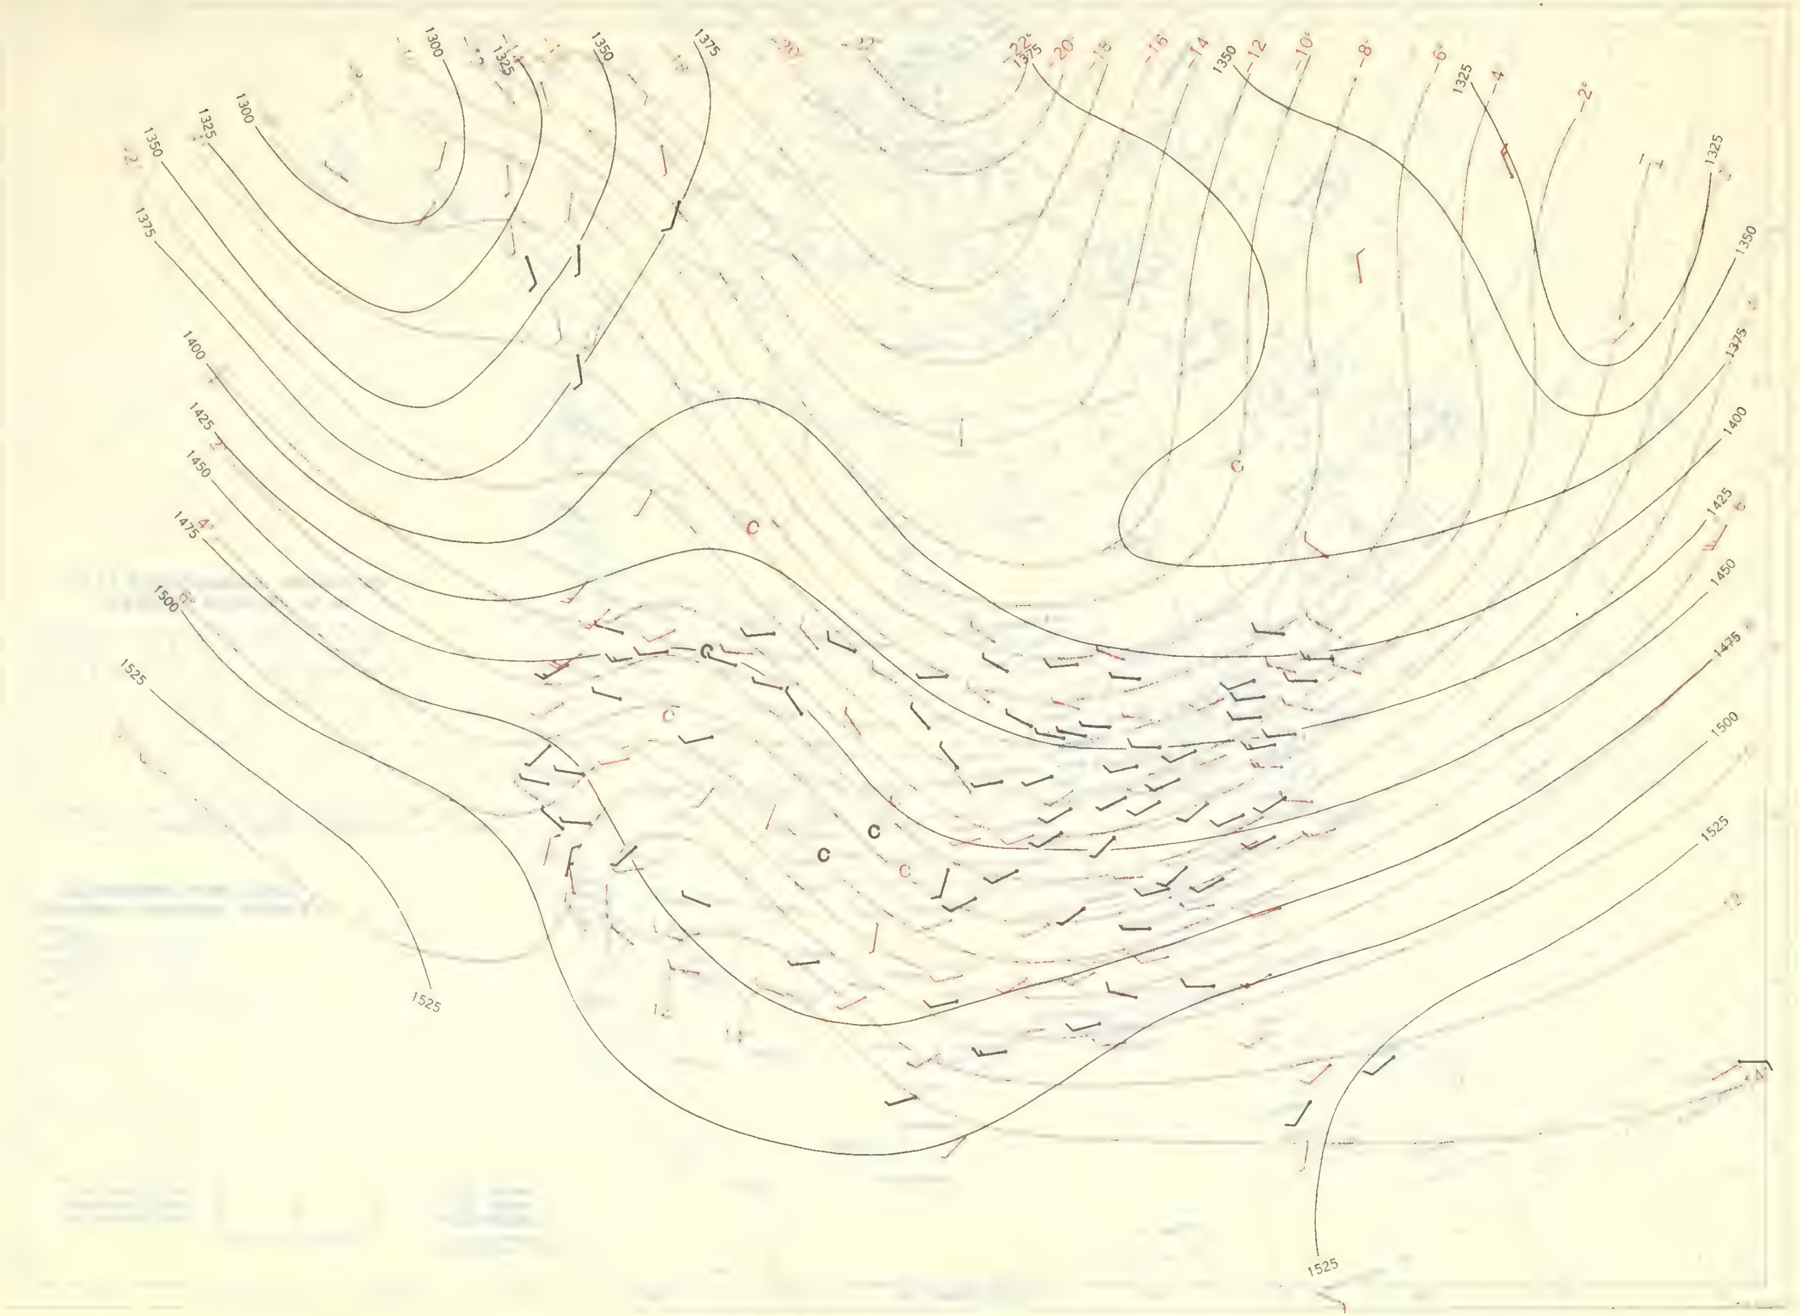
700-mb.

Chart XII. [redacted] Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



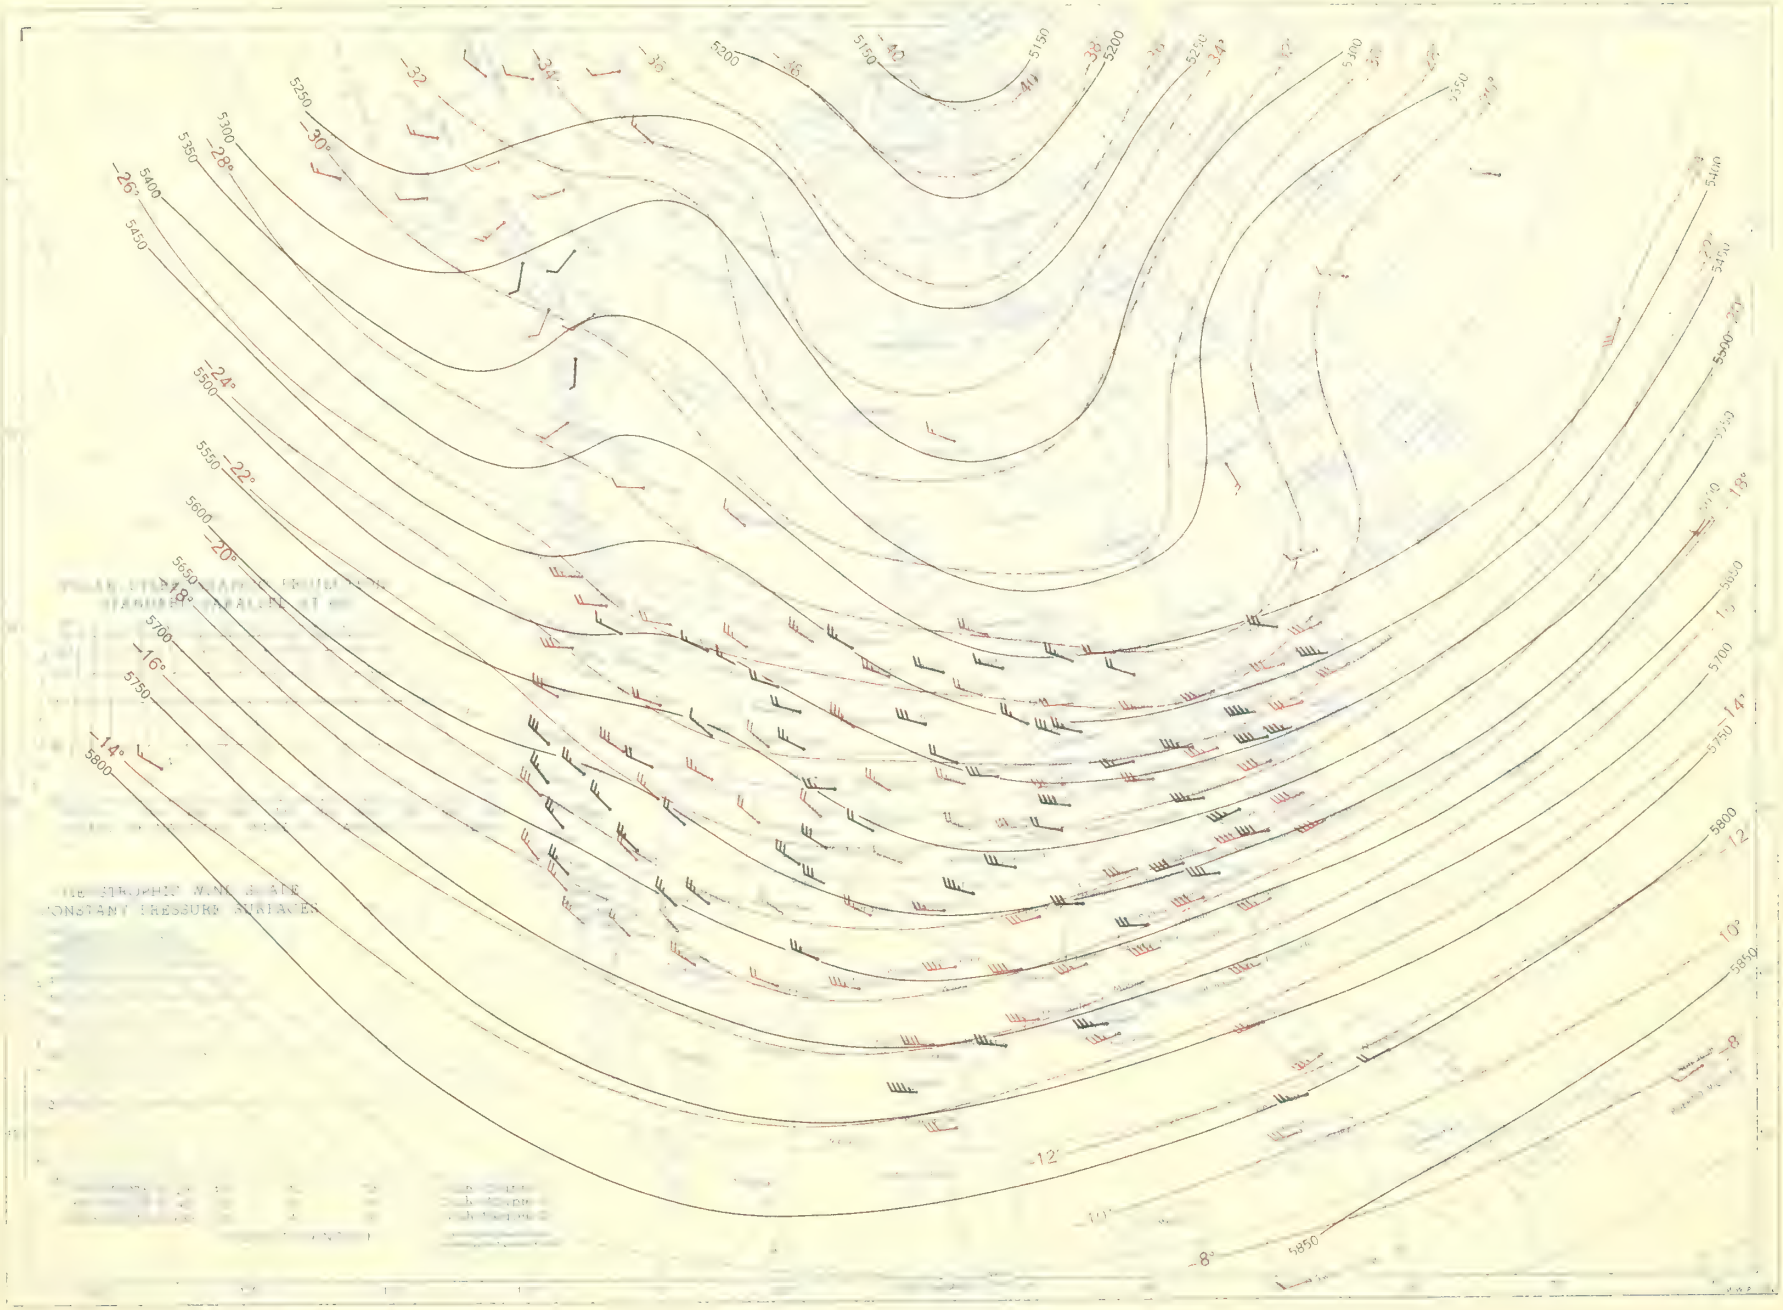
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Winds shown in red are based on rawins taken at the indicated pressure surface and time. Those in black are based

Chart XIII. [redacted] Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



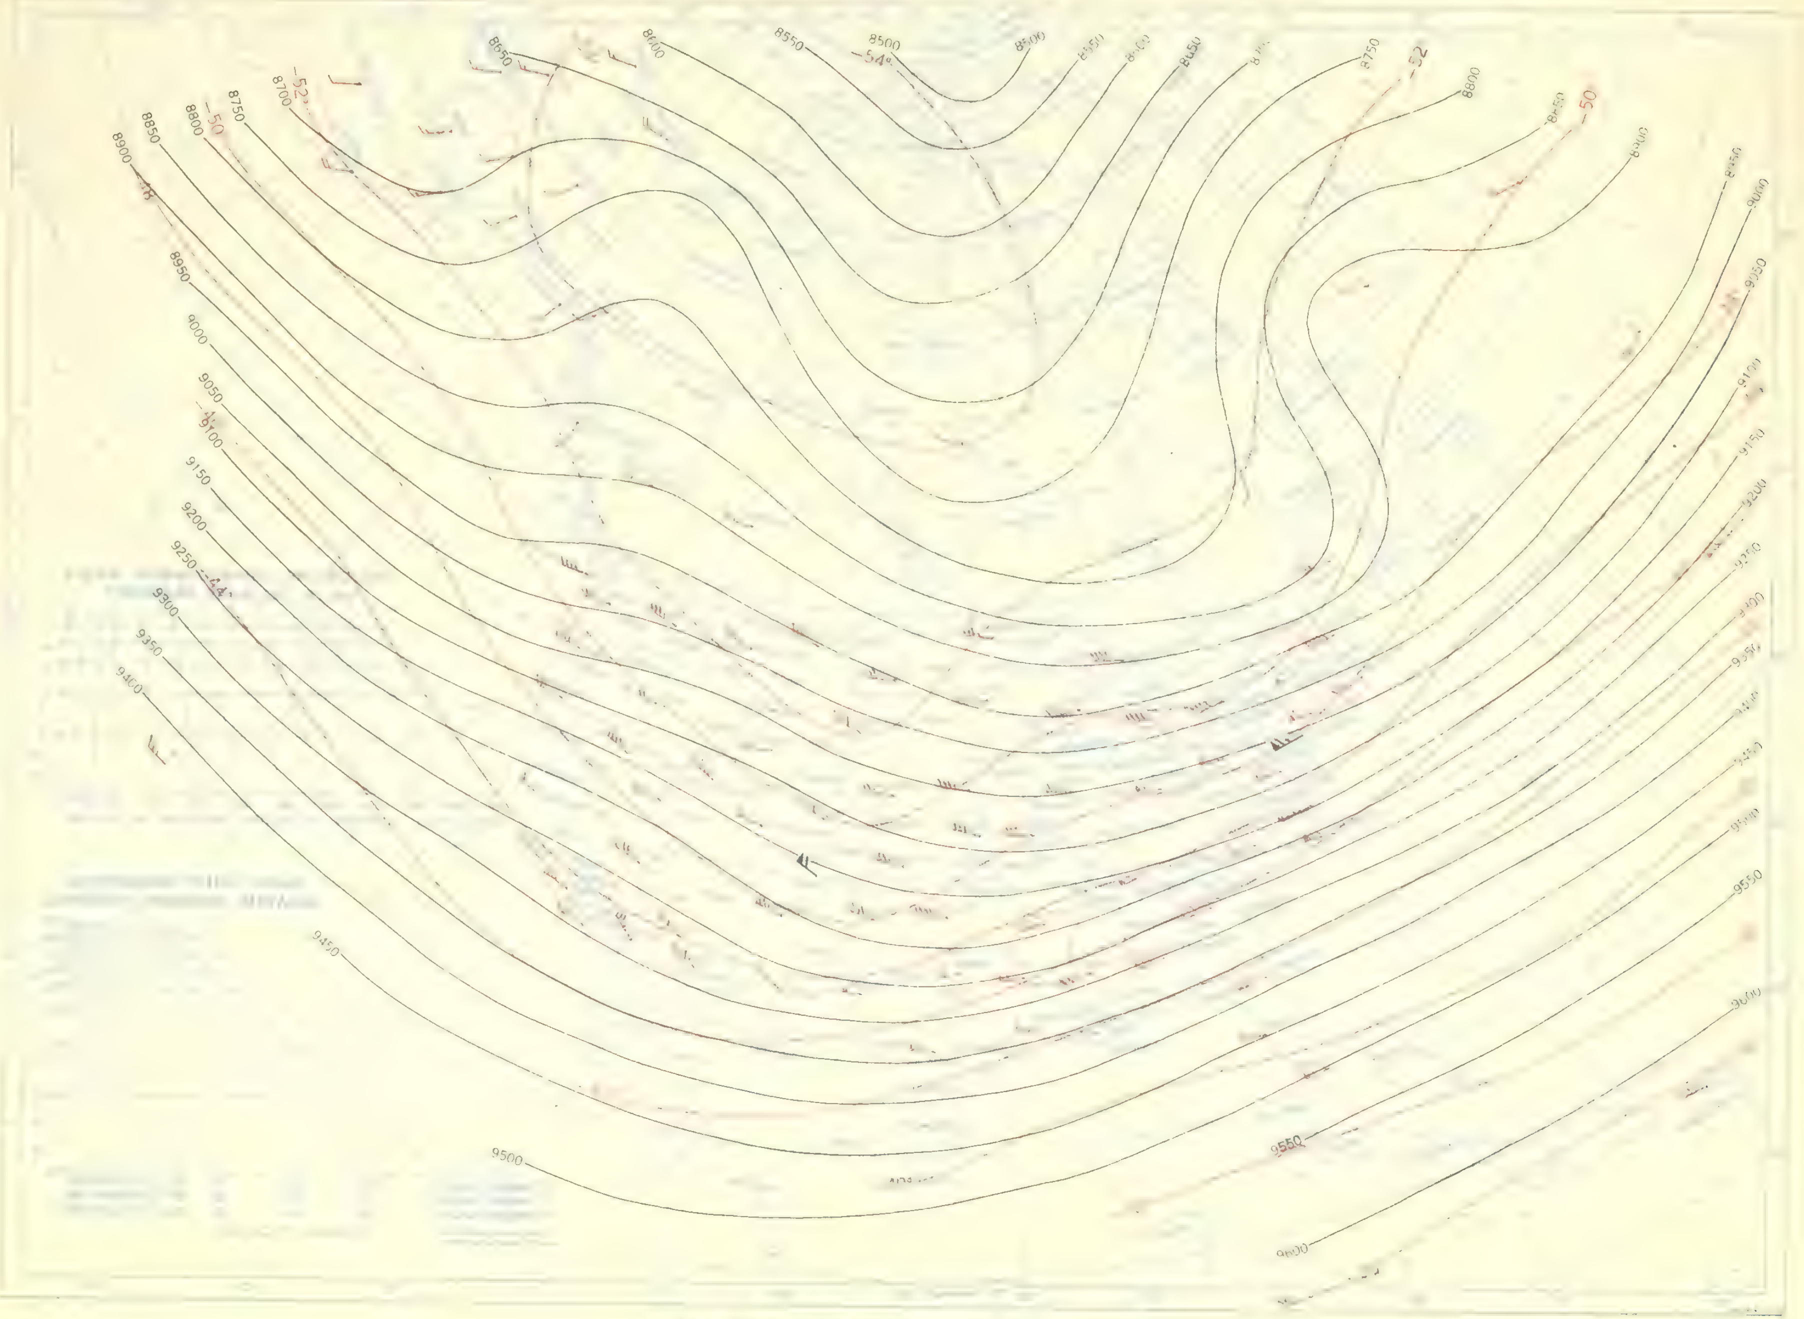
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



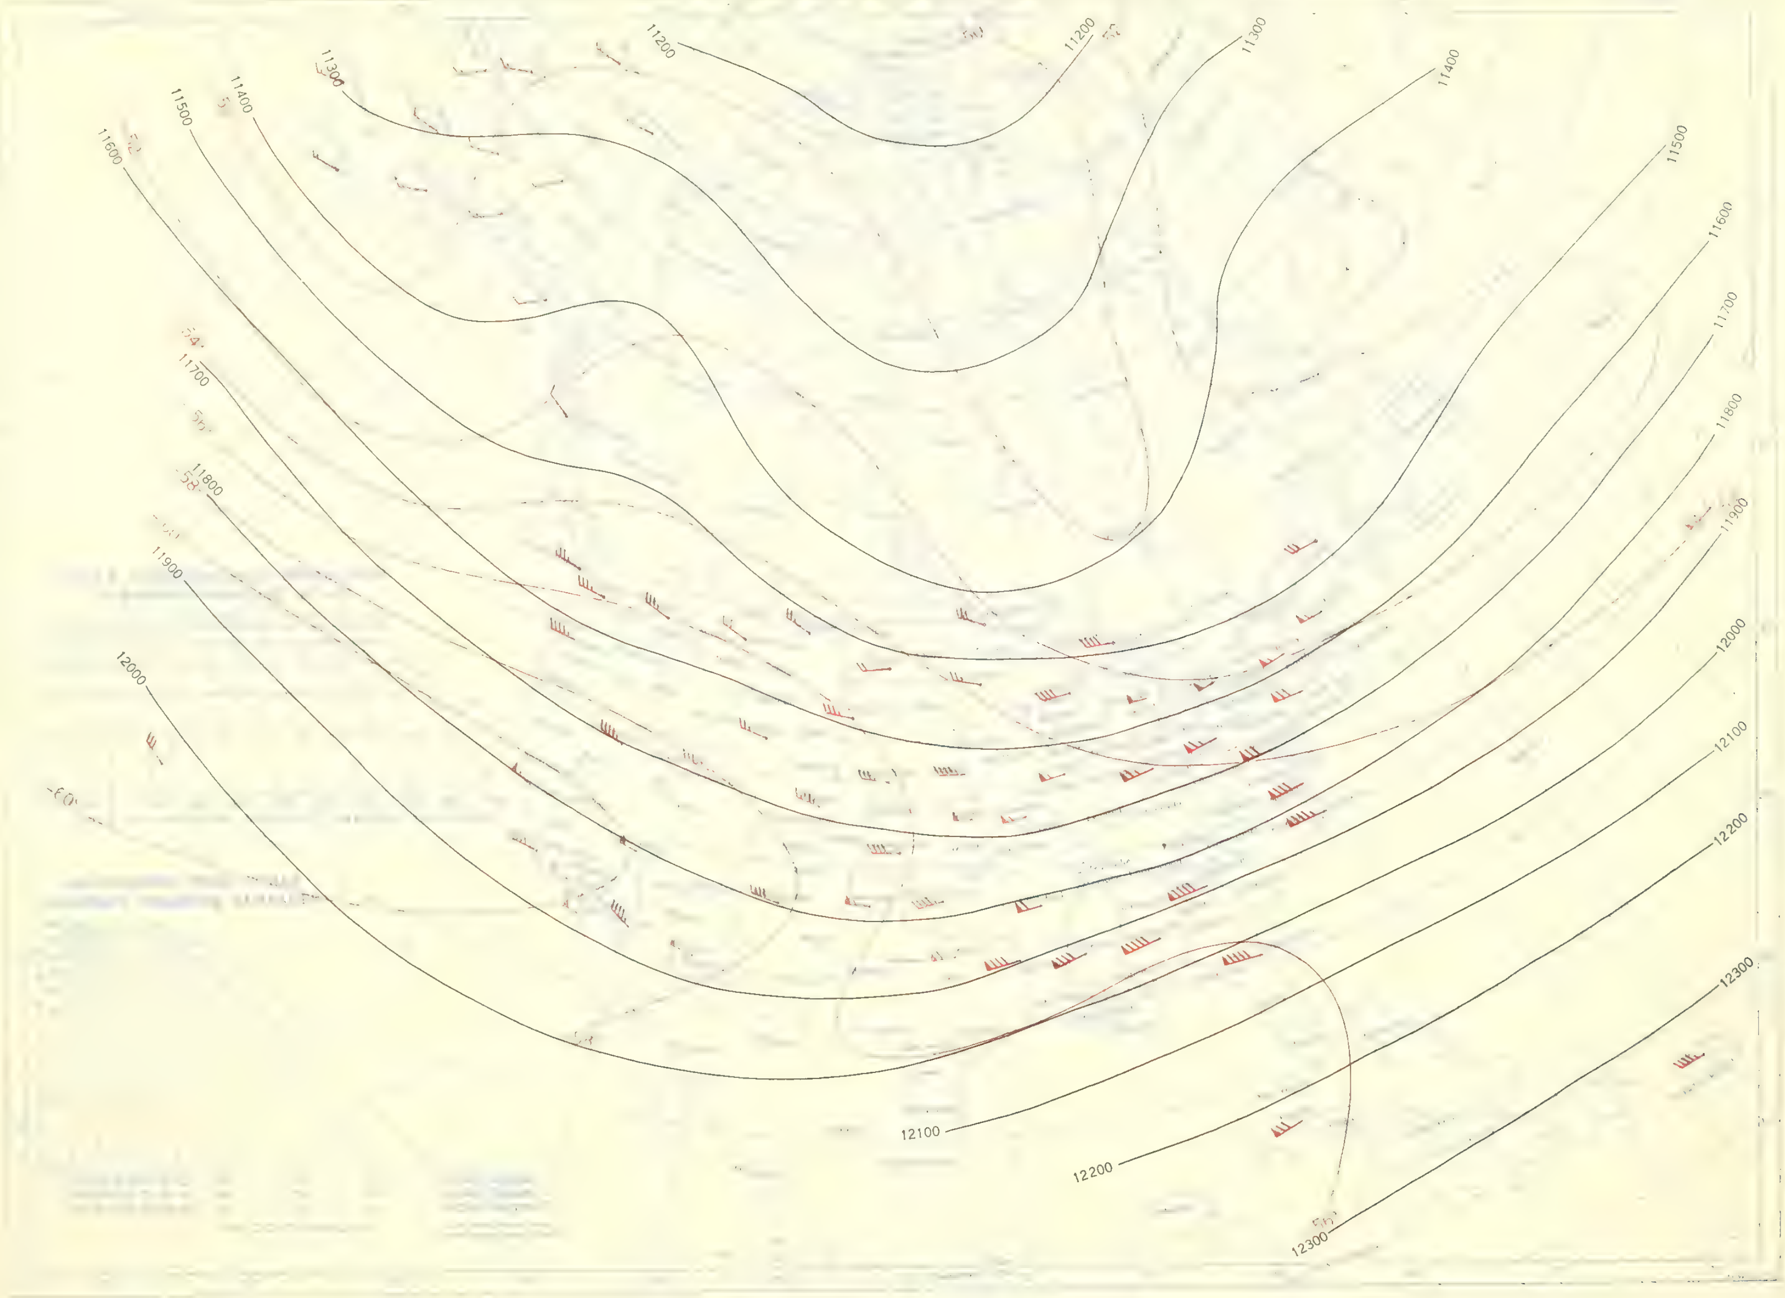
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



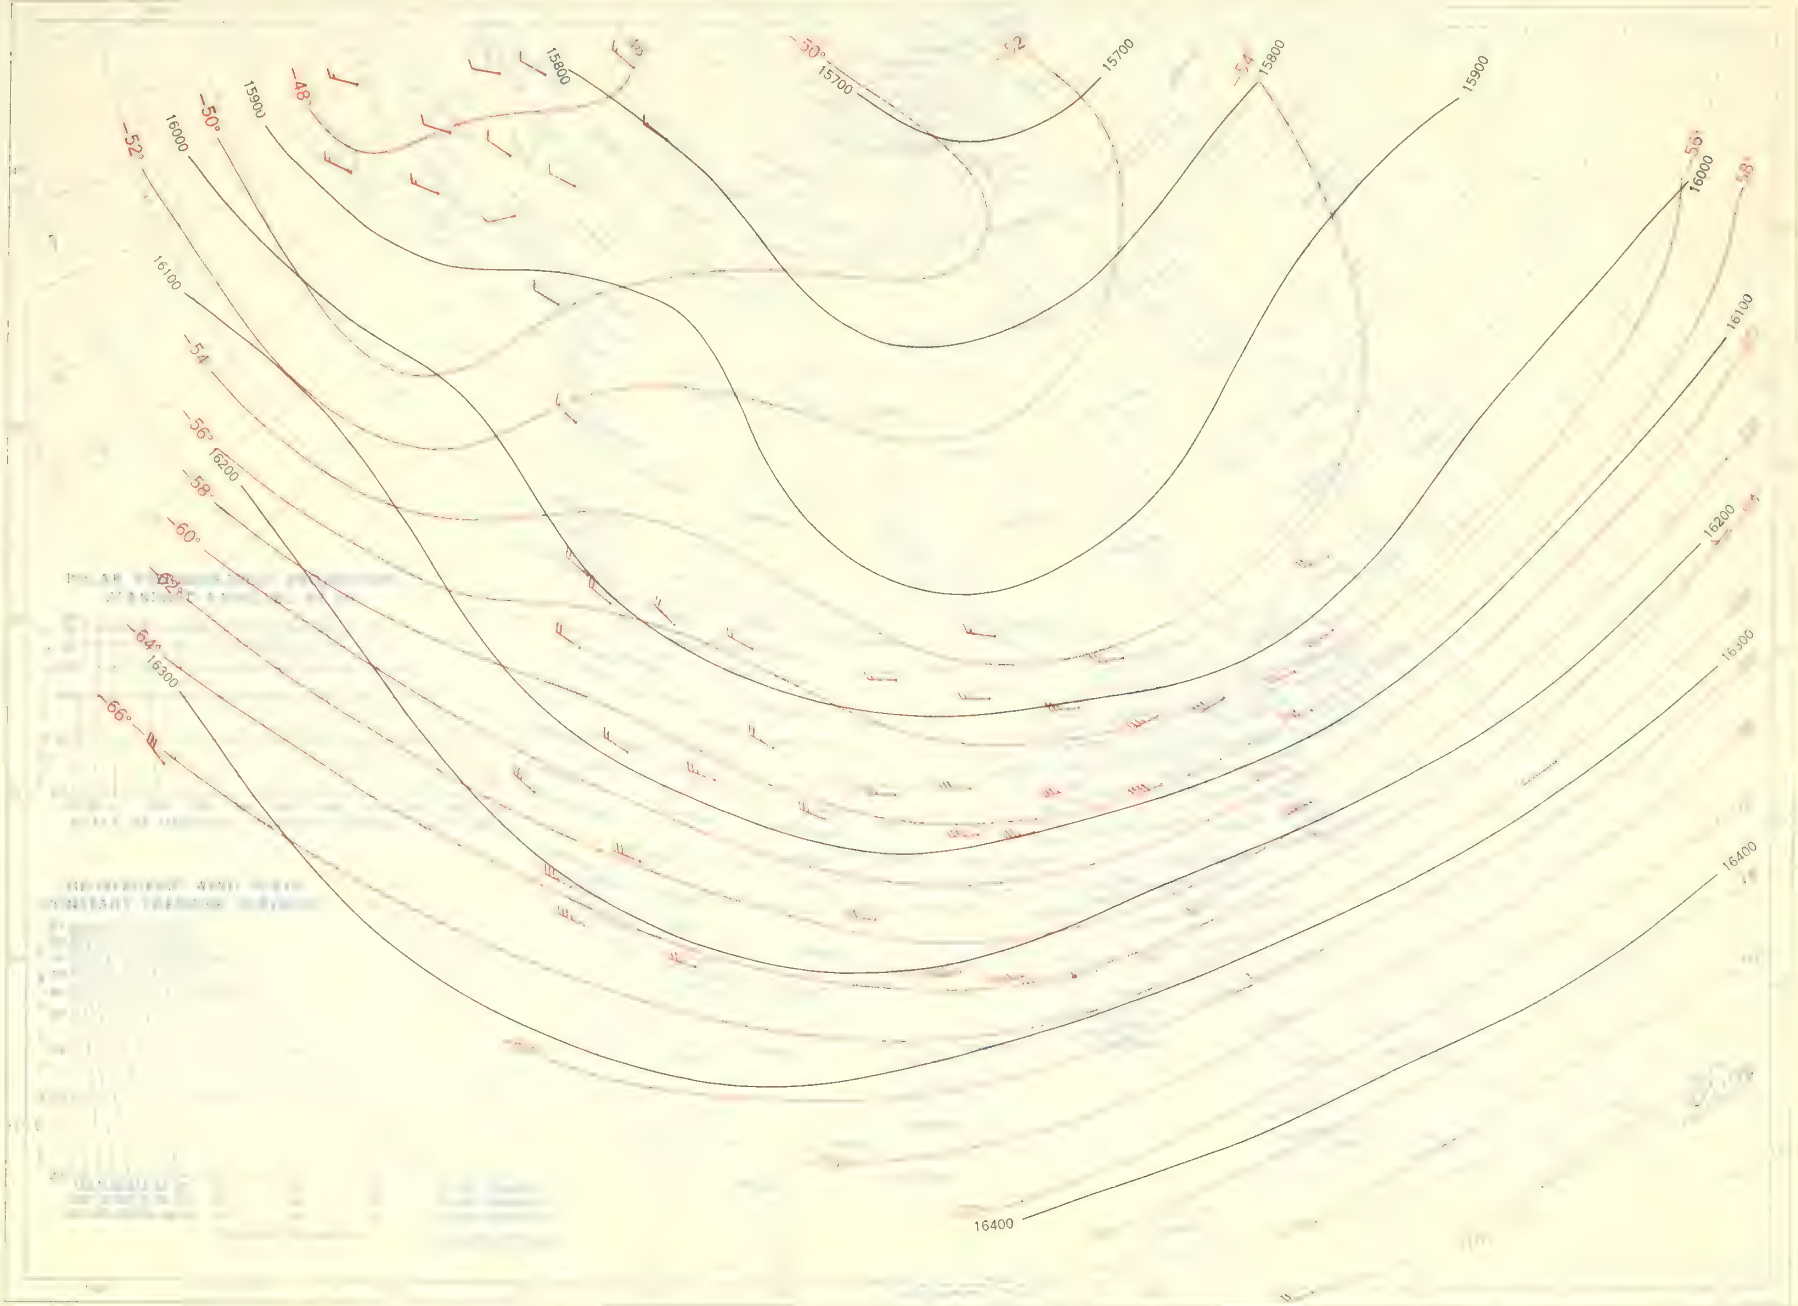
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

Chart XVII. 100-mb. Surface, 0300 GMT, March 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 4 APRIL 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

Unusually wet, cloudy weather in a large area which forked out from the lower Great Plains to Montana and Ohio was the main weather feature of April. Topsoil moisture was further replenished in much of the Great Plains, and serious floods occurred in central and eastern Texas. Unseasonably heavy snows fell from Colorado and Wyoming to Ohio during the first half of the month. The month was unusually dry, however, in the Far Southwest, from eastern North Carolina northward through Maryland and Delaware, and in New England.

The month was quite cool in the western Plains, unusually warm in the East, and about normal elsewhere. East of the Rockies the first half of the month was unusually cold in central and northern areas, but above normal temperatures persisted throughout the area during the second half.

Tornadoes and other local destructive storms occurred with great frequency in south-central areas.

TEMPERATURE.--Temperatures were unusually low east of the Rockies from about the 7th to the 15th. During this period cold Canadian air twice moved down over most of the United States. The first of these reduced temperatures to record low levels for the season in the central and lower Great Plains, ranging from 9° at North Platte, Nebr., on the 12th to 45° at Laredo, Tex., on the 14th. Fort Worth, Tex., recorded 30° on the 13th, the latest freeze and lowest temperature ever recorded there in April. The lowest temperature of the month, -27°, was recorded at Taylor Park, Colo., on the 8th, the lowest in north-central areas, -17° at Deerfield, S. Dak., on the 12th, and the month's lowest in the Northeast was -5° at Mount Mansfield, Vt., on the 11th.

Summerlike temperatures east of the Rockies during the second half of the month set new records for persistency from the Ohio Valley to the middle Atlantic coast. A good example of this occurred at Louisville, Ky., where daily maximum temperatures of 80° or above were recorded from the 19th through the 28th, a period of 10 days. Stations scattered throughout the East reported one or more record high date temperatures; stations from Baltimore, Md., to Portland, Maine, reported their warmest Easter Sunday on record; and Escanaba, Mich., and Huntington, W. Va., recorded their highest temperatures on record for April, 82° on the 29th and 92° on the 26th, respectively. Most stations west of the Great Lakes and in the Pacific States recorded their highest temperatures on the 29th or 30th when maxima reached the 90° level in Minnesota, North Dakota and Washington. The month's highest temperature, 103°, was recorded at Rio Grande, Tex., on the 24th.

PRECIPITATION.--Measurable precipitation equaled the previous record at Topeka, Kans., and a trace or more on 23 days set a new record at Billings, Mont. Topeka also recorded its greatest number of cloudy days in April, 24.

Precipitation exceeded 6 inches from central Texas to Indiana and totaled over 2 inches in all except a few sections of the Great Plains. The month's greatest total was 20.48 inches at Glenfawn, Tex., and some totals exceeding 15 inches were measured in Arkansas, Louisiana, Oklahoma and Missouri. Numerous stations reported record totals for April, among which were Fort Smith, Ark., 10.32 inches; Shreveport, La., 11.19; and Del Rio and Dallas, Texas, 6.49 and 13.85 inches respectively.

The month's precipitation was less than 50 percent of normal in eastern North Carolina and less than 75 percent of normal from that area to Maryland and Delaware. In New England 3 months of dry weather and high temperatures during the second half of April created a serious fire hazard, and numerous fires occurred in Massachusetts, New Hampshire and Maine.

SNOWFALL.--Snowfall was widespread in northern areas east of the Rockies the first half of the month. Some unusual falls and depths are listed below:

Rapid City, S. Dak.: Total 16.2 inches, most since 1929.
Denver, Colo.: Depth 15 inches on 3d.
Pueblo, Colo.: 16.8 inches on 1st-2d, 24-hour record for April.
Cleveland, Ohio: 7.6 inches on 7th-8th, 24-hour record for April.
Sioux Falls, S. Dak.: 107 inches, record April total.
Atlantic City, N.J.: 1.0 inch on 13th, most so late in season.

The snowpack in the central and northern Rocky Mountains at the end of the month was near to above normal, but it was below normal in the mountains of California and Arizona.

SEVERE STORMS.--During a blizzard which hit south-central and eastern Colorado on the 1st and 2d, up to 50 inches of snow fell in the mountains. Damage was estimated at many hundreds of thousands of dollars.

A coastal storm in the Pacific Northwest with winds up to 70 m.p.h. at Portland, Oreg., on the 14th, caused some damage.

Of the month's numerous tornadoes, the most notable, perhaps, was that which on the afternoon of the 2d swept through Dallas, Tex. Motion pictures of the storm in the most destructive part of its path through the city were taken. As far as known this is the first motion picture of a tornado to be obtained.

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.
- * Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.
- + And also on a later date or dates.
- % Peak gust.
- a maximum hourly average
- # Number of days maximum 70° or above for Alaskan stations.
- Ø Station pressures apply to elevation shown in Table 10b of the annual issue of this publication.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	Mar.31 -Apr 1									Minor storm reported at McMinnville, Tenn.
ALABAMA East-central portion	31-1	Midnight-7:30 a.m.					5	1	Wind, rain, and electrical	Appeared to have been squall line with wind blowing from east instead of from west, and on the back side of northeastward-moving line instead of on front side. High winds over all of east-central, east of line from Geneva County through Greene County and northeastward to northeast corner of State. Line of heavy rain with occasional thunder moved northeastward. High wind set in here at Montgomery immediately after it started receding to north-northeast and rain had nearly ended. During several hours of rain and thunder, wind was mostly from east to southeast. As this weather started receding, wind started picking up from east-northeast, and gust as high as 63 m.p.h., observed at slightly after 5:40 a.m. This pick-up of wind was accompanied by drop of barometer of 0.30 inch in about 10 minutes. Pressure rose 0.20 inch in about next 20 minutes and leveled off as wind subsided and shifted slightly to southeast. Nothing could be seen locally to indicate any reason for cyclonic circulation. Strongest winds apparently in Calhoun County section.
ALABAMA Dothan, Houston County	1	3 a.m.					4	1	Electrical	Lightning struck motor line's warehouse, with subsequent fire damage.
FLORIDA Escambia County	1	Early a.m.					4		Rain and wind	8 cars of freight train derailed as water-softened roadbed gave way. Moored boats on waterfront broke loose in winds; some sank, others damaged.
TENNESSEE Chattanooga, Hamilton County	1	7:30 a.m.				3		1	Wind	Strong winds blew down tree on top of car, injuring 3 persons. 2 plate-glass windows of pharmacy also damaged.
TENNESSEE Medon (near), Madison County	1	9:30 a.m.			0	0	3	1	Tornado	Parts of walls felled and roof blown off cement-block farmhouse.
GEORGIA Central and southern portions	1	Day					3	1	Wind	Wind damage extended across central and southern part of State, with total damage amounting to several thousand dollars. Wind gusts to 75 m.p.h., experienced in some areas. Damage mainly to roofs, utility lines, uprooted trees, windows, TV antennas, etc. Storm moved eastward.
ARIZONA Phoenix, Maricopa County	1	Afternoon				1			Wind	Plank hurled by gust of wind fractured workman's skull.
CALIFORNIA Southern portion	1					5	4		Wind and dust	Strong, northerly winds over State following March 31 storm reached gale force in much of south on 1st, causing widespread minor damage. Los Angeles police reported 150 trees and many powerlines blown down and about 20 homes and 15 automobiles damaged by falling trees and limbs. At El Segundo, church steeple under construction downed and dwelling roof torn off. Slate torn from roof of building in North Hollywood. Many avocados blown from trees in Vista area. Windows broken at Lancaster. Yacht off San Pedro disabled by wind. 2 trailers blown over at Mojave. 5 persons injured by winds, 1 in Los Angeles, 1 in Hollywood, and 3 in Glendora. One of worst duststorms in 10 years reported in Mojave Desert, closing Highway 99 near Indio several hours. Gusts reached 59 m.p.h., at Los Angeles Airport, 71 m.p.h., at Sandberg, 44 m.p.h., at Burbank, and reported to 50 m.p.h., at Van Nuys Airport, 60 m.p.h., in Antelope Valley, 40 m.p.h., at Santa Monica Pier, 60 m.p.h., at Del Rosa, and 40 m.p.h., at Camp Del Mar.
TENNESSEE Blount County	1							1	Wind	High winds blew off section of high school roof in Lanier community, damaged several farm buildings in Rush Strong, Mint, Chotah, and Townsend communities, and damaged powerlines in Walland-Kinzel Springs area.
	1									Minor storms also reported at Samson, Ala.; at Mesa, Ariz.; near Ripley, Miss.; at Claremore, Okla.; in eastern South Carolina; and at Cookeville and near Gatlinburg, Tenn.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
COLORADO Eastern and south-central portions	1-2	Night of 1st -p.m. 2d			5	1	5		Snow and rain	Storm beginning as rain, changed to snow during night of 1st and continued for about 30 hours, covering eastern plains and south-central and San Luis Valley areas. Snow heaviest directly east of Divide, becoming lighter in southeast. Snowfall from 10 to 50 inches fell, closing roads, damaging powerlines, roofs, and trees. 5 deaths attributed at least partially to storm; 2 from automobile accidents resulting from storm conditions (1 in automobile collision with snowplow near Georgetown, and 1 pedestrian accident in Denver), 2 from heart attacks from shoveling snow in Larimer County, and 1 from exposure at Ft. Carson. Many communities isolated, schools closed, and many places without communication facilities. Longmont estimated damage to phone lines in excess of $100,000. Cannon City, Pueblo, and Colorado Springs suffered similar heavy damage to power- and telephone lines. At Longmont, line repairman suffered broken foot when pole on which he was working collapsed from weight of snow on lines. North of Longmont, greenhouse packing shed collapsed under heavy snow weight. Damage estimated to be several thousand dollars.
	1-2									Minor storm also reported at Carthage, Mo.
MISSOURI Perryville, Perry County	1-7								Rain	5 to 8 inches of rain in 7-day period. Apple Creek at Old Appleton reached highest stage since 1949. Indian Creek out of banks from Uniontown to Frohna, damaging cropland. Brazeau Creek out of banks.
TEXAS Van Alstyne (3 miles north of), Grayson County	2	Midafternoon			0	2	4		Tornado	Tornado moving northwestward blew down 2 houses, destroyed 2 barns, and damaged garages.
TEXAS Hines City (9 miles north of Nocona), Montague County	2	3:25 p.m.	2	30	0	1	4		Tornado	1 house and 1 business establishment blown away, church destroyed, and 3 houses, warehouse, and garage of oil company damaged. Tornado moved northeastward.
OKLAHOMA Ringling area, Jefferson County	2	3:30 p.m.	2		0	0	3	1	Tornado (suspected) and wind	Several homesteads 2-1/2 miles north of Ringling destroyed or damaged. Reports indicate twister in area. Storm moved northward.
TEXAS Grapevine (3 miles northeast of), Tarrant County	2	3:50 p.m.	1/4	50-65	0	0	3		Tornado, rain, hail, and electrical	Damage caused by tornado. Storm moved northward.
TEXAS Denison (8 miles west of), Grayson County	2	4 p.m.			0	0	4		Tornado	2 homes destroyed, 1 damaged, and several barns damaged. Tornado moved north-northeastward.
TEXAS Melissa, Anna, Howe, and McKinney, Collin and Grayson Counties	2	4:20 p.m.	15	35	0	4	5		Tornado and wind	Barn shattered, contents scattered over 3-mile area. At Melissa, 1 home demolished, about 12 homes and 1 church damaged, porch of public building and warehouse blown away. At Anna, several homes and buildings damaged and hundreds of chickens killed. At Howe, 1 house damaged and several cars blown off highway. In Woodlawn community, 1 home destroyed. Trees all through the area mowed down. Believed to be same tornado which dipped down at 2 spots east of McKinney where no damage occurred. High winds caused some damage in Altoza community 10 miles east of McKinney. Storm moved northeastward.
TEXAS Dallas, Dallas County	2	4:30-5:10 p.m.	21	100	10	200	6		Tornado and rain	Struck western portion of city. At approximately 25 m.p.h., moved northward from southwestern outskirts of city to just west of Love Field Airport, northwest of Dallas, accompanied by heavy obscuring rain and loud roaring noise. Structures exploded when struck and debris carried aloft several hundred feet before falling. Serious traffic jams. Estimated some 574 buildings damaged or destroyed, electricity knocked out in 75,000 homes, and 4,000 phones out of commission.
OKLAHOMA Murray, Garvin, Pontotoc, and Seminole Counties	2	4:50 p.m.	60	400	0	1	4	2	Tornado, wind, rain, and hail	Tornado formed southeast of Davis and moved on ground about 12 miles, from 4 miles northeast of Sulphur to 5 miles south of Stratford. What was believed to be same tornado sighted aloft between Asher and Konawa by utility man. Insurance policy picked up in main destruction area south of Stratford and was dropped 40-airline miles away in Seminole. At least 18 houses and 10 barns damaged or destroyed in 12-mile path while funnel was on ground. At least 7 homes and many outbuildings received wind damage just west of Stratford. Only 1 injury resulted from flying

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA (Contd)										debris south of Stratford. Some 1-1/2-inch hail fell in Pauls Valley area. Storm moved north-northeastward.
OKLAHOMA Springer (5 miles north of), Murray County	2	4:55 p.m.	2	600	1	2	5	1	Tornado	Tornado struck on Highway 77, 15 miles north of Ardmore, overturning cars and trucks; destroyed 340-foot TV tower, unroofed transmitter building, and broke off several utility poles. 1 man killed when his pickup truck blown from highway and destroyed. Transport truck driver reported his truck picked up, whirled around, and then dragged 100 feet through field. Storm moved north-northeastward.
OKLAHOMA Marshall County	2	5:29 p.m.	5	200	2	6	6	1	Tornadoes, rain and hail	Tornado believed first sighted over Lake Texhoma, first destroyed fishing camp near Cumberland and then moved through 2 refinery camps near Little City. 15 homes destroyed and both refineries severely damaged. Automobiles picked up and tossed around, 1 of which resulted in death to 1 occupant and injury to the other. They were thrown from automobile and only small parts of it found. Unverified report indicated second funnel moved along parallel to main tornado, but remained above ground. Storm moved northward.
TEXAS Denison area, Grayson County	2	5:40 p.m.			0	0			Funnel aloft	Funnel aloft sighted moving northwestward.
OKLAHOMA Bryan County	2	5:58 p.m.	7	200	3	3	5	1	Tornadoes	Tornado may have moved from near Denison, Tex., to northeast of Calera before evidence of path on ground where drive-in theater and large stock barn completely destroyed. In southern Durant, 9 blocks received near total destruction and 20 blocks received damage. 135 homes and 25 businesses either destroyed or damaged. 2 persons killed and 3 injured when service station collapsed. Southeastern State College received damage to nearly all buildings and 3 of them will need complete new roofs. Damage at college alone estimated at $100,000. Storm moved north-northeastward out of north edge of town where third person killed when her home lifted into air and exploded. 2 ambulance drivers, driving north out of Durant, sighted main tornado move off and 2 smaller funnels form and dip to ground behind it. Last funnel hurled tree 1 foot in diameter at 1 driver, but fortunately it missed him.
TEXAS Wheeler (1-1/2 miles north of), Wheeler County	2	6:05 p.m.	1/4	50-65	0	0	4		Tornado	1 farmhouse demolished. Farm buildings destroyed and livestock killed. Tornado moved southeastward.
TEXAS Newark, Dido community, and Boyd, Wise County	2	6:15-6:40 p.m.			0	2	5		Tornado	Tornado moving north-northeastward damaged 11 houses, business establishments, National Guard canteen, and school. House lifted from foundation and slammed down on school. Roof of masonry building torn off. Tornadic activity at Boyd, northwest of Newark.
OKLAHOMA Allen, Pontotoc County	2	6:22 p.m.			0	0			Funnel aloft	Funnel aloft reported.
TEXAS Stony-Plainview area, Denton County	2	6:30 p.m.	10-15	75	0	0	4		Tornado	Dipped 3 times, damaging 2 barns and outhouses and removed portions of roof of house. Tornado moved northward.
TEXAS K-Bar Ranch area, Lamar County	2	6:30 p.m.			0	0	4		Tornado	K-Bar Ranch area bore brunt of storm. 1 house destroyed, 1 home and garage damaged, ranch buildings and arena badly damaged. Store in same area damaged. Farming equipment damaged.
TEXAS Ambia (10 miles southwest of Paris), Lamar County	2	6:30 p.m.			0	0	4		Tornado	2 houses shattered.
OKLAHOMA Jackson, Kiowa, and Caddo Counties	2	6:30-8 p.m.	45	150	0	1	5	4	Tornado and hail	Tornado touched down 2-1/2 miles east of Altus, destroyed or damaged numerous farms as it moved 1 mile west of Friendship where heaviest damage resulted, traveled northeastward to near Roosevelt and last reported just west of Mountain View. Only injury resulted when tornado demolished truck. Hailstorm near Roosevelt covered 4x6-mile area, causing over $5,000 damage to property. Effect on crops probably light, due to early stage of growth. Hailstorm also hit in Gotebo and Mountain View areas, but damage spotty. Hailstones ranged in size from hens' eggs to tennis balls. Another area 5x6 miles near Alfalfa, Caddo County, hit by damaging

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA (Cont'd)										hailstorm, resulting in $3,000 loss each to property and crops.
OKLAHOMA Asher (3 miles west of), Pottawatomie County	2	6:40 p.m.			0	0			Tornado	Tornado reported on ground.
OKLAHOMA Roger Mills County	2	7 p.m.					3	2	Wind, rain, and hail	Area around Reydon accumulated 1 to 2 inches of hail on ground. Size of hailstones ranged up to 1 inch in diameter. Windstorm at Cheyenne damaged courthouse and church. Storm moved east-northeastward.
OKLAHOMA Altus, Jackson County	2	7:05 p.m.	8	100	0	0	4	2	Tornado	Tornado formed southwest of Altus Air Force Base, moved over the east portion of base and north-northeastward over mostly open and uninhabited area.
OKLAHOMA Choctaw County	2	7:15 p.m.	16		0	0		2	Tornado	Tornado traveled north-northeastward from near Grant to 4 miles east of Hugo to 10 miles northeast of Hugo. Many homes, outbuildings, and utilities either damaged or destroyed.
OKLAHOMA Taloga and Canton, Dewey and Blaine Counties	2	7:30 p.m.	15	*10			2	2	Hail, rain, and wind	Hailstorm over northeastern Dewey and northwestern Blaine Counties filled bar ditches with stones up to 1 inch in diameter. Storm moved northeastward.
ARKANSAS Miller County	2	8 p.m.	30	1,760			3	1	Hail and rain	Storm moved for about 30 miles northeastward across Miller County from point 5 miles south of Texarkana. Hailstones averaged 1 inch in diameter. Hail accompanied by heavy rain.
OKLAHOMA Thackerville, Love County	2	8:37 p.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel moving northward.
OKLAHOMA Bartlesville, Washington County	2	8:45 p.m.			0	0			Funnel aloft	Observer reported sighting funnel aloft.
OKLAHOMA Hinton and El Reno, Caddo and Canadian Counties	2	9 p.m.	15	*3			3	4	Hail, wind, rain, and electrical	Hailstorm hit northern Caddo to west-central Canadian Counties and accumulated up to 5 inches deep. Hailstones small. Crop loss ranged up to 80 percent. Hail and wind damaged roofs and windows, and 5 grain-storage tanks under construction caved in by storm. Storm moved northeastward.
OKLAHOMA Latimer and Haskell Counties	2	9 p.m.	25	880	0	2	4	4	Tornado, hail, rain, and electrical	Tornado moved from near Bengal to 1/2 mile east of Red Oak to McCurtain. Many homes and outbuildings destroyed or damaged in Bengal, Salonia, and Red Oak communities. 2 injuries resulted at McCurtain where 26 houses and at least 6 barns destroyed or damaged. Tornado hit McCurtain at 9:40 p.m. Considerable hail reported along area of tornado. Hailstones up to 1-1/4 inches in diameter fell over area of 2 sections near Keota, Haskell County and destroyed ready to harvest spinach crop at estimated loss of $20,000. Unusual phenomenon of this storm was continuous and brilliant lightning all along path of tornado. Storm moved northward.
OKLAHOMA Haileyville, Pittsburg County	2	9:05 p.m.	10	440	0	0	4	3	Tornado, hail, and rain	Tornado demolished 2 homes and damaged businesses, homes, and outbuildings. At least 100 TV antennas bent double and many trees blown over. Hailstones up to 2-1/2 inches in diameter reported. Storm moved northeastward.
OKLAHOMA Poteau, Le Flore County	2	9:50 p.m.			0	0			Tornado (suspected)	Railroad dispatcher reported tornado. Evidently no damage occurred.
OKLAHOMA McAlester (5 miles northwest of), Pittsburg County	2	10:15 p.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel aloft.
OKLAHOMA Wheatland to Oklahoma City, Oklahoma County	2	10:30 p.m.			0	0			Tornado	Highway Patrol sighted funnel aloft near Wheatland. Funnel next noted on north edge of Oklahoma City and apparently touched ground momentarily in wheat field as grain flattened in several 30-foot wide paths over short distance. Storm moved northeastward.
OKLAHOMA Sallisaw area, Sequoyah County	2	11:45 p.m.			0	0			Funnels aloft	2 funnels reported over western and southern edges of Sallisaw.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Tonkawa area, Kay County	2	11:45 p.m.			0	0	3	1	Tornado (suspected), wind, rain, and electrical	Oil-field workers reported funnel-like cloud southwest of Tonkawa. Rural residents in vicinity and north-northeastward reported deafening roar and strong winds. Damage light, except lightning struck 4 rural homes resulting in over $2,000 loss.
OKLAHOMA Heavener (10 miles south of), Le Flore County	2	11:55 p.m.			0	0			Funnel aloft and rain	Highway Patrol reported funnel moving northward.
OKLAHOMA Lane area, Atoka County	2	P.m.			0	0	2	1	Funnel aloft and wind	Funnel aloft reported. Only slight wind damage.
OKLAHOMA Courtney, Love County	2	P.m.			0	0		1	Tornado (suspected)	House reported swept away. No verification obtained. Numerous tornadoes reported in general area.
OKLAHOMA Carnasaw Tower, McCurtain County	2	Night	9	880	0	0		1	Tornado	Tornado cut path through the forest, blowing down estimated 3,000,000 feet of timber.
OKLAHOMA Okmulgee (east of), Okmulgee County	2	Night			0	0			Funnel aloft	Funnel aloft sighted by observer.
TEXAS Cooke and Denton Counties	2				0	0			Tornadoes	Tornadoes observed; no reports of serious damage.
TEXAS Ben Franklin, Delta County	2				1	2	4		Tornado	Leveled 6 houses and damaged many.
	2									Minor storms also reported in Ellinwood, Frederick, and Topeka areas, Kans.; at Charleston, Mo.; at Coweta, Ponca City, and Supply, Okla.; and in Bountiful, Brigham City, Farmington, and Kaysville areas, Utah.
	2-3									Minor storm reported at Crane, Mo.
OKLAHOMA Davenport, Lincoln County	3	12:15 a.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel moving north-northeastward.
OKLAHOMA Tillman and Comanche Counties	3	1:20 a.m.							Wind	Strong winds which lasted over an hour and described as strongest ever witnessed by old timers caused widespread destruction over most of Tillman and Comanche Counties. Damage resulted to windows, roofs, TV antennas, buildings, trees, and utilities. Storm moved northeastward.
TEXAS Breckenridge, Stephens County	3	3:45 a.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Ft. Worth, Tarrant County	3	5 a.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Between Waxahachie and Midlothian, Ellis County	3	9:30-10:30 a.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Marshall (4 miles north of), Harrison County	3	10:28 a.m.			0	0			Tornado, rain, and wind	Tornado touched briefly 1 mile east Lone Star Steel Plant; accompanied by heavy rains and high winds.
TEXAS Denton (10 to 12 miles east of), Denton County	3	10:30 a.m.			0	0			Tornado	Tornado moving northward struck in open field, no damage.
TEXAS Marshall (4 miles north of), Harrison County	3	11:30 a.m.			0	0	3		Tornado	Ripped part of roof off house, wrecked shed, uprooted trees, and damaged 2 outbuildings. Roof blown from garage.
TEXAS Dallas (25 to 30 miles southwest of), Dallas County	3	A.m.			0	0			Funnels aloft	3 funnels aloft sighted.
TEXAS Daingerfield (6 miles south of), Morris County	3	Late a.m.			0	0	2		Tornado	6 small farm buildings damaged, 1 building destroyed.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ILLINOIS Cairo-Mound City-Tansil, Alexander and Pulaski Counties	3	2 p.m.			0	2	5	1	Tornado	Heavy damage in Mound City where 3 substantial buildings unroofed in 2-block wide path. Lighter damage in Cairo where fastest mile of wind 59 m.p.h. Several farms near Tansil received light to moderate damage. Tornado moved northeastward.
ILLINOIS North-central area	3	Late afternoon							Glaze	Scattered damage to utility lines in wide area extending approximately from Champaign to Danville and west-northwestward to beyond Illinois River. Little or no ice formed on pavements and most utility outages not prolonged.
TEXAS Avinger, Cass County	3				0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Henly (8 miles southwest of), Hays County	3				0	0			Funnel aloft	Funnel aloft sighted.
MISSOURI Caruth, Dunklin County	3	12-12:10 p.m.	1	100	0	0	3		Tornado, wind, and rain	Cotton gin and several other buildings damaged. Storm moved northeastward.
ARKANSAS Alexander community, Greene County	3	12:05 p.m.			0	0	1	1	Tornado	Tornado moving northeastward touched ground briefly, destroying garage.
ARKANSAS Cash, Craighead County	3	12:05 p.m.	20	100	0	0	4	1	Tornado and rain	Funnel observed by several persons. Several buildings destroyed and rice dryer extensively damaged. Storm moved northeastward.
ARKANSAS Manila, Mississippi County	3	12:30 p.m.			0	0	2	1	Tornado	2 houses damaged. Funnel cloud observed.
TEXAS Orange (6 miles north of), Orange County	3	12:45 p.m.			0	0	2		Tornado	In Little Cypress community, ripped 50x40-foot section of roof off school.
MISSOURI Kennett, Dunklin County	3	12:45-12:47 p.m.			0	0	3		Funnel aloft, rain, wind, and hail	Estimated 3.96 inches of rain with storm. Funnel cloud seen, which apparently did not touch ground. Damage to roofs, plate glass, TV antennas, powerlines, and farm buildings apparently from accompanying strong, surface winds. Very small hail accompanied storm. Storm moved east-northeastward.
TEXAS Hurston (13 miles southeast of Center), Shelby County	3	1:30 p.m.	2	1,200	0	0	3		Tornado	1 house and 2 barns destroyed, many outbuildings damaged.
MISSOURI East Prairie (3 miles north of), Mississippi County	3	1:30-1:35 p.m.		Narrow	0	0	3		Tornado , wind, and rain	Farm buildings damaged. Storm moved eastward.
ARKANSAS Star City, Lincoln County	3	3:30 p.m.	3				4	1	Wind and rain	Wind damage to store buildings, roofs, and TV antennas. Some water damage from accompanying heavy rain. Storm moved eastward.
TENNESSEE Henderson County	3	4 p.m.				1	1	1	Electrical	Man struck by lightning in home suffered third degree burns on left foot and lesser injury to right leg.
MISSOURI Osceola, St. Clair County	3	5:30-6 p.m.							Wind	Wind estimated at 75 m.p.h. Trees, TV antennas, and neon signs blown down.
INDIANA Dubois County	3	Afternoon			1	1	4	1	Wind, electrical and rain	At Celestine, 1 person killed and 1 injured at 4:40 p.m., when lightning struck chimney and bricks fell on persons working in factory. Near Dubois, high winds lifted hog houses over several fences and moved 2 barns; rain killed 250 turkeys. Near Jasper, several roofs damaged and windows broken by strong winds.
INDIANA Northern and central portions	3	Afternoon-evening					6	4	Freezing rain and wind	Freezing rain along with strong winds paralyzed power and communication networks. Ice accumulations up to an inch thick on exposed objects. Many trees felled which damaged utility lines, buildings, and cars. Many TV antennas fell as result of weight and wind. Roads slippery in central. Fruit trees damaged by excessive weight on limbs. Hatchery at Geneva lost incubating eggs because of no electricity. Heat and light off for hours in many sections and sometimes 1 and 2 days in rural areas where farmers had to improvise to save young stock, chickens, milk cows, and

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
INDIANA (Cont'd)										pump water. Many schools closed. Several days before communications and power networks returned to normal. Cost of repair by Indiana Bell Telephone Comany alone estimated at $500,000. Damage to utilities in Whitley County estimated at $100,000.
LOUISIANA Hodge, Jackson Parish	3	6 p.m.			0	0	2	1	Tornado	Small, short-lived tornado caused minor damage; reported by State Police.
TENNESSEE Nashville and vicinity, Davidson County	3	6-6:35 p.m.	12	200		4	4	1	Wind	Storm moved northeastward from Belle Meade area of west Nashville through downtown area to Inglewood suburb. Trees uprooted, windows broken, and 20 to 25 houses damaged in Inglewood area. 3 persons injured in west Nashville and 1 in Inglewood. Damage in Inglewood estimated at $15,000. Damage over 1-1/2-mile stretch in Inglewood was 200 yards in width.
MISSOURI Chillicothe, Livingston County	3	7 p.m.							Wind and rain	Wind estimated at 50 m.p.h., for brief time. Power- and phone lines downed, tree limbs downed, and minor damage to roofs.
MISSISSIPPI Washington, Sharkey, Sunflower, Humphreys, Leflore, Holmes, Grenada, Carroll, Yalobusha, and Montgomery Counties	3	7-11 p.m.	120	*50			4	2	Wind, rain, and electrical	Severe thunderstorms with heavy rains and high winds developed about 25 miles either side of line extending from Glen Allan to Duck Hill, with severe electrical storms reported by most stations in area. Trees uprooted, powerlines downed, and roofs and homes damaged. Storm moved northeastward.
MISSISSIPPI Glen Allan, Arcola, and Darlove, Washington County	3	7:15 p.m.	10	*1	0	4	5	2	Tornado	Moved on town of Glen Allan from Lake Washington and northeastward leaving path of 20 homes, church, and cotton gin wrecked. Since much of area to northeastward sparsely settled, length of path uncertain.
KENTUCKY Ballard County	3	P.m.			0	0	5		Tornado (suspected), rain, electrical, wind, and hail	Winds unroofed several houses and either destroyed or damaged numerous farm buildings. Drive-in theater screen demolished. Telephone communications disrupted. Trees uprooted, branches blown off, and TV antennas toppled. Heavy rain, lightning, and hail accompanied wind. Funnel cloud not seen, but wind described as having "thundering roar."
KENTUCKY Bowling Green (south of), Warren County	3	P.m.			0	0	2		Tornado	Funnel cloud sighted.
MISSOURI Bethany, Harrison County	3	Early evening					4		Wind and electrical	East wind reached gale proportions. Lasted 20 to 30 minutes; ceased abruptly. Many power- and phone lines downed, and about 50 barns, houses, and other buildings burned.
IOWA Southeastern half	3	Evening					4	1	Wind	Tree limbs blown down damaging buildings, cars, and power- and phone lines.
MISSOURI Unionville, Putnam County	3	Evening							Wind and rain	Wind estimated at 75 m.p.h. Trees, TV antennas, and small buildings damaged.
TEXAS Between Forney and Terrell, Kaufman County	3				0	0			Tornado	
TEXAS Duncanville (south of), Dallas County	3				0	0	2		Tornado	Home damaged.
	3									Minor storms also reported in Polk County, Ark.; at Benton and in Jefferson and Simpson Counties, Ky.; at Brookline, Cassville, Clinton, Dexter, Fayette, Malden, St. Joseph, and near Sarcoxie and Sweet Springs, Mo.; at Blanchard, Okla.; in Lake, Lauderdale, Obion, and Weakley Counties, Tenn.; and at Waskom, Tex.
LOUISIANA Entire State	3-4	All night						2	Wind	High winds over most of State during night and severe thunderstorms reported at numerous stations including Clinton, Franklinton, Buras, and Lake Providence, with hail reported west of Lake Charles; 2 barges washed ashore at Grand Isle and it was necessary to suspend operations on oil rigs on coast due to high waves; 1 rig developed 25° list with damage reported heavy.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

APRIL 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OHIO West-central portion	3-4	During night					5	2	Glaze	Icestorm covered large part of western Ohio, but was most severe in 15 to 18 counties in west-central. Damage greatest to telephone and power-lines, but included many trees, some of which fell on cars and houses causing indirect damage. Many newspaper accounts stated that this was worst icestorm in about 12 years.
	3-4									Minor storm also reported in Ashwood, Columbia, Mt. Pleasant, Parsons Bend and Spring Hill areas, Tenn.
SOUTH DAKOTA Statewide	3-5	A.m.3d-a.m. 5th			2		3		Snow	Deep snow with high moisture content; over 1 foot in west. Precipitation fell continuously at Rapid City for 45 hours. Sioux Falls had deepest April snowfall on record. Fatalities resulted from heart attacks while shoveling snow.
PENNSYLVANIA Statewide	3-6					10	5	1	Rain, snow, sleet, wind, and electrical	Effects of intense slow-moving storm west of State felt during 3-day period. Heavy precipitation fell as snow, sleet, and freezing rain in north and mountainous sections, with snow accumulating to depths of 20 inches and ice to 5 inches, resulting in broken tree limbs and utility lines. Winds which in some instances reached 75 m.p.h., accompanied severe thunderstorms on 5th and 6th, blew down several barns and numerous small buildings, and rolled over several house trailers in addition to trees, TV antennas, and powerlines. Lightning fired 5 homes in southeast; Storm moved northeastward.
MISSISSIPPI Winston, Noxubee, and Lowndes Counties	4	12:45-2 a.m.	20	200	0	0	4	2	Tornado, wind, and rain.	Tornado struck first 10 miles southeast of Louisville, then 10 miles west of Macon and 10 miles southeast of Columbus, moving northeastward over thinly settled farmland; thunderstorms severe over another 30 miles of path.
MISSISSIPPI Simpson, Smith, Jasper, Newton, and Lauderdale Counties	4	1-3 a.m.	40	175	1	75	5	2	Tornado, electrical, and wind	Path of tornado began near Sanatorium and extended 40 miles to communities of Ted and Warren Hill, but attending severe electrical storms and high winds extended over path 80 miles long (through Meridian) and about 50 miles wide. Heaviest damage and casualties occurred at Sanatorium when tornado destroyed or badly damaged buildings at TB Sanitarium; lone death and other injuries occurred at Ted when persons took refuge in school bus which was lifted and smashed. 1 house set afire by lightning and telephone lines snapped by falling limbs in Meridian. Storm moved northeastward.
TENNESSEE Middle Fork community, Henderson County	4	1:10 a.m.			0	0		1	Tornado (suspected)	2 houses demolished; 4 houses, several barns, and outbuildings damaged.
TENNESSEE East View community (6 miles south of Selmer), McNairy County	4	1:15-2 a.m.	8	50	0	11	5	1	Tornado	9 houses, 9 farm buildings, and 4 other buildings including cotton gin, service station, and grocery store destroyed; 13 houses and 5 farm buildings damaged. Tornado moved northeastward.
ALABAMA Northern portion	4	3:30-5 a.m.					5	1	Wind, rain, and electrical	Thundersqualls super-imposed on general high wind did widespread minor damage north of line from southern Greene County through Calhoun County. About 6 houses wrecked or damaged, practically beyond repair, and many other lesser buildings, not too well constructed; timber wrecked or damaged in varying degrees. Localities with heavier damage were Hanceville, Cullman County; near Vernon, Lamar County; Jena, Clinton, and other areas of north Greene County; Lake Arneda section of Tuscaloosa County just north of Tuscaloosa, and Searles in extreme eastern Tuscaloosa County. At Gadsden, lightning at 4 a.m., hit house, with damage about $1,500. Storm moved northeastward.
TENNESSEE Chattanooga, Hamilton County	4	8:30 a.m.					4	1	Wind, rain, and electrical	Strong winds, reaching 44 m.p.h., ripped roof from motor freight company, blew down large drive-in movie screen, uprooted several trees, and blew down numerous power- and phone lines. Lightning ignited church and adjoining parsonage, causing extensive damage. Lightning striking house blew hole in its side, knocked out window, ripped screens, knocked plaster from walls, and ruined sockets throughout.
MISSISSIPPI Newhebron, Lawrence County	4	Early a.m.			1				Rain	Man drowned when his car plunged into rain-swollen creek after bridge was washed out.

See references at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSISSIPPI Perkinston (2 miles south of), Stone County	4	Early a.m.			1				Rain	Man killed when his car skidded out of control during heavy rainstorm.
MISSOURI Caruthersville and vicinity, Pemiscot County	4	1:30-4 p.m.	20	100			3		Rain and wind	3.33 inches of rain. Wind gusts to 50 m.p.h. Buildings damaged. Storm moved northeastward.
TEXAS Bryan (5 to 7 miles north of), Brazos County	4	4:37 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
ARKANSAS Carlisle (10 miles south of), Lonoke County	4	5:30 p.m.	** 400	20	0	0	3	1	Tornado	Damage limited to about 20 acres. Grain bin destroyed. Fences and light poles torn down. Storm moved northeastward.
LOUISIANA Westlake (10 miles northwest of), Calcasieu Parish	4	9:45 p.m.			0	0		1	Tornado	Unable to obtain any information concerning this reported tornado; could have moved through uninhabited timberland.
LOUISIANA Tallulah, Madison Parish	4	10 p.m.			0	0	2	1	Tornado	A few TV antennas blown down. Roar heard by entire town, and 1 man in Vicksburg, Miss., to east reported hearing roar at same time. May have touched ground to east of Tallulah.
TEXAS Ratibor community (east of Temple), Bell County	4				1				Electrical	Man killed by lightning.
TEXAS Cranfills Gap, Bosque County	4				0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Between Clifton and Valley Mills, Bosque County	4				0	0			Funnel aloft	Funnel aloft sighted.
	4									Minor storms also reported at Fairhope, Ala.; in Wolfe County, Ky.; at Buras, La.; at Bradley Creek and near Clarksville and Sango, Tenn.; at Henderson, Tex.; and in Canaan Valley, W. Va.
MINNESOTA Southern half	4-5	A.m.4th-p.m.5th.							Snow and wind	Heaviest April snowstorm since 1949. Snowfall generally 2 to 7 inches. Greatest accumulation 13 inches in Canby area. Hundreds of schools closed. Hazardous driving conditions, with traffic badly snarled in metropolitan areas. Winds up to 55 m.p.h., in Duluth area caused pile-up of pack ice in Lake Superior, delaying opening of ore-shipping season. Storm moved eastward.
TENNESSEE Poga community and Valley Forge, Carter County	4-5	Noon 4th-4 a.m. 5th						1	Rain	Heavy rains falling from noon on 4th until 4 a.m., on 5th caused rising of Elk River which isolated about 90 families of Poga community and Doe River at Valley Forge where 12 families evacuated. 10 bridges in county under water.
CONNECTICUT Entire State	4-6	Early p.m. 4th-early p.m. 6th			1	12			Snow and rain	Storm began on 4th as snow, with 2 to 6 inches falling. Slippery highways during evening rush hours caused a great number of skidding accidents, especially in Fairfield County. 2 persons injured by falls on icy sidewalks; remainder of injuries resulted from automobile collisions. Precipitation changed to rain in early a.m., of 5th, with 1.50 to 2.00 inches by early p.m., of 6th. Flooding of cellars reported in Hartford and Middletown areas, but major streams remained within banks. 1 death resulted from automobile collision in Windham County during rainstorm of 5th.
MASSACHUSETTS	4-6	Evening 4th-night 6th			3	Many	4	1	Glaze, wind, rain, electrical, and hail	Glaze in north-central and northwest combined with wind to break many trees, limbs, and powerlines on 5th. Heavy rains caused minor flooding of streets and lowlands in some communities. Thunderstorms active during night of 5th and 6th, with $10,000 lightning damage to Oyster Harbor summer home. Few reports of hail. High, storm-surge tides threat to coastal areas. 3 deaths and many injuries from highway accidents blamed on glaze and rains.
RHODE ISLAND Entire State	4-6	Early p.m. 4th-early p.m. 6th			1				Snow, rain, and thunderstorm	1 highway fatality resulted from skid on slush-covered road on 4th. Thunderstorm accompanying rain on 5th knocked out power to 500 street lights in Pawtucket area.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
GEORGIA Lamar County	5	3 a.m.		Narrow	0	0	3	1	Tornado (suspected)	Some damage to utility lines and trees in Barnesville, but greatest damage in Antioch community where several barns destroyed and many porches and roofs blown away. Storm moved eastward.
GEORGIA Schley to Wilkinson Counties	5	4-5:30 a.m.	80	200-800	2	3	5	2	Tornado	Storm first touched surface about 4 miles southwest of Ellaville, Schley County, at 4 a.m. Greatest destruction along 15-mile path through Schley and Macon Counties. 2 children killed, 3 persons injured, and 85 buildings destroyed. Storm apparently lifted to strike again near Marshallville, and in southern Peach County where several buildings and drive-in theater destroyed about 4:30 a.m. Next damage noted at Warner Robins, Houston County, where funnel apparently barely touched ground, damaging roofs, uprooting trees, and pulling plate-glass windows out. Storm next reached surface in Twiggs County Where several houses demolished and again in Wilkinson County where roofs damaged and trees uprooted. Tornado moved northeastward.
GEORGIA Warren to Columbia Counties	5	6:15-7:15 a.m.	30	200-800	0	2	4	1	Tornadoes	Likely a different tornado from same storm condition as above hit Warren County 8 miles southwest, 3 miles south, and 2 miles east of Warrenton and moved northeastward to Thomson, McDuffie County. Many houses damaged, utility lines downed, and trees uprooted. Indication of 2 separate storms east of Thomson, 1 moving northeastward and next reaching surface in Leah community, destroying 7 houses and a church. Second storm moving eastward from Thomson hit between Appling and Harlem and again 9 miles west of Augusta where house destroyed and 2 persons injured. These tornadoes moved into South Carolina.
SOUTH CAROLINA McCormick, Saluda, Newberry, Lexington, Richland, Fairfield, Kershaw Counties	5	7:45-9:30 a.m.	70	*30		1	4	3	Wind	Series of local severe thunderstorms moved into central. Local windstorms noted; near Newberry and Prosperity, damage of $1,000 by wind; near McCormick, $500 by wind; Near Pontiac and Camden, $2,000 by wind; Ridgeway, $100 by wind; northeastern Lexington County, windstorm destroyed poultry house with lesser damage to several homes and other buildings of $9,000. Storm moved north-northeastward.
SOUTH CAROLINA Lexington County	5	7:45-8:30 a.m.	25	40	0	1	4	1	Tornado	Tornado skipped north-northeastward from 5 miles south of Batesburg to near Gilbert to northeastern edge of Lake Murray. Destroyed home and damaged several others, with significant damage to large recreation hall on northeast shore of Lake Murray.
SOUTH CAROLINA Prosperity, Newberry County	5	8:14 a.m.	3	100	0	0	3	3	Tornado	Small tornado skipped northeastward over narrow path.
GEORGIA Colquitt and Cook Counties	5	8:30 a.m.	10	200	0	0	3	1	Tornado	First hit 5 miles east of Moultrie, Colquitt County, destroying 2 barns and uprooting trees. Apparently lifted to strike again south of Lenox, Cook County, where it moved along ground for distance of 5 miles. Several barns and houses destroyed or damaged. Witnesses reported "roaring sound" and what was identified as funnel cloud. Storm moved east-northeastward.
GEORGIA Jamestown community, Ware County	5	11 a.m.	Short	Narrow	0	1	3	1	Tornado (suspected)	1 house destroyed and minor damage to other buildings and trees. Storm moved eastward.
GEORGIA Savannah (near), Chatham County	5	11:34 a.m.	** 500	Narrow	0	0	3	1	Tornado	Damage to roofs and small buildings and several trees uprooted.
INDIANA Bartholomew County	5	Morning					4	1	Wind	Wind damaged buildings on 2 farms near Walesboro and collapsed end of main hangar at Columbus Airport.
INDIANA Muncie, Delaware County	5	12:05 p.m.			0	0	4	1	Tornado	House trailer overturned, metal-garage roof hurled 50 feet, powerlines torn down, and front of house damaged.
INDIANA Fairmount, Grant County	5	12:30 p.m.			0	0	2	1	Tornado	Small tornado dipped down, destroying small shed and tore down utility line.
INDIANA Winchester, Randolph County	5	1 p.m.			0	0	3	1	Tornado	Small tornado tore door off hangar at Winchester Airport.
VIRGINIA Wise County	5	1:40 p.m.			0	3	4		Tornado and wind	Tornado struck Wildcat section of Big Stone Gap, and Ramsey section of Norton. Buildings unroofed

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path miles	Width of path yards	Number of persons Killed	Number of persons Injured	Estimated damage by categories † Property (exclusive of crops)	Estimated damage by categories † Crops	Character of storm	Remarks
VIRGINIA (Cont'd)										and walls demolished. Windows of residences and stores blown out, trees uprooted, and utility poles snapped. Damage at Norton probably from high winds associated with severe thunderstorm. Storm moved northeastward.
INDIANA Bartlettsville, Lawrence County	5	Early afternoon			0	0	3	1	Tornado	Roof of house destroyed by observed small tornado.
INDIANA Needmore, Lawrence County	5	Early afternoon			0	0	3	1	Tornado	2 buildings damaged by observed small tornado.
INDIANA Henry County (northwestern portion)	5	Afternoon			0	1	4	1	Tornado	Television antennas, powerlines, and trees blown down. One-third of gymnasium roof and roofs of small buildings ripped off.
INDIANA Parker City area, Randolph County	5	Afternoon					4	1	Wind	3 farm buildings damaged 2 miles southwest of Parker City.
INDIANA Red Key and Poling, Jay County	5	Afternoon			0	0	3	1	Tornado	"Baby twister" demolished shed, tore roof off home, and damaged many street lights.
INDIANA Adams County	5	Afternoon					4	1	Wind	Minor damage occurred in scattered areas.
MICHIGAN (Lower) Southern portion	5	Midafternoon				2	5	1	Wind and electrical	Damage mostly light, except in some counties along Indiana and Ohio borders, where gusts up to 90 m.p.h., reported. Several buildings damaged in Branch, Hillsdale, Lenawee, and Monroe Counties, and fertilizer plant at Riga nearly wrecked by winds. Trees and powerlines also hit and many windows broken. Storm moved eastward.
OHIO Northern portion	5	Afternoon			5	Many	6	1	Wind and rain	Strong winds general, but most severe thunderstorms visited northern areas. 90-m.p.h., wind at Toledo WBAS, 75 m.p.h., at Cleveland, and 80 m.p.h., at Columbus are representative. Damage to roofs, trees, signs, windows, and utility lines extensive. Walls in unfinished buildings reported blown down in Columbus and New Philadelphia. Most spectacular was Great Lakes freighter blown against highway bridge at Toledo and twin radio towers toppled at Bowling Green. Storm accompanied by torrential rains which further swelled overflowing streams throughout area.
NORTH CAROLINA Pasquotank and Camden Counties	5	4:30 p.m.	6	35	0	0	4	1	Tornado	Tornado moving east-northeastward crossed lower Pasquotank and Camden Counties, including Pasquotank River lying between the two. 1 farmhouse unroofed and several outbuildings demolished.
NORTH CAROLINA Yadkin County	5	6:10 p.m.	5	50	0	0	4	1	Tornado	Traveled eastward on skipping path from western Yadkin County to western edge of Yadkinville, blowing down trees, breaking power- and telephone lines, and demolishing a number of outbuildings.
SOUTH CAROLINA Lancaster, Lancaster County	5	8:10 p.m.	1	30	0	0	5	1	Tornado	Small tornado struck elementary school and bounced along for about 10 blocks, damaging school severely and causing minor to moderate damage to several homes. Storm moved northeastward.
NORTH CAROLINA High Point area, Guilford County	5	8:35 p.m.	5	50	0	1	5	1	Tornado	Cut skipping path east-northeastward from about 5 miles west of High Point across northern edge of town. Destroyed or damaged about 12 homes, mostly rural, and numerous outbuildings, as well as large numbers of trees, antennas, roofs, and chimneys. 1 automobile demolished and several plate-glass windows broken.
NORTH CAROLINA Hertford County	5				0	0	3	1	Tornado (suspected)	From County Agent's report, no details.
	5									Minor storms also reported at Greenfield, Ind.; in Mahaska County, Iowa; and in Boone and Boyd Counties, Ky.
NEW JERSEY Ewingville and Lawrenceville areas, Mercer County	6	Early a.m.					4		Wind, hail, and electrical	Early morning cold front passage caused general statewide thunderstorms. Most violent of these appeared to be in Ewingville and Lawrenceville areas. 1 barn and corncrib demolished. House trailer and car damaged. A few trees and wires downed. Storm moved eastward.
ARIZONA Williams, Coconino County	6	Afternoon				1		1	Wind	Woman tossed to pavement by wind. Wind also damaged roofs and toppled drive-in movie screen.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
UTAH Salt Lake Valley and Cedar City area, Salt Lake and Iron Counties	6								Rain, hail, wind, and dust	Rain caused minor flooding of some Salt Lake City streets and basements; local hail in Salt Lake Valley; winds reported to 44 m.p.h., reduced visibility to 1 mile in blowing dust at Cedar City.
NEW YORK Brockport, Monroe County	6				1				Wind	Strong winds plus current from tributary stream flowing into Lake Ontario, swept rowboat out into lake. Man in boat lost, with no trace. Stream was flowing well above average due to recent rises.
	6									Minor storms also reported at Tombstone, Ariz.; and at Tulsa, Okla.
INDIANA North-central portion	7	All day					4	1	Snow	Heavy, wet snow of several inches clogged roads and tore down trees and utility lines. Some schools closed because of roads and no electric power for heating.
MICHIGAN (Lower) Extreme southern portion	7	Day-evening						1	Snow	Heavy snow, 6 to 12 inches in depth, covered most counties bordering Indiana and Ohio. Highways blocked and schools closed.
TEXAS Midland-Odessa areas, Ector and Midland Counties	7	8:20 p.m.					4		Wind	Turbulent winds 60 to 70 m.p.h., tore down utility poles, blew down trees and TV antennas, damaged roofs, and raised dust. Storm moved southward.
ARKANSAS Elm Park area (4 miles north of Waldron), Scott County	7	11:05 p.m.	4	300	0	0	3	1	Tornado, wind, hail, and rain	3 barns and several roofs damaged. Only small hail reported. Storm moved northeastward.
ALABAMA Red Bay, Franklin County	7	11:45 p.m.			0	0	4	1	Tornado (suspected)	Storm moved across Mississippi line into Red Bay and caused $12,000 damage in Red Bay, with remainder of damage between Red Bay and Mississippi.
	7									Minor storm also reported at Pawnee, Okla.
OHIO Northern portion	7-8	Early afternoon 7th-8th		*50					Snow	Unusual snowstorm. Snow started early afternoon along lake shore on 7th and spread southward to include band some 50 miles in width. Depths ranged upward from 3 inches at Youngstown and 4 inches at Ashland to 10 to 16 inches in Cleveland-Painesville area, 15 inches in Conneaut. Band widest in west where Lima had 7 inches and it ranged up to 12 inches in Montpelier. Heaviest amounts reported in western Lake County, but specific measurements not now available.
MISSISSIPPI Old Union to Verona, Lee County	8	3:10 a.m.	10	200	0	0	5	2	Tornado	Moved through Old Union community through experiment station near Verona, unroofing and damaging homes and other buildings; at least 1 home destroyed. Storm moved northeastward.
TENNESSEE Eagle Bend, Anderson County	8	5:30 a.m.-4 p.m.						1	Wind, rain, and electrical	Torrential rains caused loss of between 1 and 2 million seedling trees at TVA nursery at Eagle Bend. Accompanying strong wind gusts twisted off irrigation pipes up to 1-1/2 inches in diameter.
TENNESSEE Isoline (near), Cumberland County	8	6 a.m.	3		0	0	3	1	Tornado (suspected)	3 barns, 5 houses, and numerous outbuildings damaged and many trees uprooted. Tornado moved eastward.
MISSISSIPPI Bruce (6 miles north of), Calhoun County	8	8 a.m.	Short	100	0	0	3	1	Tornado	2 homes destroyed or badly damaged; funnel observed. Storm moved northeastward.
ALABAMA Marion and Lawrence Counties	8	9:46 a.m.	55	100	0	5	5	1	Tornado	Path skipping east-northeastward, however, 2 long continuous stretches reported. 8-mile path beginning just south of Hamilton, lifted and hit in Bankhead Forest for 14-mile long path ending at Pine Grove, Lawrence County. Scattered fallen timber in forest occasionally up to 1/4 mile from center of path. Of total damage, $150,000 was to timber. 2 observers reported that no thunder or lightning occurred with this tornado.
ALABAMA Morgan and Marshall Counties	8	10:15 a.m.	35	40-200	2	90	6	1	Tornado	Tornado began 6 miles southwest of Falkville and ended about 10 miles north of Arab in Marshall County. Funnel said to have lashed from side to side, making somewhat of a zig-zag path and varying the width. Some skipping over east-northeastward path.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ALABAMA Cullman, Marshall, and Morgan Counties	8	10:30 a.m.	15		0	0	5	1	Tornado	Storm from northeastern Cullman County, across southeastern corner of Morgan County at Hulaco, into Marshall County and ending after hitting at Union Chapel, southeast of Union Grove. Path east-northeastward, skipping.
MISSISSIPPI Summit, Pike County	8	Early afternoon			0	0			Tornado	Few treetops broken off. Funnel aloft observed by personnel at McComb Airport, moving northeastward.
TENNESSEE McMinn County	8	1 p.m.				2	2	1	Wind, rain, and electrical	In Tranquility community, school building struck by lightning, starting minor fire and injuring 2 pupils. Elsewhere in the county, wind tore away part of screen from a drive-in theater and toppled several trees. Heavy rains resulted in flash floods in Athens area which caused minor water damage to several stores.
GEORGIA Calhoun (near), Gordon County	8	2 p.m.	10	200	0	20	5	1	Tornado	Tornado first struck southwest of Calhoun, moved northeastward for about 10 miles, passing 2 miles south of city. 70 buildings damaged or destroyed and 10 house trailers demolished. Chenille mill heavily damaged. Many of injured suffered only minor hurts, but several seriously injured. Funnel seen by large number of persons. Many miraculous escapes related.
ALABAMA Talladega County	8	2-2:30 p.m.					4	1	Wind	High winds with passage of cold front did scattered damage over county, mostly at Talladega. Frontal squall superimposed on already rather high, general, surface wind.
ALABAMA DeKalb and Jackson Counties	8	2:30 p.m.					4	1	Wind and hail	High winds over DeKalb County and extended into Jackson County. Storm accompanied by light hail size of marbles. Frontal squall superimposed on already rather high general surface wind.
TENNESSEE Chattanooga, Hamilton County	8	3-5:35 p.m.						1	Wind	Winds reaching 57 m.p.h., felled trees and powerlines and broke large plate-glass window.
SOUTH CAROLINA Oconee, Anderson, Greenville, Laurens, Spartanburg, Union, Chester, Chesterfield, and Marlboro Counties	8	3-7:30 p.m.	100	*3-10		2	3	4	Wind, hail, and electrical	Area of very active thunderstorms moved through southern Oconee County, then through Townville, Centerville, Cross Anchor, Cross Keys, Santuc, south of Chester between Great Falls and Fort Lawn, Flat Creek school, Jefferson, Wallace, into North Carolina. Damage in Anderson County, wind $1,000, hail $1,000 to crops; Greenville County, wind $500, hail $1,000 to crops; Spartanburg County, wind $2,000, hail $25,000 to crops; Chester County, wind $1,000. 2 persons injured by lightning. Storm moved eastward.
TENNESSEE Leesburg (near) Washington County	8	3:30-3:40 p.m.	3	440	0	0	3	1	Tornado	Between Bowmantown and Leesburg, roof torn from grain-storage house, tobacco and machinery barn moved about 3 feet from foundation. Roof and sides of house damaged by flying debris, and about 20 large trees blown down. Storm moved eastward.
SOUTH CAROLINA Cross Keys to Santuc, Union County	8	4-4:30 p.m.	20	1000	0	2	4	3	Tornado	Tornadic action eastward from Cross Keys to Santuc, destroyed 3 homes, damaged 57, and damaged or destroyed 67 other buildings.
GEORGIA Tift, Irwin, and Coffee Counties	8	4-5 p.m.	50	150-800	0	0	5	5	Tornado, rain, hail, and wind	Tornado first hit near Chula, Tift County and moved southeastward approximately 50 miles alternately on ground and in air across southern Irwin and Coffee Counties. Damage to houses, tobacco barns, and trees near Harding, Tift County and near River Bend, Gladys, and Lax communities, Irwin County. Planing mill destroyed near Douglas, Coffee County, and several houses damaged or destroyed in southeastern Coffee County. School bus driver in Irwin County stopped bus and watched funnel cross road ahead. $2,000 property damage due to hail. Crop damage as follows: wind $15,000, hail $5,000, heavy rains $50,000.
GEORGIA Telfair County	8	4:30 p.m.	15	400	1	5	3	2	Tornado	Storm first struck in China Hill section, Telfair County moved almost east hitting again between Jacksonville and Lumber City in southern part of county. 2 men seriously hurt (1 later died) when they tried to out-run funnel cloud in truck. Truck picked up and whirled through air for distance of 100 yards. Several houses damaged or destroyed. Loss in timber estimated in thousands of dollars. Large refrigerator carried 250 yards. TV blown into well and when recovered, glass on picture tube not broken.

VIRGINIA Norfolk, Norfolk County	8	5:20 p.m.	1		0	2	5		Tornado	Funnel cloud observed to dip down in broad open field between Norfolk Naval Base and Forrest Lawn Cemetery in Norfolk, thence along Granby Street alongside cemetery. Damage resulted from snapped utility poles, unroofed buildings, broken windows, structural damage to warehouse under construction, and destroyed signs and billboards. Tornado moved northeastward.
SOUTH CAROLINA Lancaster, Chesterfield, and Marlboro Counties	8	5:50-7:30 p.m.	50	1,000	0	16	6	3	Tornado	Tornado struck near Flat Creek School in Lancaster County with more or less continuous path, through towns of Jefferson, north of Cheraw, and Wallace, then into North Carolina near Johns. 33 homes destroyed, 108 damaged and 156 other buildings destroyed or damaged. Storm moved eastward.
GEORGIA Randolph County	8	6:30 p.m.	4	200	0	1	4	1	Tornado	Hit in Friendship community destroying or damaging 3 houses, 2 barns, church, and school. Funnel observed by 3 persons. Tornado moved eastward.
VIRGINIA Scattered areas of State	8	Afternoon-evening					5		Wind and rain	In Bristol area, high winds with gusts to 75 m.p.h., and rain caused some damage to 3 aircraft at Tri-City Airport, to roofs, and signboards estimated at $5,000; in Charlottesville area, high winds to 70 m.p.h., uprooted trees and knocked out some utility lines with damage estimated at $1,000; in Patrick County, scattered areas of wind damage to buildings, trees, signs, etc., estimated at $5,000; in Lynchburg area, wind damage to trees and powerlines estimated at $5,000; in Newport News and Norfolk areas, wind damage to trees, utility poles, unroofed buildings, downed TV antennas, and damage from blown or falling objects estimated at $50,000. Italian Liberty Ship blown aground in Hampton Roads area.
NORTH CAROLINA Bladen, Cumberland, Duplin, Hoke, Robeson, Sampson, and Scotland Counties	8	7:30-9 p.m.	100	25-300	4	114	6	4	Tornadoes	Group of tornadoes, probably at least 3 in number, skipped along on more or less parallel paths over area 100 miles long and 20 miles wide. Individual paths of destruction mostly 1/2 to 5 miles long, and 50 to 75 yards wide. 1 or 2 places where path was a few hundred yards wide apparently made by cluster of smaller funnels, 50 yards or less. First tornado crossed line from Marlboro County, South Carolina, entering Scotland County, North Carolina, near Johns about 7:30 p.m. Shortly thereafter it did considerable damage northeast of Maxton. Probably same storm touched ground near St. Pauls, and thence moved on to 2 communities near Roseboro, Sampson County, where it killed 4 persons, injured about 40, destroyed 20 dwellings and 70 other buildings, and damaged several hundred structures. Path of second storm seen only in vicinity of Pembroke, where 21 persons injured and 20 homes and other buildings destroyed. Third tornado struck with great intensity in rural community west of Rosehill, Duplin County, about 9 p.m., 9 homes destroyed and their splintered remains strewn over many acres. 39 persons injured. 12 other homes badly damaged and outbuildings demolished. Concrete foundation crumbled as if by heavy sledge hammer. Storms moved east-northeastward. Red Cross lists for 5 of the 7 counties: 4 dead, 114 injured; 63 homes destroyed, 238 damaged; 175 other buildings destroyed, 525 damaged; 359 families affected. Hoke and Bladen Counties only lightly touched.
TENNESSEE Bristol, Sullivan County	8	P.m.						1	Wind and rain	Winds, gusting to 75 m.p.h., damaged 3 DC-3 aircraft at Tri-City Airport, blew down several trees, and damaged some roofs. See Bristol storm in Virginia same date.
TENNESSEE Knox County	8						4	1	Wind	Wind gusts to 58 m.p.h., felled trees and damaged powerlines throughout county. In Knoxville, winds ripped portion of sheet-metal roof from school gymnasium, blew out windows from a bank, and damaged TV antenna.
	8									Minor storms also reported at Opelika, Ala.; in Harlan County, Ky.; at Ashland, Byhalia, and near Crawford and Starkville, Miss.; and at Bullsgap, Bradley Creek, Cherokee, Concord, Cross Anchor, Hornbeak, Indian Ridge, Jasper, Kingsport, Kingston, Madisonville, Memphis, Mt. Carmel, Mt. Pleasant, Ottway, and Piney Flats, Tenn.
WEST VIRGINIA Lost River district, Hardy County	8-9	10 p.m. 8th -6 p.m. 9th						4	Wind	Extensive damage to timber and fruit trees. Storm moved southeastward.
MAINE, NEW HAMPSHIRE, VERMONT, and MASSACHUSETTS	8-9					Some	4	1	Snow	1 to 8 inches of snowfall over entire area, except Cape section, Massachusetts, caused extremely hazardous road conditions morning of 9th and all day in northern section. Many schools closed in northern Massachusetts and some in other areas,

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MAINE, NEW HAMPSHIRE, VERMONT, and MASSACHUSETTS (Cont'd)										due to transportation hazards. Many minor accidents and some injuries. Heavy, wet snow broke tree limbs in many communities. Falling limbs cut powerlines to numerous homes.
MARYLAND Anne Arundel County	9	Morning							Wind	Strong winds snapped off road gate and overturned 1 aircraft at Ft. Meade. At Annapolis U. S. Naval Academy peak gust of 80 m.p.h., from northwest recorded at 4:30 a.m.
	9									Minor storm also reported at Knoxville, Md.
	10									Minor storm reported in Mahaska County, Iowa.
FLORIDA Boca Raton, Palm Beach County	11	10 a.m.			0	0			Tornado, rain, wind, and hail	Cloud dissipated before affecting any inhabited area. Heavy rains following caused local short-duration flooding and associated high winds unroofed several buildings. Hail also reported at several isolated points in area.
KANSAS Most of State	11	Early a.m.-evening				6			Glaze and snow	Freezing drizzle, light snow, and some sleet beginning in northwest early in morning and ending late in afternoon in south. Roads became slippery and driving dangerous, with numerous accidents reported. Storm moved southeastward.
TEXAS Stamford, Jones County	11	Evening					5		Hail	Marble to golf-ball size hailstones; entire city hit, southeast portion hardest hit. Roofs and cars battered, paint peeled, branches torn from trees and shrubbery, flowers and gardens damaged, windshields and car windows broken, and church, school, greenhouse, and public building windows broken. Storm moved southeastward.
OREGON Sandy (near), Clackamas County	12	Noon	2-3	50	0	0	3	2	Tornado and hail	Small, but apparently definite, tornado moved northwestward across fairly rugged terrain north and east of Sandy. Fir trees 18 to 36 inches in diameter twisted off 30 to 40 feet above ground. Large barn carried considerable distance, then shattered. Number of farm outbuildings blown away. Accompanying hail 1/4 to 1/2 inch in diameter broke several windows in 2 or 3 farm homes. Most shingles on 2 or 3 homes ripped off, but little or no structural damage. Hail damage $300; remainder tornado.
OREGON Gilliam and Morrow Counties	12	12:30-12:45 p.m.	15-20	100-400	0	0	2	2	Tornado and hail	Apparently definite tornado moved eastward from southeastern Gilliam County to south-central Morrow County over mostly range land and large large wheat farms. No buildings in path of storm. 1 telephone pole lifted out of ground. Hail up to 1 inch in diameter reported, but most stones 1/4 to 1/2 inch in diameter with loss negligible.
OKLAHOMA Most of State	12-14				3	Many			Snow, sleet, hail, and freezing rain	Snow depths of 4 to 7 inches reported from northern counties of northeastern quarter of State. Mostly sleet, some small hail, and freezing rain elsewhere, except in extreme south-central and southeast. Iced-over highways caused dozens of traffic accidents which resulted in 3 deaths and numerous injuries. Severe freeze wiped out most of peach and pear crop, damaged apples, strawberries, pecans, shrubs, and gardens. Loss to wheat crop estimated from 0 to 100 percent and expected to average over 25 percent. Main loss area includes counties west of the 97° longitude, except northern, western, and southern rows of counties, but also includes Jackson County.
CALIFORNIA Northern coast	13-15						4	1	Wind and rain	Strong storm front moved rapidly eastward across California 13th to 15th causing rain (1.93 inches at Ukiah in 6-hour period 4:30 to 10:30 p.m., on 13th) and gusty winds along north coast. Severe local wind reported near Crescent City night of 13th which caused considerable damage to motel, mainly to carports under construction with damages estimated at $11,000. No other damage reported in Del Norte County. Minor damage in San Francisco Bay area, with winds reaching gusts of 46 m.p.h., at San Francisco Airport night of 13th.
OREGON Northwestern and north-central portion	14	9 a.m.-3 p.m.	200-250	*100-150		1	5	3	Wind	Strong winds throughout northwest and north-central from coast to center of State felled large number of trees across power- and telephone lines, and on to some homes and other buildings. Also, blew down several farm buildings, some power and communication poles and lines, a number of outdoor signs, blew roofs off a number of buildings, and damaged other property. 2 large ships broke loose from dock in Portland harbor and smashed into Hawthorne Bridge. Gusts of 50 to 60 m.p.h., recorded in middle Willamette Valley and in central Oregon, 60 to 75 m.p.h., along coast and Columbia River inland as far as Portland. Storm moved eastward

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
GEORGIA Toccoa, Stephens County	14	4:30 p.m.	**400-500	17			2		Wind	Small, but apparently quite severe windstorm hit southwestern part of town. Greatest damage to roof of factory; welded, corregated-tin roofing torn and twisted from building in 2 distinct areas of roof about 75 feet apart; several pieces of roofing carried 300 to 400 yards and 1 piece wrapped almost around brick column of porch. Damage beyond factory mostly minor and confined to blown off shingles and blown in screens. Corner of roof of 1 house raised about a foot. Storm moved east-northeastward.
ILLINOIS Antioch, Lake County	14	6 p.m.			0	0			Funnel aloft	Pilot reported funnel cloud moving northeastward.
WASHINGTON Entire State	14				2	4	5		Wind, rain, and dust	Low pressure system off coast of Oregon and Washington intensified and moved eastward across State on 14th. Strong wind and rather heavy rainfall accompanied storm. Wind speeds ranging from 50 to 70 m.p.h., observed. Hundreds of fishermen out on lakes in small boats when first "squall" struck, only a few hours after 1957 fishing season opened. 1 person drowned when small boat sank, several other boats capsized, and many were forced to beach their boats in protected areas. Visibility reduced to nearly zero in some localities east of Cascades. Several persons injured in automobile accidents which occurred during duststorm. Power and communication outages occurred over State and 1 person killed by falling tree. Several commercial fishing boats along coast damaged.
	14									Minor storm also reported at White City, Fla.
TEXAS Gilmer (near), Upshur County	15	2:30 p.m.			1		2		Electrical	On Circle M&R Ranch, man killed by lightning. 1 yearling also electrocuted.
COLORADO Denver, Denver County	15	Afternoon					4		Wind	First thunderstorm of season on 15th caused $1,500 damage to fiber-glass window in dairy. Gust of wind accompanying storm ripped fiber glass from building and blew it away. $25,000 damage to church under construction.
	15									Minor storms also reported at Anadarko and Olustee, Okla.
NEW HAMPSHIRE Dover, Strafford County	16	2:05 p.m.	**100	2	0	0	2	1	Dust Devil	Small rowboat lifted 100 feet into air and demolished. Lumber also lifted and a fence damaged. Funnel black, darkening momentarily clear sky as it passed, and violently shook house. Storm moved northeastward.
COLORADO Fort Carson, El Paso County	16	Afternoon			1	5			Electrical	Army trainee killed and 5 others injured when struck by lightning.
	16									Minor storms also reported at Fortescue, Poplar Bluff, and Salem, Mo.; and at Miami, Okla.
CALIFORNIA San Francisco Bay area	17	12:57-1:04 p.m.	15	4,000	1		4	1	Wind, rain, electrical, and hail	Damage occurred mainly along southwest-northeast path from Hunter's Point across San Francisco Bay to community of El Sobrante, north of El Cerrito. At Hunter's Point, generator shed blown apart, and on east shore where most damage occurred, 2 radio towers felled, hole blown in roof of industrial building, causing $5,000 damage. Several warehouse building roofs blown off, windows broken, dwelling roofs and TV antennas dammaged, some streets and basements flooded as storm drains temporarily clogged, and automobiles damaged by falling tree branches. Lightning struck power pole and transformer in Alameda, temporarily blacking out homes and businesses. 1 fatality occurred at Redwood City when construction worker picked up downed powerline and was electrocuted. Hailstones reportedly size of marbles fell in San Francisco and Berkeley.
LOUISIANA Urania, La Salle Parish	17	Early a.m.					2	1	Hail and rain	Hailstones reported as large as 2 inches in diameter; must have been only few stones as no serious damage reported. Rainfall only 0.04 inch.
OKLAHOMA Quinlan, Woodward County	17	5 p.m.	13	*3			2	4	Hail	Hailstorm with stones up to 2 inches in diameter covered 85 percent of ground in area north of Quinlan. Main damage to wheat crop. Storm moved north-northeastward.
MISSOURI Vichy, Maries County	17	9:08-10:25 p.m.	11	*2-1/2					Wind, rain, hail, and electrical	Hail 3/4 inch in diameter at Vichy Airport. Continous severe lightning. 2.86 inches of rain from 9:08-11:05 p.m., at Vichy Airport; estimated 5 inches nearby. Wind hit gust of 60 m.p.h., at 10:08 p.m., at Vichy Airport. Considerable flooding of low-lying crop land.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Laclede County	17	Evening							Electrical and wind	House struck by lightning, burned to ground 8 miles west of Lebanon.
	17									Minor storm also reported at Knob Noster, Mo.
MISSOURI Springfield, Greene County	18	Noon-1:30 p.m.							Electrical, wind, rain, and hail	Hail 1/2 inch. Wind gusted to about 55 m.p.h., at 12:07 p.m. Lightning knocked out powerlines for 1-1/2 hours.
ARKANSAS Conway County	18	1:30 p.m.	10	*5			5	1	Hail and rain	Over 500 roofs damaged by hail, which also damaged windows and automobiles. Hailstones averaged 1/2 inch in diameter, with some stones as large as 2 inches in diameter reported. Storm moved eastward.
MASSACHUSETTS Dracut, Middlesex County	18	1:30 p.m.	**200		0	0	1	1	Dust devil	Small child lifted into air 3 feet and 2 other children rolled on ground by funnel, but none injured. Lumber and chair also picked up. Funnel accompanied by loud, whistling sound. Storm moved westward.
ILLINOIS Warnock, Monroe County	18	2 p.m.			0	0			Tornado	Tornado observed from across Mississippi River to west. Contact with ground shown by raising of dust. No damage reported. Tornado moved northeastward.
SOUTH DAKOTA Lyman, Buffalo, Hand, Beadle, Spink, Kingsbury, Clark, and Hamlin Counties	18	2-9 p.m.			0	0	4		Tornado, wind, hail, and electrical	Hail spread in band 130 miles long from Lyman to Hamlin Counties, stones varying from small, piling up to 6 inches deep, to isolated stones baseball size. Roofs battered and windows shattered. Hundreds of geese and ducks killed in midair had to be hauled off in trucks. High winds started near Wessington Hills and spread over wide swath, toppling weaker sheds and unroofing barn. Core of high winds passed just south of Wolsey at 4:20 p.m., destroying 11 grain bins, overturning 2 house trailers and razing telephone poles; no distinct funnel, but debris lifted spirally, indicating incipient tornado. Lower Brule, Lyman County, isolated temporarily when estimated 5-inch rain sent water 2 feet deep over roads. Lightning fired 30 tons of hay near Reliance.
WASHINGTON Seattle area, King County	18	3:30-5 p.m.	10	*3					Rain, hail, and electrical	Severe thunderstorm developed west of Seattle and moved eastward across city in vicinity of Magnolia Bluff, Queen Anne Hill, University district, and eastward across Lake Washington. Rainfall amounts ranged from 1/4 to 1/2 inch and hail occurred. Storm sewers overflowed in some localities. Lightning damaged a few residences and caused numerous power outages.
ARKANSAS Woodruff and Prairie Counties	18	3:40 p.m.	16	*8			4	1	Wind, hail, rain, and electrical	Principal damage along White River from Augusta to De Valls Bluff. Several buildings damaged in Augusta, Des Arc, and De Valls Bluff. Trees damaged by wind. Wind damage estimated at $7,500; hail at $500; rain at $500; and lightning at $1,000. Storm moved northeastward.
KANSAS Protection (5 miles south of), to Wilmore (3 miles northeast of), Comanche County	18	4:15-6 p.m.	14	*1			3	3	Hail	25 percent of ground covered by hailstones up to 2 inches in diameter. Storm moved northeastward.
TEXAS Sherman vicinity, Grayson County	18	4:20 p.m.	10	20	0	0	3		Tornadoes	Hit at Southmayd, lifted, returned to ground near Pottsboro. Moved house from foundation, demolished or damaged chickenhouses, barns, TV antennas, windmill, another house, garage, and roofs. Knocked out powerlines and hit boat docks on Lake Texoma. Residents in area said several funnels dipped to ground, cavorted about area for about 10 minutes. Storm moved northeastward.
NEBRASKA Clinton (28 miles south of), Sheridan County	18	4:45 p.m.	8-10	880	0	0	5	1	Tornado and hail	Hail damage, $9,000; tornado, $60,000. Funnel observed.
KANSAS Comanche County	18	5:55-6:12 p.m.	1-1/4	100	0	0			Tornadoes	2 small tornadoes observed. One 9 miles east of Coldwater traversed path of 1-1/4 miles. The other 7 miles east and 1 mile north of Coldwater about same time. Neither caused damage. Tremendous roar heard. Storm moved northeastward very slowly.
KANSAS Southwestern portion	18	Afternoon-evening							Wind and dust	High, southerly winds blew over most of western half much of day. In southwest, visibility ranged from 4 to 6 miles and wind speeds from 40 to 45 m.p.h. About 5 p.m., winds shifted to northwest and for an hour or so dust restricted vision to less than 100 yards locally in that area.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Waynoka to Alva, Woods County	18	7:45 p.m.			0	0			Tornado	Observer reported funnel on ground south of Waynoka. Ground Observer Corps reported funnel aloft 15 miles south of Alva moving north-northeastward.
MISSOURI Vienna (3 miles northwest of), Maries County	18	8:37-9:30 p.m.	8	*2					Rain, hail, and wind	2.70 inches of rain in 53 minutes. Small hail. Cars washed 75 yards into field. Many basements and crop land flooded. Fences damaged. Storm moved eastward.
OKLAHOMA Hollis, Harmon County	18	9:30 p.m.	1-1/2	200	0	0	4	2	Tornado (suspected), wind, rain, and hail	Strong winds or possible tornado blew down brick front of business building, sucked out plate-glass windows, leveled brick fence at residence, and damaged roofs, TV antennas, and outbuildings. Storm moved northeastward.
MISSOURI Laclede County	18	9:30-10:30 p.m.					3		Hail, electrical and wind	Hail 1/2 inch in diameter at several places in county. Roofs and electrical equipment damaged.
OKLAHOMA Crescent, Logan County	18	11 p.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel aloft.
OKLAHOMA Chickasha (2 miles southwest of), Grady County	18	11:11 p.m.			0	0			Funnel aloft.	Ground Observer Corps reported funnel aloft.
NEBRASKA Alliance (20 miles northeast of), Box Butte County	18	Late evening	Short	Narrow	0	0	3	1	Tornado	Demolished 1/2 mile of powerlines and poles over sparsely settled terrain.
OKLAHOMA Helena area, Alfalfa County	18	Night						1	Wind and rain	Strong winds damaged Helena and surrounding area. Barn unroofed and utility pole snapped at State Training School. Outbuildings destroyed or damaged and TV antennas blown down. 50 baby chickens killed when chickenhouse destroyed.
OKLAHOMA Ralston area, Pawnee County	18	Midnight						1	Wind, rain, and electrical	Severe rainstorm 2 miles south of Ralston destroyed or damaged outbuildings, roofs, trees, and utilities on several farms. 1 farm had many chickens killed when roofs blown off 2 chickenhouses.
MASSACHUSETTS Sherborn, Middlesex County	18	P.m.		2	0	0	1	1	Dust devil	Man spun around and child bowled over by funnel which made humming and buzzing sound, it extended 200 feet high. Storm moved northeastward.
OKLAHOMA West-central portion	18	P.m.							Wind, rain, and hail	Squall line with strong winds, heavy rain, and scattered heavy hail caused spotted damage over western sections of State. Hail up to 2 inches in diameter damaged crops around Gage and Shattuck, Ellis County. Winds blew down sign and broke plate-glass window in Elk City. Several farmsteads damaged by strong winds near Lone Wolf and Hobart, Kiowa County, and near Sentinel, Washita County. Windows blown out, roofs blown off, and barns blown over. Many TV antennas and trees blown down.
	18									Minor storms also reported at Kosciusko, Miss.; at Cape Girardeau and Galloway, Mo.; and at Memphis, Tenn.
MISSOURI La Due, Henry County	18-19								Rain	Major damage to several homes when heavy rains caused hillside to slide away from backs of homes. Mass of dirt 150 feet long and 15 to 30 feet deep slid down hill.
SOUTH DAKOTA Tripp and Lyman Counties	18-19	10 p.m.-2 a.m.			0	0	4		Tornado and electrical	Between 10:30 and 10:45 p.m., 2 farms 10 miles southeast and 7 miles east-southeast of Winner hit by tornado. Considerable damage to smaller buildings. Livestock and poultry killed. In Oacoma, lightning destroyed garage and contents.
TEXAS San Antonio (16 miles northwest of), Somerset, and Hondo areas, Medina and Bexar Counties	19	1:15 a.m.					4		Wind	Destroyed or damaged 15 barns. MIC at San Antonio reported debris did not support report of twisters. Storm moved northeastward.
OKLAHOMA Creek and Tulsa Counties	19	1:40 a.m.			0	0	3	1	Tornado and funnels aloft	Tornado sighted aloft near Kiefer, east of Sapulpa and touched ground on north edge of Tulsa where home damaged and 20-foot diving tower built of 4x6 lumber, TV antenna, and wooden fence destroyed. Other funnels reported in area and large trees blown down in Sand Springs. Storm moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Liberty Hill (5 miles northwest of), Williamson County	24				0	0	3		Tornado	Unroofed 2 homes and destroyed 2 barns.
	24									Minor storms also reported at New Haven and West Plains, Mo.
MICHIGAN (Lower) Southern and central portions	24-25				1	4	5	1	Winds, electrical, and hail	Winds caused scattered damage and lightning destroyed several barns. Washtenaw County farmer burned to death when his barn struck. Hail reported in several counties.
ARKANSAS Jonesboro, Craighead County	25	Midnight	** 880	200-300	0	0	4	1	Tornado, rain, and electrical	Tornado moving northeastward touched ground in 2 places; building lifted 40 feet into air. Considerable damage to roofs, signs, and utility poles.
OKLAHOMA Tulsa, Tulsa County	25	12:05 a.m.			0	0		1	Funnels aloft and wind	2 funnels aloft sighted on eastern edge of Tulsa. Small plane at auxiliary airport lifted vertically, pulling out stakes, overturned, and smashed down on other planes. Heavy marker also turned over on field.
MISSOURI Fredricktown, Madison County	25	1:25-1:30 a.m.	1/2	500	0	0	4		Tornado, wind, and rain	Observer heard loud roar and "screeching" sound. Buildings in residential area damaged. Storm moved northeastward
ILLINOIS Monroe and Saint Clair Counties	25	2:30 a.m.		200-300	0	0	4	1	Tornado	2 farmsteads damaged 3 miles northwest of Freeburg. 1 roof removed with explosive action. Loud roaring sound. Possibly same tornado which struck Fredericktown, Mo., 1 hour earlier. Minor damage near Waterloo, Ill. Tornado moved northeastward.
ILLINOIS Urbana, Champaign County	25	5:20 a.m.				2	4	1	Wind	Unanchored housetrailer overturned. 12-car garage collapsed. Other damage minor. Apparently same squall line that caused tornado at Freeburg at 2:30 a.m. Storm moved north-northeastward.
MICHIGAN Jackson (north of), Jackson County	25	9:40 a.m.			0	0			Funnel aloft	Funnel observed by CAA personnel near airport north of Jackson. Funnel lasted only a few minutes and did not touch ground.
IOWA Montgomery and Adams Counties	25	11:30 a.m.			0	0	4	1	Tornado (suspected) and hail	Buildings damaged by tornado, chickens killed by hail.
MICHIGAN Huron and Sanilac Counties	25	Afternoon			0	0	3	1	Tornadoes	Several funnels aloft, reported. Some evidence that 1 or more of funnels may have dipped briefly to surface in rural areas.
WEST VIRGINIA Weirton, Hancock County	25	3-4 p.m.					4	1	Electrical, wind and rain	Winds estimated 60-70 m.p.h., damaged plate glass, roofs, and trees. Some flooding of basements by runoff water. Storm moved northeastward.
TEXAS Buffalo Gap area, Taylor County	25	3:30 p.m.			0	0			Tornado	Hit on hilltop between Buffalo Gap and View. Uprooted some shrubs.
TEXAS Wichita Falls (10 miles south of) Wichita County	25	4:05 p.m.			0	0			Tornado	Dipped for instant, kicking up dust.
TEXAS Big Spring (22 miles east-northeast of) Howard County	25	4:22 p.m.			0	0			Funnel cloud, hail and rain	Funnel aloft sighted moving northeastward.
WISCONSIN Lone Rock, Richland County	25	4:40 p.m.							Hail	1 to 1-1/4 inches of hail covered ground.
NEBRASKA York and Seward Counties	25	6-8:30 p.m.	26	*4-12			3	4	Hail	Damage area spotted. Hailstones up to 2 inches in diameter. Storm moved northeastward.
NEBRASKA Beaver Crossing (near) to Omaha (south of), Seward to Douglass County	25	6-8:45 p.m.	80	200-400	1	18	6	3	Tornado	Most damage at Milford. Tornado moving east-northeastward touched ground at spots after passing to east at Milford.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

APRIL 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW YORK Cheektowaga and South Newstead, Erie County	25	6:15 p.m.	1/2	15	0	0	5	1	Tornado, funnel cloud, wind, rain, and electrical	Heavy roll cloud preceding thundersqualls moved into Buffalo area. 2 funnel clouds moving northeastward, reported 1 remained aloft. Damage by tornado $5,000, by wind $80,000, by rain $10,000, and by lightning $5,000.
TEXAS Ringgold (1 mile south of), Montague County	25	6:30 p.m.	3		0	0	3		Tornado	Barn and car damaged. Tornado moved southeastward.
NEBRASKA Edgar (near) to Exeter (east of), Clay and Fillmore Counties	25	6:40-7:35 p.m.	35	100-220	0	0	5	2	Tornado and hail	Several sets of farm buildings destroyed. Tornado damage to property $275,000, hail $4,000. Storm moved east-northeastward.
OKLAHOMA Tishomingo, Johnston County	25	8:30 p.m.			0	0	3	1	Funnel aloft, wind, rain, hail, and electrical	Funnel aloft sighted moving northward over Tishomingo. Strong winds twisted 30 TV antennas, blew down trees, and lifted roof from apartment building. Lightning struck home, causing estimated $900 damage.
OKLAHOMA McAlester (20 to 40 miles west of), Pittsburg County	25	8:30 p.m.			0	0			Funnels aloft	Pilot reported 4 funnels coming out of 1 cloud.
OKLAHOMA Kiowa (near), Pittsburg County	25	9:35 p.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel moving northeastward.
OKLAHOMA Kiefer, Creek County	25	10 p.m.			0	0			Tornado	Tornado sighted on ground at Kiefer moving north-northeastward toward Tulsa. Evidently just touched ground momentarily as no damage reported.
OKLAHOMA Holdenville area, Hughes County	25	10:05 p.m.	2	200	0	0	5	1	Tornado, rain, and electrical	Tornado first sighted 25 miles southwest of Holdenville by Ada Fire Chief. Tornado evidently moved northeastward across open country or went aloft until it moved over Holdenville just above ground. Over 40 homes damaged and two-thirds of business district hit hard with 7 business buildings destroyed and 8 damaged. Many outbuildings destroyed or damaged.
OKLAHOMA Okemah area, Okfuskee County	25	10:35 p.m.	9	100	0	0	4	1	Tornado, rain, and electrical	Tornado evidently skipped along just above ground 2 miles east of Okemah. 2 utility poles snapped off 5 feet above ground and barn and outbuilding damage extensive. Newly constructed drive-in theater screen blown away. Storm moved north-northeastward.
TEXAS Mineral Wells, Palo Pinto County	25	10:36 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
OKLAHOMA Claremore, Rogers County	25	11:12 p.m.	short	50	0	0	3	1	Tornado (suspected), wind, rain, hail, and electrical	What was believed to have been small tornado hit 2 farmsteads, smashing barns, outbuildings, and trees. Storm moved northeastward.
OKLAHOMA Tulsa, Tulsa County	25	11:47 p.m.			0	0	2	1	Funnel aloft, wind, and electrical	Police reported funnel aloft west of Tulsa over Arkansas River moving northeastward toward Tulsa. Wind and lightning caused minor damage to utilities.
	25									Minor storms also reported at Coldwater, Patterson, and St. Louis, Mo.; near Rockville, Nebr.; and at Anadarko, Blanchard, El Reno, Guthrie, Hugo, near Lawton, and at Rattan and Stroud, Okla.
TEXAS Big Lake, Reagan County	26	12:30 a.m.	3/4	150	0	0			Tornado	Tore up some brush. Storm moved northwestward.
OKLAHOMA Frederick, Tillman County	26	1:30 a.m.			0	0			Funnels aloft	Frederick police reported sighting several funnels aloft.
TEXAS Luling (near), Smithville, and Kovar, Caldwell and Bastrop Counties	26	2 a.m.	35-40		0	0	3		Tornado	Near Luling, barns, garages, and powerlines damaged, and furniture scattered for 50 feet. At Smithville and Kovar, large trees uprooted, barns, old oil mill, windows broken, highway signs smashed, sheds, outbuildings, and garages unroofed, and drive-in theater damaged. Storm moved northeastward.
OKLAHOMA McAlester (8 miles northeast of), Pittsburg County	26	7:54 a.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Tyler, Smith County	26	8 a.m.	5	100	0	6	6		Tornado, wind, and rain	In residential area, estimated 400 homes damaged together with 3 schools and 1 church. Storm moved northeastward.

See reference notes at end of table.

Place	Date	Time	Length of path miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Kilgore area, Gregg and Rusk Counties	26	9:15 a.m.			0	0	4		Tornado and funnels aloft	At Laird Hill, funnel slammed 4 derricks to ground, overturned other derricks and 1 oil tank, damaged 5 houses, 1 barn, and roofs; uprooted trees; demolished 2 barns, poultry houses, church, and 1 home, and wrecked lake property. 5 funnels reported.
TEXAS Longview area, Gregg County	26	9:30 a.m.	1	50-60			4		Tornado	1-1/2 miles east of Longview, 2 houses unroofed, another moved off foundations. 2 miles south of Longview, only minor damage, except 1 garage destroyed.
TEXAS Gilmer (east of), Upshur County	26	Morning			0	0	4		Tornado	Demolished church, damaged school, and destroyed garage and 2 homes.
ARKANSAS Arkadelphia (5 miles north of), Clark County	26	Noon				1		1	Wind	House damaged in Caddo Valley community.
ILLINOIS East-central portion	26	Noon-4 p.m.					4	1	Wind	Damage to a dozen farmsteads at Vermilion at 2 p.m. From shortly after noon to 4 p.m., scattered wind damage also reported from Gilman, Onarga, Wellington, Paris, Decatur, Neoga, and Mattoon. Storm moved northeastward.
INDIANA Kniman (1 mile east of), Jasper County	26	Noon			0	0	3	1	Tornado	Small tornado damaged several buildings of farm and felled large tree. Barn roof carried several hundred feet into field.
TEXAS Midkiff area, Upton County	26	1:30 p.m.			0	0			Funnel aloft	Funnel aloft sighted moving northeastward over open country.
ARKANSAS Conway and Faulkner Counties	26	2 p.m.				1	4	1	Wind	Extensive wind damage in eastern Conway County and western Faulkner County. Several buildings destroyed or damaged. Principal damage in vicinity of Gleason, Faulkner County. Reports of funnel clouds having been observed, but damage was apparently caused by straightline winds.
ILLINOIS Le Roy-Gibson City, McLean and Ford Counties	26	2 p.m.	25	30	0	0	4	1	Tornado and rain	Path intermittent and indistinct, with mostly light damage to 8 or 10 farms from 4 miles south of Le Roy to 2 miles east of Gibson City. No funnel observed, but heavy rain with storm. Typical roaring sound and debris scatter indicated tornado. Storm moved northeastward.
TEXAS Ranger (3 to 5 miles north of), Eastland County	26	2:10 p.m.			0	0			Tornado	Reported by Ground Observer Corps. Storm moved northeastward.
TEXAS Dallas (near), Dallas County	26	2:21 p.m.			0	0			Funnel aloft	Funnel aloft sighted at Hensley Air Force Base; moved north-northeastward.
INDIANA North Manchester, Wabash County	26	2:30 p.m.			0	0			Tornado	35 miles west-northwest of North Manchester, pilot reported funnel cloud moving northeastward and touching ground at times.
INDIANA Wabash area, Wabash County	26	Afternoon			0	0	3	1	Wind, hail, and funnel aloft	Hail fell at Wabash in windstorm that blew down some trees. Funnel-shaped cloud formed southwest of Wabash, but did not dip to ground.
INDIANA Culver, Marshall County	26	Afternoon			0	0			Funnel aloft	Funnel cloud observed aloft, moving northeastward.
INDIANA Kendallville, Noble County	26	Afternoon			0	0			Funnel aloft	Funnel cloud observed aloft.
INDIANA Denver, Miami County	26	4 p.m.			0	0	3	1	Tornado	Small tornado swept across southern edge of Denver, with sound of train; twisted television antenna, lifted roof from elevator, and did other minor damage.
TEXAS San Saba (20 miles northwest of), San Saba County	26	4 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Granbury, Hood County	26	4:02 p.m.			0	0			Funnel aloft	Funnel aloft sighted moving northeastward at about 25 m.p.h.
IOWA Benton County	26	4:20 p.m.			0	0			Funnel aloft	Funnel aloft reported by persons in Belle Plaine area.
TEXAS Granbury, Hood County	26	4:45 p.m.			0	0			Funnel aloft	Funnel aloft sighted moving northeastward.

See reference notes at end of table.

Place	Date	Time	Length of path miles	Width of path, yards	Number of persons Killed	Number of persons Injured	Estimated damage by categories † Property (exclusive of crops)	Estimated damage by categories † Crops	Character of storm	Remarks
TEXAS Between Copperas Cove and Gatesville, Coryell County	26	4:45 p.m.			0	0			Funnel aloft	Funnel aloft sighted moving northward.
INDIANA North Webster, Kosciusko County	26	5:20 p.m.			0	0			Funnel aloft	State police reported funnel cloud aloft.
INDIANA Churubusco, Whitley County	26	5:20 p.m.			0	0			Funnel aloft	State police reported funnel cloud aloft.
MISSOURI Between Lamar and Sneldon, Barton County	26	5:30-5:40 p.m.			0	0			Tornado	Funnel cloud moving northeastward dipped briefly.
OKLAHOMA Okmulgee (20 miles northwest of), Okmulgee County	26	5:50 p.m.			0	0			Funnel aloft	Observer at Okmulgee reported funnel aloft.
INDIANA Chesterfield, Madison County	26	6:15 p.m.			0	0			Funnel aloft	State police reported funnel cloud aloft.
TEXAS Granbury (10 miles southwest of), Hood County	26	11:35 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
INDIANA Greenfield, Hancock County	26	Evening			0	0	3	1	Tornado and rain	Small tornado dipped into area 2 miles north of U.S. Highway 40 and along Sugar Creek, following creek valley northeastward for a distance. 2 houses and barn damaged and corncrib blown down. It was accompanied by heavy rain for about 3 minutes.
	26									Minor storms also reported at Aly, Hope, and Malvern, Ark.; at Marion, Ind.; at scattered points in Iowa; and at Potosi, Mo.
	26-27									Minor storm reported near Juneau, Alaska.
MICHIGAN Pontiac, Oakland County	27	10:30 a.m.			0	0	3	1	Funnels aloft and tornado	3 funnels aloft reported near Pontiac. 1 dipped briefly to surface in north end of Pontiac, damaging lumber yard slightly and hurling 2 big planks through window of nearby grocery.
TEXAS Corpus Christi and Robstown, Nueces County	27	A.m.					2		Wind	About 50-m.p.h., winds. Southwest of Corpus Christi, city carport destroyed. At Robstown, phone poles broken off near ground, signs damaged or destroyed, and small shed blown down. No evidence of tornado or tornadic wind. Storm moved south-southwestward.
PENNSYLVANIA Pen Argyl, Northampton County	27	2:45 p.m.			1	1			Electrical	Lightning struck tree under which 2 boys were sitting, killing 1 and injuring the other.
OKLAHOMA Muskogee County	27	3 p.m.			0	0			Funnel aloft	Highway Patrol sighted funnel aloft near Keefeton which later passed over Davis Field at Muskogee.
MISSOURI Malden, Dunklin County	27	3:46-4:25 p.m.			0	0			Funnel aloft and rain	Funnel aloft; appeared in leading edge of cloud. Funnel about 400 feet above ground; did not touch ground, but lifted dust near funnel tip. 0.59 inch of rain in 34 minutes. Very little lightning or thunder. Storm moved north-northeastward.
OKLAHOMA Tenkiller Lake, Cherokee County	27	4 p.m.			0	0			Funnel aloft	Pilot reported funnel aloft.
OKLAHOMA McAlester (35 miles northeast of), Pittsburg County	27	4:09 p.m.			0	0			Funnel aloft	Funnel aloft reported moving northeastward.
NEW MEXICO Hillsboro, Sierra County	27	4:50 p.m.	1-1/2	880			3	3	Hail and rain	Hailstones 1/2 to 1 inch in diameter. Some damage to roofs and gardens. Heavy rain washed rocks and sand across highway.
TEXAS Mildred area, Navarro County	27	5:55 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
LOUISIANA Carlyss (south of Sulphur), Calcasieu Parish	27	5:40 p.m.	1	200	0	0	4	1	Tornado	Moved toward northeast across village of Carlyss, destroying 1 home, damaging several homes, barns, and fences; 1 automobile turned completely around; family saved when refrigerator held debris off as they crouched beside it.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Fairfield (north of) Freestone County	27	6:50 p.m.			0	0			Funnel aloft	Funnel aloft moving south-southwestward.
TEXAS Alvin, Brazoria County	28	6:20 a.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Waco (32 miles north of), Hill County	28	3:25 p.m.			0	0			Funnel aloft and rain	Funnel aloft sighted moving north-northeastward at about 10 to 15 m.p.h., with heavy rain.
PENNSYLVANIA Lancaster (near), Lancaster County	28	8 p.m.			0	0	4	1	Tornado and electrical	Twister dipped to earth only momentarily, but leveled large cinder-block farm building. On nearby farm, lightning struck barn which burned to ground resulting in $40,000 loss.
WEST VIRGINIA Berkeley Springs, Morgan County	28								Hail	Hailstones size of golf balls damaged roofs, automobiles, and gardens.
	28									Minor storms also reported in Christian and Madison Counties, Kentucky; at Anniston, East Prairie and Lilbourn, Mo.; in Camden area, N.J.; and at Amityville, Pa.
TEXAS Raymondville, Willacy County	29	2:15 a.m.			0	0			Tornado	Powerlines damaged.
TEXAS Palacios (south-southwest of), Matagorda County	29	12:08 p.m.			0	0			Funnels aloft	2 funnels sighted aloft.
TEXAS Deweyville, Newton County	29	12:32 p.m.			0	0			Funnel aloft	Funnel aloft sighted.
TEXAS Waco (29 miles southwest of), McLennan County	29	12:45 p.m.			0	0			Funnels aloft	2 funnels sighted aloft.
OKLAHOMA McAlester (30 miles southwest of), Pittsburg County	29	1 p.m.			0	0			Funnel aloft	Pilot reported high-level funnel.
TEXAS San Angelo (28 miles east-northeast of), Tom Green County	29	1:32 p.m.			0	0			Funnel aloft	Funnel sighted aloft.
TEXAS Cheek, Jefferson County	29	1:55-2:08 p.m.			0	0			Funnels aloft	3 funnels sighted aloft.
ARIZONA Dinnehotso (4 miles northeast of), Navajo County	29	2:15 p.m.	2-1/2	105	0	0			Tornado	Cedar trees on Navajo Indian Reservation uprooted, no other damage reported. Tornado moved northeastward.
VIRGINIA Fairfield, Brownsburg, and Mountain View areas, Rockbridge County	29	2-4 p.m.	4	*4				3	Hail, wind, and rain	Hail 1/4 to 1/2 inch caused principal damage. Drains clogged by hail backed up water from heavy rain over U. S. Highway 11, causing temporary block of traffic. Storm moved eastward.
NEW HAMPSHIRE Salem, Rockingham County	29	2:30 p.m.	1		0	0	1	1	Dust devil	Funnel ripped away canvas roof and blew clothes from line.
OKLAHOMA Kingston (6 miles south of), Marshall County	29	2:40 p.m.			0	0			Funnel aloft	Train crew reported funnel almost touching ground.
TEXAS Waco (east-southeast of), McLennan County	29	3:02 p.m.			0	0			Funnel aloft	Funnel sighted aloft.
TEXAS Mexia (southwest of), Limestone County	29	3:05 p.m.			0	0			Funnel aloft	Funnel sighted aloft.

2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

APRIL 1957

Most significant during the month were the severe floods that developed in Texas during the last 10 days of the month. Excessive flooding occurred on nearly all streams throughout the area east of the Pecos River to the Sabine River. Seventeen lives were lost, several hundred homes were destroyed, and large lowland areas were evacuated. A great amount of damage was done by comparatively small streams in urban areas where flood flows were flashy and large in comparison to stream capacities. The floods were in progress at the end of the month.

ST. LAWRENCE DRAINAGE

Lake Erie.--The heavy precipitation during April caused rivers in the Lake Erie drainage to remain at high levels throughout the month. It was the second wettest April of record at Ft. Wayne, Ind., with a total of 7.11 inches. The 10.6 inches of snowfall recorded at this point was the greatest of record. The Maumee River at Ft. Wayne was above flood stage for 9 consecutive days, with a crest of 19.2 feet reached on the 11th due to considerable snowmelt. This was the highest stage reached at this point since February 1950. No serious damage resulted from the high water as preliminary precautions were taken.

Lake Ontario.--Little or no damage resulted from the high water on Oatka Creek which inundated some farmland near Garbutt, N. Y., on the 6th and 7th.

The Groveland-Mt. Morris, N. Y., road was inundated by several feet of water as the Canaserago Creek overflowed on the 6th. No other damage was reported in that area except for the delay that resulted in planting crops due to the wet soil. No damage resulted from the flooding of the Genesee River at Scio, N. Y., on the 6th and 25th.

ATLANTIC SLOPE DRAINAGE

Heavy precipitation (3 to 4.5 inches) during the period April 1-12 caused some flooding along the Wallkill River at Gardiner and Phillipsburg, N. Y. The highest stage reached at these two points was about 13.5 feet. The water level remained at a stage of 12 to 13 feet for a period of 7 days. Some crop damage resulted.

Minor flooding occurred on several streams in New Jersey during the period 5-8th due to heavy precipitation (3.5 to 4.5 inches, April 1-6). The heaviest precipitation occurred during the night of the 4-5th, when about 2 inches was recorded. Some road underpasses were flooded in the vicinity of Manville and Bound Brook, N. J., delaying traffic for several hours. Near Chatham, N. J., a few manufacturers were forced to curtail operations on the 6th due to back-up of drainage.

The minor flooding on the Lackawaxen River at Hawley, Pa., on the 6th and 7th was due to heavy precipitation (2.3 inches) on the 5th, which fell as snow and melted rapidly on the 6th. There was some flooding on small streams in the Lehigh drainage on the 5th from the heavy rain (2.7 inches) over the basin on the 4th and 5th. Larger creeks, as well as the Lehigh, remained well within their banks.

Local flooding occurred on Perkiomen Creek at Graterford, Pa., on the 5th and 6th from the heavy precipitation during the first 5 days of the month. Fairly high rises occurred on the Schuylkill, but there was no flooding.

Minor flooding occurred on the Susquehanna and Chemung Rivers in New York on the 6th and 7th from heavy precipitation (1.5 inches) on the 5th and 6th. The precipitation on the 5th was in the form of wet snow (8 inches in the Chemung Basin) which melted rapidly on the 6th. No damage was reported.

The flooding in the James River Basin in Virginia from the 5th to the 8th was due to heavy rainfall during the first 6 days of April. The precipitation averaged 2.5 inches above Lynchburg, Va., and 1.75 inches below. Flood damage was limited mostly to inconvenience resulting from rerouting traffic on low-lying roads and streets and the moving of livestock from low-lying pastures.

Minor flooding occurred in the Roanoke Basin in Virginia and North Carolina between the 6th and 26th from the heavy rainfall (2-3 inches) from the 5th to the 9th. Rainfall in the other river basins in eastern North Carolina was comparatively light (less than 1 inch) and no flooding occurred.

The high water in the Yadkin Basin in North Carolina and the Pee Dee River Basin in South Carolina between the 5th and 16th was due to heavy rain (3.5 to 4.5 inches) on the 4th and 5th. Runoff was heavy as nearly 2.5 inches of rain occurred on the 1st and 2d. At Wilkesboro, N. C., the Yadkin crested 4.5 feet above bankfull, the highest stage since 1945. The major damage was to small, private bridges (farm) and to gullies washed as the water receded. The Airport was also waterlogged for several days.

Heavy rains (2-3 inches) over the upper Saluda, with local amounts in excess of 5 inches in the headwaters of the Broad and Catawba Rivers in South Carolina on the 4th and 5th, caused light to moderate overflows in those streams. The Catawba River reached its highest stage at Catawba, N. C., since June 14, 1947. A considerable portion of these flood waters was contained in reservoirs downstream so that only a light spill occurred at Wateree Dam. The Saluda above Lake Greenwood crested at the highest values since last spring. Lake Greenwood did not spill, although the reservoir almost reached capacity storage. Lake Murray has continued to rise and is at the highest level in several years, although still several feet below spilling. On the Broad unusually high stages occurred from Gaffney northward due to excessive rains in the headwaters, while crest stages downstream were not as pronounced. Lake Marion also rose to the highest level in the last year.

Little, if any, damage resulted from the flooding along the Ocmulgee River in Georgia during April as most of the land adjacent to the river banks is generally uncultivated and uninhabited. Lumbering interests which maintain equipment in the lowlands were given sufficient warning to move equipment to higher ground.

EAST GULF OF MEXICO DRAINAGE

Moderately heavy rains on the 1st and 2d, averaging 1 to 1.5 inches, followed by heavy to excessive rain (3 to 5 inches) on the 5th, produced light flooding along the Chattahoochee River at West Point, Ga., and Eufala, Ala., and along the Apalachicola in Florida. Warnings were timely in permitting stockmen to remove their livestock from flooded areas. Loggers and sand dredging interests adjusted their activities with little or no loss in time from high water.

No damage was reported from the flooding along the Choctawhatchee River in Alabama and Florida which resulted from the heavy rains on the 4th. However, there was considerable farm damage from erosion due to heavy rains.

Heavy rain in the Alabama River Basin (3.7 inches) in Georgia and Alabama during the 24-hour period ending on the morning of the 5th caused all streams in the basin to rise above flood stage. The rainfall ranged from 1.77 inches at Gadsden, Ala., to 7.18 inches at Natchez, Ala. Runoff was heavy as light to moderate to occasionally locally heavy rainfall had fallen somewhere over the basin during the first 4 days of April. The Coosa River rose 28 feet overnight on the 4-5th at Wetumpka, Ala., and several head of livestock were marooned for several days. This was the greatest flood on the Alabama River since 1948. Civil Air Patrol pilots reported several thousand head of livestock marooned in the Alabama, lower Tallapoosa and lower Coosa River lowlands on the afternoon of the 6th. One pilot reported about 50 head of cattle were marooned 8 miles north of Montgomery and evacuation was being attempted by swimming them out. Hundreds of lowland homes were completely surrounded by water and scores were evacuated. Many rural roads were inundated from 4 to 10 feet deep and several were closed. About 100 persons were evacuated in Montgomery, Ala., on the 7th. The Tallapoosa River rose rapidly and was 3 miles wide, with flood waters reaching almost up to the prison. Several thousand head of cattle were marooned in the Milstead, Ala., area and the lower Tallapoosa River for several days, and livestock losses are believed to have been rather heavy.

Minor flooding occurred over the upper reaches of the Warrior and Tombigbee Rivers and over the lower reaches of the Tombigbee during the first part of April due to heavy rainfall on the 1st and 4th. The rainfall averaged 1.5 inches during the first period and 2 inches during the latter, with the heaviest concentration over the middle section near the confluence of the two rivers. Agricultural damage was heavier than would normally occur during the winter as some crops had been planted in the lowlands. Warnings were issued well in advance of the high water to give residents time in which to remove cattle and logging equipment.

Heavy rains on the nights of March 31-April 1 and April 3-4 produced flood conditions on the Pearl River and high stages in the Pascagoula River System. The rainfall ranged from 1.1 inches at Union, Miss., to 4.53 inches at Philadelphia, Miss., with distribution elsewhere ranging mostly from 2-4 inches. Substantial damages were reported over the Pearl River Basin.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--The main surge of the spring snowmelt in the Upper Mississippi Basin above Aitkin, Minn., began on the 17th. It was accompanied with general rains (2.25 inches) over the area on the 19th and 20th. The potential flood threat was not too great as the Upper Reservoirs were low and the upper crust of the ground was dry, even with frost still evident below the first 6 to 12 inches of topsoil.

Spring snowmelt in the upper Chippewa River and upper Wisconsin River drainages was small and spread out so that the hydro-electric plants were able to absorb or flatten the peak flow in their pools.

The mean monthly flow at Merrill, Wis., on the upper Wisconsin River, was 2,456 c.f.s. This is only 64 percent of the normal 3,850 c.f.s. flow. In 1956, Merrill's April flow was 4,007 c.f.s.

There were three periods of flooding on the Meramec River in Missouri. The first overflow was due to rains averaging 1.75 inches during the 48-hour period ending 7 a.m. on the 4th. The second overflow was due to light to moderate recurring rains which began on the 16-17th and continued to the 20th. Additional heavy rain (1.5 inches) occurred in the upper reaches of the basin on the 22d. The last overflow was due to moderately heavy rains (1.25 to 1.5 inches) during the 24-hour period ending on the 27th. The flooding in the Illinois Basin was due to moderately heavy rains (about an inch) which fell during the 24-hour periods ending on the mornings of the 25th and 27th. Very little damage resulted from the overflows as very few crops had been planted.

Missouri Basin.--Heavy rains in southeastern Montana on the 22d-23d resulted in some local overflow of small streams in the Yellowstone River Basin. A few fences were washed out, and there was some erosion of farmland and small creek banks.

Heavy rainfall on the 3d and 4th produced crests on the Grand River one-half foot under bankfull stage at Chillicothe, Mo., and 2 feet above bankfull at Sumner, Mo. The Platte in Missouri crested 3 feet under bankfull. One-half bankfull rises occurred in the tributaries of the lower Kansas and in the Marais des Cygnes River and tributaries in Kansas. The same storm deposited heavy snowfall in western Kansas, Nebraska and South Dakota.

Heavy rains in South Dakota on the 19th and 20th caused minor rises on the middle James and upper Big Sioux Rivers. Heavy rains in Kansas and Nebraska on the 22d-23d caused near bankfull rises on Red Willow Creek, and one-half bankfull crests in the upper Republican. The Marmanton at Ft. Scott crested one-half bankfull.

Ohio Basin.--Bankfull stages were reached on small tributary streams in the Beaver, lower Allegheny, and upper Ohio Basins in Pennsylvania from the light to heavy precipitation which fell over the watershed from the 3d through the 6th. Rainfall averaged 1 to 1.25 inches over the lower Allegheny and upper Ohio Basins on the 4th and 5th, and 0.5 to 0.75 inch over the Allegheny Basin on the 5th and 6th. Light to heavy precipitation (rain and snow) fell over the watershed on the 8th and 9th. Precipitation averaged 1.5 to 1.75 inches over the upper Allegheny, and 0.5 to 1 inch over the lower Allegheny, with snow depths varying from 4 to 18 inches. No flood stages were reached along the main stem of the Allegheny and Beaver Rivers. Flash flooding occurred on the 24th and 25th in the Titusville, Pa., area, where 5 families were evacuated. Water reached the living room levels. Six herds of cattle were evacuated due to the fast-rising streams. Many secondary roads were closed due to high water and landslides. Several streets in the business district of Titusville were flooded, and several cellars had to be pumped out.

The flooding on the New River near Radford, Va., on the 5th and 6th was due to heavy rainfall during the 24-hour period ending on the morning of the 5th. Several stations reported amounts between 2 and 4.7 inches.

Heavy rain during the first 10 days of April resulted in wide-spread flooding along the Scioto River and Paint Creek in Ohio. Flood damage was confined to a small percentage of seeded farmlands where less than 5 percent of the acreage along the lower Scioto had been planted.

Several families in the Big Walnut and Alum Creek areas were temporarily evacuated on the 4th. Flood damages were light, but further rises of 1 foot would have resulted in major damage to residential and industrial property.

The flooding on the Little Miami River in Ohio was due to heavy rainfall (2.5 inches) on the 3d and 4th. Runoff was heavy as the ground was saturated from the rain (0.75 to 1 inch) on the 1st and 2d. About 26 persons were evacuated, and many others marooned in Old Fort Country Club, Tower Hill, Fort Scott, Miami Grove and Bass Island, where water was 4 feet deep in some residential areas.

Rainfall was heavy over much of the Ohio Basin on the 3d-4th, averaging 2 to 2½ inches with locally heavier amounts on the Green River in Kentucky. A few stations reported between 4 and 5 inches.

Another general rain over the basin on the 7-8th averaged 1 to 1.5 inches. These rains brought a rapid rise to all streams in the Ohio Basin.

Flooding occurred along the Green in Kentucky, except in the upper portion. The high water was less pronounced than in February and caused little, if any, additional damage.

It was necessary to evacuate some families in Mill Shoals, Ill., along Skillet Creek, as well as at Carmi, Ill., along the Little Wabash. The high water delayed spring planting for about 3 weeks. There was some loss of wheat, barley and clover, otherwise crop damage was fairly low.

Several families were evacuated along the Wabash River in the Wabash, Ind., area by the Red Cross, local police and Civil Defense agencies, as the Wabash rose to 9.5 feet above flood stage on the 6th. At Montezuma, Ind., the Wabash remained above flood stage from the 4th through the end of the month. At Elliston, Ind., the White River crested at a stage of 26.45 feet (flood stage 18 feet), only a few tenths of a foot short of the stage which would have resulted in the rerouting of traffic of the Milwaukee Railroad. River stages in many areas were the highest since 1950. A few levees gave way at points along the Wabash River and in the Petersburg area on the White River. Many state highways were closed by high waters and a number of areas not flooded directly were inconvenienced for this reason.

The moderate flooding on the French Broad River in North Carolina was due to heavy rain during the night of the 4th and 5th. The rainfall ranged from 3.1 inches at Hot Springs to 5.99 inches at Hendersonville. It was the highest April flood of record.

Locally heavy rains during the same period caused the South Chickamauga Creek to rise 3.7 feet above flood stage near Chickamauga, Tenn., on the 5th. No damages resulted from this rise. Another locally heavy rain on the 8th caused flash floods on Pistol Creek in Maryville, Tenn., and Guest Creek in Sevierville, Tenn. The crest was the highest in the memory of several old residents in the area. Damages were limited to flooding of basements and roads. Another flash flood occurred on Colburn Creek at Colburn, Va., on the 22d from a local thunderstorm of one hour's duration. A retaining wall gave away and flooded a used car lot.

Flooding along the main stem of the Ohio was limited to the reach at and below Dam 33 at Maysville, Ky., a river distance of 576 miles. This flood was comparatively minor and damages were limited mostly to pasture lands as other crops had been destroyed in the February flood. There was some delay in preparing ground for spring planting.

White Basin.--Heavy rains on the 3d and 4th caused a sharp rise in streams in the White Basin in Arkansas with flooding on the Black, Little Red and White Rivers. The Black and the White Rivers were in continual flood in some portions of the lower reaches the remainder of the month. There were two distinct overflows on the Little Red, the last overflow being due to heavy rains during the last week of the month. Damages along the Black and Little Red were heavy, amounting to around a quarter of a million dollars in each basin.

Arkansas Basin.--The flooding in the Arkansas Basin during April was due to heavy rainfall (4 inches) on the 3d and 4th, and from the 21st to the 23d. The flooding on the Illinois River at Tahlequah, Okla., was the sixth highest of record. The principal flood damages occurred on the Illinois River above Tahlequah, Okla., and in the Arkansas Basin between Sallisaw, Okla., and Van Buren, Ark.

Red Basin.--There were two periods of flooding in the Little River in Arkansas and in the Sulphur River in Louisiana and Texas during April. The first period of flooding occurred between the 1st and the 14th and the second from the 22d through the end of the month. This second overflow also included the Cypress River in Texas and the Red River in Arkansas and Louisiana. The rainfall that caused these overflows averaged 2.75 inches in the Upper Red Basin during the first 4 days of the month, and 10.5 inches in the lower portion. During the 2d period, from the 20th to the 27th, precipitation averaged about 7 inches in the upper and lower Red, and 14 inches in the central portion. Damages from the flooding is expected to be heavy as it continued into May.

Lower Mississippi Basin.--The St. Francis continued in flood from the 3d through the end of the month and was due to heavy rainfall that averaged nearly 5 inches during the first 4 days of the month. Moderate rains during the remainder of the month kept the river in flood with little change in stage.

Minor flooding of farmlands occurred in the Big Black River Basin in Mississippi.

The lower Mississippi was in flood at Caruthersville, Mo., from the 13th through the 24th, due to high flows from the Ohio Basin resulting from the heavy rains on the 4th and 8th. Overflow was confined to very low areas in Missouri and Arkansas between the levee and the river and lowlands in Tennessee. There was some damage to highways and buildings in the flooded area.

WEST GULF OF MEXICO DRAINAGE

There were two rises on the Sabine River in Texas during the month. The first overflow was due to heavy rains on the 1st (0.75 to 1 inch) and 4th (1.5 to 3.4 inches). The second period of flooding was due to heavy precipitation from the 20th to the 30th which averaged about 11 inches over the Sabine, with 2.5 inches of it occurring during the 24-hour period ending at 7 a.m. on the 27th. In the Longview-Marshall area, 4.5 inches was reported in that 24-hour period.

The light flooding in the Nezpique Bayou and the Mermentau River in Louisiana was set off by heavy rainfall on the 17th. At Mermentau, La., and Hecker, La., 4.4 inches and 4.3 inches, respectively, were reported on that date.

The major flooding which was in progress on the Trinity River in Texas as the month ended began on the 21st at Trinidad, Tex., and was due to the record-breaking rainfall which began on the 19th and continued into May. The heaviest rainfall occurred on the 26th, with several stations reporting more than 7 inches on that date. There was extensive damage to agricultural interests with 200,000 to 300,000 acres inundated. Streets and highways also suffered extensive damage, and there was some damage to a limited number of residences near small streams in the Fort Worth area, and considerable damage to residential areas in the southern section of Dallas unprotected by levees. There was moderate damage to transportation facilities and utilities. Approximately 900 families were evacuated in the river bottoms in South Dallas during the afternoon of the 26th.

Flooding occurred on all portions of the Guadalupe, Lavaco, Navidad and the San Antonio Rivers, except for the middle portion at and below Falls City, Tex. Flooding began on the 23d in the Guadalupe at Victoria, Tex., and on the 24th in the San Antonio River. Rains up to 9 inches occurred above New Braunfels, Tex., on the Guadalupe and above the Medina Dam on the Medina during the early morning hours of the 24th, resulting in moderate flash flooding in those areas.

Rains during the day of the 24th caused the Blanco River to rise sharply, with some areas of San Marcos, Tex., flooded during the early morning hours of the 25th. As the crests from these rains moved downstream they were increased and delayed by additional heavy rains over all watersheds. There was considerable damage to growing crops and grazing lands in the middle and lower sections of the rivers. Approximately 100 families were evacuated in San Antonio on the 28th, and 15 to 25 families in Victoria, Tex., on the last of April and the first part of May.

Heavy rains on the Colorado River watershed below Mansfield Dam caused the first flood stages at Columbus and Wharton, Tex., since establishment of the control dams above Austin, Tex. The crest of the high water passed Columbus, Tex., on April 29, and Wharton in the early morning hours of May 1. Flood damage at Columbus and below was largely to crops that were inundated and to roads washed out between Bay City and Matagorda, Tex. Cropland flooding was most extensive below Columbus between the towns of Garwood and Eldridge, Tex. The peculiar combination of heavy rains above Mansfield Dam and also downstream did not permit release from Lake Travis until the floodwater below Austin had moved into the Gulf. This resulted in the highest levels ever known in Lake Travis since the dam was built. There was extensive damage to many homes around Lake Travis which had been constructed below the spillway level of 714 feet.

Considerable flooding occurred in the middle and lower Nueces, the middle and lower Frio, and the Atascosa Rivers in Texas from the heavy rains during the last 2 weeks of April. The highest stage since 1946 was reported at Three Rivers, Tex., on the Nueces. Otherwise, there was no major flooding as the rainfall was sufficiently spaced. Flood damages were limited to soil erosion with minor damage to highway and railroad bridges and embankments. Construction on the new Wesley Seale Dam on the lower nueces and damages are not expected to be high except for about 2 months' delay in construction time. Most of the flooding occurred on ranch and farmlands with minor damage. A few families were evacuated from their homes along the Nueces River at Cotulla, Tex., during the flash flooding on the 22d.

The minor flooding on the Rio Grande, at Eagle Pass, Tex., on the 29th was due to heavy rains that fell over the basin from Langtry to Brownsville, Tex., during the nights of the 27th and 28th. The rainfall ranged from 1 to 4 inches, with unofficial amounts considerably higher. No damage was reported.

125	26	14,614	-54.1		291	34.8
100	24	16,051	-55.4		291	29.5
80	22	17,452	-56.5		292	20.6
60	15	19,267	-55.7		285	13.8
50	13	20,423	-56.4		276	11.8
40	12	21,834	-56.6		263	11.1
30	10	23,653	-56.0		255	8.7
20	7	26,258	-54.2			
15	5	28,105	-53.1			

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

20-----	6	26,450	-48.9			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

20							5	26,492	-49.2																					

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

* 7 mb., 5 obs., 33,043 m., -43.4°C.

** 7 mb., 11 obs., 33,134 m., -45.7°C.

60	5	19,431	-59.3			

Note: All observations scheduled at 0300, G.C.T. except at Mazatlan, Merida and Veracruz, where they are taken near 0200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed in Table 30 appears in Monthly Weather Review, Volume 75, No. 3, March 1947, p. 47.

SOLAR RADIATION DATA

APRIL 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg
Date------------	2	3	4	5	6	7	8		9	10	11	12	13	14	15		16	17	18	19	20	21	22

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

** Radiometer inoperative

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

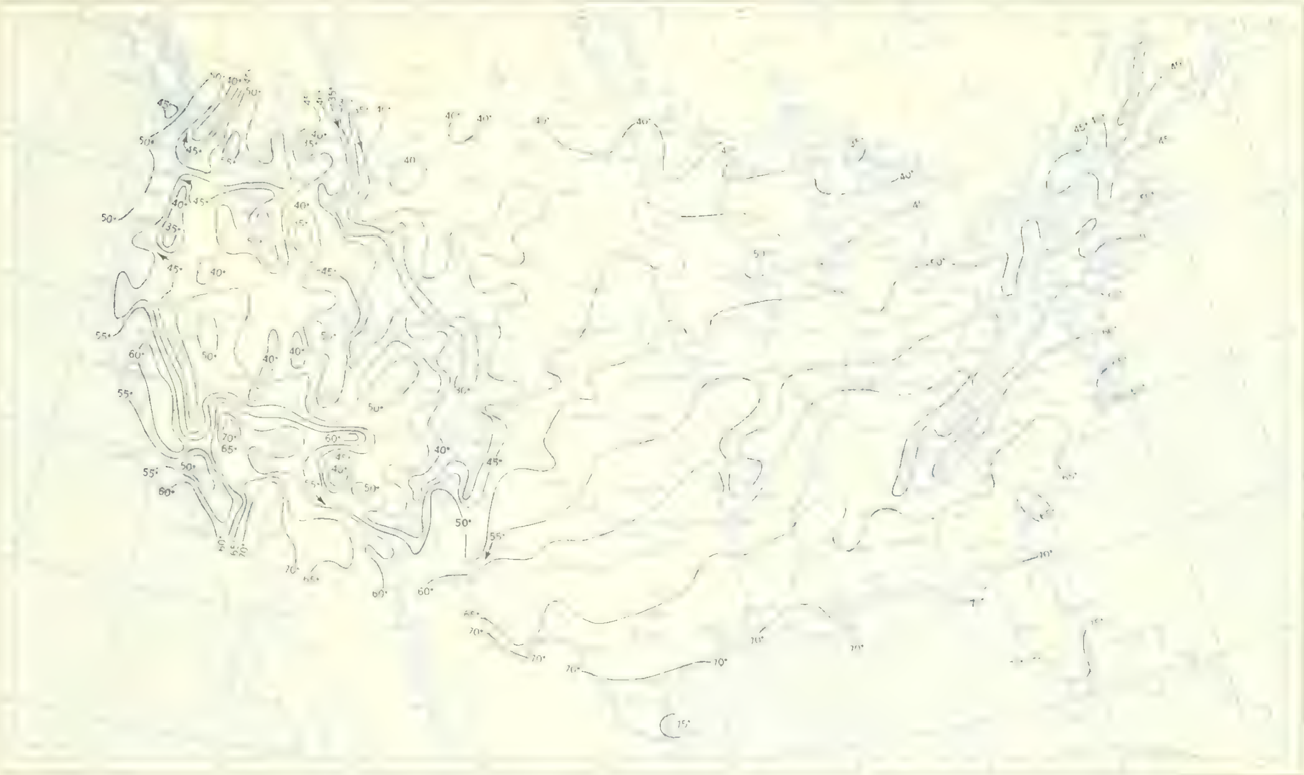
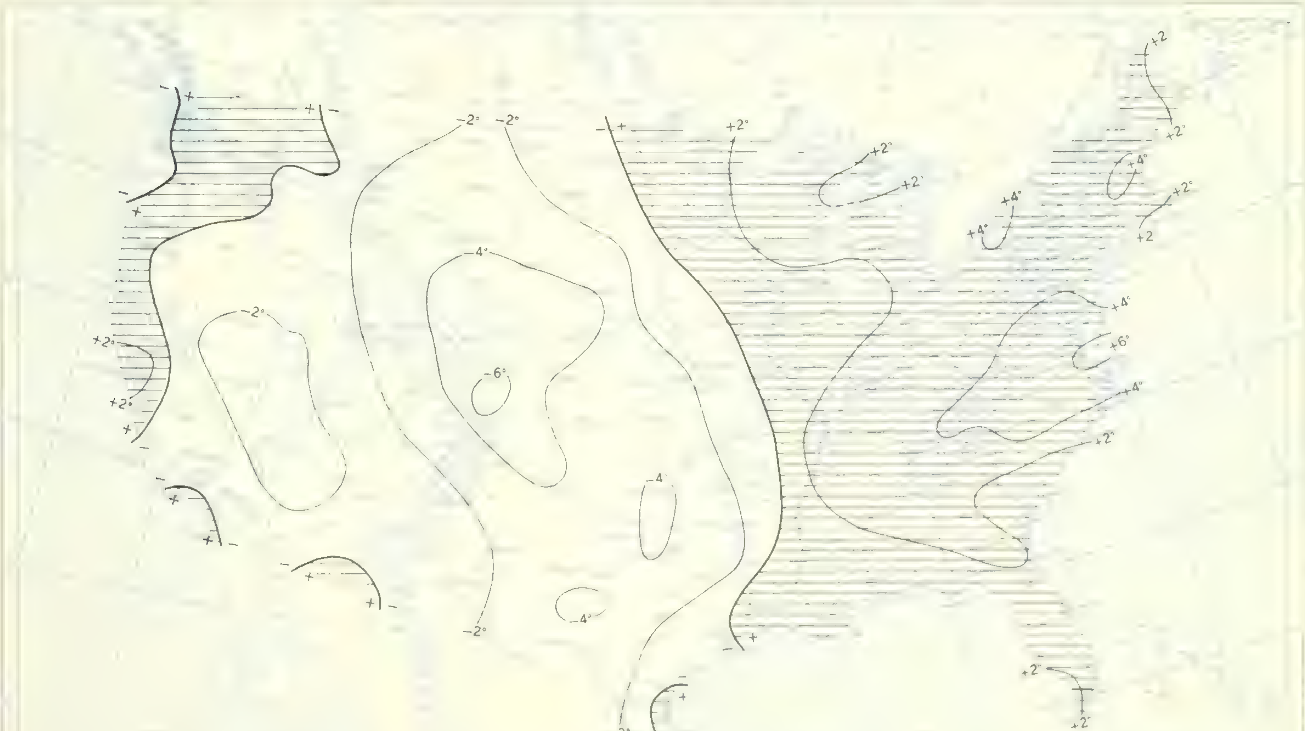
Chart I. A. Average Temperature (°F.) at Surface, April 1957.

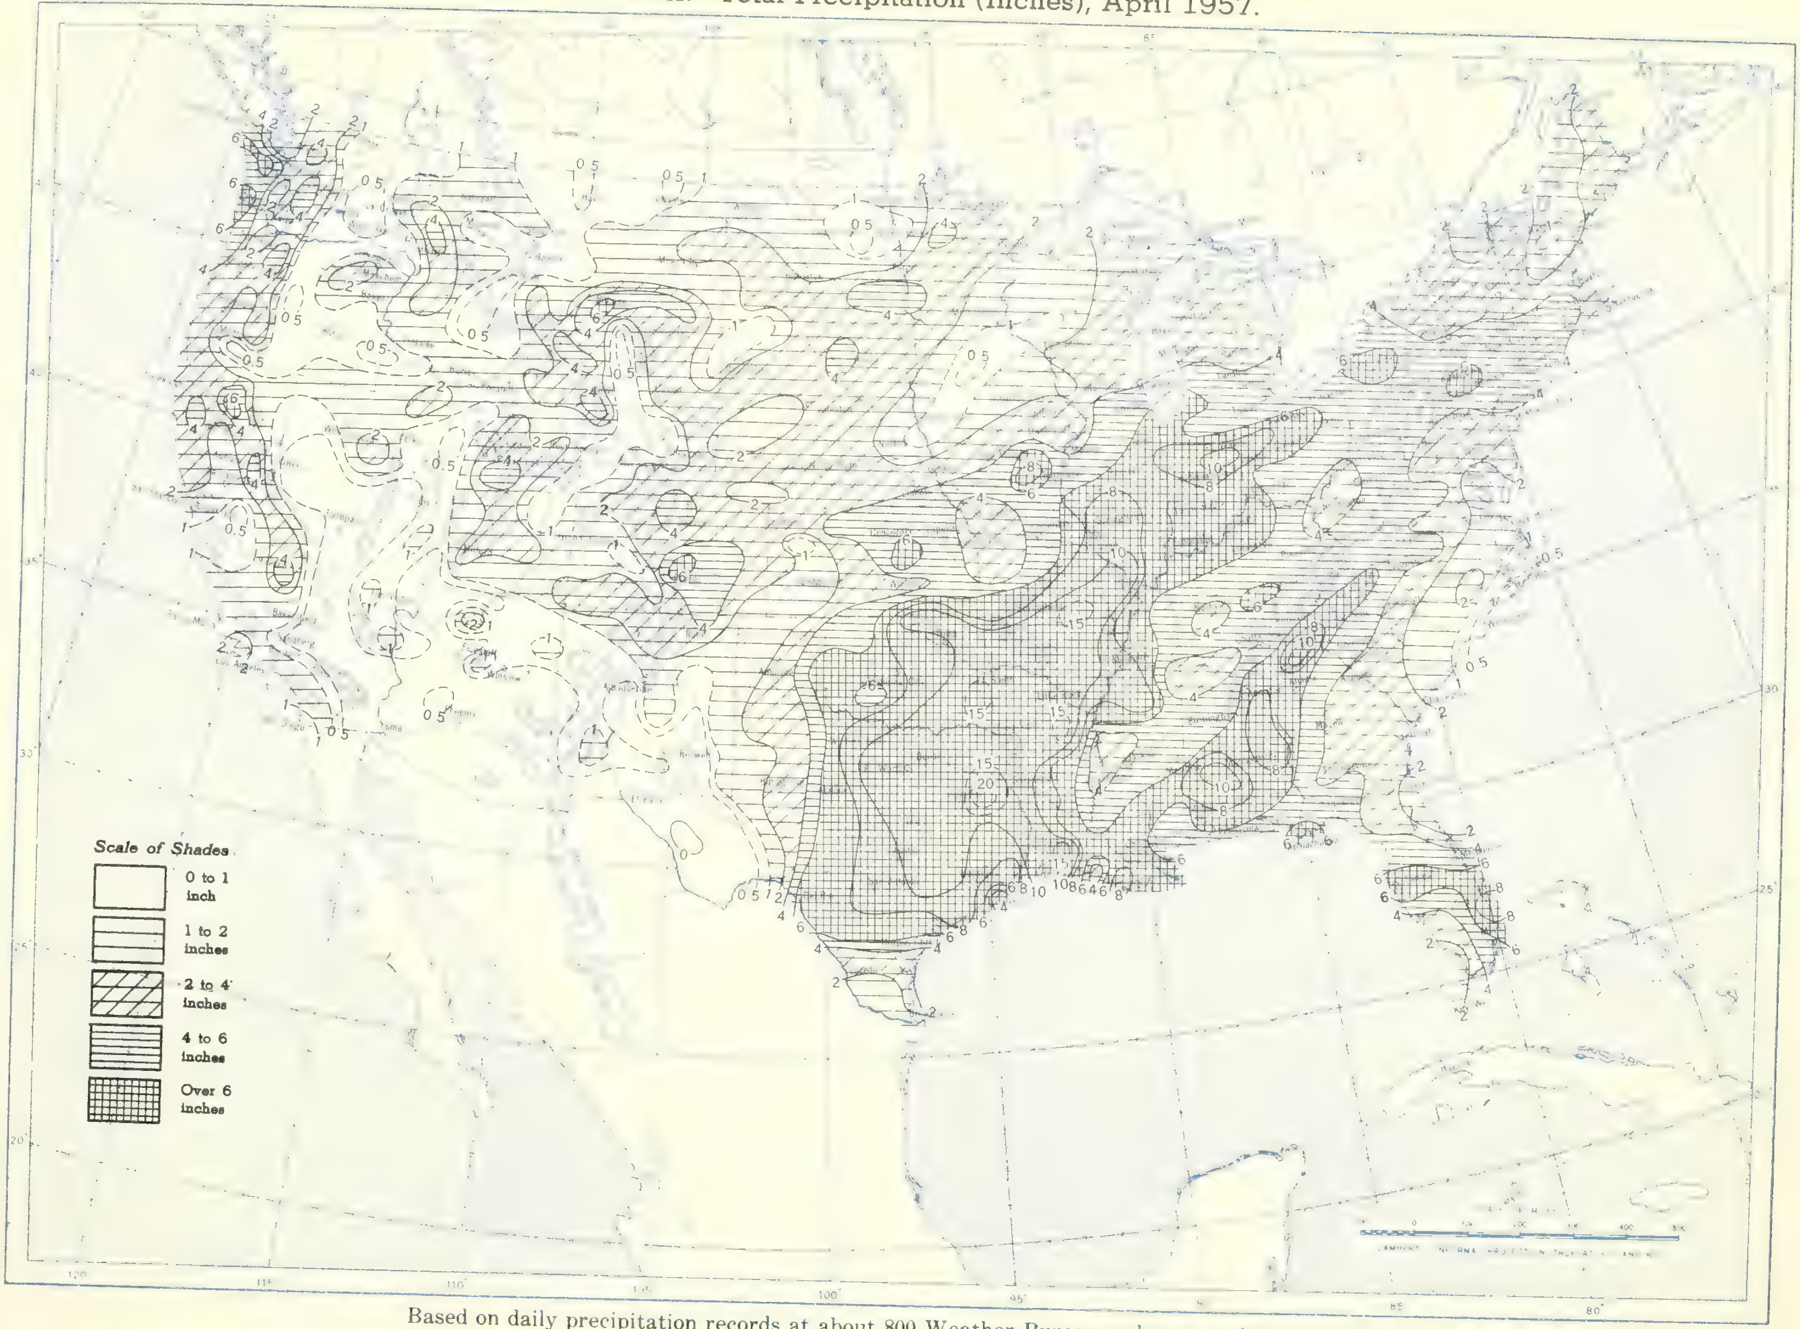


B. Departure of Average Temperature from Normal (°F.), April 1957.



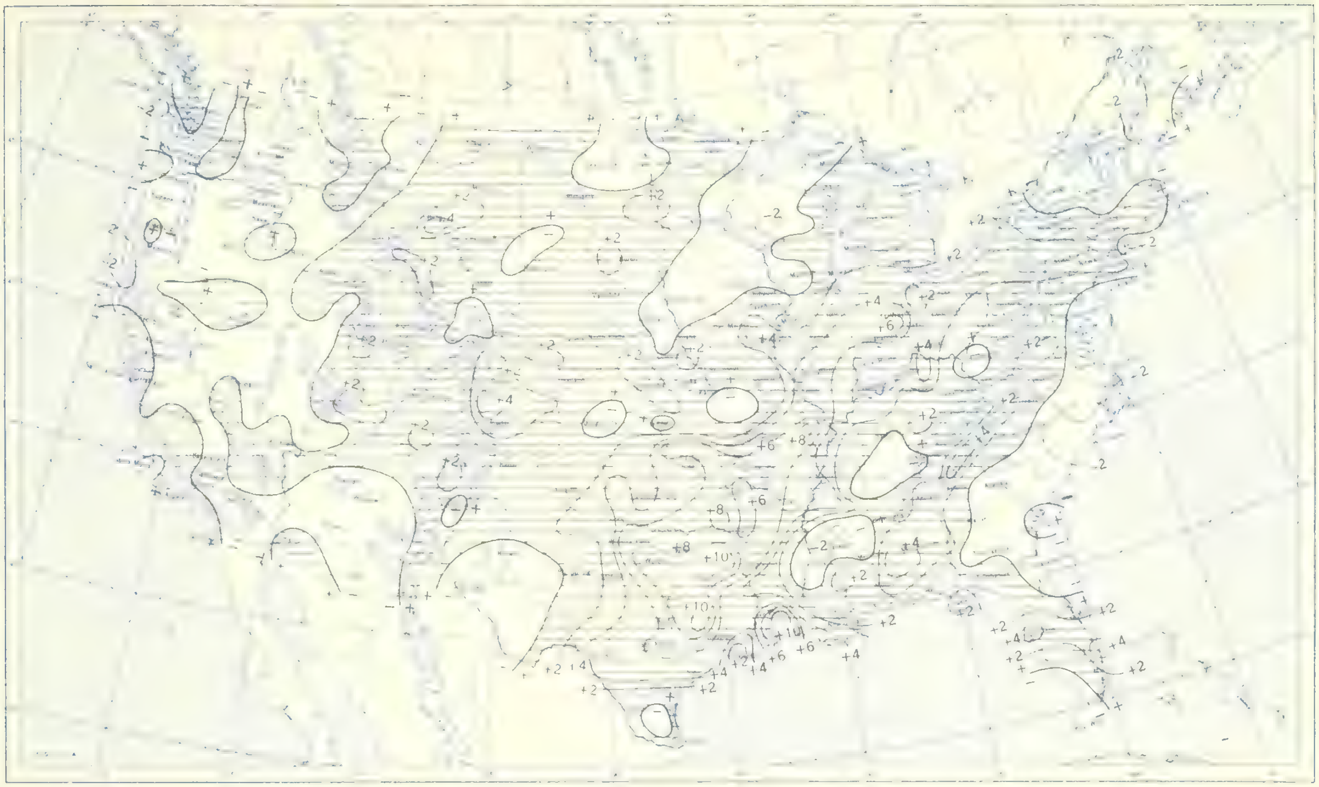
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), April 1957.

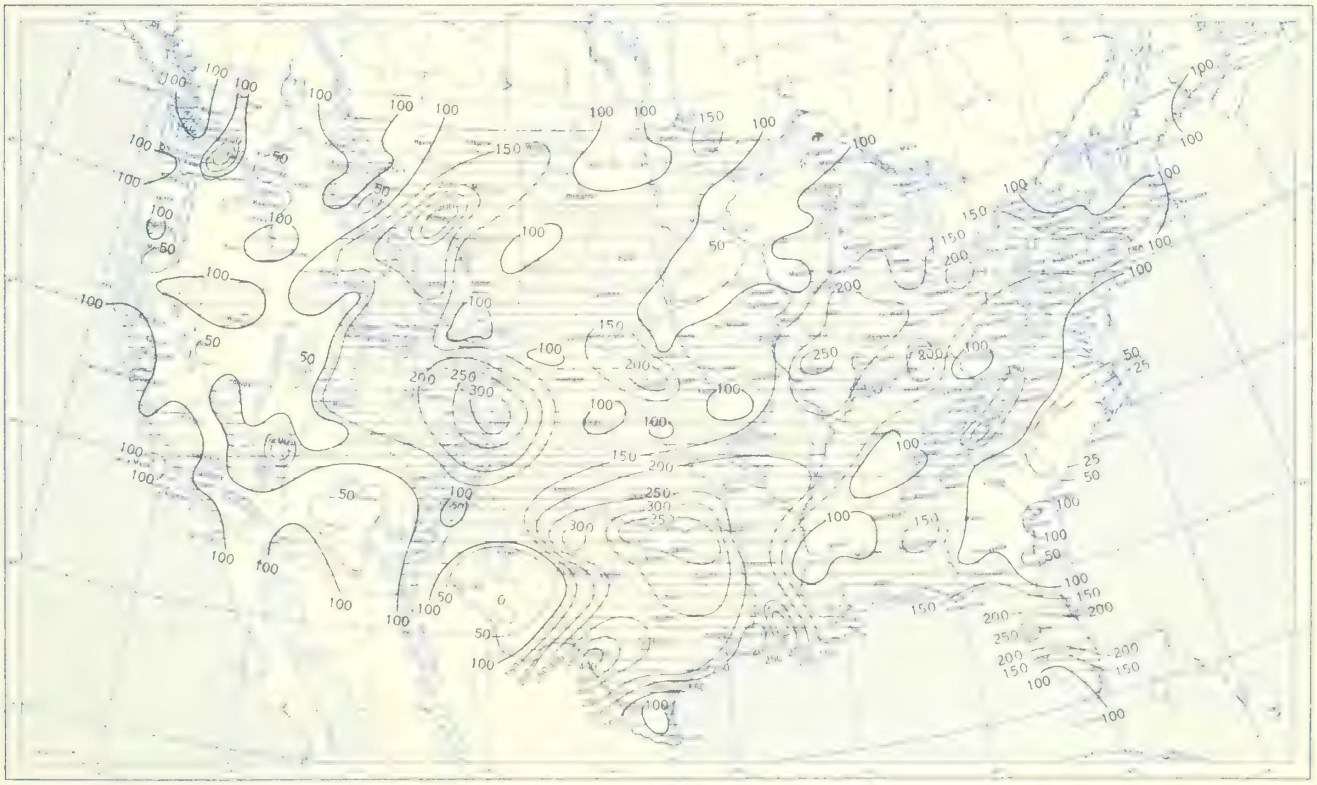


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations

Chart III. A. Departure of Precipitation from Normal (Inches), April 1957.

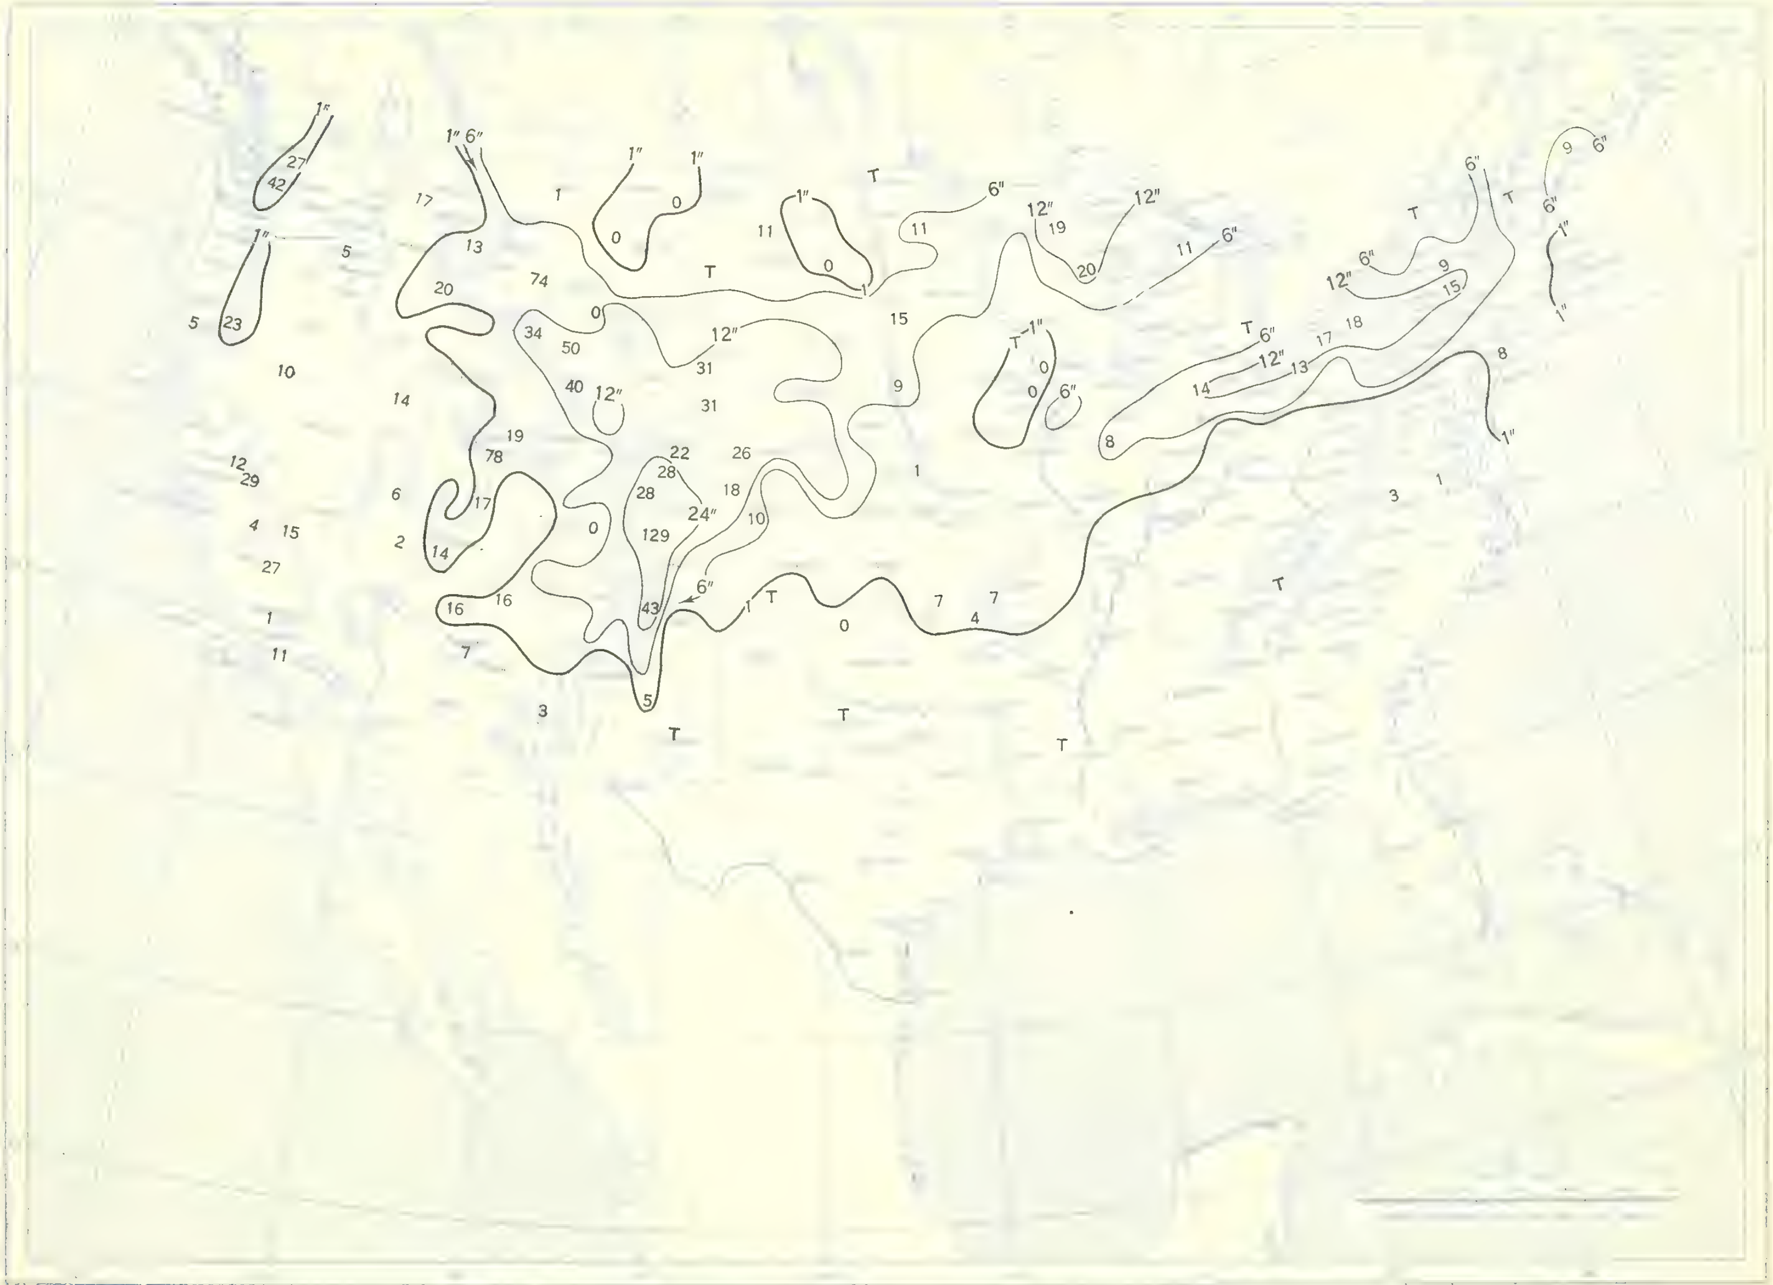


B. Percentage of Normal Precipitation, April 1957.



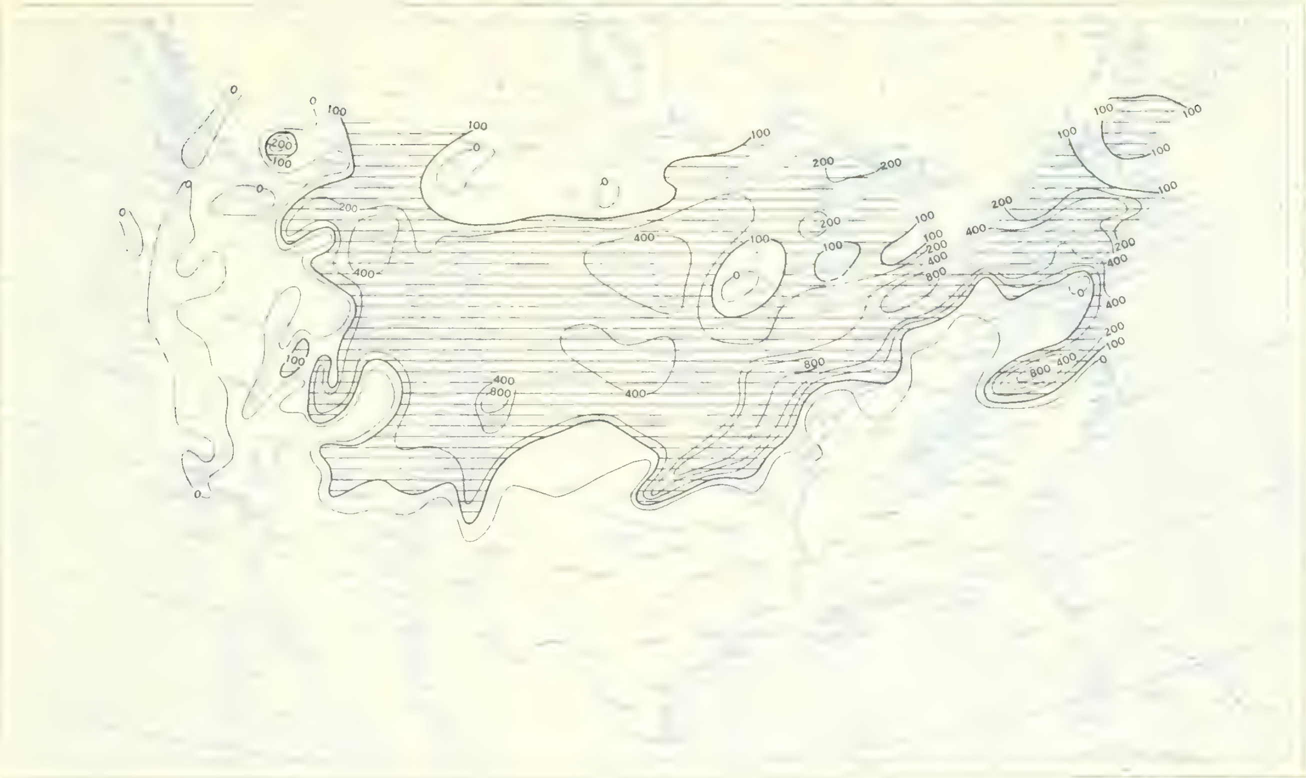
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart IV. Total Snowfall (Inches), April 1957.



This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, April 1957.

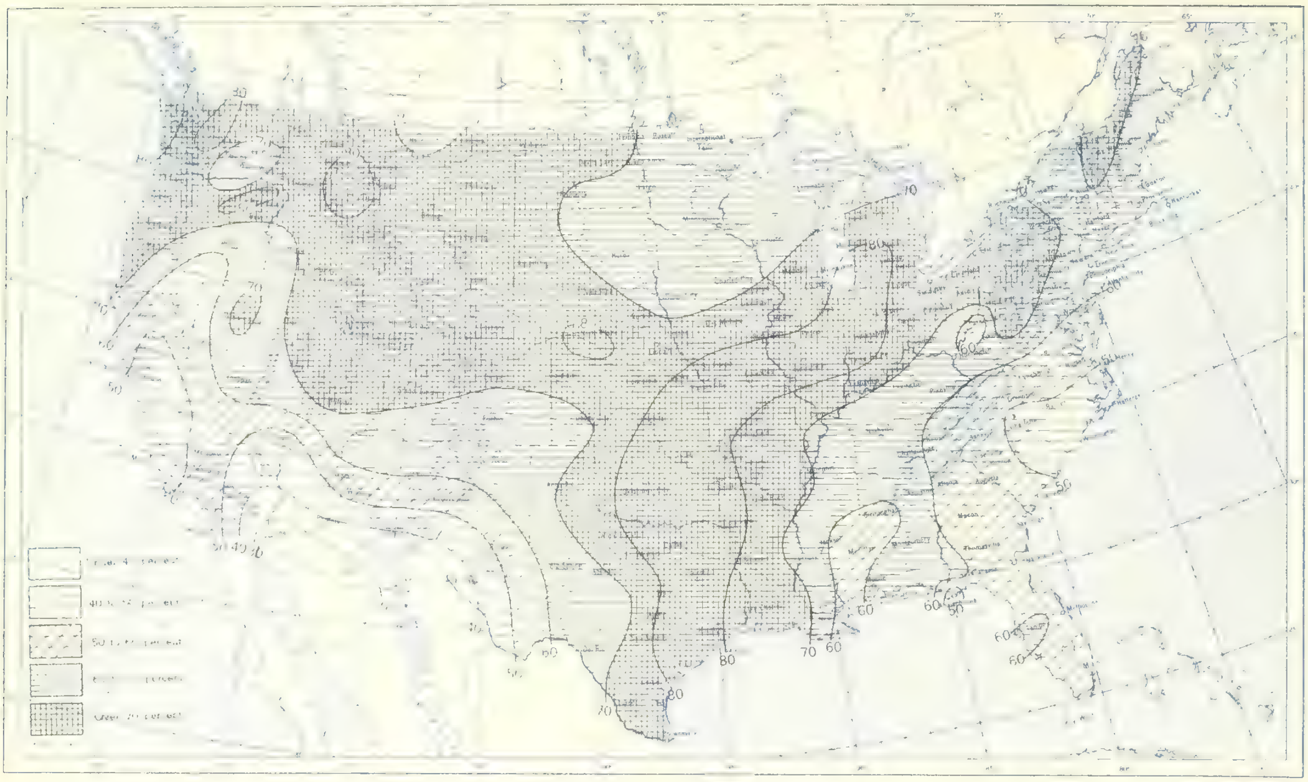


B. Depth of Snow on Ground (Inches). 7:30 a. m. E. S. T., April 29, 1957.

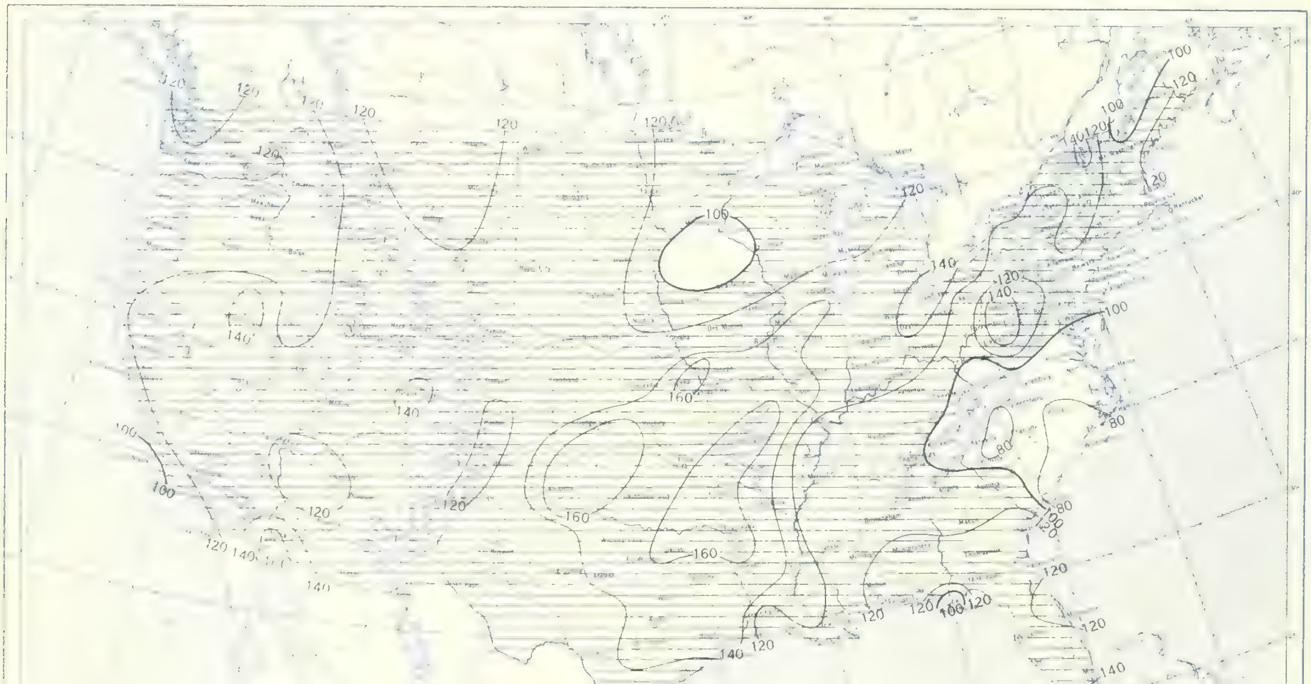
DISCONTINUED UNTIL NOVEMBER

A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:30 a. m. E. S. T., of the Monday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, April 1957.

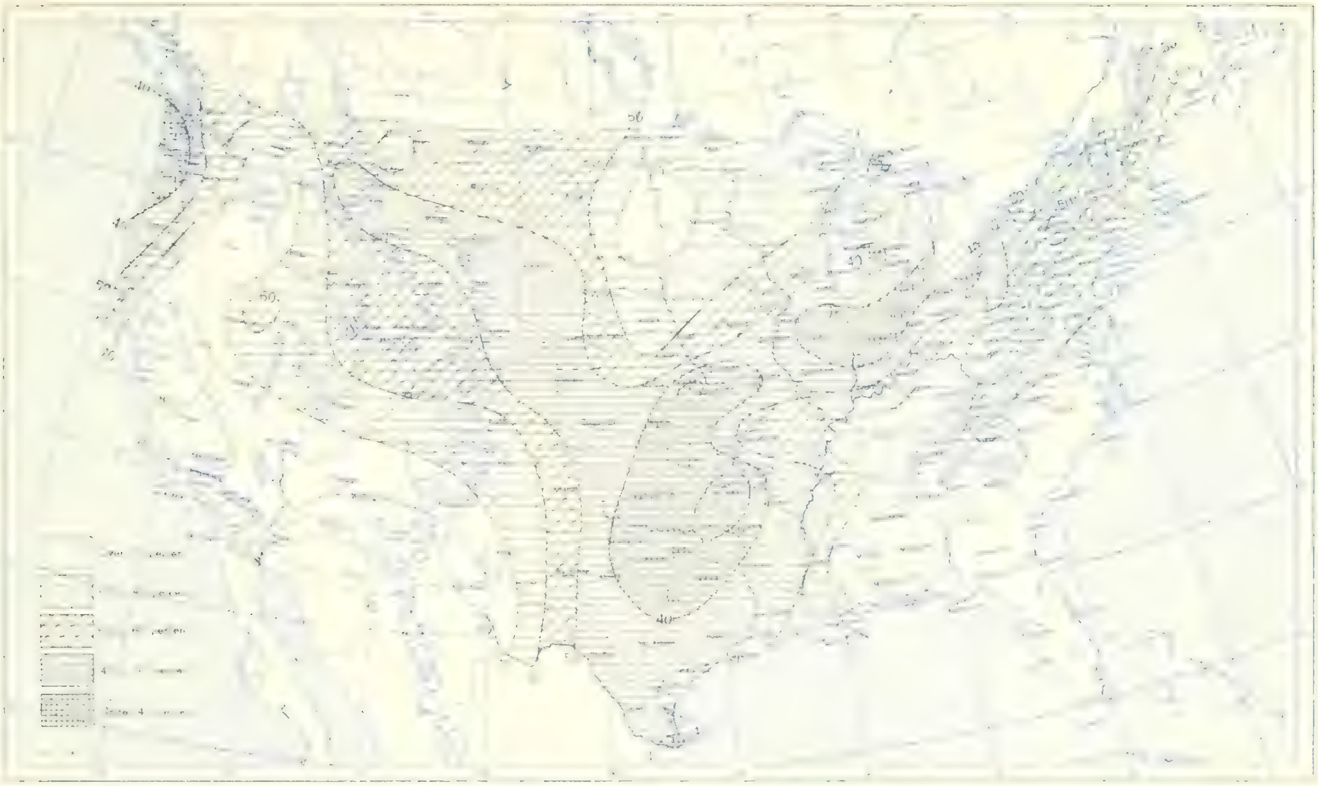


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, April 1957.

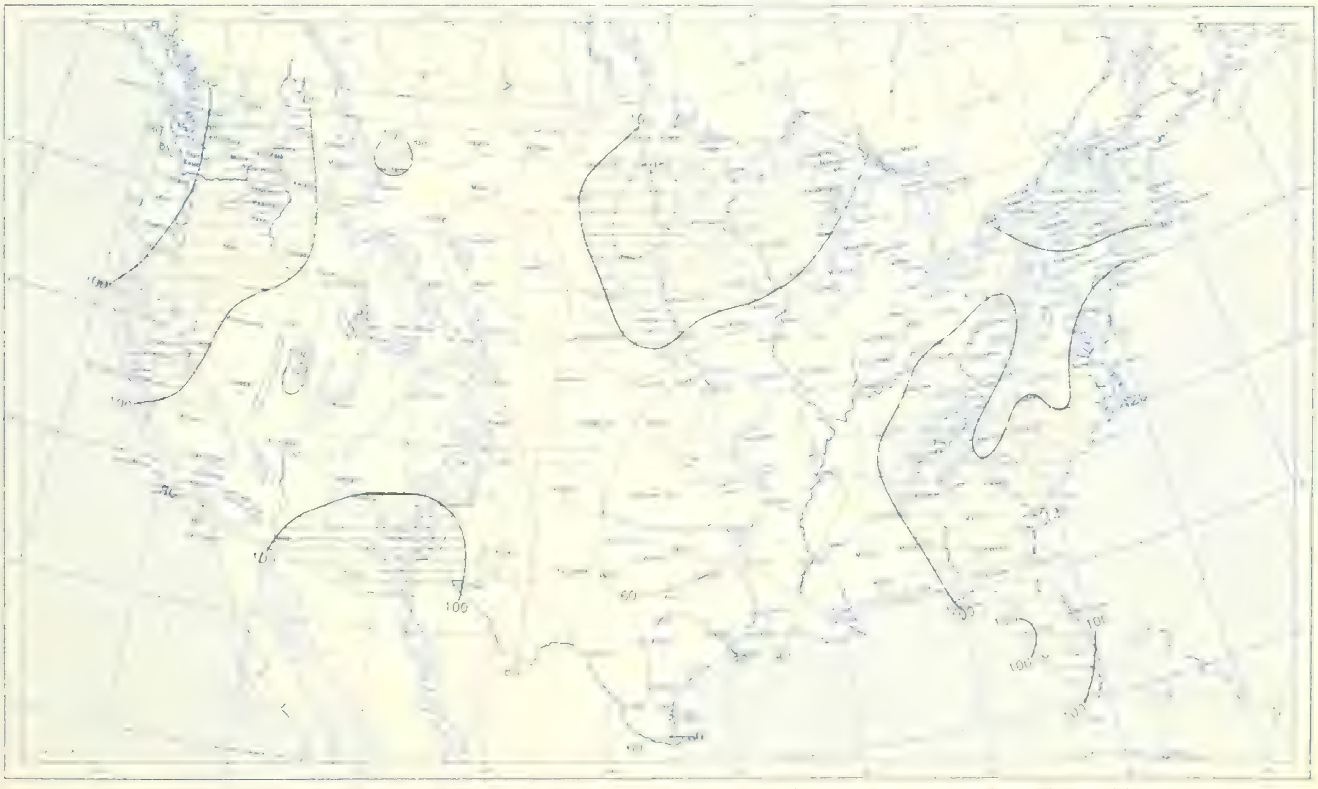


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, April 1957.



B. Percentage of Normal Sunshine, April 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, April 1957. Inset: Percentage of Mean Daily Solar Radiation, April 1957. (Mean based on period 1951-55.)

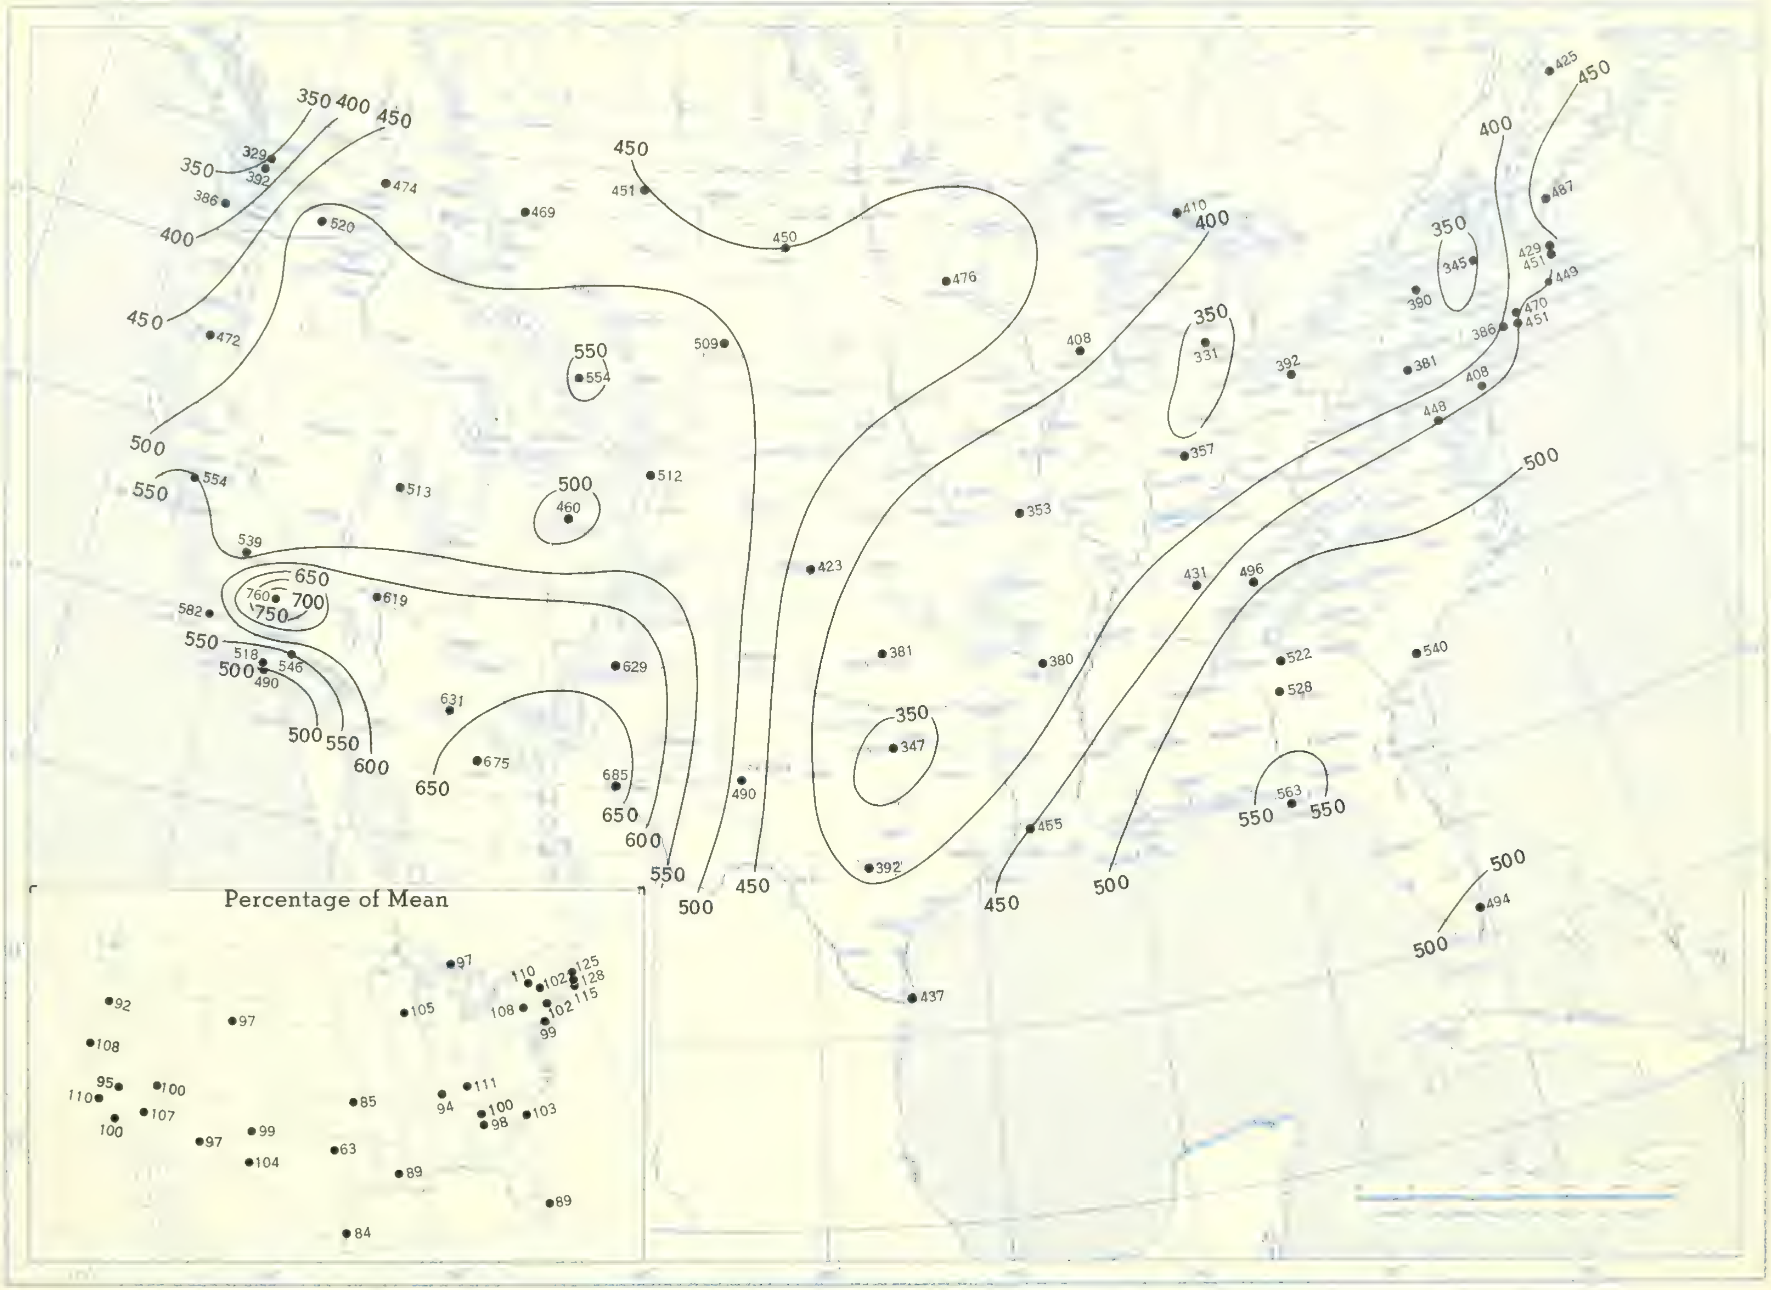


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm. $^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

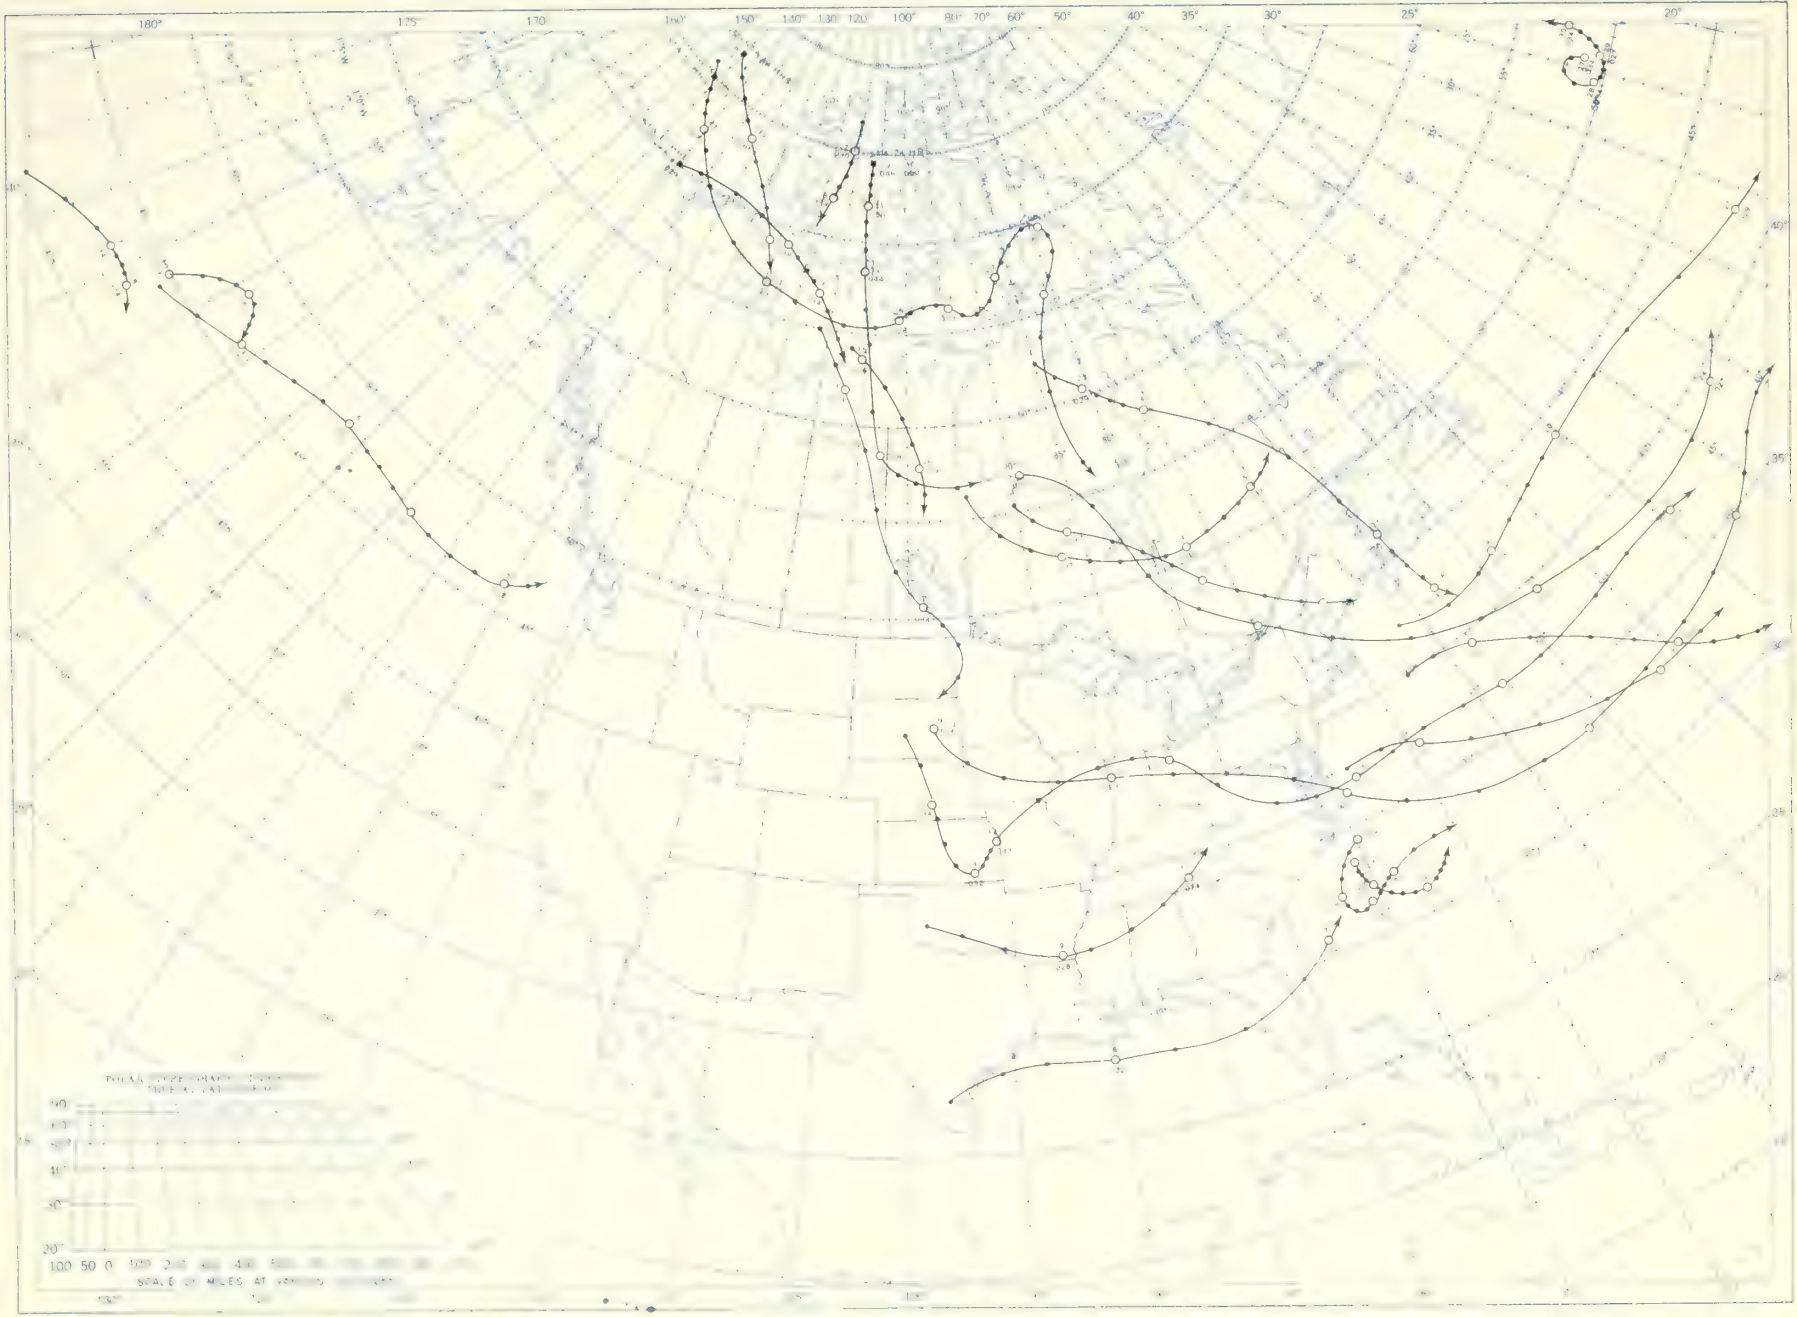
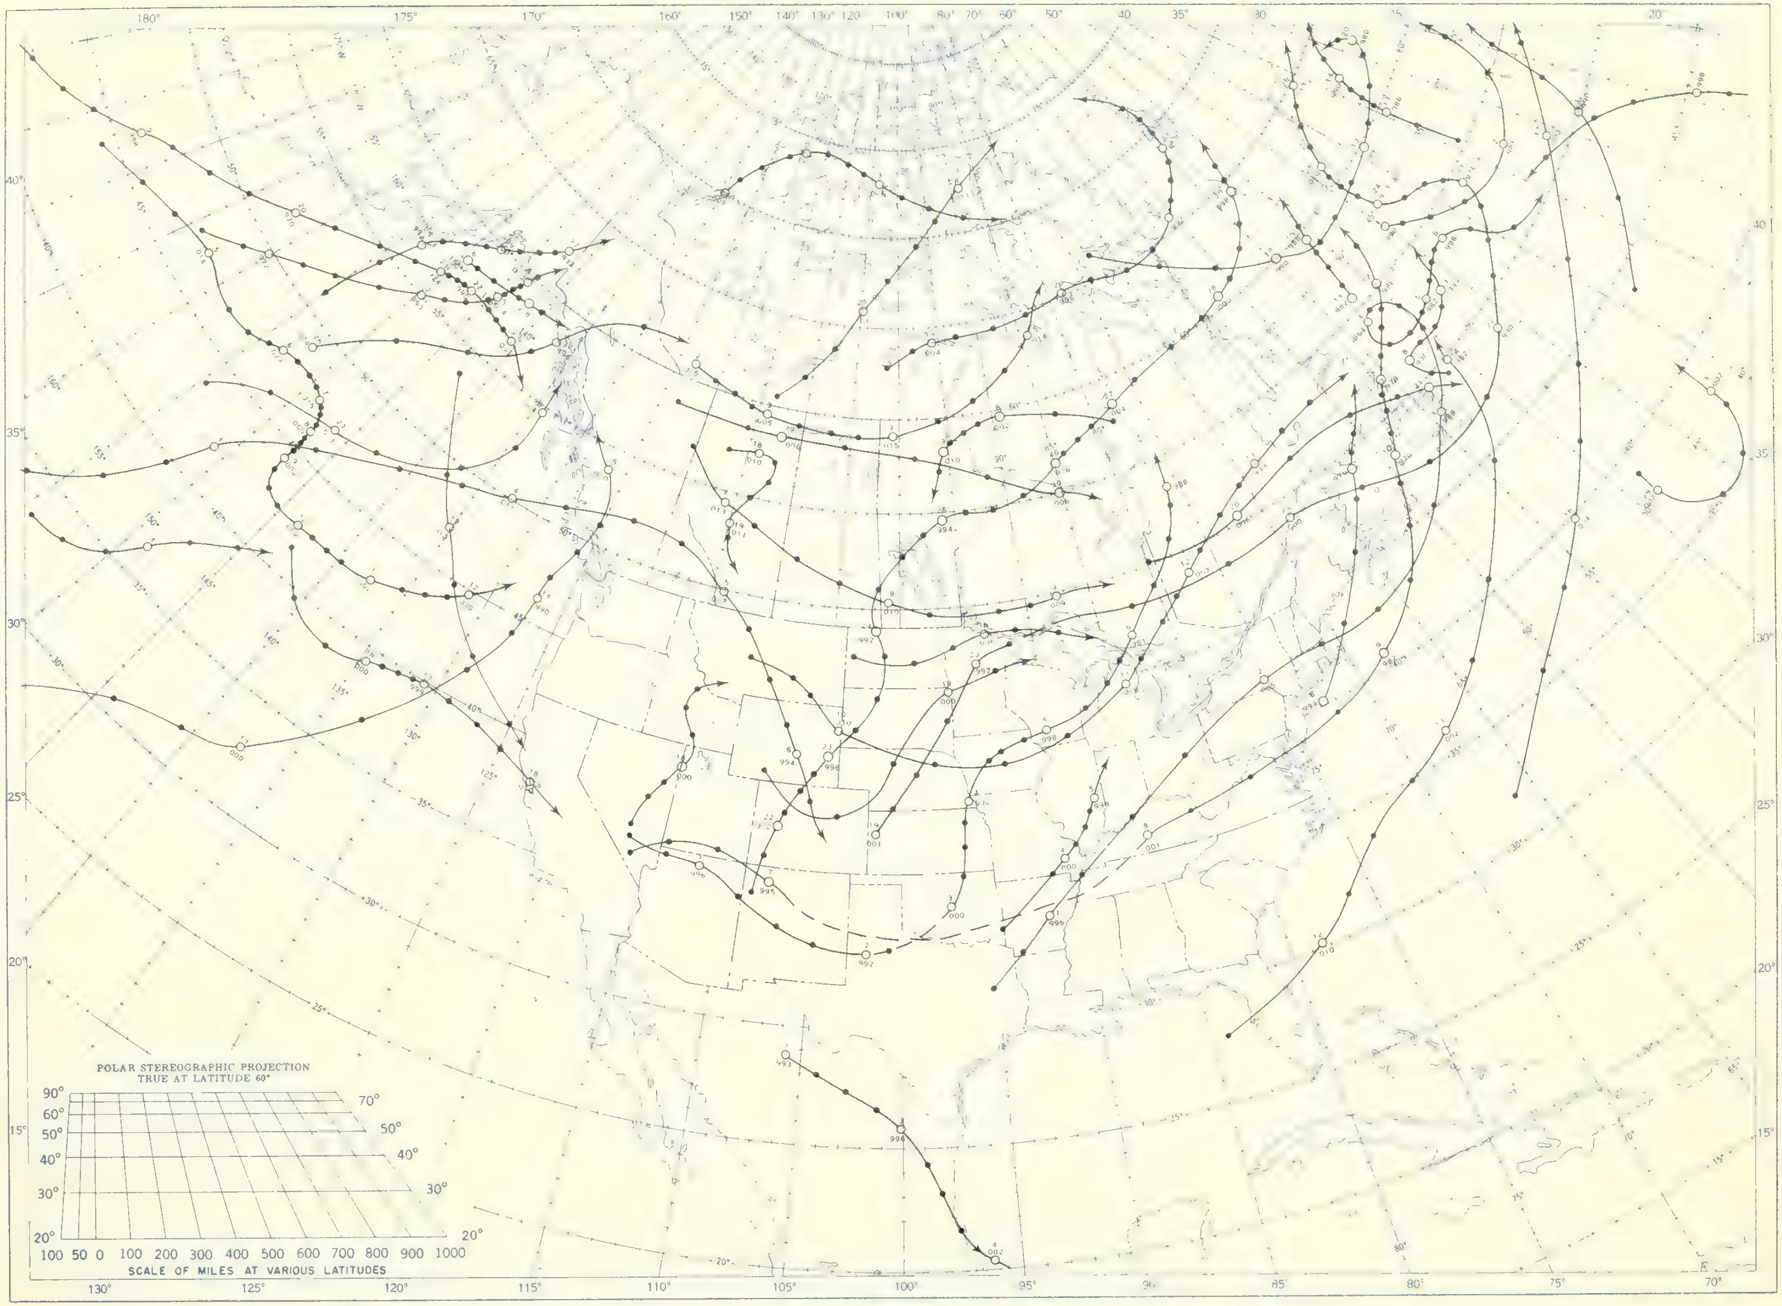
Chart IX. Tracks of Centers of Anticyclones at Sea Level, April 1957.



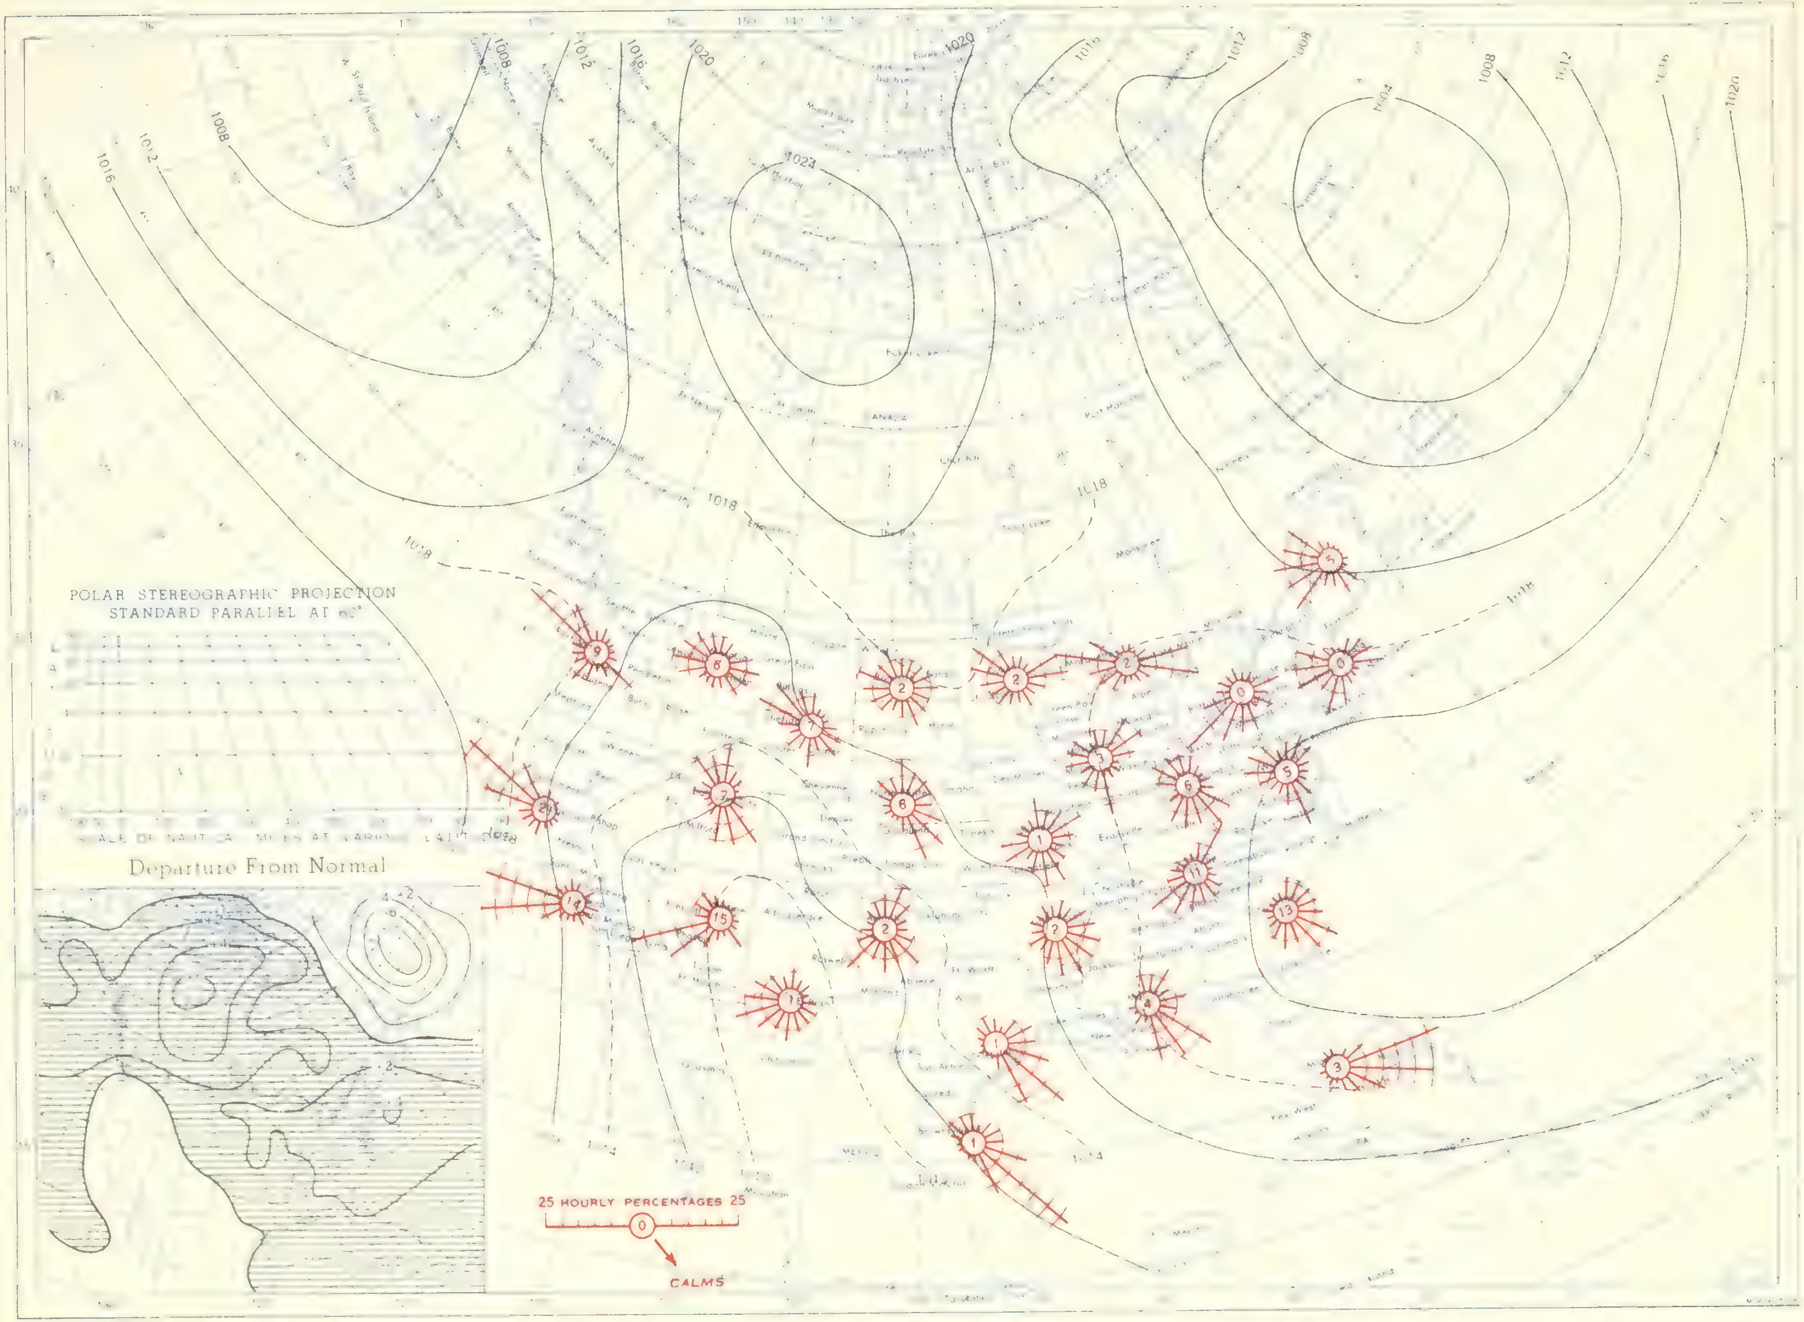
Circle indicates position of center at 7:30 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, April 1957.



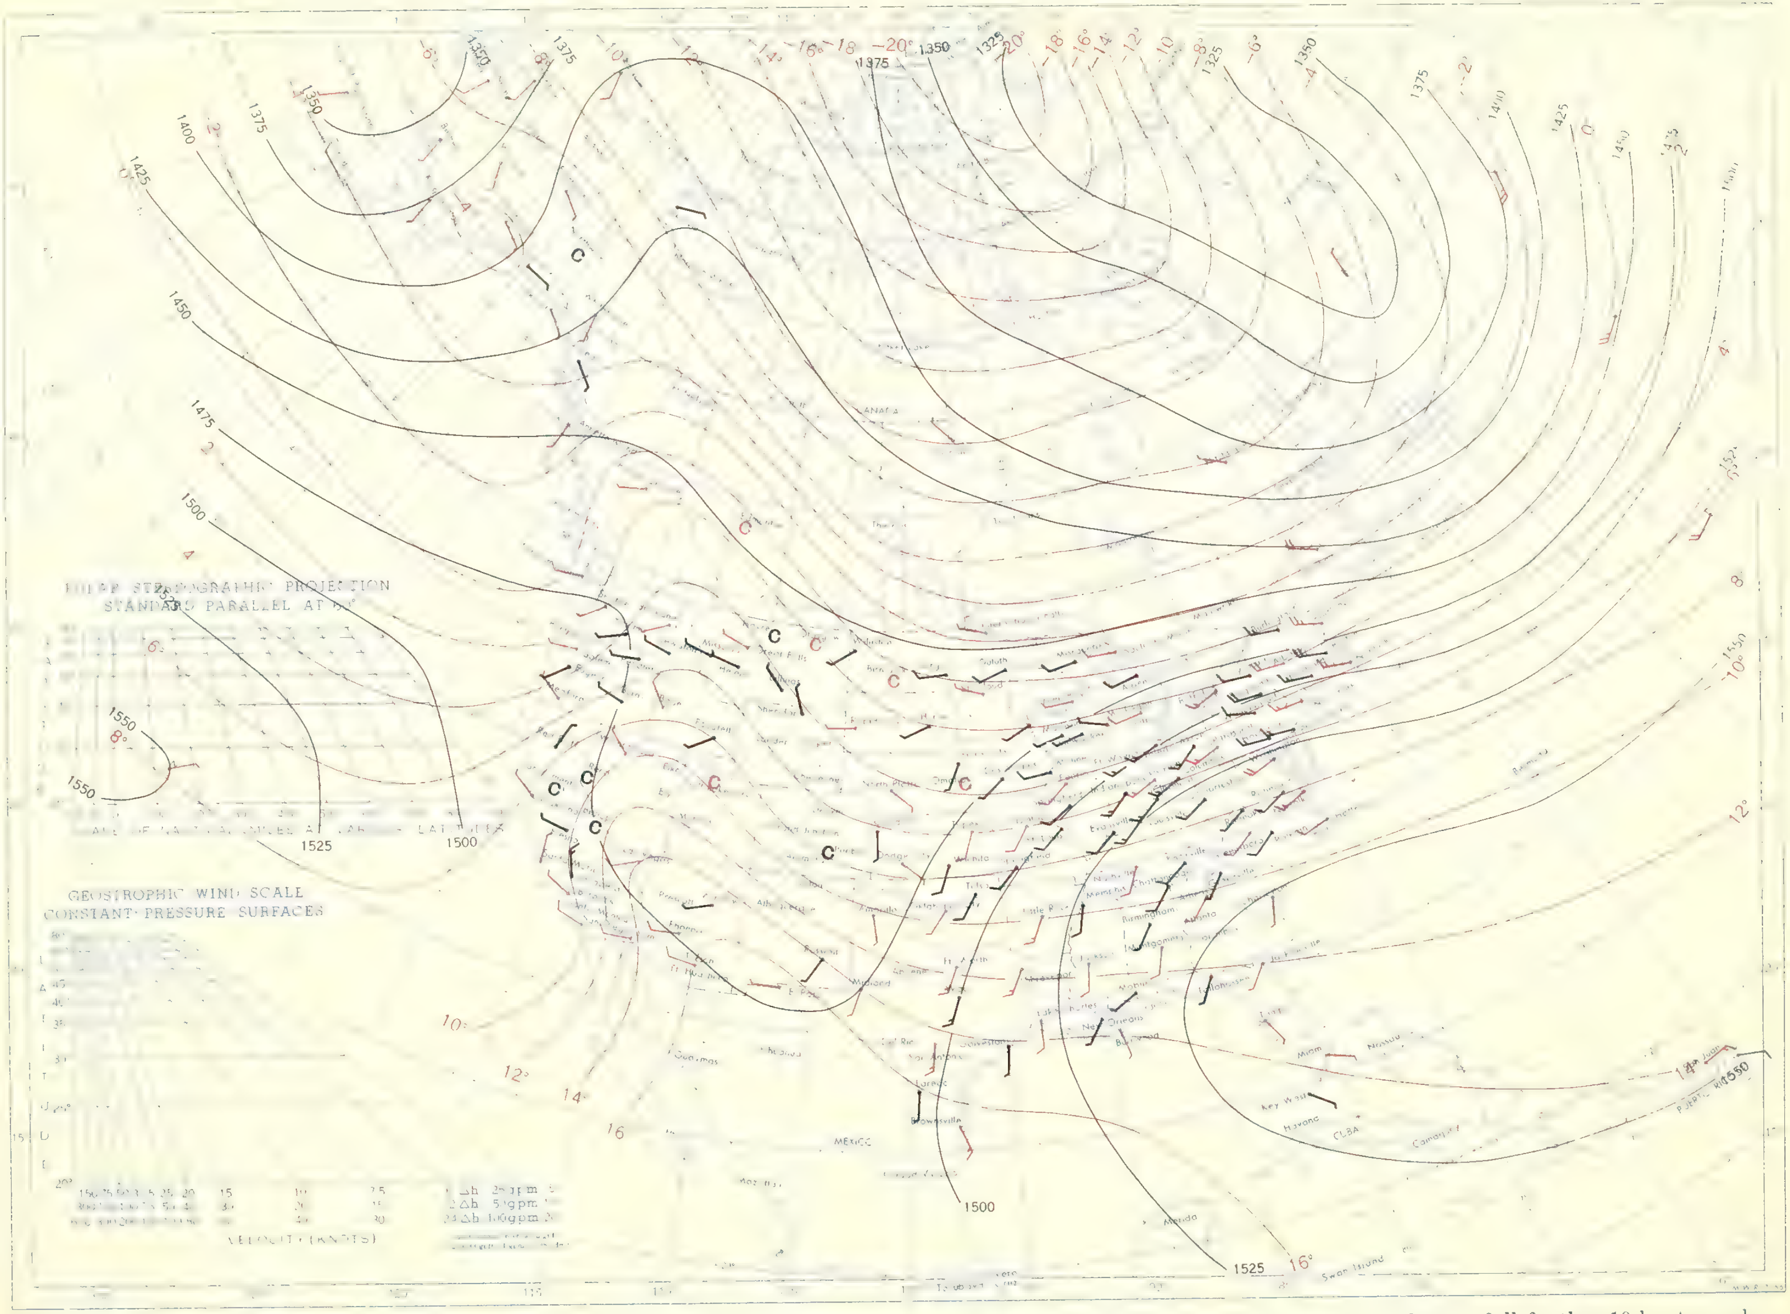
Circle indicates position of center at 7:30 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, April 1957. Inset: Departure of Average Pressure (mb.) from Normal, April 1957.



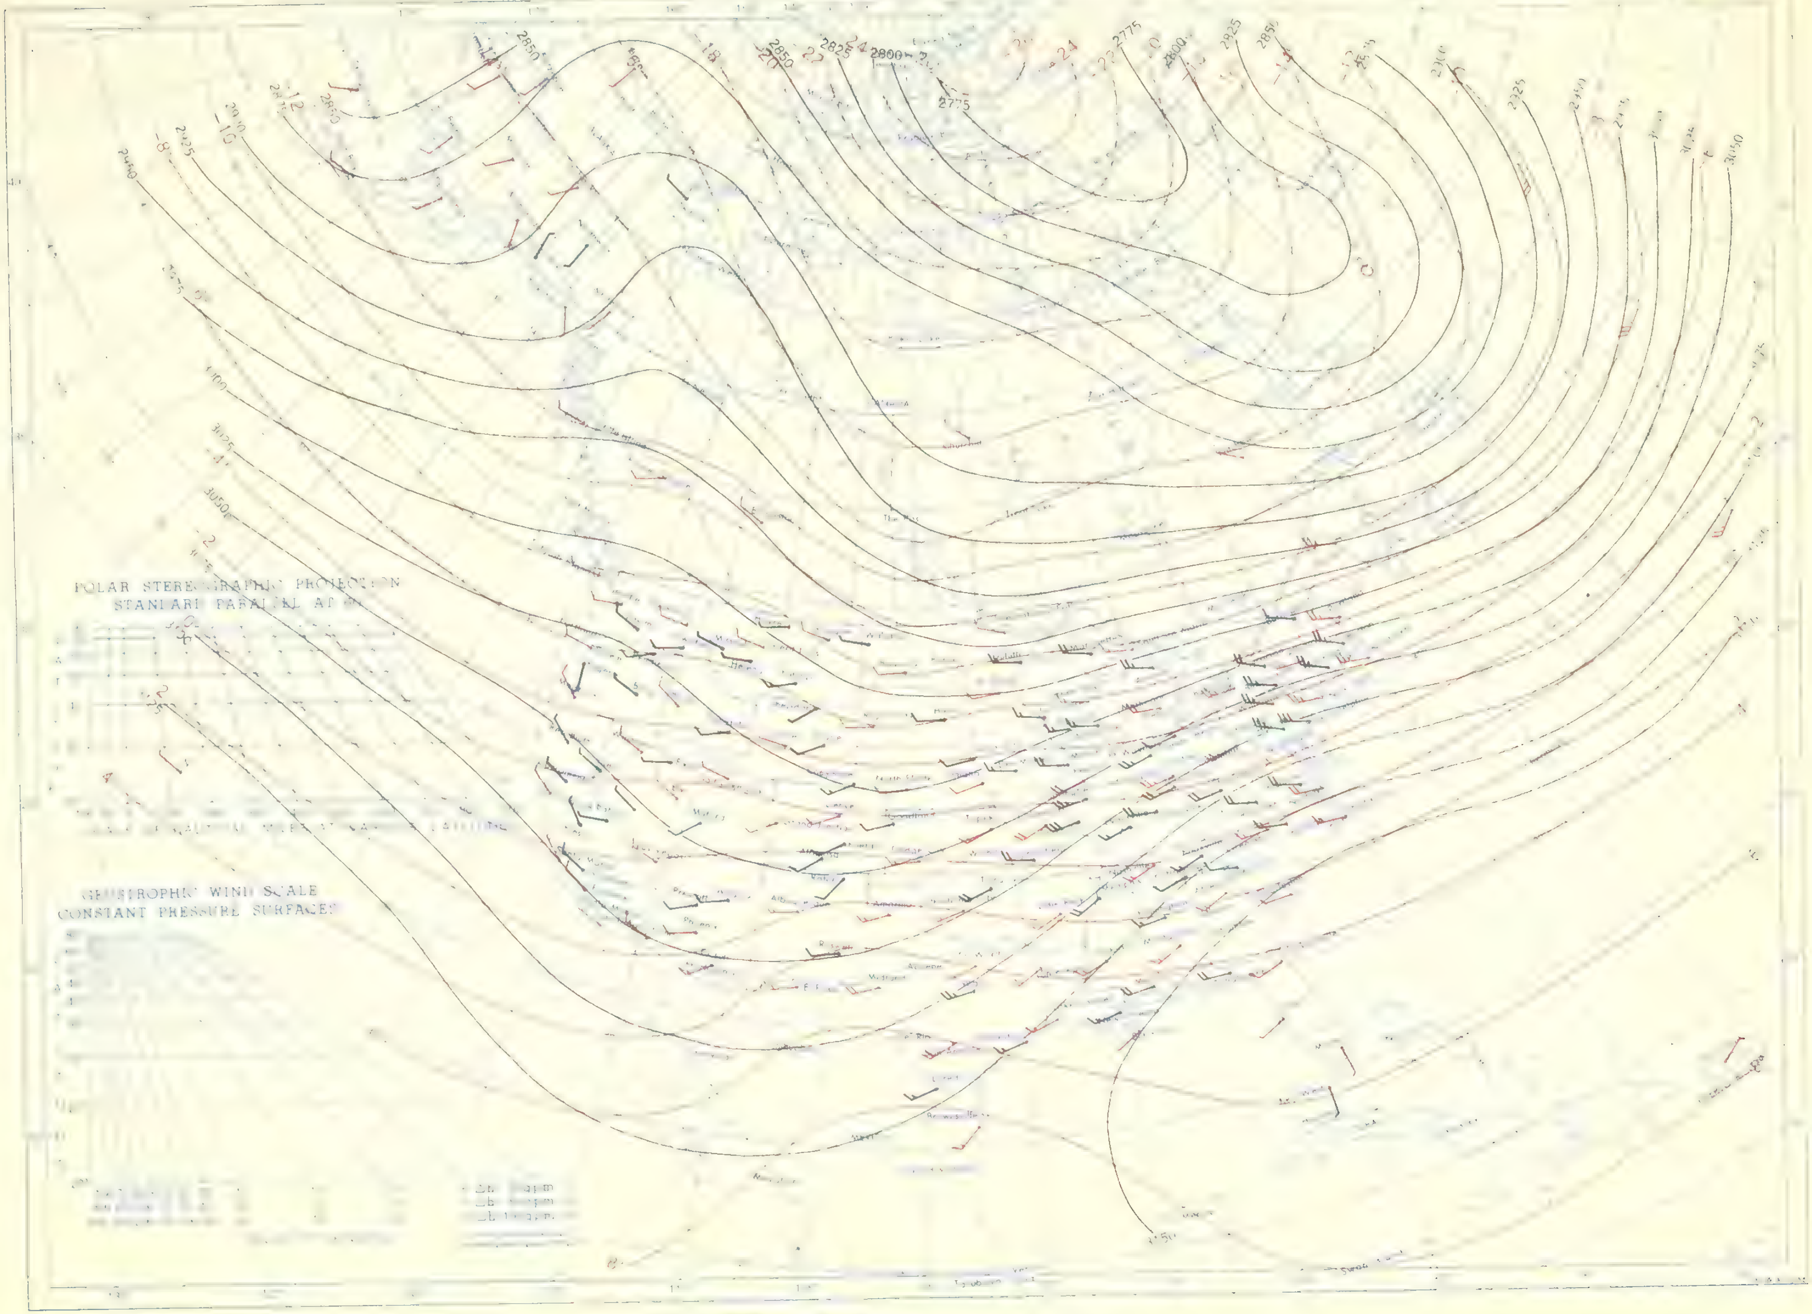
Average sea level pressures are obtained from the averages of the 7:30 a. m. and 7:30 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



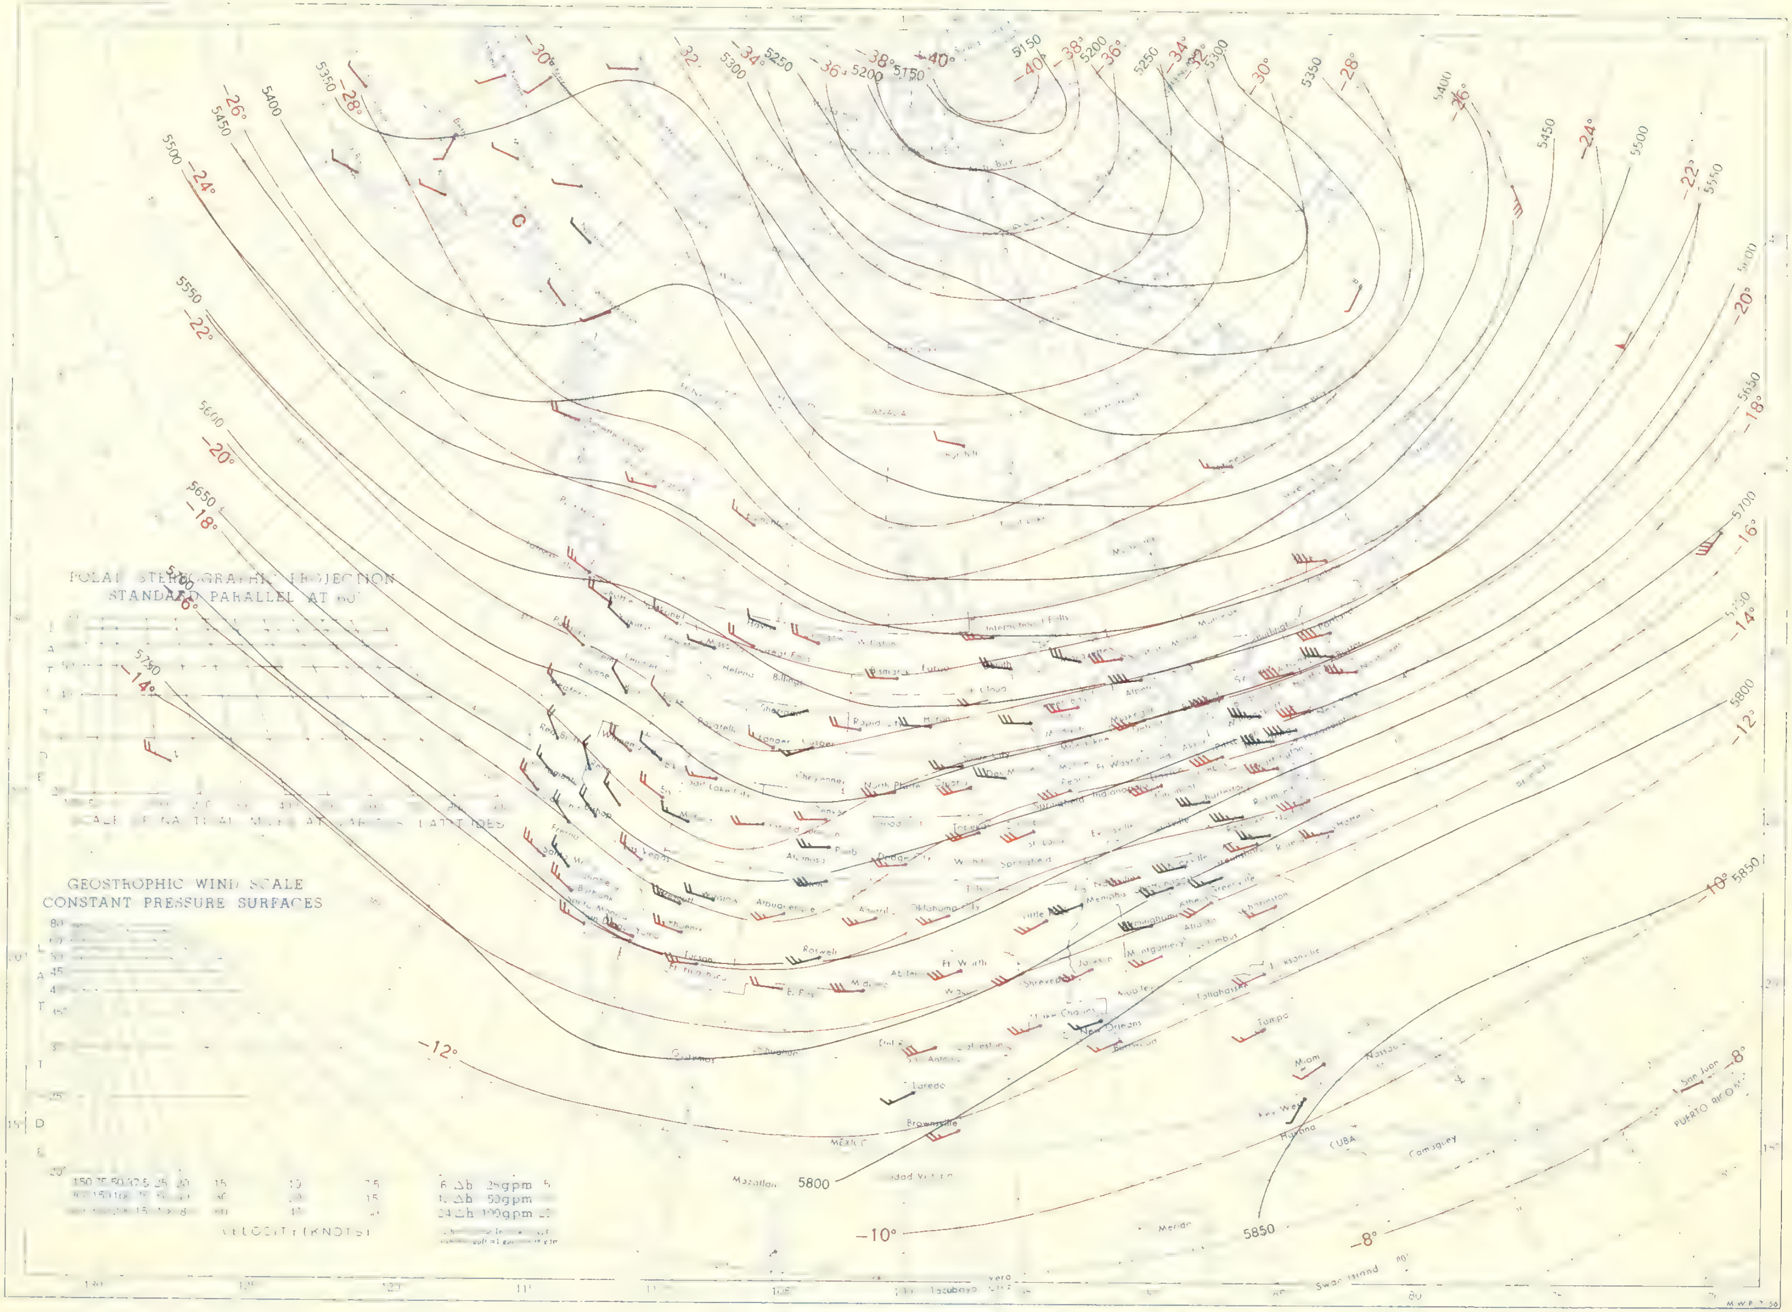
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Winds shown in red are based on rawins taken at the indicated pressure surface and time. Those in black are based on pibals taken at 2100 GMT and are for the nearest standard height level.

Chart XIII. 700-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



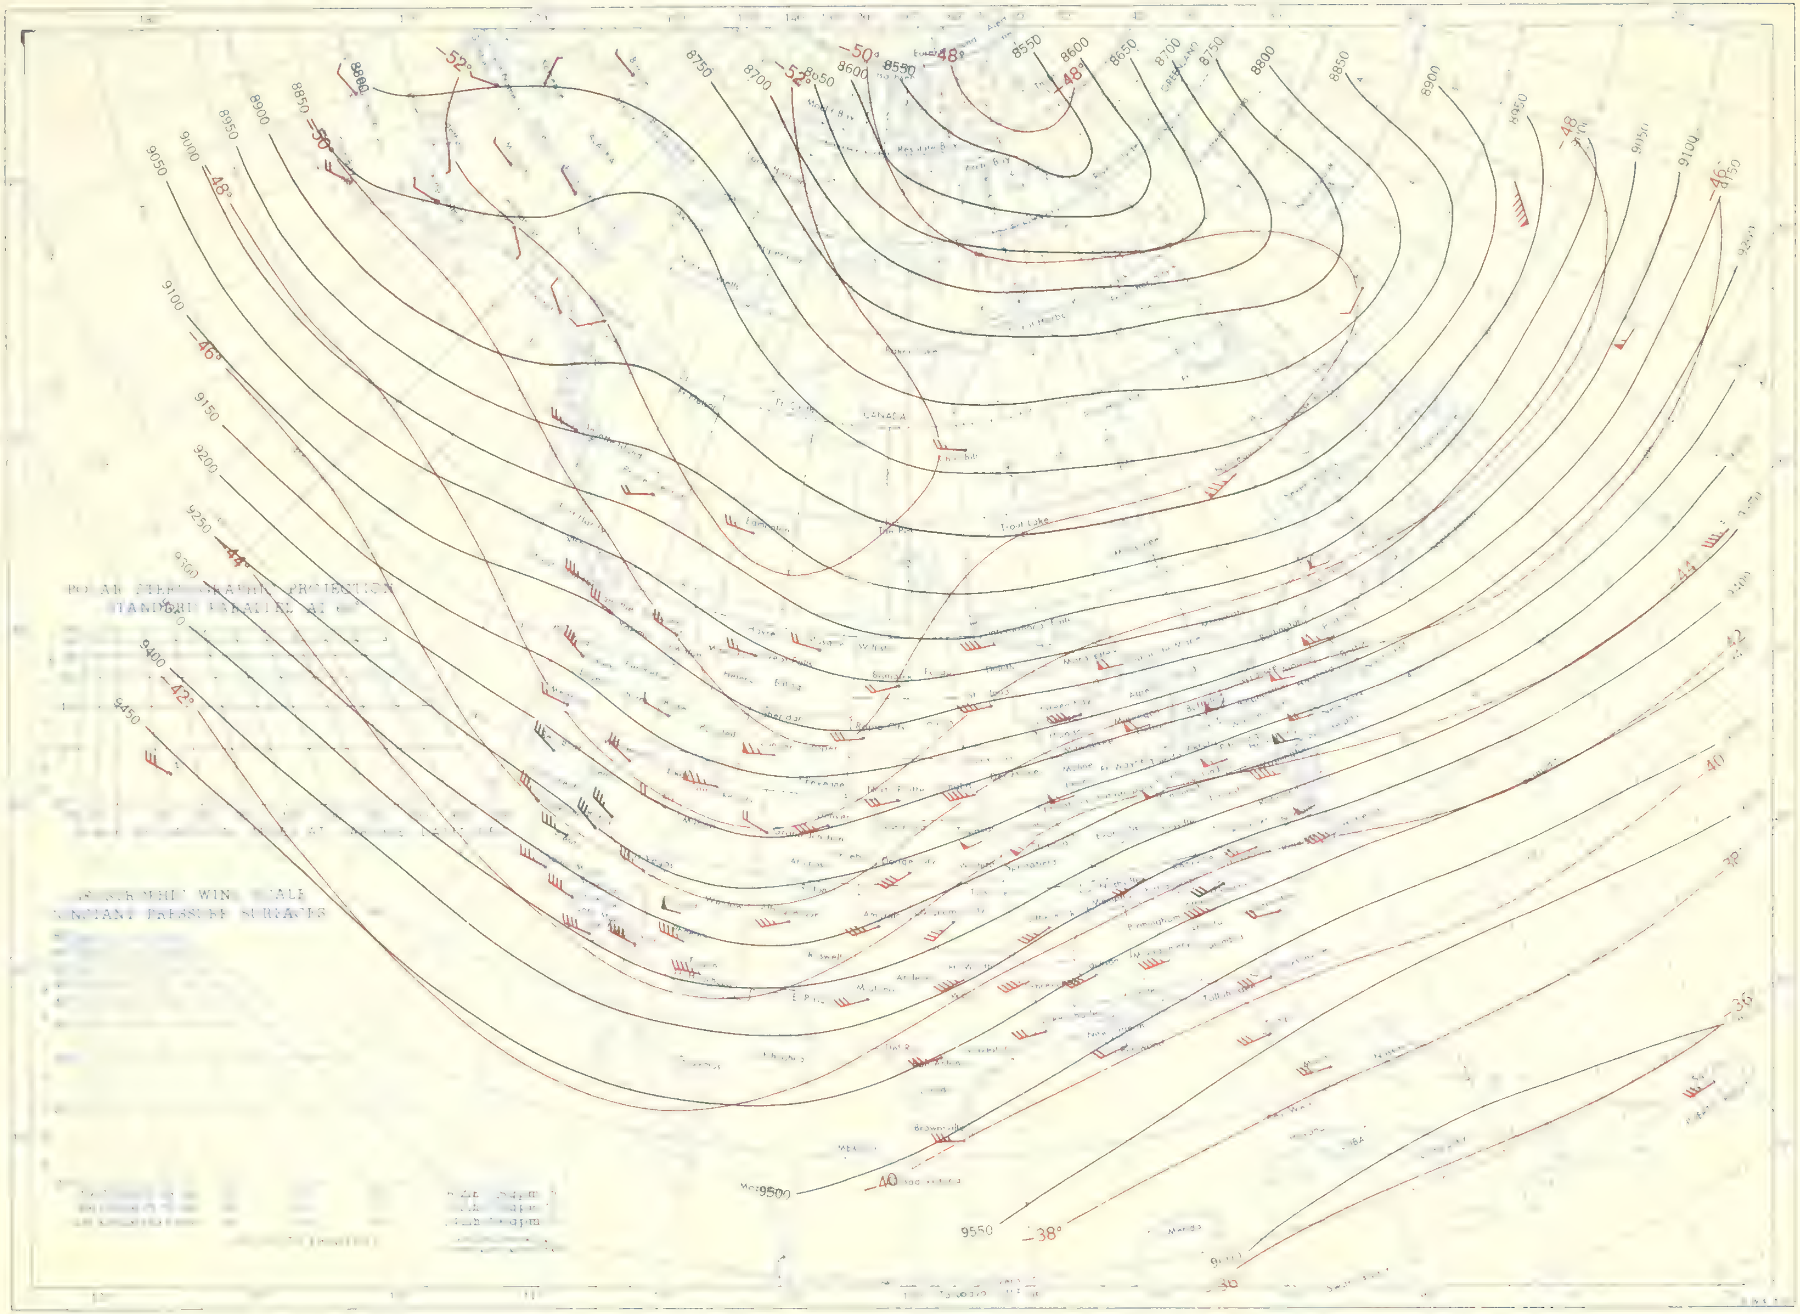
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



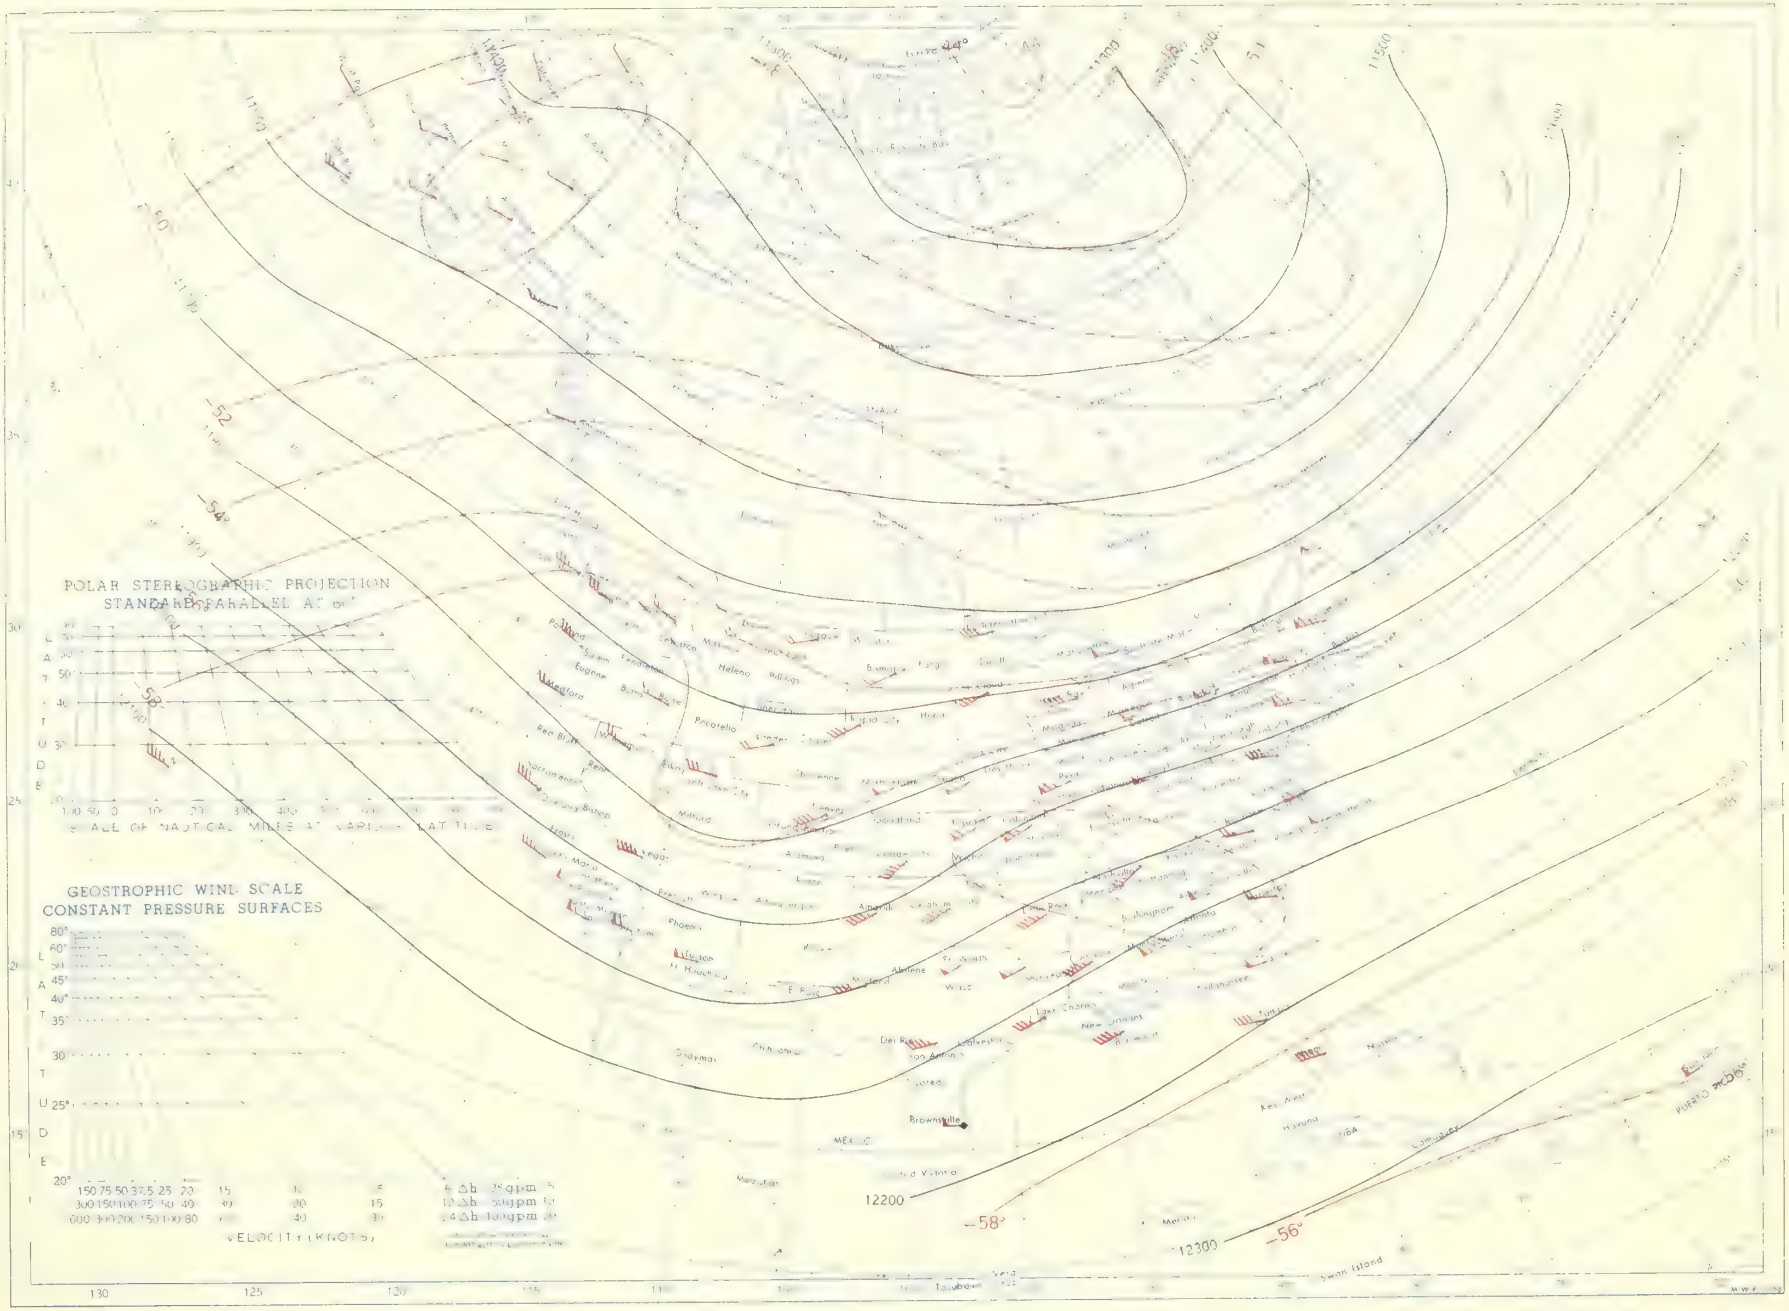
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



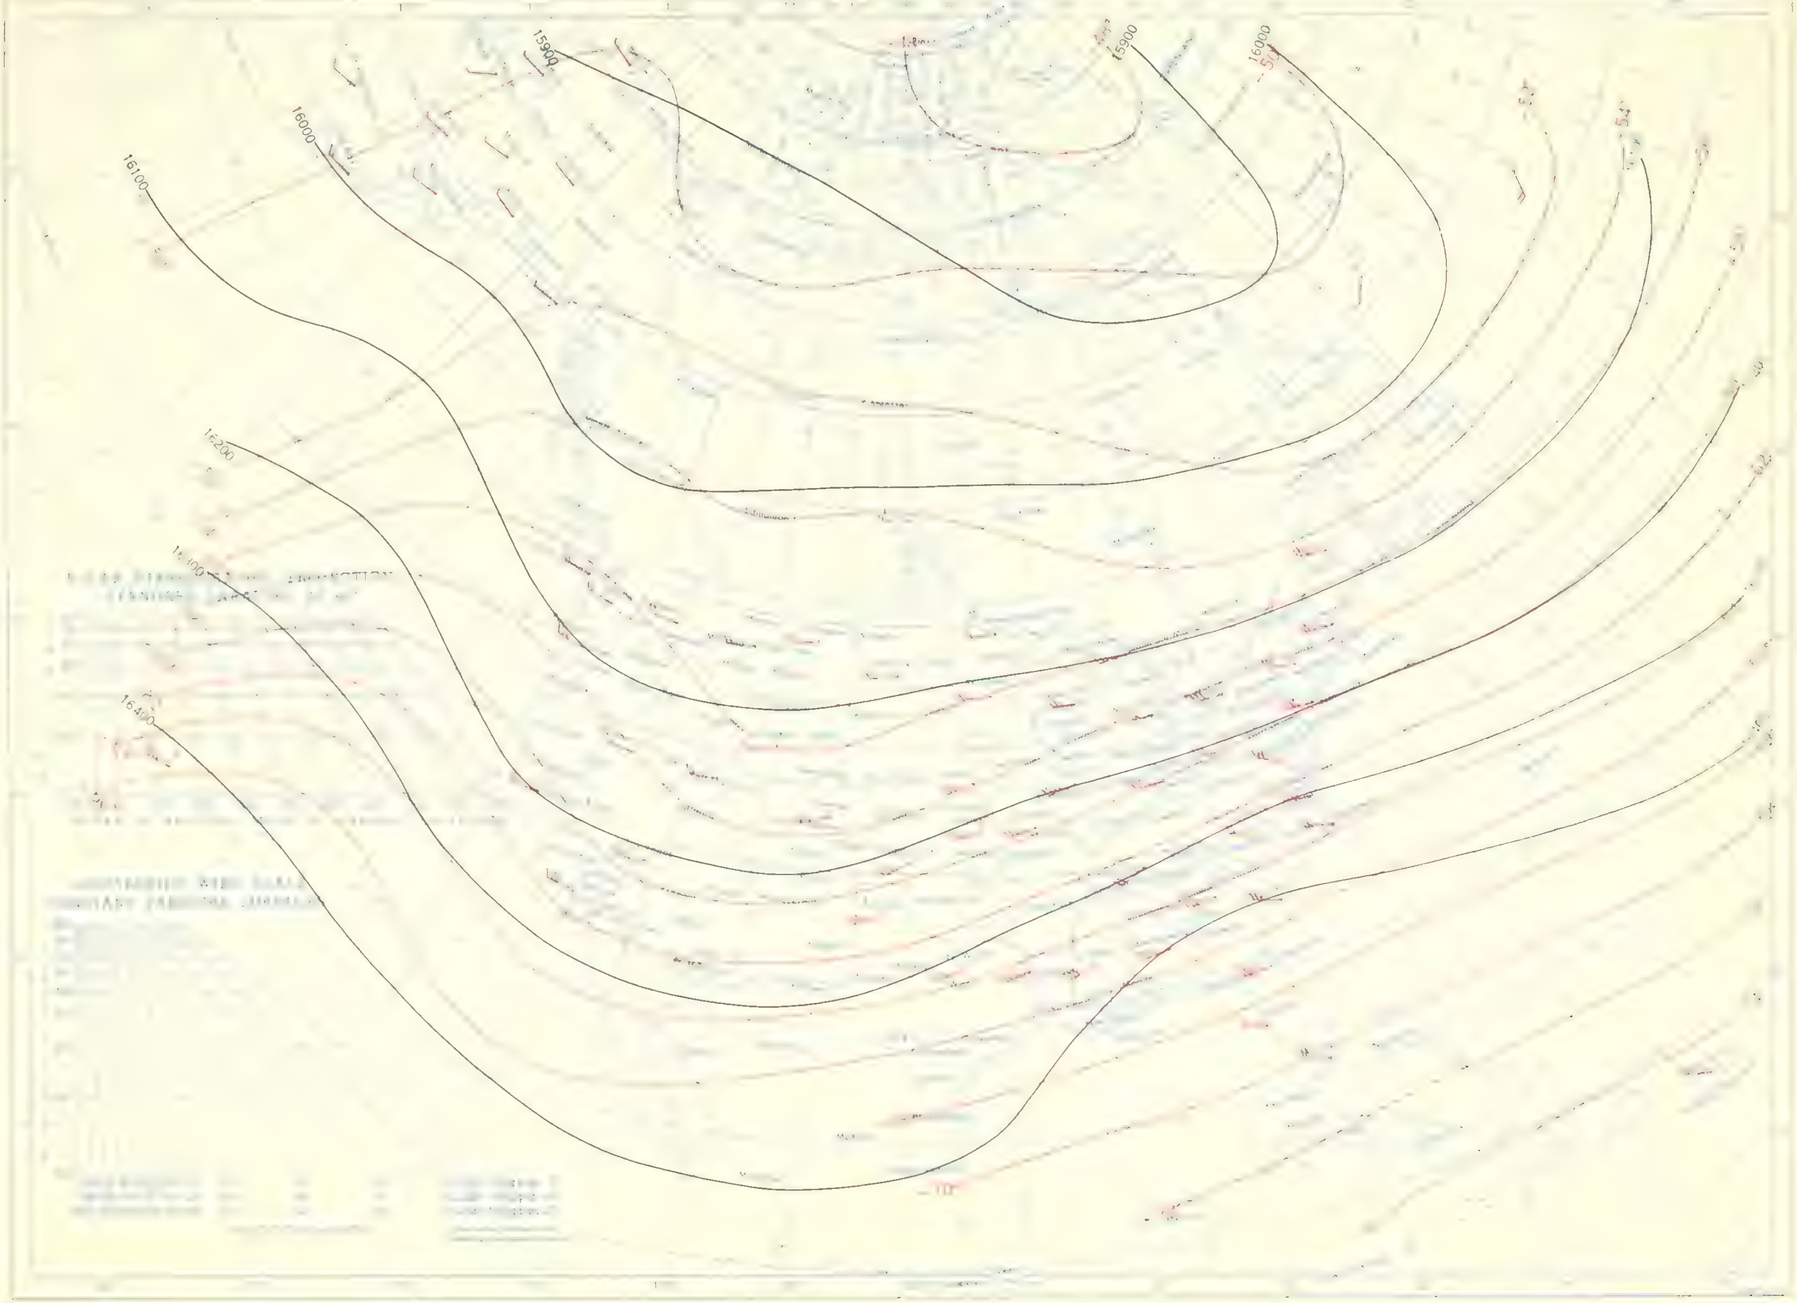
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

Chart XVII. 100-mb. Surface, 0300 GMT, April 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

NOTE.--This publication contains all of the climatic data formerly printed in the MONTHLY WEATHER REVIEW.

SUBSCRIPTION PRICE: Monthly 30 cents and annual 50 cents per copy; yearly subscription, including monthly and annual issues, $4.00 domestic, $5.50 foreign. Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to "Superintendent of Documents, Government Printing Office, Washington 25, D. C."

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 5 MAY 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

The weather of May 1957 was outstanding mainly for widespread, heavy precipitation and numerous severe local storms, particularly in the mid-continent area where floods, overcast skies, and wet soil seriously delayed harvesting of wheat and planting of other crops. Most of the central and lower Great Plains and middle Mississippi Basin, where serious drought prevailed during May 1956, now had adequate to excessive moisture. Areas in need of more moisture were limited mostly to sections along the northeastern coast. Temperaturewise May was about normal. Sunshine was less than normal over most of the Nation.

TEMPERATURE.--The month was slightly cooler than normal in an area which extended from Michigan and Wisconsin southwestward over most of the Great Plains and the Far Southwest, and slightly warmer than normal elsewhere. The greatest departures from normal were 4° below normal in parts of the Southwest and 4° above at a few stations in the Pacific Northwest. Elsewhere monthly averages were about normal for May with the possible exception of the north Atlantic coast where averages of 2° above normal are considered rather warm for May. Monthly extremes with few exceptions were well within the limits of former records. The highest temperature of the month was 110° at Cow Creek, Calif., on the 31st and Rio Grande City, Tex., on the 23d, and the lowest of the month was 5° at Mount Mansfield, Vt., on the 3d.

The most significant freeze occurred in the Northeast on the 17th. In New York State clover, alfalfa, and fruit suffered some damage, and in New England apples suffered rather heavy damage in some orchards from Massachusetts northward. On the same date Nantucket recorded 29.7°, the lowest temperature ever observed there in May.

PRECIPITATION.--May rainfall was well above normal over the greater portion of the country. Areas with below normal amounts included mainly an area beginning in the central Gulf region and extending northeastward through the Appalachians to the north Atlantic coast.

This month was one of the wettest Mays on record from the Mississippi Basin westward and also in parts of the Southeast. In these areas new record totals for May were reported by scattered stations including Prescott, Ariz., 1.24 inches; Pocatello, Idaho, 3.11; Pueblo, Colo., 5.43; Dallas, San Antonio, and Del Rio, Tex., 13.74, 8.22, and 10.23, respectively; and Macon, Ga., 11.77 inches.

Precipitation amounts were generous throughout most of the Great Plains and Mississippi Basin, furnishing ample to excessive moisture in virtually all sections. The greatest excesses occurred in an area extending from Oklahoma and central Texas northeastward to the lower Ohio Valley. The greatest monthly total was 23.38 inches at Hennessey, Okla., where 13.07 inches fell on the 15th. Monthly totals exceeding a foot were reported from stations in Texas, Arkansas, Missouri, Illinois, Kansas, and western portions of Kentucky and Tennessee, and totals of nearly a foot were reported from stations in Indiana and Nebraska. No station in Illinois and Arkansas measured less than 3 inches and none in Kansas, Missouri and Nebraska less than 2 inches.

In the Southeast rainfall was particularly heavy in northern Florida and portions of Georgia and South Carolina. Monthly totals ranged up to 16.48 inches at Nilton, Fla., 13.83 at Butler, Ga., and 12.01 inches at Beaufort, S. C.

In sections of the Northeast, particularly along the north Atlantic coast and in many sections of New England, dry weather continued through the first week, but rains the 14th and 15th were sufficient to relieve the fire hazard. Total rainfall for the month in southeastern Massachusetts, Rhode Island, most of Connecticut, and in coastal areas from Virginia to southern New Jersey was less than 50 percent of normal with station totals generally less than 2 inches and in some sections less than 1 inch. All these areas needed more rain at the end of the month, and some sections were experiencing drought conditions.

DESTRUCTIVE STORMS.--Severe local storms were featured by the greatest number of tornadoes ever reported for a single month. Two hundred and thirty-one of these storms touched the ground and an additional 133 funnels not touching the ground were reported. On the 20th, 34 tornadoes and 20 funnel clouds aloft were reported which may be a record for a single day. However, old records show that 52 tornadoes occurred in the Southeastern States on February 19, 1884, causing millions of dollars property damage, the loss of about a thousand lives, and perhaps twice that many injuries. One of the worst of these tornadoes in May 1957 swept through the suburbs of Kansas City, Mo., on the 20th, killing more than a score and injuring over 200 persons.

Severe thunderstorms with hail, wind, and torrential rains resulting in flash floods in the Great Plains and Mississippi Valley were responsible for additional millions of dollars of damage to crops and property.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
LOUISIANA Burrwood (6 miles north-northeast of), Plaquemines Parish	1	7:10 a.m.			0	0			Funnel aloft	
LOUISIANA Donaldsonville (near), Ascension Parish	1	11:19 a.m.			0	0			Funnel aloft	Reported by airline pilot.
TEXAS San Antonio (36 miles south of), Atascosa County	1	1:46 p.m.			0	0			Funnel aloft	
KANSAS Geneseo (3 miles east of), Rice County	1	5-5:05 p.m.			0	0			Funnel aloft	Funnel aloft moving northeastward observed for only short distance.
NORTH DAKOTA Wing (8 miles north of), Burleigh County	1	5:20 p.m.			0	0	3	3	Tornado, hail, and rain	Tornado seen to touch ground 4 times. $2,000 property damage by hail; $2,000 crop damage by rain. Storm moved eastward.
NORTH DAKOTA Wing area, Burleigh County	1	5:45-9 p.m.			0	0			Tornado and rain	Tornado observed at 5:45 p.m., 10 miles northeast of Wing. 4.15 inches of rain fell between 6 and 9 p.m., 15 miles east of Wing. Storm moved eastward.
KANSAS Meade (14 miles southwest of), Meade County	1	6 p.m.			0	0			Funnel aloft	Funnel formed aloft near State Lake and observed moving northeastward for only a few minutes.
ARIZONA Florence (5 miles northwest of), Pinal County	1								Hail	Hail damage to crops.
NORTH DAKOTA Kenmare (east of), Ward County	1						3		Hail	Heavy hail, nearly 2 inches in diameter; some hail still on ground next morning. Windows broken and windshields damaged.
	1									Minor storms also reported at Mobile, Ala.; and at Novice, Tex.
MISSISSIPPI Plainview community, Pearl River County	2	8:30 a.m.			0	0	1	2	Tornado	Funnel observed 6 miles east of Bogalusa, La., passing through pecan grove uprooting trees.
TEXAS Waco (15 miles north of), McLennan County	2	11:05 a.m.			0	0			Funnel aloft	Funnel observed moving southeastward.
TEXAS Waco (25 miles north of), Hill County	2	11:48 a.m.			0	0			Funnels aloft	2 funnels nearly touching ground, moving eastward.
LOUISIANA Sulphur (10 miles west of), Calcasieu Parish	2	11:57 a.m.			0	0			Funnel aloft	
TEXAS Waco (20 miles west of), McLennan County	2	1:12 p.m.			0	0			Funnel aloft	Funnel observed about 1,500 feet above ground.
TEXAS Waco (40 miles west of), Coryell County	2	1:15 p.m.			0	0			Funnel aloft	
SOUTH CAROLINA Gramling (near), Spartanburg County	2	Afternoon						5	Hail	Hailstorm over about 500 acres caused major damage to peach orchards.
OKLAHOMA Okmulgee County	2	4:30 p.m.	4	880	0	0	2	2	Funnels aloft, wind, rain, and electrical	Funnel aloft sighted 8 miles west of Beggs and again 5 miles southwest of Beggs. Winds caused light damage in area. Unconfirmed reports of funnels aloft south of Okmulgee. Storm moved southeastward.
OKLAHOMA Ardmore, Carter County	2	4:34 p.m.			0	0			Funnel aloft	Ardmore Air Force Base reported funnel 5 miles east of Base.

See reference notes at end of table.

MISSISSIPPI Hattiesburg, Forrest County	2	7 p.m.			0	0	2	2	Tornado	Funnel observed dipping down and uprooting trees, destroying TV antennas, etc.
LOUISIANA Monroe (10 miles north of), Ouachita Parish	2	7:05 p.m.			0	0			Tornado	Funnel moving northeastward observed to strike open ground; some tree tops blown off.
FLORIDA White City, St. Lucie County	2	P.m.							Hail	Hailstones as large as ice cubes reported; damage very light.
NORTH DAKOTA Grant County (central portion)	2	Evening					4		Wind, rain, and hail	Bridges and culverts washed out. 3 head of cattle drowned.
	2									Minor storm also reported at Ridgetop, Tenn.
OKLAHOMA Kingston (near), Marshall County	3	10:54 a.m.			0	0			Funnel aloft	Funnel aloft reported moving northwestward.
OKLAHOMA Altus (south-southwest of), Jackson County	3	11:32 a.m.			0	0			Funnel aloft	Funnel aloft reported moving westward.
TEXAS McGregor (5 miles west of), McLennan County	3	Noon			0	0			Funnel aloft	
TEXAS Petrolia, Clay County	3	1 p.m.			0	0			Funnels aloft	2 funnels observed.
OKLAHOMA Altus (northeast of), Jackson County	3	1:10 p.m.			0	0			Funnel aloft	Funnel aloft reported moving westward.
OKLAHOMA Granite (south of), Greer County	3	1:20 p.m.			0	0			Funnel aloft	Public watched funnel aloft move southwestward.
TEXAS Vernon (6 miles north of), Wilbarger County	3	1:30 p.m.			0	0			Funnel aloft	Funnel observed moving northeastward.
OKLAHOMA Marietta, Love County	3	2:42 p.m.			0	0			Funnel aloft	Pilot reported funnel aloft.
COLORADO Bennett area, Adams County	3	Afternoon				1			Electrical	Man struck by lightning and knocked from tractor and run over by rotary hoe, when he was working on farm 2-1/2 miles northwest of Bennett. He was taken to hospital and treated for numerous puncture wounds and burns.
TEXAS Strawn, Palo Pinto County	3	4 p.m.			0	0			Funnel aloft	Funnel observed moving eastward.
GEORGIA Glynn County	3	8:05 p.m.	1	50	0	1	4	1	Tornado	10 buildings destroyed or damaged, utility lines blown down, and trees uprooted. 1 person injured slightly by flying glass. Tornado moved southeastward.
FLORIDA Davie, Broward County	3	P.m.						3	Electrical	Lightning killed 5 head of cattle.
ARIZONA Duncan (near), Greenlee County	3						1		Hail	Hail damage to crops.
	3									Minor storms also reported at Phoenix, Ariz.; near Gordon, Nebr.; and near Baytown, Tex.
MASSACHUSETTS Salisbury, Essex County	4	10:30 a.m.		3	0	0			Dust devil	Narrow funnel extending 500 feet up into clear sky jostled an automobile with surprising force and carried twigs and leaves aloft. Storm moved northwestward.
MASSACHUSETTS Fitchburg, Worcester County	4	10:50 a.m.	** 900	7	0	0	1	1	Dust devil	Accompanied by sound like freight train, funnel lifted 110-gallon oil drum about 75 feet into air. Lumber and debris also lifted and dropped over area. Storm moved southward.
WASHINGTON Eastern portion	5	6-8 p.m.					5	5	Rain and hail	Several severe thunderstorms developed along eastern slope of Cascades and in other areas of

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
WASHINGTON (Cont'd)										eastern Washington during afternoon. Heavy rainfall from thunderstorm near Wenatchee caused flash flood at mouth of Canyon No. 2, in residential section of Wenatchee. Power- and communication lines out for several hours and 200 residences damaged. Irrigation canals washed out or filled with debris. Windows broken and some crops damaged by hail. Other thunderstorms occurred in Lincoln and Spokane Counties where hail and heavy rain damaged crops and caused serious erosion.
FLORIDA Naples, Collier County	5	P.m.			0	0	4		Wind and funnel aloft	Winds estimated at 70 m.p.h., blew down 210-foot radio tower, damaged several residences. Funnel cloud sighted.
FLORIDA Pompano Beach, Broward County	5	P.m.			0	0			Waterspout	
ARIZONA San Simon Valley and Sulphur Springs Valley	5						1		Hail	Hail damage to crops.
TENNESSEE Centerville, Hickman County	5					1			Electrical	Lightning struck woman, tearing clothing and scratching her chin and hand.
	5									Minor storms also reported at White City, Fla.; at Maryville, Mo.; and in Columbus and Tierra Amarilla vicinities, N. Mex.
IDAHO Northern counties	5-6								Electrical	Lightning strikes on several power substations in Wallace area, power outages in vicinity of Coeur d'Alene, disruption of telephone services north of Nezperce. Lightning touched off explosions in dynamite stored on construction site on Highway 10 east of Coeur d'Alene, jolting 2 pickup trucks and causing rockslides, but no injuries resulted.
MASSACHUSETTS Milton, Suffolk County	6	Noon-2 p.m.			0	0			Dust devils, waterspout, and funnels aloft	Blue Hill Observatory reported numerous funnels associated with sea breeze front, 15 to 20 total. Thin column extended to height of 600 feet. Another thick column carried much sand and dust. Another crossed Houghton's Pond as waterspout, lifting water level 2 to 3 feet with anti-cyclonic circulation.
WYOMING Thermopolis, Hot Springs County	6	Afternoon	**500	20	0	0	2	1	Whirlwind	Storm moved eastward.
WASHINGTON Spokane, Lincoln, and Whitman Counties	6	Afternoon-evening			0	0	2	5	Tornadoes, funnels aloft, and rain	2 small tornado funnels extending downward from cloud reported southwest of Gieger Field near Spokane at approximately 12:25 p.m. Funnel clouds did not reach ground. Funnel cloud extending to ground reported by airline pilot in vicinity of Harrington at 1:58 p.m.; no damage reported. Very small tornado or severe dust devil, approximately 10 miles southeast of Spokane, destroyed small farm building at about 9 p.m. Thunderstorms and heavy rain damaged crops and caused considerable soil erosion in some areas of Whitman County. Storm moved southwestward.
ARIZONA Pinal County (central portion)	6						1		Hail	Hail damage to crops.
	6									Minor storm also reported at Missoula, Mont.
TENNESSEE Washington County	6-8						1	4	Freeze	Heavy frost on 6th and 7th and light frost on 8th damaged crops, mainly strawberries.
SOUTH DAKOTA Perkins and Harding Counties	7	2 p.m.			1				Electrical	Lightning killed a rancher on horseback as he was riding on high ground near Bixby. Brush fires started in adjacent Harding County that evening.
NEBRASKA Dorchester (near), Saline County	7	Afternoon				1			Wind	Woman blown down while hanging clothes. Storm moved northward.
OREGON Central portion	7	4-6 p.m.	40-50	*10-20			5	3	Rain and electrical	Violent thunderstorms. Cloudburst over Hay Creek drainage basin. Flash flood in this creek cut across Highway 97, 15 miles north of Madras, trapping and washing away cars whose occupants barely had time to escape. 4 head of livestock drowned here, and 4 additional head killed by lightning in Bend area. Much field eorsion. Highway 97 cut at several points; 1 bridge destroyed and 175 feet of railroad bed washed out, halting rail traffic for several days over this route. A few small forest fires started by lightning. Damage from cloudburst 97 percent, remainder due to lightning.

See reference notes at end of table

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Hudspeth and El Paso Counties	7	Late Afternoon						5	Hail	About 1,000 acres of pima cotton destroyed, 1,200 acres ordinary cotton 50 percent destroyed.
ARIZONA Duncan (near), Greenlee County	7						1		Hail	Hail damage to crops.
	7									Minor storms also reported in Boone County, Iowa; and in Deming vicinity, N. Mex.
SOUTH DAKOTA Huron (near) Beadle County	8	2:15 a.m.					4		Electrical	Lightning fire demolished farm house.
MASSACHUSETTS Hatfield, Hampshire County	8	Noon			0	0	3	1	Dust devils	Felled large part of elm tree onto house with considerable damage. Accompanied by high whistle, like a siren. Two other dust devils in area lifted tobacco bed sash during afternoon. Storms moved eastward.
WASHINGTON Walla Walla County	8	4:30 p.m.				1			Rain and electrical	Heavy rain associated with thunderstorm activity in southeastern Washington caused some property damage. Several basements flooded in Walla Walla and 1 person injured by lightning.
OREGON Scattered areas	8	Afternoon-evening					4	4	Rain, hail,, electrical	Cloudbursts in Wallowa Valley carried large quantities of debris across railways and roads, caused serious erosion in some newly-plowed barley fields, and drowned several sheep. In Medford area, heavy hail caused moderate damage in a few pear orchards, and limited amount of damage to field crops. Several lightning-caused forest fires started, but controlled with negligible losses. Lightning strikes also caused a few power-service interruptions. Cloudburst damage 30 percent, hail 68 percent, and lightning 2 percent.
TEXAS Trent (near), Taylor County	8	10:38 p.m.			0	0			Tornado	Occurred in rural area, no damage reported; moved eastward.
TEXAS Merkel (6 miles northwest of), Taylor County	8	11:15 p.m.			0	0			Funnels aloft	2 funnels observed.
	8									Minor storms also reported near Gladstone, and at Manistique and Sault Ste. Marie, Mich.; in Lovington and Roswell vicinities, N. Mex.; at Russell and Warren, Okla.; and near Estelline and Chillicothe, Tex.
IDAHO Clearwater River Basin	8-9								Rain	Near Orofino, flash flood washed out bridge across Bear Creek on road leading to Peck; erosion in fields on Camas Prairie excessive (some fields had just been seeded); creek in town of Cottonwood spilled over, flooding several basements, streets, and lawns; spasmodic power outages occurred evening of 8th.
COLORADO Denver, Adams, Arapahoe, and Weld Counties	8-12				3		°6	C	Rain and electrical	Heavy rain beginning afternoon of 8th, continuing through 9th, in Denver, Adams, Arapahoe, and Weld Counties caused high water along Platte River and its tributaries. Hardest hit were communities of Fredrick, Firestone, and Evanston, 25 miles north of Denver. In some suburban Denver areas, homes built in once dry-creek beds heavily damaged by flood waters. 3 persons drowned in basement apartment northeast of Aurora early morning of 9th. 3 to 5 inches of rain fell in 24 hours, swelling creeks and river to capacity. Homes, bridges, roads, sewer systems and communication lines destroyed or damaged. On night of 11th and again on night of 12th, heavy rains flooded same area north of Denver, adding to damage. Lightning with thunderstorm on 11th struck grange hall, 7 miles east of Brighton, setting it afire. Damage to hall estimated at $7,000. Some livestock losses reported. Denver, Adams, Arapahoe, and Weld Counties designated as disaster areas. Total damage from the 3 floods estimated in excess of $2 million.
TEXAS Waco (30 miles east-northeast of), Limestone County	9	9:15 a.m.			0	0			Funnel aloft	
NEBRASKA Burr to Syracuse, Otoe County	9	3:30-3:45 p.m.	10	100	0	0	4	1	Tornado	Several sets farm buildings damaged. Tornado moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
MISSOURI St. Louis and St. Charles Counties	9	3:30-4:15 p.m.	9	100-150	0	0	3	4	Tornado, wind, and rain	First reported point of contact on grounds of seminary at Florissant. At this spot, a number of trees broken in wooded area close to point of contact. Storm then struck farm 6/10 mile northeast, where shingles ripped from house, windows blown out, number of trees broken off or uprooted, several outbuildings suffered damage. At this location, enough evidence available from direction of trees in orchard and around house to determine that pattern of force was from vortex or suction. This, together with numerous eyewitness reports of sightning funnel, leaves no doubt but that it was tornado, probably not exceeding from 50 to 75 feet in diameter at point of contact with ground. Second farm, less than 1/4 mile northeast of first, suffered major damage both to house and outbuildings. Tornado continued to move in northeastward direction, apparently "skipped" or crossed open ground before striking barn on edge of Missouri River bluff. At this point, funnel seen to lift up momentarily before descending to river where it crossed an island, then moved into flat bottomland on north side of river, changed direction to more northerly course, "dumped" a heavy downpour just after river crossing and 4 miles from point where it left bluffs, struck schoolhouse. Roof of school blown off and windows broken. Since this was only building in open fields, no other damage occurred. Funnel last seen retracting back into clouds as it passed over town of Portage Des Sioux.
MISSOURI Kirksville, Adair County	9	3:45 p.m.					2	2	Hail	Hail 3/4 inch in diameter.
MISSOURI Aurora, Lawrence County	9	4:30 p.m.			1				Electrical and rain	Lightning hit and killed farmer who had sought shelter under tree.
MISSOURI Golden City, Barton County	9	4:30 p.m.					4		Electrical	Large barn hit by lightning and burned.
KANSAS Barton County (southwestern portion)	9	Late afternoon	8	*2					Hail	Hail of golf-ball size damaged crops over narrow strip 2-1/2 miles long near Pawnee Rock. Hail lay 2 inches deep and resulted in total damage to some fields. Much roof and glass damage to buildings. Storm moved eastward.
KANSAS Rice County (northern portion)	9	5:17-6 p.m.			0	0	4	4	Tornadoes, funnels aloft, hail, and wind	2 tornadoes, both small, struck in separate parts of county. First traveled path of 1-1/2 miles to within a mile of west side of Lyons and damaged 1 farm plant. The other struck 2-1/2 miles east of Little River and damaged buildings at 2 farms. 3 other funnels sighted, but remained aloft. Hail driven by high winds across northwestern part of county from Bushton to Chase, damaged strip about 4 miles wide. Crop damage from hail. Storm moved eastward.
TEXAS Abilene (28 miles southwest of), Taylor County	9	5:30 p.m.			0	0			Funnel aloft	Funnel observed moving eastward.
ILLINOIS La Harpe area, Hancock County	9	7:10 p.m.	4	200	0	0	3		Tornado	Some damage at 4 or 5 farms south and east of La Harpe. Roaring sound reported. Tornado moved northeastward.
TEXAS Atlanta area, Cass County	9	7:20 p.m.			0	0			Funnel aloft	Funnel first sighted 2 miles southwest, then passed over Atlanta.
KANSAS McPherson County	9	7:30-7:45 p.m.	3	*2-1/2			4	4	Hail and wind	Hail up to 1/2 inch in diameter driven by high winds damaged crops, roofs, screens, and automobiles in almost circular area of 3 miles in diameter around Inman. Some crops total loss. Storm moved eastward.
ARIZONA Avondale (near) Maricopa County	9						1		Hail	Hail damage to crops.
OKLAHOMA Frederick, Tillman County	10	2:16 a.m.			0	0			Tornado	Highway Patrol reported tornado southwest of Frederick moving southeastward. It remained on ground only short time. Very few clouds reported in area and there were no echoes on radar.
UTAH Nephi, Juab County	10	1-1:20 p.m.	3-4	*1-1/2			4	4	Hail and electrical	Alfalfa and fruit crops badly damaged. 6,000 turkeys killed by hail. Storm moved north-northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OREGON Corvallis (southeast of), Benton County	10	2 p.m.			0	0			Funnel cloud	Tornado cloud with fully developed funnel reported by several reliable observers, appeared several miles southeast of Corvallis. No confirmed report of it touching ground at any point; no report of any damage caused by it.
INDIANA Huntington County	10	3:30 p.m.	5	*1		1	3	1	Wind	At Majenica and in parts of Lancaster and Rock Creek Townships, severe windstorm caused considerable damage. Factory roof and second floor destroyed. Corn crib knocked off its foundation. Furniture and windows broken in farmhouse east of Majenica. Storm moved northeastward.
MASSACHUSETTS Bernardston, Franklin County	10	4:35 p.m.	**300	10	0	0	2	1	Tornado, wind, and rain	Funnel observed on ground, but had no visual connection with squall clouds above, giving appearance like dust devil. Wind calm only 80 feet away from twister during passage. Very soon strong, gusty, squall winds and heavy rain followed. Damaged trees, phone and electric lines, and a roof. No hail. Storm moved east-southeastward.
TEXAS Wink (60 miles south-southwest of), Reeves County	10	4:43 p.m.			0	0			Funnel aloft	
NEW HAMPSHIRE (southeastern portion) and MASSACHUSETTS (northeastern portion)	10	5-6 p.m.			0	0	4	1	Funnels aloft, wind, electrical, and rain	Damaging squall winds felled trees and damaged buildings. Several small funnels seen at Milford, N.H., 1 dipping much of way to ground, but all short-lived. Wind damage noted there in path 1 mile north to south and 1/4 to 1/2 mile wide, occurring at about 5:20 p.m. Severe lightning, but no hail. $2,500 damage to buildings from wind and falling trees at Derry Village, N.H., at about 5:30 p.m., in area 1/4 mile square. $10,000 damage estimated in Haverhill, Mass., area mainly from trees falling on phone and electric lines. Many lines out also in Rockingham County, N.H. Automobile smashed by falling tree at Newton Junction, N.H., where 80-foot smokestack was felled. Storm moved southeastward.
TEXAS Pecos, Reeves County	10	5:30 p.m.			0	0			Funnel aloft	
NEW YORK Troy, Rensselaer County	10	Late afternoon			1	4			Wind	High winds associated with thunderstorm blew tree over on top of car, killing 1 occupant and injuring 4 others.
NEW MEXICO Farmington area, San Juan County	10	6:20 p.m.			1	0	4	1	Tornado	Damage in city confined to 1/2 block. Death occured about 17 miles northwest of Farmington when oil rig blew over. Storm moved southeastward.
TEXAS Dallas (50 miles northeast of), Hunt County	10	6:30 p.m.			0	0			Funnel aloft	Funnel visible for 7 minutes.
CONNECTICUT Hartford County	10	7-8 p.m.					3	1	Wind and electrical	High winds accompanying squall line through town of Suffield blew down tobacco curing barn and small poultry house. A few fowl killed in latter. Weather Bureau Airport Station a few miles south of affected area recorded wind gusts to 50 m.p.h., during squall. Storm moved south-southeastward.
ALABAMA Headland, Henry County	10	7:45 p.m.	Short	Narrow	0	0	3	1	Tornado (suspected)	House damaged. A neighbor saw tornado dip near his house without touching ground, to later dip and hit first-mentioned house.
MISSOURI Bismarck, St. Francois County	10	8:30 p.m.			1				Electrical	Man killed when hit by lightning.
TEXAS Robert Lee, Coke County	10	8:45 p.m.			0	0			Funnel aloft	Funnel moved east or southeastward.
TEXAS Langtry area, Val Verde County	10	9:15 p.m.	25	*20			4	1	Hail, wind, and rain	Ground entirely covered by hail, average size of hens' eggs; killed a number of livestock, damaged roofs, windows, fences, TV antennas. Strong winds damaged roofs, demolished tenant house, badly damaged trailer house. Hail fell in strips 3- to 4-hundred yards in width. Storm moved southwestward.
ARIZONA Glendale, Avondale, and Litchfield Park, Maricopa County	10						1		Hail	Hail damage to crops.

See reference notes at end of table.

ARIZONA Pinal County (central portion)	10						1		Hail	Hail damage to crops.
	10									Minor storms also reported at Diehlstadt, Rolla, and Springfield, Mo.; in Carlsbad and vicinity and in Lea County, N. Mex.; at Heppner and Weston, Oreg.; and Emery, Utah.
CALIFORNIA Mountains north of San Francisco Bay, central Sierras, and southern mountains and coastal basin	10-11					1			Hail, rain, electrical, and funnel aloft	Moist, unstable air from ocean with low center off coast caused numerous thunderstorms. Hail fell at Bridgeport Dam, Mono County, in San Fernando Valley, and adjacent foothills of Los Angeles County, and Julian area, San Diego County. Rains, locally of cloudburst intensity, flooded some streets in southeast Los Angeles, and Coast Highway near Dana Point. Lightning struck several telephone and power poles and 2 transformers in Huntington Park, also 2 houses, slightly injuring 1 person. Funnel cloud, estimated 10 to 12 miles northeast of Hamilton Air Force Base, Marin County, observed by pilot and base weather station personnel on 10th. Lower extremity of funnel well above ground, estimated 800 feet; lasted only a few minutes; no report of damage.
TEXAS Between Seminole and Andrews	11	3:35 a.m.			0	0			Funnel aloft	
TEXAS Cotton Center (5 miles southwest of), Lamb County	11	3:41 a.m.			0	0			Funnel aloft	Funnel observed moving northeastward.
TEXAS Big Spring (7 miles west of), Howard County	11	3:55 a.m.			0	0			Funnel aloft	Funnel observed moving eastward.
TEXAS Justin, Denton County	11	4:15 a.m.			0	0			Funnels aloft	3 funnels observed moving northeastward.
ARKANSAS Prairie View community, Logan County	11	11 a.m.			0	0		1	Tornado	Funnel observed from Prairie View. Damaged barn 1 mile southeast, then went aloft to point 1/4 mile northeast, where it damaged 7 buildings and destroyed several fruit trees. Tornado moved northeastward.
TEXAS Hereford (10 miles east of), Deaf Smith County	11	1:50 p.m.			0	0			Funnel aloft	
MISSOURI Red Oak, Barton County	11	Afternoon							Electrical	Farm home and contents hit by lightning and destroyed.
INDIANA Fort Wayne (6 miles northeast of), Allen County	11	4:50 p.m.			0	0	2	1	Tornado	Unconfirmed funnel cloud briefly touching ground, damaged house under construction.
TEXAS Channing (1 mile south of), Hartley County	11	5:15 p.m.	Short	30	0	0			Tornado	Hit 7 or 8 times in open country, no damage; moved northeastward.
MISSOURI Risco and New Madrid, New Madrid County	11	5:30 p.m.			0	0	2		Funnel aloft, wind, rain, hail, and electrical	Storm moved northeastward.
ARIZONA Tempe (near), Maricopa County	11	6:30 p.m.					3		Hail and rain	Hail and rain damaged property in Tempe with additional crop damage in surrounding area. Storm moved northeastward.
IDAHO North-central areas	11	Evening							Rain, hail, and wind	Numerous power outages in vicinity of Coeur d'Alene and considerable damage to appliances; hail covered 200 acres of alfalfa to depth of 8 inches; heavy rains damaged new orchard near Council; trees felled by wind at Dixie.
ARIZONA Pinal County (central and southern portions)	11								Hail	Hail damage to crops.
UTAH Duchesne County	11				2				Hail and rain	2 deaths occurred when 2 cars collided when 1 of them slid sideways; 1/2 inch of hail on highway at time.

See reference notes at end of table.

NEBRASKA Papillion (south of), Sarpy County	13	6:45 p.m.	2	Narrow	0	0	3	1	Tornado	Tornado moved eastward.
NEBRASKA Omaha (south of), Douglas County	13	7 p.m.	Short	Narrow	0	0	2	1	Tornado	

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
FLORIDA Lakeland, Polk County	13	Evening				5	4		Rain	Heavy rains collapsed roof of skating rink.
ARIZONA Coolidge (5 miles southwest of), Pinal County	13								Hail	Hail damage to crops.
IOWA Cedar County	13								Hail	1-1/4-inch hail reported, with some building damage.
TEXAS Hico (7 miles west of), Hamilton County	13				1				Electrical	Lightning killed man as he stepped outside to check weather.
	13									Minor storms also reported near Atkins and Belle Chapel community and at Ozan, Ark.; in Buena Vista, Cerro Gordo, and Woodbury Counties, Iowa; in Great Bend and Hoisington areas, Kans.; at Cameron, Mo.; at Dyer, Nev.; at Chandler, Grant, Okmulgee, Sapulpa, and Stigler, Okla.; near Green Brier, Tenn.; and at Cody, Wyo.
CALIFORNIA Entire State	13-14				1	1			Hail, wind, electrical, and rain	Unstable air following cold front passage resulted in widespread thunderstorms, hail, and locally strong winds from Oregon border to southern California, with highest incidence in central Sierras and lower San Joaquin Valley. Heaviest thunderstorm in years at Dudley's, Mariposa County, and severe thunderstorm at Auberry, Fresno County, caused 2-1/2-hour power failure evening of 13th. Considerable fruit damaged by hail in local areas of Madera, Fresno, Kings, and Tulare Counties, and grapevines stripped by hail of golf-ball size in area southwest of Fresno. Lightning struck cable leading into tunnel at site of Haas Powerhouse project in Fresno County, setting off dynamite, killing man who was carrying it and partially deafening another. Rancher 4 miles west of Kerman, Fresno County, lost 6,100 turkeys due to hailstorm; loss estimated at $10,000. Howling winds toppled more than 50 trees in various sections of Los Angeles, 1 crushing 3 unoccupied automobiles.
TENNESSEE Cookeville, Putnam County	14	3 a.m.					4	1	Electrical	Lightning ignited poultry house, burning esimated 20,000 broilers and 600 bags of feed. Damage, including equipment, feed, and chickens, estimated at $50,000.
MISSOURI Dexter, Stoddard County	14	5:30 a.m.				1			Electrical and rain	Boy badly burned. Large barn hit by lightning and burned.
IOWA Lyon County	14	5:50 a.m.			0	0			Funnel aloft	State Police reported that Sibley radio reported funnel in vicinity of Rock Rapids.
MINNESOTA Blooming Prairie (4 miles east of), Dodge County	14	11 a.m.		200-250	0	0	2	1	Tornado (suspected) and hail	Severe thunderstorm with some hail. No funnel observed. Barn destroyed. Other buildings and machinery damaged. Witness described storm as making "terrible roar" following a calm. Storm moved northwestward.
IOWA Maquoketa, Jackson County	14	11:35 a.m.			0	0			Funnel aloft	Reported by Cedar Rapids; original source of report unknown.
COLORADO Jefferson, Denver, Arapahoe, Douglas, and Kit Carson Counties	14	Noon							Hail and rain	Thunderstorm accompanied by hail cut across southern and western parts of Metropolitan Denver, extending through Englewood, Littleton, Evergreen, Morrison, Golden, Lakewood, and southward to Castle Rock. Hailstones size of marbles piled 2 to 6 inches deep in area. Heavy rain caused flooding of homes in low places, and some roads and streets closed because of high water. Same day heavy hailstorm in Kit Carson County damaged roofs, windows, and all growing vegetation.
MISSISSIPPI Vicksburg, (north of), Warren County	14	1 p.m.			0	0			Funnel aloft	Pilot reported "twister north of Vicksburg able to circumnavigate," but no evidence of damage or reports of funnel cloud by observers on ground.
ALABAMA Muscle Shoals (near), Colbert County	14	2:30 p.m.			1				Electrical	Man killed by lightning while operating tractor in field.
OHIO Wooster, Wayne County	14	2:40 p.m.			0	3	5		Tornado (suspected) and wind	While strong thunderstorm winds did some damage throughout Wooster area, major casualties were business blocks in downtown area. Wayne County National Bank building lost its entire roof by what could easily have been tornadic action. Witnesses reported seeing roof lifted 3 to 5 feet then crash down into bank where 3 persons

See reference notes at end of table.

MAY 1957

Place	Date	Time	Length of path miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OHIO (Cont'd)										injured. Brick chimney also fell inside. Windows in air-conditioned buildings "sucked" out. Storm moved northeastward.
OHIO Cuyahoga and Lake Counties	14	3 p.m.				2	°5	C	Wind	Strong, gusty winds did structural damage to buildings, utility lines, and trees confined mainly to spots in Cleveland. Among places hit hardest were Lakewood, Berea, Painesville, Wickliffe, and Willoughby. Maximum 5-minute speed at WBAS at Cleveland 40 m.p.h., but gusts reached to 90 m.p.h. Storm moved northeastward.
CONNECTICUT Fairfield and New Haven Counties	14	3-10 p.m.					2	1	Electrical and rain	Heavy rains undermined and caused collapse of old, unoccupied building in Shelton. Lightning struck house and garage in Ansonia, but no fire damage resulted. Street flooding occurred in Danbury and nearby towns as unofficial observer reported over 2 inches of rain in less than 6 hours.
WASHINGTON Spokane County	14	4 p.m.					5	4	Rain	Heavy rain associated with thunderstorm activity occurred in Spokane area. Basements flooded, streets damaged, and power outages occurred. Section of railroad south of Spokane washed out and several highway bridges damaged. Storm moved westward.
WISCONSIN Green Bay, Brown County	14	4:30 p.m.					3	1	Rain	Localized flooding of basements and streets washed out. 1.15 inches of rain fell from 4:30 to 5:30 p.m.
WISCONSIN Plymouth-Sheboygan area, Sheboygan County	14	5 p.m.					4	1	Wind	Strong winds uprooted trees, damaged buildings, overturned 2 trucks, killed livestock, and demolished 1 barn. Storm moved eastward.
TEXAS Silverton (12 miles southwest of) Briscoe County	14	5:30 p.m.			0	0			Tornado	Hit a lake sending up spout of water, then dissipated; moved northeastward.
VIRGINIA Staunton, Weyers Cave, and Mt. Sidney, Augusta County	14	Late afternoon					4		Electrical	House and 2 barns burned by lightning. 7 large hogs killed. More than 300 telephones out of service for several hours.
PENNSYLVANIA Statewide	14	Afternoon-evening					4	1	Wind, electrical, and rain	High and turbulent winds blew down several structures and damaged homes, trees, and other property resulting in $15,000 damage. In west, heavy rain resulted in numerous washouts. Storm moved eastward. Lightning knocked power transformers and fired several buildings, causing $15,000 damage.
WEST VIRGINIA Mason, Jackson, Wood, and Ritchie Counties	14	Afternoon-evening						1	Wind	Some roofs and awnings damaged by high winds; a few antennas blown over; several houses damaged by falling trees; falling limbs and trees broke several power- and telephone lines and blocked highways.
KANSAS Thomas and Logan Counties	14	6:30-6:45 p.m.	30	*6			4	4	Hail, wind, and rain	Hail up to 1 inch in diameter fell over northern Logan and southern half of Thomas County. Damage to property especially severe at and near Winona. Hail 3 inches deep in some places. Wind and heavy rain accompanied hail. Storm moved eastward.
KANSAS Trego and Ellis Counties	14	9:20-9:30 p.m.	10	*3			5	4	Hail and wind	Heavy hail fell from near Ogallah to Ellis. Some stones 2-1/2 inches in diameter. Hail 3 inches deep. Roofs, windows, and screens damaged. Not much wind. Storm moved eastward.
KANSAS Russell County	14	11 p.m.	15				2	3	Hail and wind	Small hail, with some stones up to 1 inch in diameter fell from Russell to Dorrance. Hail not frozen hard. Intermittent damage. Part of high school roof blown off and rain damaged considerable plaster.
ALABAMA Bridgeport, Jackson County	14	Evening					4	1	Electrical	Lightning hit drawbridge which interrupted train and boat traffic and destroyed control tower of bridge.
MICHIGAN (Lower) Southern and central portions	14	Evening					4	1	Electrical, wind, and hail	Lightning and high winds caused scattered damage. Several barns destroyed by lightning or winds. 1 home and some oil tanks destroyed by lightning near Reed City. Hail occurred in a few localities.
MICHIGAN (Lower) Southern and central portions	14	Evening			0	0			Funnels aloft and waterspout	Funnels aloft reported in Berrien, Kent, Ottawa, Ionia, Clinton, Calhoun, Jackson, and Livingston Counties. Waterspout also reported in Lake Michigan, near Oceana County.
OHIO Scattered areas	14								Wind and hail	Line squall reported to have done considerable damage in towns over State, among them being Shelby, New London, Wellington, Zanesville, New Philadelphia, and Gallipolis. In Zanesville, hail fell to depth of 1/4 inch.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	14									Minor storms also reported at Florala and Greenville, Ala.; in Buena Vista, Cherokee, and Scott Counties, Iowa; in Wichita area, Kans.; in Bourbon County, Ky.; at Sandy Spring, Md.; and in Athens and vicinity, at Bristol, Kingston, and Lexington, Tenn.
NEW JERSEY Passaic, Essex, and Hudson Counties	14-15	Midafternoon-early a.m.					4		Rain, wind, and electrical	Series of thunderstorms produced torrential rains (amounts up to 4.73 inches at Ridgefield, Bergen County), resulting in flooding of cellars, numerous street and highway washouts, and damage to stalled automobiles. Accompanying lightning set small fires in several residences and 1 theater. Wind and lightning damage disrupted power services in some communities.
MICHIGAN Ishpeming, Marquette County	15	Early morning					4	1	Wind	High winds blew down 224-foot radio station antenna.
ARIZONA Phoenix, Maricopa County	15	12:30 p.m.			0	0	3	1	Dust devil	Dust devil moving northward ripped roof off small house.
OKLAHOMA Kingfisher, Garfield, Alfalfa, Woods, Major, and Blaine Counties	15	1:30 p.m.-midnight					5	6	Hail, rain, and wind	Heavy thunderstorms developed and remained over these counties with severe hailstorms and extremely heavy rains. Hail, 1 to 2 inches in diameter, caused up to 100 percent loss to crops and extensive damage to property in Kingfisher County over area 30 miles long and up to 20 miles wide. Hail fell off and on during period and reports indicated just heavy hail fell for period of 35 minutes. Extensive destruction resulted from heavy hail over 4-square-mile area in and near Cherokee, Alfalfa County, and in another area 10 miles by 3 miles in northwestern Alfalfa County. Stones averaged 1 inch in diameter, but larger stones ranged up to 3 inches in diameter. Spotted hail damage noted in other counties also. Heavy rains fell over most of area, and bucket survey indicated 20 inches near Dover, Kingfisher County. Record floods resulted along most streams in area. Winds and heavy rains over uplands caused almost as much damage to crops and washed soils as did floods.
OKLAHOMA Kingfisher County	15	3:03 p.m.			0	0			Funnel aloft	Police and Highway Patrol sighted funnel aloft between Hennessey and Dover.
TEXAS Groom (4 miles east of), Carson County	15	3:15-4 p.m.	7		0	0	3	1	Tornado	Crossed farm and pasture lands, heavily damaged barns and outbuildings; minor damage to farm home. Tornado moved northward.
TENNESSEE Johnson City, Washington County	15	3:20 p.m.			1	3			Electrical	Lightning struck 4 teenage boys playing baseball, killing 1 and injuring the others.
WASHINGTON Spokane County	15	Afternoon					5	5	Rain	Heavy rain associated with thunderstorm activity caused considerable property damage in Spokane. 3 apartment houses damaged when flood water undermined foundations. Basements flooded and streets and bridges damaged.
OKLAHOMA Dover (6 miles southwest of), Kingfisher County	15	5:10 p.m.			0	0			Tornado	Sheriff reported tornado. Evidently hit in open country as no damage reported.
TEXAS Miami (northeast of), Roberts County	15	5:10 p.m.			0	0			Funnels aloft	2 funnels observed moving northeastward.
MARYLAND Andrews Air Force Base, Prince Georges County	15	5:15-5:30 p.m.					5	1	Wind, rain, and hail	Severe, isolated thunderstorm lashed Andrews Air Force Base with hurricane-force winds. Top of thunderstorm reported 12,000 feet high as it moved in from west. In 10 minutes it built up to 40,000 feet and raised havoc for 15 minutes. Tents set up for Armed Forces Day blown down and valuable precision instruments damaged. 1 aircraft suffered minor damage to wing tip. Navy inflatable building blown down and ripped. Rain and hail accompanied storm.
TEXAS Pampa area, Gray County	15	5:20-7:30 p.m.			0	0	3	1	Tornado	Formed at Lefors, 13 miles south of Pampa, damaged grain elevators at Pampa. Sighted near McLean at 7:30 p.m., but no damage there. Tornado moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks

MISSOURI Independence, Jackson County	16	Afternoon							Wind, rain, and electrical	Extensive local flooding.
KANSAS Chautauqua, Montgomery, Wilson, and Neosho Counties	16	4:18-5 p.m.	40	100-300	0	0	5	4	Tornado, funnels aloft, hail, and rain	Tornado first hit ground about 6 miles southwest of Elk City, traveled northeastward, occasionally lifting from ground. Intermittent damage path extended to 2-1/2 miles east of Earlton after passing north of Neodesha and south of Altoona. 4 small funnels observed at one time aloft in Neosho County. Hail and heavy rain caused crop losses.
KANSAS Elk County	16	4:30-4:50 p.m.	4	20	0	0	3		Tornadoes	4 small funnels moving northeastward appeared to bounce off ground, 2 caused damage 2 miles north of Grenola and the other 2 caused damage 4 miles east of town.
FLORIDA Auburndale, Polk County	16	4:45 p.m.	6	150	0	0	3		Tornado	Tornado moved westward.
MISSOURI Richmond, Ray County	16	Late afternoon							Rain, wind, hail, and electrical	4.60 inches of rain in Richmond. Local flooding. Tree limbs and power- and phone lines downed.
TEXAS Miami (12 miles northwest of), Roberts County	16	5 p.m.			0	0	3		Tornado	Destroyed garage and outhouses.
OKLAHOMA Nowata, Nowata County	16	6:35 p.m.			0	0			Funnel aloft	Funnel aloft reported moving northeastward.
KANSAS Oswego (6 miles southwest of), Labette County	16	7:20 p.m.			0	0			Funnel aloft	Funnel cloud aloft observed moving east-northeastward.
OKLAHOMA Skiatook (near), Tulsa County	16	8:55 p.m.			0	0			Funnel aloft	Police sighted funnel.
OKLAHOMA Barnsdall (5 miles southeast of), Osage County	16	9:08 p.m.			0	0			Funnel aloft	Highway Patrol sighted funnel.
OKLAHOMA Oklahoma City, Oklahoma County	16	P.m.			1				Electrical	Lightning struck and killed man driving tractor.
MISSOURI Miller County	16	Evening							Rain	4 to 5 inches of rain caused much flooding along small streams.
KANSAS Labette County	16	Night				1			Wind	Boy became intangled in broken powerline when large limb of tree fell during minor windstorm and severed line. Boy suffered shock mainly.
	16									Minor storms also reported at Preston, Idaho; in Grenada and Minter City areas, Miss.; in Dudenville, Hardin, Kirksville, and Marshall, Mo.; at Oxford, Nebr.; and at Vinita, Okla.
TENNESSEE Nashville, Davidson County	17	11 a.m.						1	Wind, electrical, and hail	Wind blew out windows, snapped tree limbs, and blew down signs. Lightning struck substation, interrupting electric power services. Hail of golf-ball size fell. Storm moved east-northeastward.
ALABAMA Courtland, Lawrence County	17	1 p.m.				1			Electrical	Man hit by lightning while operating tractor apparently killed, but revived.
OKLAHOMA Garvin County	17	2:45 p.m.			0	0			Funnel aloft	Funnel aloft reported northeast of Elmore City and again between Wynne Wood and Pauls Valley moving northeastward.
TEXAS Crosbyton (10 miles south of), Crosby County	17	3:50 p.m.			0	0			Tornado and rain	Tornado moving eastward hit in ranch area, no damage. Heavy rain.
NORTH CAROLINA Madison County	17	4 p.m.						4	Hail	Corn, tobacco, and fruit damaged.
OKLAHOMA McAlester, Pittsburg County	17	5:25 p.m.		*3	0	0		2	Wind, rain, electrical, and funnel aloft	Strong winds estimated up to 60 m.p.h., with heavy rain and lightning caused widespread damage over McAlester. Buildings damaged and some roofs blown off, trees blown over, and damage to utilities estimated at $6,000. 2 utility poles broken off. Lightning struck home and set fire to TV set. Unconfirmed reports of funnel sighted Storm moved north-northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories [1]		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Jefferson County	17	9 p.m.	7	*5			4	4	Hail, wind, rain, and electrical	Hailstorm, with stones 1 to 3 inches in diameter, caused considerable damage to crops and property in and around Terral and Fleetwood. Storm moved eastward.
TEXAS Jacksboro, Jack County	17	10-11 p.m.					3		Wind	85-m.p.h., wind damaged trees, roofs, signs, and plate glass all over town. 1 garage blown down.
	17									Minor storms also reported at Eminence, Rolla, and Toronto, Mo.; at Chickasha and Tulsa, Okla.; and at Brownwood, Tex.
CALIFORNIA Entire State	17-19					4			Wind, rain, and hail	Storm front moving southeastward, followed by moist, unstable air brought record or near-record May rains to north and central coastal areas, widespread thunderstorms, hail, and high winds in northern mountain ranges, central Sierras, and lower San Joaquin Valley, and locally heavy rains and high winds in south. Heavy rains caused heavy damage to strawberries and cherries in Santa Clara County, and strawberries in Santa Cruz County. At Santa Cruz, rain-swollen waters of San Lorenzo River destroyed coffer dam with estimated damage of $6,000, while in nearby Soquel, Soquel Creek washed out earth-fill used as temporary crossing during bridge construction. Rainwater accumulating on roof of market in San Mateo, due to clogged drain, caused estimated $2,000 structural damage. Cloudburst sent 5-foot wall of water down Uvas Creek in Santa Clara County, washing out small coffer dam. Earthslides threatened 2 homes in Mill Valley, Marin County, and 1 street was flooded. Winds estimated up to 50 m.p.h., knocked down powerline at Ross, and a number of powerlines blown down in San Francisco. In San Lorenzo, Alameda County, 2 areas flooded with 6 to 8 inches of water. Russian River rose to crest of 13.55 feet at Guerneville, washing out beach facilities and refreshment stands prepared for summer season. Kaweah and St. John Rivers threatened to flood Visalia, Tulare County, and approaches to Dinely Bridge above Three Rivers washed out. At Lake Spaulding, 5.15 inches of rain fell in 24 hours, greatest of record for May. Rockslide derailed Western Pacific's California Zephyr in Feather River Canyon. 2 of the 3 diesel engine units plunged 150 feet to canyon floor, and 4 trainmen injured, 1 seriously. Slide again closed highway at Emerald Bay on Lake Tahoe. Locally heavy rains and high winds occurred in south. At Crestline, San Bernardino County, unofficial measurement of 5.12 inches in 10 hours reported. Strong winds lashed coast, and pleasure cruiser with 12 passengers grounded on Anacapa Island, off Oxnard; no loss of life or injuries.
ILLINOIS Extreme southern portion	18	12:10 p.m.					4		Wind and rain	Severe wind squalls and heavy rain showers affected area from Carbondale and Du Quoin and northeastward to Benton. At 1:45 p.m., windstorm also affected narrow strip along Highway 50 from Salem to Olney. Storm damage chiefly to overhead wires by broken trees. Wind gusts to 55 m.p.h., measured near Carbondale. "Roaring sound" reported from Hurst-Bush area and may have been tornado.
LOUISIANA New Iberia, (15 miles south of), Iberia Parish	18	2 p.m.			0	0			Funnel aloft	Funnel moving southeastward reported not touching ground; might have been waterspout which moved onto land.
VIRGINIA Barrenridge area, Augusta County	18	3-3:30 p.m.							Hail and wind	Fruit trees stripped, gardens cut to pieces, and paint scarred.
INDIANA Evansville, Vanderburgh County	18	3:20 p.m.				1			Wind	Several trees and powerlines blown down. Falling limb injured a child. Winds reached 55 m.p.h., from northwest. Storm moved east-northeastward.
OHIO Mt. Healthy, Hamilton County	18	Afternoon						3	Hail	During heavy thunderstorm, hail ranging up to golfball size stripped trees of foliage and did damage to peach, apple, tomato, cabbage, and bean crops.
MISSOURI Rolla, Phelps County	18	7:30 p.m.			0	0			Funnel aloft	Funnel sighted over wooded area.
ARKANSAS Pickens, Desha County	18	9 p.m.							Wind and hail	Moored crop-dusting airplane destroyed and 2 damaged also several roofs damaged by wind. Slight hail damage to young cotton.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Union City vicinity, Obion County	18	P.m.						1	Wind, rain, and electrical	In Union City, 8 business establishments flooded with minor damage; streets flooded; 2 fires caused by short circuits due to flooding, and lightning struck and damaged transformer. In Woodland Mills area, wind destroyed several barns and damaged cotton gin, garage, and blacksmith shop.
TENNESSEE Cross Roads community, Crockett County	18	P.m.						1	Electrical	Barn, struck by lightning, destroyed, including 450 bales of hay, 2 cribs of corn, and some small implements.
NORTH CAROLINA Rutherford County	18							4	Hail	Tobacco, fruit, and other crops damaged.
	18									Minor storms also reported at Filer, Idaho; in Lyons and Marco areas, Ind.; and in Daviess County, Ky.
CALIFORNIA Fresno, Fresno County	19	8:18-8:23 a.m.	Short	Narrow	0	0			Tornado	Third tornado ever to be seen in Fresno area swung down to earth briefly at 8:18 a.m., lasting until 8:23 a.m., observed from WBAS, Fresno and by local pilot. Clouds broken, and rain showers had just ended. No unusual noise heard by observers, but occupant of 1 of damaged houses reported roaring noise. Funnel cloud was vertical when first observed, but looped just before breaking up. Tornado ripped shingles from homes and twisted cooler on roof of 1 residence. Almond tree uprooted. Tornado moved east-northeastward.
WEST VIRGINIA Tyler County	19	Afternoon							Hail	Severe hailstorms reported, but no details given.
WEST VIRGINIA Wood County	19	Afternoon							Rain and hail	Excessive rainfall caused collapse of factory roof; stock and fixtures below damaged by water. A few streets and many residential basements in Parkersburg flooded, considerable damage. 25- to 30-foot section of retaining wall at rear of Parkersburg parking lot washed away. 2 small rural bridges washed out. Some damage to fences and topsoil; some field crops and gardens hurt by heavy rain and hail.
NEBRASKA Harrison (2 miles south of), Sioux County	19	5 p.m.	Short	Narrow	0	0			Funnel aloft	Observed over sparsely settled terrain.
NEBRASKA Minatare (7 miles east of), Scotts Bluff County	19	6:30 p.m.	Short	Narrow	0	0			Tornado	Observed by Highway Patrol; moved northeastward.
NEBRASKA Gurley (1 mile west of), Cheyenne County	19	9 p.m.	2	Narrow	0	0	4	1	Tornado	Farm buildings destroyed; tornado moved northeastward.
NEBRASKA Bayard (6-1/2 miles west of), Morrill County	19	9:30-10 p.m.	Short	Narrow	0	0	4	1	Tornado and funnels aloft	Several other funnels observed in clouds.
WYOMING Meadowdale (north of), Platte County	19	Evening			0	0	2	1	Whirlwind	
TENNESSEE Pulaski, Giles County	19							1	Electrical	100-year-old rural house struck by lightning; considerable damage.
UTAH Salt Lake and Weber Counties	19								Rain	Heavy rains caused flooding of many streets and basements; several thousand dollars damage reported in Ogden and minor damage elsewhere.
	19									Minor storms also reported at Fairhope, Foley, Montgomery, and Selma and in Limestone County, Ala.; in Montgomery County, N.C.; at Old Jefferson, Tenn.; and at Hooper and Manti, Utah.
IOWA Cherokee County	20	7 a.m.					4	1	Electrical	Lightning struck and burned large barn and contents.
COLORADO Kit Carson County	20	11:10 a.m.			0	0			Tornado	Tornado reported touching ground near Bethune, moved northeastward to vicinity of Burlington, then into Kansas where it was reported seen 12 miles west and 2-1/2 miles north of Goodland.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS Sherman and Rawlins Counties	20	11:10 a.m.-1:35 p.m.	100		0	0			Tornado	Tornado first sighted near Bethune, Colo., about 11:10 a.m., touching ground near Burlington, Colo., and on ground 5 miles north-northeast of Goodland at 12:40 p.m., and again 5 miles southwest of Atwood moving northeastward at 1:35 p.m, and apparently disappeared near Herndon a little later. No real damage done as tornado missed all farm buildings.
KANSAS Phillipsburg area, Phillips County	20	11:55a.m.-12:10p.m.	1	300	0	0	2	1	Tornado	Large funnel-shaped cloud formed aloft about 4 miles south of city, moving northeastward. After it had passed to north of city limits, white tail appendage broke off from main cloud and hit ground for about a mile near southeast side of city.
SOUTH DAKOTA Eastern portion	20	All day				1	3		Electrical	Widespread lightning activity caused major damage to house at Spencer, minor damage to houses at Hoven, Howard, and Hayti. Near Faulkton, a man standing in barn doorway near lightning-rod groundwire knocked to ground, necessitating hospitalization.
KANSAS Osborne, Jewell, Mitchell, Cloud, Republic, and Washington Counties	20	1-4 p.m.		300-400	0	0	5	1	Tornadoes, funnels aloft, wind and hail	During severe afternoon thunderstorm a number of damaging tornadoes and several funnels observed. Severe hailstorm occurred at Haddam and winds caused damage intermittently. Tornado at 2:05 p.m., moving north-northeastward damaged 3 homes and numerous farm buildings. Sounded like a train, 3 to 9 miles north of Burr Oak. Another tornado at 1:15 p.m., hit farm plant 3 miles north and 1/2 mile east of Downs, Osborne County, moving northeastward. Some trees, telephone lines, and shed blown down. Well-defined funnel first observed at 1:25 p.m., in Hunter area, Mitchell County, traveling northeastward. About 7 miles south of Solomon Rapids, second funnel at 1:45 p.m., developed and passed to east. North-bound funnel observed to dip to ground 4 times, the last near Solomon River. Debris "fallout" found 4 miles further north; no particular damage. Apparently this latter tornado that developed southwest of Beloit and followed an eastern course dissipated and reformed 5 miles east-northeast of Glasco at about 2:50 p.m., and cut path northeastward for 60 miles. Auxillary funnels observed along route between 2:50 and 4 p.m.; 1 about 6 miles south-southeast of Concordia over short path; second and third, 1 on either side of main funnel 1-1/2 miles east of Huscher covered paths of 1 mile and 2 miles; fourth, 7 miles east of Concordia; and fifth began about 1 mile east of main tornado and traversed path northeastward for 4 miles where it appeared to join main funnel 4 miles east of Hollis and 1 mile north of Republican River. Main funnel continued northeastward passing 3 miles southeast of Haddam and lifting about 3 miles northwest of Morrowville, Washington County. Severe hail, especially large stones of 3 to 4 inches in diameter, fell between 3:40 and 4 p.m., over 10-square-mile area south and east of Haddam. Hail large, but not frequent enough to cover ground. Damage to property $5,000, to crop $3,000 by hail.
NEBRASKA Red Cloud (northeast of), Webster County	20	1:30 p.m.	Short	Narrow	0	0	2	1	Tornado	Funnel observed moving northward; struck little of value.
NEBRASKA Upland (north of), Franklin County	20	1:30-2:30 p.m.					1	3	Hail	Hailstones 1/2 to 1-1/4 inches in diameter. Ground covered at center of storm.
COLORADO Bent County	20	1:40 p.m.			0	0			Funnel aloft	Tornado cloud seen 10 miles north of Las Animas at 1:40 p.m., by airline pilot. It was traveling about 1,500 feet above ground and remained aloft.
NORTH CAROLINA Greene County	20	2 p.m.						4	Hail	5 square miles damaged, mostly tobacco.
NEBRASKA Broken Bow (northeast of), Custer County	20	2:13-2:20 p.m.	Short	Narrow	0	0	2	1	Tornado	Funnel observed moving northeastward; struck little of value.
NEBRASKA Guide Rock (east of), Webster County	20	2:20 p.m.	Short	Narrow	0	0			Tornado	Observed by Highway Patrol; moved northeastward.
NEBRASKA McCook-Indianola areas, Red Willow County	20	2:30 p.m.	6	*1	0	0	3	4	Hail, wind, and funnel aloft	Funnel cloud observed by radar in this storm. Property damage by wind, crop by hail. Storm moved northeastward.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEBRASKA Holstein (north of), Adams County	20	2:30-2:45 p.m.	9	*6			1	5	Hail	Stones 3/8 inch in diameter. Ground covered 5 inches in center of storm. Storm moved northeastward.
SOUTH DAKOTA Rockerville (near), Pennington County	20	3 p.m.			0	0	3		Tornado	Barn destroyed, nearby objects not disturbed. No funnel cloud observed.
NEBRASKA Farnam (near), Dawson County	20	3-4 p.m.	8-10	*2-3			3	4	Hail	Hailstones 3/4 to 1-1/2 inches in diameter. Storm moved northeastward.
TENNESSEE Henry County	20	3-4 p.m.						1	Electrical, rain, and wind	Lightning ignited 2 houses, 1 in Paris the other about 3 miles east of Paris, burning both to ground. Limbs blown from trees, and power- and phone lines damaged by high winds in county. Accompanying heavy rains severely damaged county roads and washed-out several bridges.
NEBRASKA South of Hebron to Malcolm, Thayer to Lancaster Counties	20	3-5 p.m.	70	Narrow	0	0	5	2	Tornado	15 sets of farm buildings destroyed or badly damaged. Storm probably moved into State from Kansas, moving north-northeastward.
KANSAS Topeka (9 miles northwest of), Shawnee County	20	Early afternoon			1				Electrical	Lightning struck man working in nursery field. Only a few drops of rain fell.
NORTH CAROLINA Hertford County	20	3:15 p.m.						4	Hail	Cotton and corn damaged over 2 square miles.
NEBRASKA Roseland (near), Adams County	20	Afternoon	Short	Narrow	0	0			Funnel aloft	Did not reach ground.
NEBRASKA Anselmo (3-1/2 miles west of), Custer County	20	Afternoon		Narrow	0	0	3	1	Tornado	Most of path over sparsely settled country.
MISSOURI Sullivan, Franklin County	20	Afternoon							Hail	Hail damaged 3 parked aircraft.
MISSOURI Rolla, Phelps County	20	Afternoon							Hail, rain, and wind	Large hail, some size of hens' eggs. Roofs and greenhouses damaged.
MISSOURI Maysville, De Kalb County	20	Late afternoon	8	200	0	0			Tornado, rain, and wind	Heavy rains, up to 2.50 inches. Buildings damaged on 8 farms.
KANSAS Cedar Vale (south and west of), Chautauqua County	20	4-4:30 p.m.	3	*3				3	Hail	Hail pelted 9-square-mile area. Stones ranged from 1/2 to 1 inch in size, but barely covered ground.
NEBRASKA Daykin (5 to 6 miles southwest of), Jefferson County	20	4:16 p.m.			0	0			Funnel aloft	Observed by radar.
NEBRASKA Endicott (near), Jefferson County	20	4:30 p.m.	4-5	*4-5			1	4	Hail	Hailstones 2 to 3-1/2 inches in diameter. Storm moved northeastward.
OKLAHOMA Oklahoma City, Oklahoma County	20	4:30 p.m.			0	0			Funnel aloft	Funnel aloft reported in a severe thunderstorm over north edge of city, moving northeastward.
OKLAHOMA Pawnee, Pawnee County	20	5 p.m	1/2	100	0	0			Tornado, wind, hail, rain, and electrical	Small tornado damaged roof of house and broke electrical lines north of Pawnee. Several farmsteads in area damaged by winds. Storm moved northeastward.
NEBRASKA Adams (2 miles west to 6 miles north of), Gage County	20	5 p.m.			0	0	4	3	Tornado and hail	Storm moved north-northeastward. Tornado moved over narrow, 7-mile long path. Hail damaged area wider. Property damaged by tornado, crop by hail.
NEBRASKA Doniphan to Phillips, Hall and Hamilton Counties	20	5:08 p.m.	12	Narrow	0	0	4	1	Tornado	Tornado moved north-northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
NEBRASKA Wood River (near), Hall County	20	5:10 p.m.	Short	Narrow	0	0			Funnel aloft	Observed by radar.
OKLAHOMA Hominy, Osage County	20	5:45 p.m.			0	0	4	1	Tornado (suspected)	Warehouse destroyed and equipment stored inside damaged. Iron girders twisted. Storm moved northeastward.
NEBRASKA Lincoln (southwest of), Lancaster County	20	5:45-5:56 p.m.	10	Narrow	0	0			Funnel aloft	Did not reach ground; moved north-northeastward.
KANSAS Greenwood, Lyon, Osage, Franklin, Miami, and Johnson Counties	20	5:45-7:37 p.m.			0	0	6	4	Tornadoes, hail, and funnels aloft	Severe thunderstorm developed south of Emporia and moved northeastward to southern Kansas City, Mo., from about 5:30 to 8 p.m. A number of funnel clouds and tornadoes were spawned by this thunderstorm cell. At Hartford, 14 miles southeast of Emporia, tornado at 5:45 p.m., followed short, east-southeastward path through town, damaging trees, roofs, and windows with damage of $300. Funnel cloud aloft sighted southeast of Quenemo, Osage County, about 6 p.m., had a white appearance. Funnel observed aloft about 2 miles west of Madison, Greenwood County, at 6:15 p.m., had well-defined "elephant trunk" appearance; struck ground near junction of 2 branches of Verdigris River, 1-1/2 miles northwest of Madison and moved northeastward. Trees, old sheds, and minor roof damage done. Had roar louder than jet plane. Main tornado of this storm struck ground about 2 miles southwest of Williamsburg, Franklin County, about 6:15 p.m., and followed northeastern course of 71 miles to about 2 miles northeast of Knobtown, Mo. Kansas part of path approximately 57 miles. Tornado passed out of Kansas 1 mile southwest of Martin City, Mo., at 7:37 p.m. Another tornado left damage path of about 7 miles adjacent to and parallel with main path from 1 mile northeast of Williamsburg to about 3 miles northeast of Homewood. 3 funnels observed east of Ottawa in addition to main tornado. 1 funnel sighted aloft and heard as it passed northeastward over Overland Park and Fairway. Main tornado on ground virtually all the length of path. Noise of tornado terrific and could be heard at least 5 minutes in advance. Debris carried to height of 30,000 feet and to many miles from damage path. Cloud was well-defined funnel variously described from light to dark, and which became larger and narrower near its termination. Destruction indicated great intensity of storm. Damage to property estimated at $1,000,000, to crops $10,000.
OKLAHOMA Norman (northwest of), Cleveland County	20	6 p.m.			0	0			Funnel aloft	Highway Patrol reported funnel aloft.
OKLAHOMA Lincoln County	20	6 p.m.			0	0			Tornado	Tornado traveled northeastward several miles across southeastern Lincoln County, causing extensive damage to at least 8 farmsteads in Prague area. Many homes damaged, outbuildings destroyed, and trees and fences blown down.
MISSOURI Grant City, Worth County	20	6:30 p.m.							Wind, rain, and hail	Damage to gardens, trailer home, roofs, and windows.
OKLAHOMA Sapulpa (area), Creek County	20	7 p.m.			0	0		1	Tornado	Tornado moved south and east of Sapulpa. Several outbuildings blown away and cow killed.
OKLAHOMA Nowata (7 miles west of), Nowata County	20	7 p.m.			0	0			Tornado	Tornado dipped to ground. 500 yards of fence ripped up and oil tank blown into gully.
OKLAHOMA Broken Arrow, McCurtain County	20	7:30 p.m.	3	500	0	0	5	1	Tornado and funnels aloft	Tornado formed over and bounced diagonally across City. About 200 homes received variable damage to complete destruction, outbuildings destroyed, and cars and trees were blown over. 2 other funnels reported with main tornado. Storm moved northeastward.
MISSOURI Jackson and Ray Counties	20	7:37-8:30 p.m.	15	200-300	33	170	6		Tornado, wind, rain, hail, and electrical	Tornado first spotted at 6:15 p.m., near Williamsburg, Kans. It was tracked by radar, and reported by persons observing storm along its entire track. Crossed Kansas-Missouri border just north of southwestern corner of Jackson County, at 7:37 p.m. From there it hit Martin City, Ruskin Heights, and near Knobtown. Speed of motion calculated at from 31.4 to as much as 46.9 m.p.h., at various times along its path. Some indications

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI (Contd)										tornado lifted near Knobtown, then either came back down, or another funnel formed near Sibley then moved into Ray County across river. Witnesses at Hardin and Richmond told of seeing tornado and considerable damage to property done at Richmond about 8:30 p.m. Debris from Hickman Mills found later at Ottumwa, Iowa, and at many points in north-central Missouri.
OKLAHOMA Beggs (3 miles southwest of), Okmulgee County	20	8:04 p.m.			0	0			Tornado (suspected)	Ground Observer Corps reported tornado on ground; moved northeastward.
MISSOURI Hardin, Ray County	20	8:45-9 p.m.			0	0			Tornado	Witnesses heard "freight-train roar". 40-acre field littered with debris from Grandview-Ruskin Heights storm. Tornado moved northeastward.
MISSOURI Ash Grove, Greene County	20	9 p.m.							Wind, rain, and hail	Heavy rain and hail size of pecans. Hail damaged roofs. Oat and barley fields and gardens ruined.
MISSOURI Sibley area, Jackson County	20	9:15-9:30 p.m.				2			Wind and rain	5 houses damaged in and near Sibley. Storm moved northeastward.
MISSOURI Stark City and Sweetwater, Newton County	20	9:55 p.m.							Wind, rain, hail, and electrical	Storm first hit Sweetwater at 9:55 p.m., destroying garage and damaging home and store. It then moved to Stark City at 10 p.m. Many windows broken and trees and lights downed. Storm moved northeastward.
OKLAHOMA Chelsea, Rogers County	20	10:30 p.m.			0	0			Tornado (suspected), wind, and rain	Several farmsteads in area had extensive damage 1 house lifted and twisted, and many outbuildings destroyed. Widespread wind damage to roofs and trees reported. Storm moved northeastward.
OKLAHOMA Mayes and Delaware Counties	20	11 p.m.		200	0	1		2	Tornado and funnels aloft	Funnel aloft passed northeastward over Pryor, struck farmstead 3 miles southwest of Spavinaw, moved through city, and struck several more farmsteads northeast of city. First farmstead had $40,000 damage to home and all outbuildings blown away. Extensive damage and destruction resulted all along tornado's path. 1 injury resulted in Spavinaw when house destroyed. This same storm is believed to have moved into Delaware County and damaged at least 3 farmsteads in Deerlick community, 4 miles northeast of Jay. Reports of funnels numerous throughout 2-county area.
OKLAHOMA Nowata (south of), Nowata County	20	11:30 p.m.			0	0			Funnel aloft	Funnel sighted.
MASSACHUSETTS Coastal and eastern areas	20	P.m.					4	1	Wind	Northeast storm caused abnormally high-tide surge along coast. Damage heaviest along south shore, where many small boats and yacht-club installations smashed, including one 36-foot cabin cruiser. Winds inflicted minor damage to interior towns in eastern Massachusetts by felling trees, limbs, and wires.
OKLAHOMA Tulsa, Tulsa County	20	P.m.			0	0			Tornado	Sheriff deputies reported funnel aloft and unconfirmed report indicated it dipped to ground, however, no damage noted.
OKLAHOMA Tulsa County	20	P.m.			0	0			Funnels aloft, rain, hail, and electrical	Police reported several funnels aloft during severe thunderstorm at Collinsville. Unconfirmed reports received of funnels sighted in Skiatook area.
OKLAHOMA Centralia (west of), Craig County	20	P.m.			0	0		1	Tornado (suspected)	Extensive damage to outbuildings and home on ranch.
OKLAHOMA Vinita area, Craig County	20	P.m.			0	0			Tornado (suspected), wind, and hail	3 barns damaged on farm northeast of Vinita. 1 had roof lifted off. Some wind and hail damage noted in Vinita.
OKLAHOMA Herd, Osage County	20	P.m.			0	0			Funnels aloft	Observer reported 2 funnels.
IOWA Scattered locations	20	Evening					5	1	Wind	Damaged buildings, downed utility lines, and damaged automobiles.
NEBRASKA Antelope County (northeastern portion)	20	Evening					3	3	Hail	Drifts up to 8 inches deep.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	20									Minor storms also reported at Gower, Kirksville, Springfield, and Wheaton, Mo.; near Calloway, and Lexington, and at Falls City, Nebr.; at Hominy, Perry, Stillwater, and Talala, Okla.
MISSOURI Neosho, Newton County	20-21	Night							Rain, hail, wind, and electrical	4.93 inches of rain fell from 9:30 p.m., on 20th to 8 a.m., 21st. Hail size of golf balls fell about 9:45 p.m. Much damage to local greenhouse. Many streets, roads, and homes flooded.
	20-21									Minor storm also reported in Jasper and Lawrence Counties, Mo.
MISSOURI Laclede County	20-23								Rain	Much flooding of lowlands.
MISSOURI Waynesville, Pulaski County	21	11:30 a.m. -1:20 p.m.					4		Electrical, wind, and rain	Lightning hit poultry house 3 miles east of Waynesville and killed 5,200 turkeys. Some trees downed and trailer house upset by wind. Damage to farm buildings estimated at $9,200. Storm moved northeastward.
MINNESOTA Staples (6 miles northeast of), Cass County	21	1 p.m.	4-1/4	100-300	0	0	4	1	Tornado	Funnel cloud observed. Struck farm, demolishing barn and garage. Windows in house blown out. Swath 1 mile in length cut through stand of pine trees. Tornado moved northward.
IOWA Marion, Poweshiek, and Iowa Counties	21	1-2 p.m.					3	3	Hail	Hail up to 1-1/2 inches in diameter covered ground, damaging early crops and destroyed poultry.
MINNESOTA Harris-Rush City area, Chisago County	21	2 p.m.	9	100	0	2	4	1	Tornado	Funnel cloud witnessed by several persons, also photographed. Struck 9 individual farms, beginning 1 mile east of Harris and ending 1 mile north-northeast of Rush City. Child snatched from mother's arms as they tried to escape storm and hurled both through the air. 1 house destroyed, 4 others damaged. 8 barns blown over and destroyed as were numerous outbuildings. Trees up to 24 inches in diameter twisted off and uprooted. Storm moved north-northeastward.
MISSOURI Rolla, Phelps County	21	2:10-3:40 p.m.					4	4	Hail and rain	Hail hit area 13x2 miles. Almost covered ground in places. Largest stones 3 inches in diameter. Storm moved northeastward.
MISSOURI Dent County	21	3 p.m.	12	440-880	0	1	4	3	Tornado, hail, wind, and rain	Storm first struck on Highway 19, just north of Standing Rock. Highway blocked by fallen trees. Tornado cut northeastward path through timber, then rose shortly after crossing Highway 19. Next damage 2 miles east of Doss, where home completely destroyed. Storm moved to near junction of Highways 32 and 72, hitting several farm buildings and houses along way. 1 child hurt by flying glass. All others had sought shelter in basements or storm cellars. Heavy hail fell in northeastern corner of Dent County. Damage to livestock about $800.
MISSOURI Taney and Douglas Counties	21	3:15-3:27 p.m.	11	500-1,000	0	0	5	3	Tornado	Tornado apparently first hit in northeastern corner of Taney County, near Brownbranch. Then moved northeastward, making several short "zigzags," passing near Squires, and lifting 2-1/2 miles northeast of Girdner. Tornado covered 10 miles in about 12 minutes. All persons in path able to escape injury by going to basements or storm cellars, including rural school teacher and 11 children, who all went in teacher's car to nearby farm-home storm cellar. Many reported hearing noise like dozens of railroad cars, or low-flying planes.
MISSOURI Reynolds, Washington, and St. Francois Counties	21	3:45-4:15 p.m.	8	300-400	8	50	7		Tornado, wind, rain, hail, and electrical	Tornado apparently hit in vicinity of Centerville, Reynolds County, damaging several buildings. It then came down again in vicinity of Belgrade, Washington County, where 20 buildings destroyed, and several damaged. It then moved almost due east along Highway 8, destroying 1 house at Leadwood. Full impact of storm hit Desloge and Cantwell, St. Francois County. Several large buildings, including churches, school buildings, and many homes demolished. After leaving Cantwell, tornado apparently lifted, and then hit again in vicinity of Fairview and French Village. Witnesses told of seeing funnel form and disappear several times.
MISSOURI Carter, Wayne, Reynolds, Washington, St. Francois, and Ste. Genevieve Counties	21	3:53-4:10 p.m.		400-500	7	50-75			Tornado, funnels aloft, wind, rain, and hail	Tornado hit Fremont just before 4 p.m., then moved to Van Buren, and then toward Piedmont, Wayne County. Town of Fremont left devastated, with only 7 homes intact. In Van Buren, damage severe but not as complete as in Fremont. Large hail reported at Van Buren at 4 p.m. Exact path of storm difficult to reconstruct, since some of area

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
MISSOURI (Cont'd)										sparsely inhabited, and reports of more than 1 funnel involved. Some evidence that this storm, or funnel clouds which developed in same "family" of funnels, went from Piedmont, Wayne County, to Centerville, Reynolds County; Belgrade, Washington County; and Desloge and Cantwell, St. Francois County; and eventually into Illinois near Ste. Genevieve. Heavy damage to homes, buildings, and timber. Storm moved east-northeastward.
ILLINOIS Monroe and St. Clair Counties	21	3:50 p.m.	25	150	0	0	5		Tornado and hail	Intermittent path from south of Columbia to Belleville and Scott Air Force Base. Damage apparently most severe near Columbia. Heavy hail in parts of Belleville. Storm moved east-northeastward.
MISSOURI Marble Hill, Bollinger County	21	4:45 p.m.-late evening			0	0			Wind, rain, and funnels aloft	Possible funnels aloft. Heavy rain. Roofs of farm buildings damaged and trees uprooted.
ILLINOIS Claremont, Richland County	21	5 p.m.	4	150	0	0	4		Tornado	Path seems to have been fairly continuous, affecting several farmsteads. Storm moved east-northeastward.
MISSOURI Jackson (5 miles west of), Cape Girardeau County	21	5-5:30 p.m.	5	500	0	0	4		Tornado	Tornado began just north of Highway 34, west of Jackson in Byrds Creek area, then moved northeastward 5 miles, making numerous "dips." Buildings on 12 farms damaged.
IOWA Cedar, Muscatine, and Scott Counties	21	5-6:30 p.m.	10	100	0	0	5	1	Tornadoes	1 or more tornadoes destroyed several farm buildings. Storm moved northeastward.
MISSOURI Millersville and Bufordville, Cape Girardeau County	21	5:30 p.m.	3	440	0	0	4		Tornado	Houses and barns demolished in storm path. Trees uprooted. Tornado moved northeastward.
MISSOURI Monticello area, Lewis County	21	5:30-5:31 p.m.		440	0	2	5		Tornado, wind, and rain	Storm hit 6 miles southwest of Monticello, damaging barn, then apparently skipped and hit northwestern Monticello, then skipped to about 6 miles northeast, where it destroyed some buildings in Benjamin. No one actually saw funnel, but observers heard "terrible roaring."
ILLINOIS Jackson and Union Counties	21	6:07 p.m.	9	200	0	0	5	5	Tornado	Tornado apparently lifted and struck again near Makanda. Heavy damage at Alto Pass where high school wrecked. Heavy damage to valuable peach orchards. Tornado moved east-northeastward.
ILLINOIS Gallatin and Pope Counties	21	7 p.m.			0	0	4		Wind, rain, and funnel aloft	Series of heavy wind and rain squalls caused scattered damage to several communities during evening. Funnel cloud sighted at Herod, possibly continuation of Alto Pass tornado.
MISSOURI Fredricktown area, Madison County	21	7-9 p.m.			0	0	2		Hail, rain, wind, and funnel aloft	Pea-sized hail at Fredricktown at 7:45 p.m. From 4:20 p.m., 21st through night of 22d, over 6 inches of rain fell, causing local flooding on Saline Creek. Funnel cloud reported northeast of Fredricktown. It either remained aloft, or failed to touch down at any inhabited point.
ILLINOIS Colmar, McDonough County	21	7:40 p.m.	10	120	0	0	5		Tornado	Houses destroyed at southeast edge of Colmar and several farmsteads damaged. Tornado moved east-northeastward.
INDIANA Indianapolis, Marion County	21	8 p.m.				1	3	1	Wind	Wind broke windows, tore down trees, and knocked out electrical services. Injury occurred as result of flying glass.
INDIANA Paradise, Warrick County	21	8:03 p.m.			0	2	4	1	Tornado and electrical	Tornado cloud observed and debris showed evidence of tornado. Lightning nearly continuous and brilliant. 1 home destroyed; 2 occupants injured. House picked up, spun around and carried 150 feet, roof carried 500 feet.
ARKANSAS Faulkner, Lonoke, White, and Jackson Counties	21	8-11 p.m.					5	4	Wind, rain, and electrical	Severe thunderstorms with high, gusty, surface winds over wide area during evening. Considerable property damage principally due to wind with some damage from heavy rain and lightning. Airplane and hangar destroyed near Cabot, Lonoke County. Storm moved northeastward.
ARKANSAS Mississippi County	21	10:30-11 p.m.					4	5	Wind and rain	Widespread damage over county. Of the $125,000 damage to crops, $100,000 attributed to wind and $25,000 to rain.
MISSOURI Portageville area, Peniscot County	21	11 p.m.							Wind and rain	Powerlines and trees downed, roof blown off seed company building, and plate-glass windows broken.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks

ARKANSAS Jonesboro, Craighead County	21	11-11:30 p.m.	1	800		1	5	1	Wind	Principal damage on campus of Arkansas State College at Jonesboro, where several buildings damaged, including extensive damage in adjacent student-housing area. Also considerable damage to residental property.
MISSOURI Dunklin and Pemiscot Counties	21	11:45 p.m.			0	0			Tornado and funnels aloft	Tornado damage reported in eastern edge of Kennett, southwest of Arbyrd, where 1-mile long strip damaged, and in Gobler Deering area many buildings demolished. Funnels aloft also reported north and south of Malden at 11:30 p.m. 18 persons and 4 dogs crowded into storm cellar 5 feet in diameter in Kennett. Storm moved northeastward.
KENTUCKY Jefferson County	21	P.m.					3		Wind	Winds with gusts to 77 m.p.h., struck parts of county. Trees and powerlines knocked down and home badly damaged.
KENTUCKY Hardin County	21	P.m.					4		Wind	Screen and marquee of outdoor theater blown down and home badly damaged.
OKLAHOMA Wright City, Garvin, and Broken Bow, areas, McCurtain County	21	P.m.			0	0			Wind, rain, hail, and electrical	High winds, large hail, and heavy rain damaged buildings, homes, cars, trees, utilities, etc. Most of hail reported west of Garvin. Storm was hardest seen in area in 15 years. Storm moved northeastward.
INDIANA Logansport, Lafayette, Terre Haute, Seymour, Delphi, and Portland, in Cass, Tippecanoe, Vigo, Jackson, Carroll, and Jay Counties	21	Evening					4	1	Wind, rain, and electrical	Severe thunderstorms struck scattered areas. Winds damaged trees which fell on cars and utility lines. Television antennas blown down. Heavy rain and lightning responsible for some damage.
INDIANA Sullivan County	21	Evening					4	1	Wind	Barn blown down and dwelling damaged on farm between Farmersburg and Fairbanks and also on farm northeast of Carlisle. Minor damage occurred in other communities of county.
INDIANA Danville (4 miles north of), Hendricks County	21	Evening	1				4	1	Wind	Several farm buildings damaged. Falling trees wrecked property.
INDIANA Greenwood, Johnson County	21	Evening					4	1	Wind, rain, and electrical	Wind knocked down trees and utility lines. Heavy rain flooded streets and basements. Lightning damaged electric lines. Property damage by wind $10,000, by rain $10,000, by lightning $10,000.
MISSOURI Newburg, Phelps County	21								Rain, wind, hail and electrical	Local flooding. Extensive damage to homes and business properties.
TENNESSEE Weakley County	21								Wind, electrical and rain	In Mt. Pelia community, 2 barns blown down, killing a cow and a mule. In county, 15-20 power transformers struck by lightning and damaged and many fields flooded. Storm moved eastward.
	21									Minor storms also reported in Poinsett County, Ark.; at Bloomington and Jefferson and near Greenfield, Ind.; near St. Paul Park, Minn.; near Danby and at Auxvasse and Mountain View, Mo.; and south of Wisner, Neb.
ARKANSAS Sevier County	21-22	9:30 p.m. 21st - 2:30 a.m. 22d					4	4	Wind and hail	Storm covered entire southern portion of county. Property damage $6,000 due to wind and $5,000 to hail. Crop damage $10,000 due to wind and $8,000 to hail. Crops damaged included strawberries, peaches, hay, small grains, and seed crops.
ARKANSAS Greene and Clay Counties	21-22	10 p.m. 21st- 2 a.m. 22d					4		Wind	Widespread wind damage in Greene County to north of Paragould and in southeastern Clay County in vicinity of Rector. Storm moved northeastward.
TENNESSEE Churchton Community, Dyer County	21-22	P.m. 21st-a.m. 22d						1	Wind	Heavy outdoor signs blown over, store twisted on its foundation, porch blown off house, windows knocked out, a garage lifted from its foundation, and barn almost totally demolished.
TENNESSEE Lake County	21-22								Rain and wind	Heavy rains on top of already wet soils resulted in severe flash flooding on 22d. Crop damage heavy. 5,000 acres of cotton ruined, remaining 15,000 acres damaged; 6,000 acres of soybeans ruined, remaining 18,000 acres damaged; most of 10,000 acres of corn will have to be replanted; 60 percent of barley, 25 percent of wheat, and 70 percent of truck crops ruined. Many yards and streets flooded at Ridgely and Tiptonville.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE (Cont'd)										Winds on 21st blew down several TV antennas and damaged trees.
MISSOURI Noel and Pineville, McDonald County	21-22								Rain and electrical	Roads, streets, basements, and bottomlands flooded.
	21-22									Minor storm also reported at Siloam Springs, Tenn.
TENNESSEE Obion County	21-23	6 p.m.21st -a.m.23d							Rain and electrical	Heavy rains on already wet soils resulted in severe flash flooding on 23d. County Agent reported cotton one-third destroyed, corn one-half to be replanted, soybeans one-third to one-fourth destroyed and wheat and oat yields reduced 50 percent due to lodging and scalding. 3 families evacuated from their homes in Walnut Log area, and flooding of streets and highways reported across county. During evening of 21st, lightning struck home at Kenton, doing minor damage. At about midnight on 22d, 7 powerlines at Union City damaged by lightning.
ILLINOIS Extreme southern portion	21-23								Rain	Following tornadoes and windstorms of 21st, very heavy rains developed during night and continued through night of May 22 and 23. 6 to 8 inches of rain fell from Carbondale southwestward and southward and from Carbondale east to Harrisburg and Shawneetown. Harrisburg received 9.60 inches. Flooding general throughout area, with Harrisburg and Marion hardest hit.
INDIANA Rising Sun, Dearborn County	22	12:30 a.m.					4	1	Wind	Severe thunderstorm brought strong winds which unroofed several buildings.
TENNESSEE Christmasville Community, Carroll County	22	Early a.m.						1	Electrical	Lightning struck farm home and 4 small outbuildings, causing extensive damage. Buildings did not ignite.
TENNESSEE Gibson County (northwestern portion)	22	Early a.m.						1	Wind	Several large trees blown down between Dyer and and Yorkville. West of Rutherford, 3 barns blown down, 2 houses twisted on their foundations, and several large trees blown down. Just west of Kenton, several trees uprooted.
TENNESSEE Bolivar, Hardeman County	22	Early a.m				1			Electrical and hail	5-year old girl suffered second degree burns when lightning struck and ignited her bed. Hail fell in portions of county, heavily damaging crops and gardens.
TENNESSEE Tipton County	22	4:30-6:30 a.m.					5		Rain	Heavy rains on 22d on top of already wet soils caused localized flash floods. Crops severely damaged and low roads inundated.
TENNESSEE Memphis, Shelby County	22	5 a.m.						1	Wind	Huge oak tree over 300 years old blown down, damaging home and garage. Another nearby large tree blown down, wrecking garage and damaging car.
OKLAHOMA Southwestern, central, north-central areas, and entire northeastern quarter.	22	5 a.m.-noon				4			Wind, hail, rain, and electrical	Severe squall line that triggered several tornadoes and funnels aloft moved rapidly across State, with winds reported up to 70 m.p.h., heavy rain, and spotted hail. Widespread damage resulted throughout area to buildings, windows, trees, TV, antennas, utility lines, etc. 1 person injured near Chandler, Lincoln County when his truck blown into ditch. 2 persons slightly injured by flying glass when window blown out at Yale, Payne County. Near Bixby, strong wind resulted in woman breaking an arm. Lightning struck 3 homes in widely separated areas. Heavy hail damaged crops and buildings in 4-square mile area near Nardin and similar area near Newkirk, Kay County. In Tulsa, 5 planes among widespread damage over city. Storm moved northeastward.
TEXAS Vernon (southwest of), Wilbarger County	22	5:40 a.m.			0	0			Funnel aloft	
OKLAHOMA Chattanooga, Comanche County	22	6 a.m.			0	0			Tornado	Public reported tornado, however, no reports of damage received.
OKLAHOMA Mountain View to Alfalfa and Eakly, Kiowa, Washita, and Caddo Counties	22	6:15 a.m	15		0	0	4	4	Tornado	Tornado believed to have passed over Mountain View, sucking out several plate-glass windows into street. Tornado first reported on ground 5 miles northeast of Mountain View. Considerable damage to roofs, barns, outbuildings, and 150 chickens lost when 3 chickenhouses blown away at Alfalfa. In Eakly, couple narrowly missed

See reference notes at end of table.

OKLAHOMA (cont'd)										being injured when their home nearly destroyed. Many farms along path received extensive damage. Storm moved northeastward.
OKLAHOMA Ponca City, Kay County	22	6:38 a.m.	2	25	0	0	2	1	Tornado	Tornado hit farm, but only destroyed trailer, and uprooted tree on another farm as it traveled eastward mostly through open country.
OKLAHOMA Luther area, Oklahoma County	22	8 a.m.	2	50	0	0	4	1	Tornado	Tornado moving northeastward struck farm 1 mile southwest of Luther. All buildings severely damaged and 4,000 of 5,000 young chickens killed in demolished chickenhouse. Outbuildings damaged in Luther and trees and utility lines knocked down.
OKLAHOMA Perry, Noble County	22	8 a.m.	Short	100	0	0	3	1	Tornado	Funnel sighted southwest of Perry dipped down momentarily over Perry and damaged 1-block area. Buildings, signs, fences, and automobiles damaged. Tornado moved northeastward.
OKLAHOMA Yale (6 miles north of), Payne County	22	8:58 a.m.			0	0		1	Tornado	Civil Defense reported tornado moving northeastward.
SOUTH CAROLINA Charleston (near), Charleston County	22	8:58 a.m.			0	0			Waterspout	Waterspout moved inland.
OKLAHOMA Norman area, Cleveland County	22	9:30 a.m.			0	0			Funnels aloft	Police sighted funnel 10 miles southwest which moved aloft over Norman. 20 minutes later 2 funnels sighted southwest which moved south of Norman. Funnels moved northeastward.
OKLAHOMA Muskogee, Muskogee County	22	10 a.m.			0	0			Funnel aloft	Funnel aloft reported over northern edge of Muskogee.
OKLAHOMA Wagoner, Wagoner County	22	10 a.m.			0	0			Funnels aloft	2 funnels aloft sighted.
KANSAS Labette, Cherokee, and Crawford Counties	22	9:30-11:30 a.m.			0	0			Hail, wind, rain, electrical, and funnel aloft	Severe thunderstorm over extreme southeastern counties brought deluges of rain to some localities, several spot hailstorms, severe winds, and tornado. Greenhouse at Parsons had 1,000 panes of glass broken. At Pittsburg, business houses flooded when water topped street curbs. Also 3 places suffered minor damage from lightning. Tornado funnel sighted west of Columbus and dipped to within 200 feet of ground. Storm moved eastward.
MISSOURI Marionville, Aurora, and Verona, Lawrence County	22	11 a.m.-noon	20						Wind, rain, and electrical	Extensive damage to power- and phone lines, windows, trees, cars, etc. All phone lines cut at Marionville, and power interrupted in all 3 towns. Storm moved east-northeastward.
KENTUCKY Carroll County	22	A.m.	3/4	400	0	0	4	3	Tornado and hail	Damage apparently caused by tornado, although funnel cloud not observed. "Noise like a bunch of freight trains" heard. Area hit about 4 miles southwest of Carrollton. Storm destroyed frame house, demolished 4 barns and other buildings. Trees twisted off and utility poles downed. Hail general over county and some damage done to tobacco beds, gardens, and strawberry crop. Storm moved northeastward.
KENTUCKY Pulaski County	22	A.m.					4	3	Wind	Church building extensively damaged, several barns and a few homes and garages damaged. Power- and phone lines disrupted all over county by falling trees. Trees in young apple orchard uprooted.
OKLAHOMA Tryon (near), Lincoln County	22	A.m.			0	0		1	Tornado (suspected)	Garage lifted and demolished and barn unroofed.
OKLAHOMA Mountain Park (6 miles west of), Kiowa County	22	A.m.			0	0			Tornado	Tornado moved house off foundation and destroyed outbuildings. Another home damaged in area.
OKLAHOMA Yukon (5 miles southeast of), Canadian County	22	A.m.			0	0	3	1	Tornado (suspected)	Farmstead badly damaged.
TEXAS Sulphur Springs and vicinity, Hopkins County	22	A.m.			0	0			Funnel aloft	
MISSOURI Monett, Barry County	22	Late a.m.							Wind, rain, and hail	Wind reported up to 85 m.p.h. Many fallen trees blocked streets and roads. Several trees fell

† See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
MISSOURI (Cont'd)										on roofs of homes. Extensive damage to homes, trees, etc. Drive-in theatre screen blown down. Storm lasted 10 minutes
MISSOURI Fair Grove, Greene County	22	Morning							Rain	Unofficial report of 8.50 inches of rain, measured in small, plastic gage. Not considered too reliable. Other reports in Fair Grove area of 3.00 inches of rain in 30 minutes. Many roads washed out, with water pouring across Highway 65 near Fair Grove.
MISSOURI Aurora, Lawrence County	22	Noon							Wind, rain, and electrical	Many trees and wires downed and cars and roofs of buildings damaged.
MISSOURI Marshfield, Webster County	22	Noon							Wind, rain, hail, and electrical	Wires and trees downed, plate-glass windows broken, and roofs damaged by falling limbs.
MISSOURI Springfield, Greene County	22	Noon			0	1			Tornado (suspected), wind, and rain	Area from southeastern Springfield to Lake Springfield to Marshfield experienced "tornadic-type" weather, with small objects like boxes, signs, etc., blown about. Many phone lines and trees downed.
MISSOURI Barry County	22	Noon							Wind, rain, and electrical	Damage near Corsicana and Macedonia to homes, farm buildings, and trees.
OKLAHOMA Kellyville, Creek County	22	12:05 p.m.			0	0			Funnel aloft	Ground Observer Corps reported funnel aloft.
MISSOURI Cole and Camden Counties	22	1:15-2:15 p.m.							Wind, rain, hail, and electrical	Hail reported over 10-square mile area south and east of Jefferson City about 1:45 p.m. Wind hit gusts of 55 m.p.h., at Jefferson City Airport. Heavy rain and brief gusts to 60 m.p.h., reported from Bagnell Dam at about 12:45 p.m. Camdenton had heavy rain, with local flooding about same time. Storm moved east-northeastward.
MISSOURI Eveningshade and Houston, Texas County	22	1:20-2 p.m.							Wind and rain	Homes and barns damaged. Many trees downed.
MISSOURI Steelville, Crawford County	22	1:59 p.m.			0	0			Funnel aloft	Funnel observed from fire tower in Indian Trail Park, and by traveler on Highway 19 between Steelville and Dent County line. It was "sucking" leaves off trees, but apparently did not touch ground.
OKLAHOMA Ottawa County	22	2:01 p.m.			0	0			Funnel aloft	Residents of Commerce watched funnel aloft northeast toward Quapaw where it was also sighted.
OKLAHOMA Okemah to Schulter and Morris, Okfuskee and Okmulgee Counties	22	2:30 p.m.			0	0			Funnel aloft	Rope-like funnel followed along 30-mile route. Funnel moved northeastward.
MISSOURI Caledonia, Washington County	22	2:30 p.m.		8	0	0			Tornado	7 barns and 5 houses damaged. Tornado moved northeastward.
MISSOURI Farmington, St. Francois County	22	3:25 p.m.			0	0			Funnel aloft	Funnel moved east-northeastward.
MISSOURI Troy, Lincoln County	22	3:30-4:30 p.m.					2	2	Rain	1 inch of rain in little less than 1 hour. Sky got so dark that car lights had to be turned on.
MISSOURI St. Louis and St. Charles Counties	22	3:45-4:05 p.m.	5-1/2	600	0	1	5		Wind, rain, electrical, and funnel aloft	In St. Louis, man injured by falling tree, roofs of 500 homes damaged, heavy rain accompanying storm flooded basements. Funnel aloft observed near St. Charles Airport. It dissipated and did no apparent damage. Storm moved northeastward.
GEORGIA Stephens and Hart Counties	22	Mid-afternoon					3	2	Wind, rain, and hail	High winds and heavy rains struck Toccoa at 3:15 p.m., causing widespread damage to roofs, trees, utility lines. Strong winds and hail caused minor damage in Hart County at about same time.
TEXAS Vernon (1 mile south of), Wilbarger County	22	Afternoon			0	0			Funnel aloft	
MISSOURI Cape Girardeau County	22	Late afternoon							Rain and wind	Very heavy rains, 3 to 5 inches, flooded lowlands and basements.

See reference notes at end of table.

OKLAHOMA Muskogee, Muskogee County	22	5-7 p.m.						1	Electrical	Lightning struck 2 homes at 5 p.m., damaging structure on 1 and TV set in another. Third strike at 7 p.m., set 3-car garage on fire and destroyed structure and 2 cars.
MISSOURI Pemiscot County	22	6 p.m.							Wind, rain, and electrical	Severe lightning. Heavy rains caused flooding. Trees and lines downed.
MISSOURI Republic, Greene County	22	6:30 p.m.			0	0			Funnel aloft	Good correlation with Springfield radar echoes.
TEXAS Waco (5 miles east of), McLennan County	22	6:45 p.m.			0	0			Funnel aloft	Funnel observed moving northeastward.
TEXAS Prairie Hill (15 miles west of), McLennan County	22	6:50 p.m.			0	0			Funnel aloft	
TEXAS Hubbard (10 miles southwest of), Hill County	22	7:23 p.m.			0	0			Funnel aloft	
OKLAHOMA Muldrow, Sequoyah County	22	8:30 p.m.			0	0			Tornadoes	Ground Observer Corps reported 2 tornadoes, 1 and 2 miles south of Muldrow. No damage reports received.
TEXAS Malone (5 miles west of), Hill County	22	9 p.m.	4	200	0	4	5		Tornado	Immediately following heavy rainstorm, tornado severely damaged 3 farm homes; destroyed 4 others; damaged outbuildings, 1 truck, and farm machinery and equipment; and tore down all phone poles along its route. Tornado moved northeastward.
TEXAS Ennis (14 miles southwest of), Ellis County	22	10:15 p.m.	2	200	0	0	4		Tornado	Tornado moved northeastward.
MISSOURI Cape Girardeau, Cape Girardeau County	22	10:55-11 p.m.			0	0	2		Funnel aloft, wind, rain, and electrical	Witnesses say they heard "roaring" noise.
INDIANA La Porte (5 miles south of), La Porte County	22	11:02 p.m.			0	0			Funnel aloft	Tornado aloft moving northeastward reported.
INDIANA New Carlisle (east of) St. Joseph County	22	11:18 p.m.			0	0			Funnel aloft	Tornado aloft moving eastward reported.
INDIANA New Carlisle (4 miles south of) St. Joseph County	22	11:20 p.m.			0	0			Funnel aloft	Funnel cloud close to ground reported.
MISSOURI Mississippi County (southeastern tip)	22	11:55 p.m.		3-4	0	0			Tornado (suspected)	25 houses and barns badly damaged. 8-room house lifted off its foundation, leaving 19 members of family inside, unhurt. Storm moved northeastward.
	22									Minor storms also reported in Colbert and Lauderdale Counties, Ala.; at Fayetteville, Ark.; at Evansville, Ind.; in Davies and Laurel Counties, Ky.; in Cheboyan and Muskegon Counties, Mich.; at Billings, Campbell, Eldon, Humansville, Mansfield, New Madrid, Piedmont, Pomona, Rolla, Stark City, Sweetwater, and West Plains, Mo.; near Brownsville, at Columbia, Dyersburg, and Watertown, Tenn.; and near Hagansport, Tex.
TENNESSEE Dyer County	22-23	12:30 a.m. 22d-6:30 a.m. 23d						6	Rain	Heavy rains on already wet ground, 7.22 inches of rain at Newbern on May 22 and 23, resulted in flash floods in central and western parts of county during evening of 22d and on 23d. Serious damage to agricultural interests includes the following: 7,000 acres of cotton, 15,000 acres of soybeans, and 20,000 acres of corn. On 23d, 15 families evacuated from their homes at Lenox, 3 families northeast of Dyersburg, and some in Dyersburg. Some houses reported flooded in Newbern. Transportation impeded as roads and railroad beds washed out. At Hurricane Hill community, flash-flood waters uprooted power pole, snapping electric wires which electrocuted 2 cows.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CALIFORNIA Northern and central Sierras, lower Sacramento Valley, southern mountains, and southeastern desert area	22-23								Hail and rain	Small storm developing in southern Nevada and southeastern California on 22d caused numerous thunderstorms and hail in northern and central Sierras and lower Sacramento Valley, and rain showers in southern mountains and in southeastern desert areas. Hail size of marbles fell in Sacramento evening of 22d, and brief hailstorm in northern districts of San Bernardino occurred on morning of 23d. Heavy rains in Redlands caused flooding of 2 street intersections.
TENNESSEE Crockett County	22-23								Rain	Flash floods damaged 10 to 15 percent of cotton crop in county.
TENNESSEE Lauderdale County	22-23							6	Rain	Heavy rains on 22d and 23d on top of already well wet soil resulted in severe flash flooding, causing extensive crop damage.
INDIANA Howe (north of), Lagrange County	23	12:25 a.m.			0	0			Funnels aloft	State Police reported several funnel-shaped clouds.
ILLINOIS Christopher, Franklin County	23	2:45 a.m.				4	4		Electrical	Injuries in residence fire started by lightning.
TEXAS Sulphur Springs, Hopkins County	23	10:45 a.m.	7	1,000			5	1	Wind and rain	Small buildings, compress, trees, roofs, and signs damaged. TV antennas toppled and many roofs stripped. Automobiles damaged by falling trees. Entire county affected, Sulphur Springs received most damage. Storm moved northeastward.
TEXAS Quinlan, Lone Oak, Dunn's Creek communities, Hunt County	23	Late a.m.-2 p.m.						5	Wind and hail	Damaged homes, small buildings, 3 churches, TV aerials, and windows; sheds toppled to ground; grain and cotton destroyed. Area north and northeast of Quinlan hardest hit. Trees uprooted and roofs ripped off. Hail broke all rain gages. Worst crop loss in Quinlan history.
TEXAS San Saba (8 miles north of), San Saba County	23	12:50 p.m.			0	0			Funnel aloft	
TEXAS Quinlan, Hunt County	23	2:30 p.m.			0	0			Funnel aloft	
TEXAS Whitehouse, Smith County	23	3:15-3:30 p.m.			0	0			Funnel aloft	
TEXAS Mt. Pleasant, Titus County	23	3:30 p.m.		60	0	0	3		Tornado	Powerlines, trees, and TV antennas damaged. Storm moved eastward.
TEXAS Gladewater Gregg County	23	3:45 p.m.			0	0			Funnel aloft	
TEXAS Longview, Gregg County	23	3:50-4:15 p.m.	10						Wind	Gusts to 80 m.p.h., recorded at Gregg County Airport. Storm moved south-southeastward.
ARKANSAS McNeil to College Hill Church, Columbia County	23	4:30-5 p.m.	6-1/2	880	0	0	4	1	Tornado and hail	Roofs damaged, garages and small buildings destroyed. No hail damage reported. Storm moved northward.
LOUISIANA Shreveport, (20 miles north of), Bossier Parish	23	5 p.m.	1/4	150	0	1	4	2	Tornado	3 homes damaged, trees uprooted, and derrick blown over.
ARKANSAS Dierks, Howard County	23	5:30 p.m.	1/2	440	0	0		1	Tornado	Damage confined to City of Dierks. Tornado moved northeastward.
LOUISIANA Hosston (near), DeSoto Parish	23	7 p.m.			0	0	2	1	Tornado	
ARKANSAS Monticello, Drew County	23	7:30 p.m.	6	25	0	0	5	4	Tornado	Storm path northeastward from point 3 miles southwest of center of Monticello to a point 3 miles northeast. Extensive property damage. Crop damage included peaches and tomatoes.
PENNSYLVANIA Central and east-central portions	23	Evening				3	4	1	Wind, rain, and electrical	In Centre County, roof of elementary school partially blown off, exposing contents to torrents of rain, causing $15,000 damage. 2 persons struck by lightning in Lehighton and another in

See reference notes at end of table.

PENNSYLVANIA										Pocono area. Considerable damage inflected by high winds on trees and utility lines. Storm moved eastward.
MISSOURI Perryville, Perry County	23				0	0			Tornado	
TEXAS Winters (near), Runnels County	23					2			Wind	
UTAH Weber and Davis Counties	23						3		Hail and rain	Some flooding of canyon homes, orchards, and fields reported; hail covered ground 4 to 5 inches deep at Ogden.
	23									Minor storms also reported at Conway, Ark.; at Hayti and Stockton, Mo.; and at Marshall and Tyler, Tex.
CONNECTICUT New Haven and Fairfield Counties	23-24	10 p.m. 23d- 2 a.m. 24th					4	3	Electrical, wind, and hail	Electrical storm with wind gusts clocked unofficially at 67 m.p.h., and considerable hail damage in New Haven and suburbs to north and northwest. 3 acres of truck crops wiped out by hail size of golf balls in Hamden. Loss estimated at $3,000. Lightning struck 2 factories and 2 homes in Ansonia, Shelton, and North Haven with total fire damage estimated at $6,500. Many trees blown down or split by lightning in New Haven, blocking numerous streets with debris for several hours. Overnight power failures to 5,000 users. Store windows and greenhouse sash shattered by wind in Hamden. Storm moved east-southeastward.
	23-24									Minor storm also reported in Essex County, N.J.
RHODE ISLAND Southwestern portion	24	1-2 a.m.					3	1	Electrical	Home at Westerly struck by lightning with extensive fire damage resulting to second floor. Storm moved eastward.
NEW MEXICO Roosevelt and Curry County	24	4 a.m.	40	35	0	0	5	5	Tornado and hail	Storm evidently started in west-central Roosevelt County and moved northeastward leaving State southeast of Hollene. Funnel aloft much of time, striking ground at intervals between Grier and Hollene and damaging or destroying several sets of farm buildings. $100,000 hail damage to crops.
OKLAHOMA Panama, Le Flore County	24	10 a.m.				1			Electrical	Lightning knocked railroad dispatcher unconscious.
OKLAHOMA Willow Springs, Bryan County	24	10:40 a.m.			0	0	4	1	Tornado (suspected)	20 boat stalls and several boats twisted and left in splinters.
TEXAS Parmer, Deaf Smith, and Potter Counties	24	10:45 a.m.		34	0	0	°3	C	Tornado	First touched ground about 5 miles south of Bovina, damaged farm property and orchard. Lifted west of Hubb, came down northeast of Hubb, crossed fields past Friona and into Black community. Passed through Deaf Smith County, on past Bushland in Potter County. Tornado moved northeastward.
TEXAS Maple, Bailey County	24	11 a.m.			0	0			Funnel aloft	
TEXAS Lazbuddie, Parmer County	24	11:15 a.m.			0	0			Funnel aloft	
TEXAS Between Farwell and Friona, Parmer County	24	11:15-11:20 a.m.			0	0			Funnel aloft	
TEXAS Wildorado (20 miles northwest of), Oldham County	24	11:17 a.m.			0	0			Funnel aloft	Funnel observed moving northeastward.
TEXAS Enochs (4 miles north of), Bailey County	24	11:20 a.m.		500	0	0	3		Tornado	Hit in open country. Damage only to rural Electric Association poles and wires. Tornado moved northeastward.
TEXAS Hereford area, Deaf Smith County	24	11:30 a.m.			0	0			Tornado	One of series of tornadoes around noon, struck along line in Hereford area; no damage. Tornado moved northeastward.
UTAH Salt Lake City, Salt Lake County	24	12:15-12:25 p.m.			0	0			Funnel aloft	Observed by CAA employee. No evidence that funnel ever touched ground.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Olton area, Lamb County	24	12:35-12:45 p.m.		200	0	10	°5	C	Tornado	Estimated 77 homes in Olton area destroyed, grain company building badly damaged. Funnel first sighted near Maples community about 11 a.m., moved to Sudan where it touched ground in cemetery; lifted and came down at Olton. Tornado moved northeastward.
TEXAS Halfway (5 miles northwest of), Hale County	24	1-2 p.m.			0	0			Tornado	Tore up houses, barns, and trailers and killed livestock. Continuation of Olton tornado; moved northeastward.

TEXAS Canyon area, Randall County	24	1:25 p.m.			0	0			Funnel aloft	
TEXAS Bushland area, Potter County	24	1:20 p.m.	1/4	50	0	0	4		Tornado	Damage occurred all on 1 farm. Tornado lifted, came down again in open country west of Cliffside at 1:54 p.m., no damage; lifted, came down again 7 miles north of Amarillo Airport in open country, no damage. Lifted for last time at 2:47 p.m. Tornado moved northeastward.
TEXAS Kress (south of), Swisher County	24	1:46 p.m.			0	0			Funnel aloft	
TEXAS Amarillo (near), Potter County	24	1:57 p.m.			0	0			Funnel aloft	
TEXAS Between Hale Center and Cotton Center, Hale County	24	2 p.m.			0	0	4		Tornado	Southwest of Plainview, 3 homes destroyed, others damaged.
TEXAS Plainview and Midland areas, Hale and Midland Counties	24	2:10 p.m.			0	0			Funnels aloft	7 funnels sighted within 25 miles of Plainview and at least a dozen around Midland.
TEXAS Acuff area, Lubbock County	24	2:35 p.m.			0	0			Funnels aloft	3 funnels observed.
TEXAS Lenorah, Martin County	24	2:45 p.m.			0	0	3	1	Tornado	Damaged 5 houses and several farm buildings in area; moved east-northeastward.
TEXAS Vernon (6 miles north of), Wilbarger County	24	3:52 p.m.			0	0			Funnel aloft	
COLORADO Weld County	24	Afternoon			0	0			Tornadoes	Several small tornado funnels sighted north of Greeley in Carr, Pierce, and Ault vicinity. 2 reached ground near Pierce; one 4 miles east leveled vacant farmhouse, haystacks, and farm machinery; the other 1 mile west destroyed abandoned farmhouse.
TEXAS Hereford, Deaf Smith County	24	Afternoon			0	0			Funnel aloft	
WYOMING Goshen County	24	Afternoon-evening			0	0	4	1	Tornadoes and funnels aloft	Several funnel clouds and tornadoes moving northeastward. Farm buildings damaged near Yoder and house trailer destroyed south of Torrington.
OKLAHOMA Tillman County	24	4:30 p.m.	12	1,000	0	0	4		Tornado, funnels aloft, rain, and hail	Tornado and 2 funnels aloft moved north-northeastward 3 miles south of Davidson to 3 miles south of Frederick. Several farmsteads along route had extensive damage. Utility lines and poles knocked down.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
TENNESSEE Cairo and Crockett Mills communities, Crockett County	24	5 p m.					4		Wind and electrical	1 house and an automobile damaged at Crockett Mills; chickenhouse, pumphouse, and other minor buildings damaged at Cairo.
KANSAS Herndon (near), Rawlins County	24	5 p.m.	8	*3			3	4	Hail	Hailstones ranging in size from 1 2 to 2-1/2 inches in diameter fell. Much damage to good wheat. Hail covered ground 2 inches deep. Storm moved northeastward.
KANSAS Belle Plaine (3 miles southwest of), Sumner County	24	5:05 p.m.			0	0			Tornado	Funnel cloud sighted. It dipped once and drew back up into main cloud.
OKLAHOMA Comanche and Cotton Counties	24	5:30 p.m.	22	880	4	5			Tornadoes, hail, and rain	Tornado moved northeastward from Apheatone, Cotton County, to just south of Lawton, Comanche County. Observers reported sighting 3 funnels on ground at same time. At least 12 homes destroyed and many farmsteads destroyed or damaged along path. 4 persons killed when 2 homes destroyed. 1 person seriously injured when his house demolished. 4 other persons received minor injuries from flying debris. Up to 70 head of cattle and a number of chickens killed. At least 5 cars completely demolished. Fences rolled into 50 foot in diameter balls. Heavy hail, with stones that weighed up to 2 pounds, fell and heavy rain up to 5 inches caused flooding in area.
TEXAS Midland (10 miles northeast of), Midland County	24	5:41 p.m.			0	0			Funnel aloft	Funnel observed moving northeastward.
OKLAHOMA Wynne Wood to Wanette and McComb, Garvin and Pottawatomie Counties	24	6-7:45 p.m.	48	440	0	0	5		Tornado	Tornado formed southwest of Wynne Wood, moved north-northeastward, dipped down and destroyed barn, moved over Wynne Wood at tree-top level and caused damage to new oil refinery, cracking unit which lost 30 to 40 tons of catalyst. Next hit was Walker school area, southeast of Pauls Valley, where school, 5 houses, and many outbuildings damaged or destroyed. Tornado then moved mostly aloft through open country, as little evidence noted until 2 segments of cyclonic-moving clouds came together just north of South Canadian River and south of Wanette and formed single funnel which broke trees in its path to Wanette. Tornado hit Wanette at 7:10 p.m. Observers noted 2 funnels aloft with tornado, warm rain ahead and behind tornado, and hot air as if from an oven just ahead and behind tornado. Many frame buildings, homes, and outbuildings damaged or destroyed in Wanette. Path of storm from Wanette was north and looked as if bulldozers had smashed trees preparatory to building new road. Several farmsteads in path heavily damaged to completely destroyed. Last damage noted was several barns destroyed 6 miles northwest of McComb. Funnel believed sighted aloft west of Tecumseh and Shawnee. 5 persons badly burned when accumulated gas exploded as lamp was lit in storm cellar in Wanette.
NEBRASKA Alliance (north of), Box Butte County	24	6-8:30 p.m.	4	*3			1	4	Hail	Stones about 1/2 inch in diameter; ground covered to depth of 3/4 inch. Storm moved southeastward.
TEXAS Midland (10 miles north-northwest of), Midland County	24	6:28 p.m.	2		0	0			Tornado	Moved eastward through pasture land.
NEBRASKA Grant (11 miles west-northwest of), Perkins County	24	7:30 p.m.	Short	Narrow	0	0	3	2	Tornado	
OKLAHOMA Wild Life Refuge, Comanche County	24	8 p.m.			0	0			Tornado	Tornado sighted in mountains.
OKLAHOMA Henryetta area, Okmulgee County	24	8 p.m.			0	0			Funnel aloft	Funnel aloft sighted 8 miles west to 4 miles north of Henryetta moving northeastward.
MISSOURI Joplin, Jasper County	24	8 p.m.-late evening			0	0			Rain, wind, hail, electrical, and funnels aloft	3.11 inches of rain in Joplin from 8 to 8:30 p.m. Joplin CAA reported surface winds gusting to 55 m.p.h. Several funnels aloft reported, but apparently did not touch ground. Storm moved east-northeastward.

See reference notes at end of table.

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Abilene (10 miles north of), Taylor County	24	8:14 p.m.			0	0			Funnel aloft	
TEXAS Seymour (northwest of), Baylor County	24	8:15 p.m.			0	0			Funnel aloft	
TEXAS Fort Phantom Lake vicinity	24	8:27 p.m.			0	0			Funnel aloft	Funnel observed moving eastward.
TEXAS Seymour (10 miles southwest of), Baylor County	24	8:30 p.m.			0	0	3	3	Tornado	Tornado moved southwestward.
OKLAHOMA Moore area, Cleveland County	24	9:25 p.m.			0	0	2	1	Tornado	Public reported funnel. Windows and tree limbs broken.
OKLAHOMA Tulsa, Tulsa County	24	9:30 p.m.					5	1	Electrical	Lightning struck Public Service plant, burning insulation on switching equipment and circuit breakers over much of huge plant. Heavy rain fell at time. 2 men overcome by smoke.
OKLAHOMA Ottawa County	24	10 p.m.	1	1,000	0	0	4	1	Tornado	Damage resulted in Quapaw and mining company derrick destroyed east of Picher. Tornado moved northeastward.
OKLAHOMA Duncan area, Stephens County	24	10:20 p.m.			0	0		1	Tornado	Tornado hit 1-1/2 miles southwest of Duncan, moved northeastward into city and cut 12-block-long path of broken trees and TV antennas. $5,700 trailer house nearly a total loss where tornado first hit.
OKLAHOMA Okmulgee and Muskogee Counties	24	10:25-11:10 p.m.			0	0			Tornadoes	Ground Observer Corps reported tornado at Morris, Okmulgee County; no damage reports received. Similar report received from Boynton, Muskogee County at 11:10 p.m.
OKLAHOMA Midwest City, Oklahoma County	24	10:57 p.m.			0	0			Funnel aloft	Unconfirmed tornado reported 2 miles east of Tinker Air Force Base. Highway Patrol reported funnel aloft in area.
OKLAHOMA Henryetta (12 miles southeast of), Okmulgee County	24	11:43 p.m.			0	0			Tornado	Highway Patrol reported tornado; no damage reports received.
OKLAHOMA Eufaula (9 miles north of), McIntosh County	24	11:45 p.m.			0	0			Tornado	Tornado reported; no damage reports received.
OKLAHOMA Anadarko, Caddo County	24	P.m.			0	0			Funnels aloft	Observer spotted 2 funnels aloft just after dark; 1 passed west and the other south of city.
OKLAHOMA Marlow area, Stephens County	24	P.m.			0	0			Tornado and rain	Tornado hit in Denton community, just west of Marlow, where destruction extensive to residences, barns, and outbuildings on several farmsteads. Heavy rains of about 7 inches in 1 hour reported. 1 farm had barn and brooder house destroyed, 100 turkeys killed, and 2x4-inch boards blown through house. Bus picked up on highway and blown into ditch, however, the 20 passengers uninjured.
OKLAHOMA Grady County (southeastern portion)	24	P.m.				2	6	1	Electrical	Lightning struck 180-foot specially-built, oil-drilling rig, ignited leaking gas, and resulting flames shot 100 feet into the air. Derrick and equipment completely destroyed. 2 men blistered by heat.
OKLAHOMA Chickasha, Grady County	24	P.m.				1	2	1	Electrical	Occupant suffered shock when lightning struck home.
OKLAHOMA Purcell area, McClain County	24	P.m.			0	0			Tornado (suspected) and electrical	Roof of barn blown off, outbuildings damaged, and several trees uprooted on farm southwest of Purcell. Lightning burned farm home, chickenhouse, and chickens north of Purcell.
OKLAHOMA Turley, Tulsa County	24	P.m.			0	0			Funnel aloft	Funnel aloft reported moving northeastward.
MISSOURI Newton County	24	Evening							Wind, rain, and electrical	Much flooding of lowlands and roads. Farm buildings damaged by high winds north of Neosho.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
COLORADO Otero and Kit Carson Counties	24				0	0			Tornadoes, rain and hail	Small tornado struck farm 5 miles northwest of La Junta, picked up outbuilding and set it down again in middle of field. Same afternoon small twister demolished brooder house on farm 9 miles north of Burlington. Heavy rain accompanied by hail same afternoon and evening, washed out 2 fills on Rock Island tracks east of Burlington.
TENNESSEE Johnson City, Washington County	24							1	Rain and electrical	Heavy rains resulted in wet cables, knocking out service to 700 telephones and caused minor flooding. Several power transformers struck by lightning and put temporarily out of service.
TEXAS Shallowater area, Lubbock County	24				0	0			Funnel aloft	
	24									Minor storms also reported at Framingham, Mass.; near Bovina, Miss.; near Eustis and at North Platte, Nebr.; in Haywood County, N.C.; and at Frisco, Oklahoma City, and Tonkawa, Okla.
OKLAHOMA Coleman, Johnston County	25	12:05 a.m.	1	200	0	0	4	1	Tornadoes	2 funnels sighted moving northeastward. Roof of new school partially blown off and extensive damage resulted to homes, outbuildings, trees, etc.
OKLAHOMA Lehigh (near), Coal County	25	12:10 a.m.			0	0		1	Tornado (suspected)	House and barn damaged and sheds splintered on farm.
OKLAHOMA Pontotoc and Hughes Counties	25	12:15 a.m.	12	150	0	0	3		Tornado	Tornado moved northeastward from 5 miles southeast of Allen, Pontotoc County, to Atwood, Hughes County. Extensive damage resulted to farmsteads along path and several homes and places of business damaged in Allen. Outbuildings and trees blown down in Atwood.
ARKANSAS Kibler, Sebastian County	25	1:30 a.m.			0	0			Funnel aloft	Funnel moving northeastward observed by control tower personnel at Ft. Smith Airport. Did not touch ground.
MISSOURI Lamar, Barton County	25	2 a.m.							Rain, wind, and electrical	Frequent thunderstorms; 2 to 3 inches of rain. Nursing home hit by lightning.
OKLAHOMA Tishomingo (northwest of), Johnston County	25	5:30 a.m.			0	0			Funnel aloft	Highway Patrol reported funnel aloft moving northward.
ARKANSAS Hot Springs, Garland County	25	6 a.m.			0	0	2		Tornadoes	2 funnels observed moving northward; only scattered light damage.
OKLAHOMA Antlers, Pushmataha County	25	A.m.							Electrical	Lightning struck transformer which burned fuses at 2 businesses and caused extensive damage to contents of home.
MISSOURI Springfield, Greene County	25	12:30 p.m.							Wind	Estimated gusts to 80 m.p.h., in southeastern part of city. Trees and lines downed.
MASSACHUSETTS South Weymouth and Waltham, Suffolk County	25	1:45 p.m.		10	0	0	2	1	Dust devils	Funnel damaged construction shed and clothes on a line. Another dust devil, with no damage, reported at Waltham.
SOUTH DAKOTA Jerauld County	25	2 p.m.			0	0			Funnel cloud	Observed briefly about 5 miles south of Wessington Springs moving northeastward.
TEXAS Lipan (9 miles east of), Hood County	25	2 p.m.			0	0			Tornado	Touched ground only briefly on ranch; moved eastward.
ARKANSAS El Dorado, Drew County	25	2:01-2:12 p.m.				5	4	1	Wind and rain	Considerable property damage by wind. 5 persons injured when wind broke large plate-glass window in store. Storm moved northeastward.
IOWA Clay County	25	2:25 p.m.							Hail	Hail 1/2 to 3/4 inch in diameter.
SOUTH DAKOTA Grover (near), Codington County	25	2:45 p.m.			0	0			Tornado	Funnel observed.
IOWA Chickasaw County	25	3-4 p.m.			0	0	4	3	Tornado (suspected)	Farm buildings and crops damaged in Fredericksburg area.
MINNESOTA Maple Lake, Wright County	25	3:38 p.m.	3/4	20	0	0	4	1	Tornado (suspected)	Flattened barn and uprooted trees. Observer reported hearing roaring noise, but no funnel observed. Storm moved northeastward.
IOWA Shelby County	25	4:10 p.m.			0	0			Funnel aloft	Reported 1-1/2 to 2 miles west of Harlan.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WISCONSIN Bloomington-Fennimore area Grant County	25	4:30 p.m.	20	400	0	0	4	1	Tornado	Some persons reported 2 or 3 funnels. Tornado first moved northwestward then curved to northeastward on skipping path.
INDIANA Grandview, Spencer County	25	4:35 p.m.	5				4	1	Wind	Many trees blown down which damaged houses, electric lines, and cars. Roads blocked for several hours.

In Lebanon section, 3 house trailers and home blown off foundations. At Philadelphia International Airport, small plane blown over and badly damaged. Lightning knocked out electric services for several hours. Hail occurred in widely separated areas, resulting in undetermined amount of damage to fruit. Heavy rain caused serious erosion in York County and smashed grain crops to ground, resulting in $50,000 damage. Storm moved southeastward.
NEW MEXICO Clovis, Curry County	26	6:45 p.m.			0	0			Funnel aloft	Funnel cloud aloft sighted moving northward.
ALABAMA Montgomery, Montgomery County	26	7 p.m.					4	1	Wind	Severe wind widespread over most of city. 8 airplanes damaged at Maxwell Field, drive-in movie screen blown down, and other scattered minor damage.
NEW JERSEY Gloucester, Camden, Burlington, Mercer, and Middlesex Counties	26	7-9 p.m.					4		Wind, rain, and electrical	Thunderstorms accompanying cold-front passage moved rapidly across area. Duration brief, but intensity severe in communities affected. Strong winds downed trees and powerlines and caused minor building damage. Lightning interrupted power services, particularly in Camden County, and set fire to several buildings. About 1/2 inch of rain in 30 minutes slowed highway traffic. Storm moved northeastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	26									Minor storms also reported at Taneytown, Md.; at St. Clair, Mo.; in Greensboro and vicinity, N.C.; in Halls Mill community and near Johnson City, Tenn.; near Beyersville and Lockhart, Tex.; at Bellows Falls, Vt.; and in Marion and Waynesboro areas, Va.
VIRGINIA Old Well to Madisonville, Charlotte County	27	8:20-8:30 a.m.	8	800	0	0	4	4	Tornado, hail, and rain	Damage to property from tornado estimated at $5,000; crop damage principally from hail which ranged in size from 1/2 to 1 inch in diameter. Storm moved northeastward.
VIRGINIA Prince Edward County	27	9-9:30 a.m.		600			4	4	Hail and wind	Property damage chiefly from wind. Crop damage from hail estimated at $5,000 and from wind $3,000. Principal crop damage to small grains and tobacco. Storm traveled northeastward across county, damaging small areas at intervals of approximately every 5 or 6 miles.
VIRGINIA Dundas area, Lunenburg County	27	10-10:20 a.m.	1	200	0	0	4		Tornado	1 dwelling, 3 tobacco barns, machinery sheds, brooder houses, and some farm equipment destroyed. Storm moved eastward.
RHODE ISLAND Providence County	27	3-4 p.m.					4	1	Electrical and rain	Storm damage centered in Providence and nearby suburbs. 2 homes struck by lightning, with considerable damage resulting from fire. Barn near Providence destroyed by lightning-caused fire, with loss of building and equipment set at $1,500. Street flooding from heavy rains forced traffic to halt at many points in Providence. Rainfall south of city very light by comparison. Storm moved eastward.
NEBRASKA Deuel County (northeastern portion)	27	Afternoon	2	*1			1	4	Hail	
NEW MEXICO Quay County (southern portion)	27	5:30 p.m.			0	0			Tornado	Funnel cloud moving eastward sighted about 12 miles north of Ragland struck ground in open country.
OKLAHOMA Cimarron and Texas Counties	27	P.m.							Hail, wind, and rain	Wind-whipped small hail and heavy rain which caused 20 to near 100 percent crop damage at scattered points in western Texas and eastern Cimarron Counties.
	27									Minor storms also reported in Russell County, Kans.; at Duxbury, East Milton, and Marshfield, Mass.; and in Cravin, Lenoir, and Martin Counties, N.C.
CALIFORNIA Siskiyou Mountains, northern Sierras, and lower San Joaquin Valley	27-29								Wind, hail, and electrical	Low pressure trough in northern and central California caused thunderstorms and locally strong winds. Hail fell at Lake Spaulding, Nevada County, and at Vinton, Plumas County. Many lightning strikes occurred in Fresno County, starting roof fire in Fresno, small blaze in Sierras, and burned several acres of grain and grass near Riverdale and Huron.
WYOMING Riverton, Fremont County	28	1 p.m.	1	10	0	0	2	1	Whirlwind	
MISSOURI Mt. Vernon, Lawrence County	28	4 p.m.			0	0			Funnel aloft	Funnel aloft observed moving northeastward.
KANSAS Lincoln County (southwestern portion)	28	5-5:30 p.m.	15	*1			4	5	Hail	Hailstones ranging in size up to 3 inches in diameter covered ground to depth of 5 inches. Storm moved northeastward.
KANSAS Barton, Russell, Ellsworth, Stafford, and Pawnee Counties	28	8:30-11:30 p.m.			0	0			Hail, electrical, and funnels aloft	Heavy hail, with stones varying in size up to that of baseballs, hit numerous small areas over Barton, Pawnee, Russell, and Stafford Counties. Wheat and other crops beaten into ground and many fields total loss. Roofs, cars, windows, etc., badly damaged. 1 home had 5 inches of hail on second floor. Drifts of hail in some places 3 feet deep. 4 funnel clouds aloft sighted, 2 near Ellsworth, 1 near Kanopolis, and 1 between Great Bend and Hoisington about 9:30 p.m. Lightning followed TV wire into house and blasted hole in wall, ruined TV set, and damaged wall on opposite side of room.
	28									Minor storms also reported at Norton, Kans.; at Bartlesville, Okla.; and near Clearmont, Wyo.
IOWA Everly (4 miles south of), Clay County	29	11:50 a.m.			0	0	3	1	Tornado	Several small farm buildings damaged. Tornado moved eastward.

See reference notes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IOWA Hancock County	29	1:30 p.m.			0	0			Tornado	Reported near Garner.
NEBRASKA North Platte (5 miles south of), Lincoln County	29	1:55-2:53 p.m.	Short	Narrow	0	0			Funnel aloft	Reported by RAWARC; moved northeastward.
COLORADO Larimer and Weld Counties	29	Afternoon			0	0	2	1	Tornadoes	Damage to buildings on farm near Waverly, 10 miles north of Fort Collins. Tornado appeared to come from Owl Canyon, 15 miles northwest of Fort Collins and is closest one to mountains that Weather Bureau forecasters in Colorado can remember. Same afternoon, 2 small tornadoes seen, 1 southeast of Greeley and the other west of Nunn, both came down in open country, no damage reported.
FLORIDA Sarasota, Sarasota County	29	3 p.m.			0	0			Funnel aloft	
NEBRASKA Huntley (southeast of), Harlan County	29	3 p.m.	4-5	*1-2			1	4	Hail	Storm moved southward.
NEBRASKA Pawnee City, Pawnee County	29	3-5 p.m.	10	*2			1	4	Hail	Hailstones 3/4 inch in diameter. Storm moved east-northeastward.
NEBRASKA Geneva (near), Fillmore County	29	3:40 p.m.	Short	Narrow	0	0			Funnel aloft	Reported by RAWARC.
NEBRASKA Syracuse (southeast of), Otoe County	29	3:45-4:30 p.m.	6	*2			2	4	Hail	Hailstones 1/4 to 1/2 inch in diameter. Storm moved southeastward.
IOWA Barnum, Webster County	29	4 p.m.			0	0			Tornado	Funnel cloud touched ground.
NEBRASKA Cook (near), Johnson County	29	4-4:30 p.m.	6-8	*6-8			2	3	Hail	Largest stones size of golf balls. Storm moved eastward.
NEBRASKA Cambridge (near), Furnas County	29	4:15-4:30 p.m.	10-12	*1				4	Hail	Hailstones up to 2 inches in diameter. Storm moved southeastward. Considerable property damage.
NEW MEXICO Hobbs, Lea County	29	4:45 p.m.	10	*1	0	0	°5	C	Funnel aloft and hail	Funnel cloud observed moving northward, but no evidence it touched ground. Major damage from hail to roofs, windows, and cars. Hailstones up to 3-3/4 inches in diameter reported.
KANSAS Rawlins and Decatur Counties	29	5-7 p.m.	25	2				4	Hail	Hail covered narrow strip from southwest of Atwood to north-central Decatur County. Stones up to 3-1/2 inches in diameter covered ground to depth of 4 inches. Heavy losses of very promising crops. Storm moved east-northeastward.
KANSAS Phillipsburg area, Phillips County	29	5:30 p.m.	2	1			3	3	Hail	Considerable damage resulted from hailstones averaging 1-1/2 inches in diameter, but some as much as 3 inches in diameter.
LOUISIANA Raceland (8 miles east of), La Fourche Parish	29	5:35 p.m.			0	0			Funnel aloft	Pilot reported funnel in that area and radar showed rain also, but none of surrounding stations reported any rain; area unpopulated, mostly swampland.
KANSAS Russell and Ellsworth Counties	29	6-8 p.m.	15	5	0	0	5	6	Hail, tornado, and winds	Much crop damage over northern Ellsworth County from heavy hail, with stones mostly 3/4 inch in diameter but driven by high wind. Small tornado caused some damage 9 miles northwest of Ellsworth. High winds damaged buildings in scattered localities over Russell County. Most of listed damage was from hail. Storm moved northeastward.
TENNESSEE Chattanooga area, Hamilton County	29	7:20 p.m.						1	Rain and electrical	Flash floods in Tifonia-Wauhatchie area caused water damage to several homes. 1 family forced to evacuate. Lightning caused extensive damage to powerlines.
OKLAHOMA Arnett (14 miles west of), Ellis County	29	8:15 p.m.			0	0			Tornado	Highway Patrol reported tornado moving northeastward. Evidently traveled over open country as no damage reported.
OKLAHOMA Ponca City (6 miles west of), Kay County	29	11:37 p.m.			0	0			Tornado	Filter Center reported tornado on ground; moved northward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
FLORIDA Tarpon Springs, Pinellas County	29	P.m.			1	1			Electrical	1 person killed by lightning, another injured, while loading watermelons in field.
FLORIDA Captiva, Lee County	29	P.m.			0	0			Waterspout	
GEORGIA Southern and central portions	29	P.m.					3	4	Electrical, hail, and rain	Severe thunderstorms with hail, heavy rains, and high winds hit several central and southern counties, including Pike, Randolph, Berrien, Colquitt, Ware, Brantly, Appling, Tattnall, and Wayne. Considerable damage to young crops by hail. Waycross had wind and water damage from flash floods, following heavy rains. Barn destroyed by lightning in Pike County.
	29									Minor storms also reported in Hillsborough and Madison Counties, Fla.; in Bremer and Cass Counties, Iowa; near Ellinwood, Kans.; at Nevada, Pomona, and Winona, Mo.; near Edgar and Trenton, Nebr.; at Durant, Muskogee, and Tahlequah, Okla.; and at Armour, S. Dak.
IOWA Marshall and Benton Counties	29-30	Most of day					4		Rain	Caused local flooding on Iowa and Cedar Rivers and tributaries.
KANSAS Olivet (near), Osage County	30	10:50 a.m.			0	0			Funnel aloft	Funnel aloft moving eastward observed by a number of persons.
NEW MEXICO Santa Fe (20 miles south of), Santa Fe County	30	12:20 p.m.			0	0			Tornado	Moved southeastward in open country; no damage.
NEW MEXICO Corona (7 miles northwest of), Torrance County	30	1:45 p.m.			0	0			Tornado	Moved southeastward in open country; no damage.
TEXAS Dell City, Hudspeth County	30	1:45 p.m.		*1				4	Hail	1,000 to 2,000 acres of crops, nearly one-half in cotton, damaged or destroyed.
NEW MEXICO Corona (8 miles southeast of), Lincoln County	30	2 p.m.			0	0			Tornado	Moved northwestward in open country; no damage.
IOWA Panama, Shelby County	30	2:35 p.m.			0	0			Tornado	Reported to Omaha Weather Bureau; occurred at Panama.
COLORADO Larimer, Weld, and Washington Counties	30	Afternoon			0	0	3	1	Tornadoes	In and near Windsor, several thousand dollars damage done to schools, farm buildings, etc. Other small tornadoes sighted near Loveland, Akron, and Otis, but no damage reported.
WYOMING Greybull area, Big Horn County	30	Afternoon			0	0			Funnels aloft	1 funnel aloft 6 miles northwest and one 20 miles west of Greybull.
OKLAHOMA Manitou, Tillman County	30	3 p.m.	10	*5	0	0		5	Hail, wind, rain, and funnels aloft	Severe hailstorm, with stones up to 1-1/2 inches in diameter reported 3 inches deep on ground. Crop loss ranged from 50 to 100 percent. Damage to buildings, automobiles, etc., light. Other spotted areas reported crop damage due to hail. 2 funnels aloft reported in area. Storm moved northward.
KANSAS Thomas County	30	3:35 p.m.			0	0			Tornado and funnel aloft	2 funnel clouds observed north of Colby; 1 about 4 miles north moving northward touched ground; second funnel only 1-1/2 miles north, traveling slowly eastward, did not touch ground.
IOWA Beaver (10 miles northwest of), Greene County	30	3:36 p.m.			0	0			Funnel aloft	Reported to Des Moines Weather Bureau.
OKLAHOMA Eldorado, Jackson County	30	4 p.m.	6	*4					Hail, wind, and rain	Hailstorm caused 25 to 75 percent damage to crops in area. Wind and heavy rain also damaged crops and fields.
OKLAHOMA Ardmore, Carter County	30	4 p.m.						1	Electrical and rain	Lightning struck home causing structural damage. Rain which measured 1.50 inches in less than 1 hour caused some flooding.
OKLAHOMA Elmore City (3 miles east of), Garvin County	30	4:15 p.m.			0	0			Tornado	Ground Observer Corps reported tornado moving eastward.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

MAY 1957

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IOWA Earling (near), Shelby County	30	4:37 p.m.			0	0			Tornado	Reported by Ground Observer Corps, descending rapidly toward ground.
NEW MEXICO Eunice, Lea County	30	4:39-7:39 p.m.			0	0			Tornadoes	3 separate funnels observed at 4:39 p.m., 7 p.m., and 7:39 p.m.; moved east-southeastward over open country; no damage.
IOWA Carroll (12 miles northwest of), Carroll County	30	4:50 p.m.			0	0			Tornado	Reported by radio station.
IOWA Nevada (15 miles north of), Story County	30	4:50 p.m.			0	0			Tornado	Funnel cloud reported to have occasionally touched ground.
GEORGIA Thomas County	30	6:40 p.m.			0	0	2	2	Funnel aloft, hail, and rain	Tornado funnel sighted aloft south of Thomasville, but apparently did not touch ground. Heavy rains in parts of county and hail in northeast section.
KANSAS Butler County (northern portion)	30	6:42 p.m.			0	0			Funnel aloft	Funnel aloft reported.
TEXAS Decatur (near), Wise County	30	8:10 p.m.			0	0			Funnel aloft	
TEXAS Kermit, Wink, and Monahans, Winkler and Ward Counties	30	8:30-9 p.m.	25-30				5	1	Wind	Damaged many homes, public buildings, and business houses. Gust clocked at 98 m.p.h., at Wink. Warehouse disintegrated, another unroofed. Property damage at Wink $10,000, at Monahans $350,000. Storm moved southeastward.
FLORIDA Boynton Inlet, Palm Beach County	30	P.m.			0	0			Waterspout	
GEORGIA Brooks County	30	P.m.					1	4	Hail	Hailstones 1/2 to 3/4 inch in diameter covered ground and caused almost complete destruction of crops over 8-mile belt in southern Brooks County. Tobacco, corn, cotton, watermelons, and cantaloupes suffered greatest damage.
COLORADO Rye (3 miles south of), Pueblo County	30								Hail	Destructive hailstorm ruined first crop of alfalfa, and damaged growing crops.
SOUTH DAKOTA Harding (near), Harding County	30								Hail and rain	4 inches of small hail. Damage to fences and crops from locally heavy high water.
	30									Minor storms also reported at Corrales, N. Mex.; at Edmond and Lawton, Okla.; in Eastover section and Laurens, Spartanburg, and Union Counties, S. C.; and at Redmond, Utah.
KANSAS Lamar (near), Ottawa County	31	11:35 a.m.			0	0			Funnels aloft	2 funnels aloft observed.
TEXAS Dallas, Dallas County	31	11:45 a.m.			2				Electrical and rain	Lightning struck and killed 2 boys.
KANSAS Medicine Lodge (28 miles southwest of), Barber County	31	11:55 a.m.-12:20 p.m.	5	150	0	0			Tornado	Tornado hit ground in open pastureland; moved northeastward.
IOWA Greene County	31	1:19 p.m.			0	0			Funnel aloft	Reported near Jefferson.
WISCONSIN La Crosse (25 miles southeast of), La Crosse County	31	1:30 p.m.			0	0			Funnel aloft	
KANSAS Glasco (west of), Cloud County	31	2:06 p.m.			0	0			Funnel aloft	Funnel aloft reported.
INDIANA Vallonia, Jackson County	31	2:15 p.m.					4	C	Wind, rain, and electrical	High winds felled trees which damaged buildings and utility lines. Heavy rains flooded basements and streets. Lightning caused minor damage. Loss may be prorated: $20,000 by wind, $5,000 by rain, and $5,000 by lightning.

See reference notes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW MEXICO Albuquerque (20 miles south-southwest of), Bernalillo County	31	2:15 p.m.			0	0			Tornado	Small funnel moving eastward over open country; no damage; observed from WBAS Albuquerque.
NEW MEXICO Loving, Eddy County	31	2:27 p.m.			0	0			Tornado (suspected)	Report of tornado moving westward unconfirmed.
KANSAS Goodland (10 miles west of), Sherman County	31	2:35 p.m.			0	0			Tornado	Tornado touched ground briefly before dissipating.
KANSAS Goodland (north of), Sherman County	31	2:55 p.m.			0	0			Funnel aloft	Funnel cloud sighted aloft.
KANSAS Wallace County	31	3:06 p.m.			0	0			Funnel aloft	Funnel aloft reported between Sharon Springs and Weskan.
KANSAS Kingman County (south-central portion)	31	3:15 p.m.			0	0			Funnel aloft	Funnel cloud observed, apparently did not come to ground.
MISSOURI Lafayette and Jackson Counties	31	3:30-4:30 p.m.			0	0			Funnels aloft	Funnels aloft reported near Odessa, Lee's Summitt, Raytown, and Buckner.
KANSAS Sumner County	31	3:35 p.m.			0	0			Funnels aloft	3 incipient funnels aloft observed to descend from clouds and then recede shortly between Conway Springs and Viola.
KANSAS Goodland (13 miles northwest of), Sherman County	31	3:44 p.m.			0	0			Tornado	Tornado on ground.
MISSOURI Forest City, Holt County	31	4:01 p.m.			0	0			Funnel aloft	
KANSAS Highland (2-1/2 miles south of), Doniphan County	31	4:03 p.m.			0	0			Funnel aloft	Funnel cloud close to ground.
WISCONSIN Northfield, Jackson County	31	4:29 p.m.			0	0			Funnel aloft	
MISSOURI Butler, Bates County	31	4:30 p.m.			0	0			Funnel aloft	
KANSAS Rawlins County (northeastern portion)	31	5-6 p.m.	6	*6			1	4	Hail	Heavy hail fell. Stones varied in size from 1/2 to 2-1/2 inches. Ground covered to depth of 2 inches. Storm moved northeastward.
KANSAS Strong City (15 miles northwest of), Chase County	31	5:15 p.m.			0	0			Funnel aloft	Funnel cloud suspended half the distance from cloud to ground moving northeastward, but soon broke up. May have been more than 1 funnel.
KANSAS Ottawa (15 miles southwest of), Franklin County	31	5:42 p.m.			0	0			Funnel aloft	Funnel cloud aloft observed for several minutes Movement slowly northward.
INDIANA Lebanon, Boone County	31	8:30-9 p.m.					4	C	Electrical and rain	Lightning caused burning of lumber yard. Several inches of rain filled basements and streets and washed out roads. Damage attributed to lightning $30,000 and rain $10,000.
FLORIDA Vero Beach, Indian River County	31	P.m.			1				Electrical	Man killed by lightning while fishing in Sebastian Inlet.
MINNESOTA East-central portion	31	P.m.			1	4	4	1	Electrical, wind, and funnel aloft	Lightning struck overhead irrigation system, killing 1 and injuring 4 persons near Willow River. At Crystal Airport, near Minneapolis, 2 hangar units damaged, including 6 light aircraft. Property damaged estimated at $13,000. Unconfirmed funnel cloud sighted near Milaca. No damage reported. Storm moved southeastward.
	31									Minor storm also reported in central Vermont.

See reference notes at end of table.

8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

MAY 1957

The most important flooding during May were the floods in Texas, Oklahoma, Arkansas, and south-central Kansas. The floods were record-breaking in the Cimarron and Washita Rivers in Oklahoma. Major flooding occurred along the Arkansas River throughout its entire course in Arkansas. At Dardanelle, Ark., the flood was the second highest for the period of record. In Texas, the floods were less than record except in isolated cases. More than 4,000 persons were evacuated from unprotected lowlands on the West Fork of the Trinity above Fort Worth and along creeks in Fort Worth, Texas. In south-central Kansas, record-breaking floods occurred on the Ninnescah River and Beaver Creek.

ST. LAWRENCE DRAINAGE

Lake Michigan.--Minor flooding occurred on the Red Cedar in Michigan on the 20th and 21st. Only minor damage was reported.

Lake Ontario.--The rise of May 19 and 20 in Canaseraga Creek produced flooding of 3 to 4 feet over the Groveland - Mt. Morris, N. Y., road for several days. No damage was reported from the flooding as crops had as yet not been planted.

The rise of the 20th to 22d on Oatka Creek at Garbutt, N. Y., produced minor damage to hay standing in fields near the mouth of the creek.

ATLANTIC SLOPE DRAINAGE

Locally heavy rain in eastern North Carolina on the 11th and 12th caused local flooding on the Neuse River at Smithfield, N. C., on the 13th and 14th, and on Crabtree Creek which flows through Raleigh into the Neuse. Some of the heavy rainfall amounts recorded were: Raleigh, N. C., 4.33 inches; Neuse, N. C., 4.31 inches, and Smithfield, N. C., 1.78 inches. Amounts elsewhere over the Neuse Basin were generally less than 1 inch. Some residential and business areas along Crabtree Creek were flooded during the evening of the 11th and the morning of the 12th, otherwise no damage was reported.

Near bankfull stage occurred on the Broad River at Blair, S. C., on the 31st from the heavy rains on the 30th and 31st. Some isolated areas reported unconfirmed amounts of rain of 5 to 6 inches. A number of small streams along the Tiger and Enoree reported heavy rises but no flooding occurred along the main streams. Some damage from flash flooding occurred in areas of excess rainfall.

Minor flooding occurred on the Ocmulgee River at Abbeville, Ga., on the 12th and 13th from the frequent heavy rains during the month. Rainfall of 1 to 2 inches fell at one or more stations in the Altamaha Basin on 15 days of the month. Record rainfall of 11.77 inches was reported for the month of May at Macon, Ga., with a maximum 24-hour fall of 4.01 inches on the 23d-24th. The greatest fall was at Stillmore, Ga., where 13.81 inches was recorded for the month. The average for the whole basin was 9.8 inches, which was considerably above normal.

EAST GULF OF MEXICO DRAINAGE

The flooding on the Apalachicola River at Blountstown, Fla., from the 6th to the 9th was due to moderate to heavy rain during the first 4 days of May. During that period, Blountstown, Fla., reported 7.83 inches. No damages resulted from the high water and there was little or no interruption of any operations.

Flash floods occurred on creeks and smaller streams in east-central Alabama on May 3 from rainfall ranging between 2 and 7.7 inches during the 24-hour period ending at 7 a.m. c.s.t. on May 4. At Montgomery, Ala., 2.72 inches of rain fell within a 3-hour period breaking all previous maximum rainfall amounts for a 15-minute period, and near record amounts for 5- and 10-minute periods. Severe flooding occurred in some areas with some bridges washed out and fences washed away. Considerable damage was reported to cotton and corn and other small plants in the flooded areas.

The flooding on the Pearl River at Bogalusa, La., on the 7th was due to moderately heavy rains during the first week of May. No damage was reported.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--Heavy thundershowers on the evening of the 29th and the morning of the 30th produced minor flooding in the Iowa River basin below Marshalltown, Iowa, and in the Black Hawk Creek basin at Hudson, Iowa. Rainfall amounts in the Iowa River basin averaged 2.45 inches, with local amounts in excess of 4 inches. The rainfall in the Black Hawk Creek basin averaged about 2.5 inches. Damage was slight and confined to lowlands near the river and to overflows in small streams.

The flooding in the Illinois Basin, which began on April 26 at Morris and LaSalle, Ill., was due to moderately heavy rains on the 25th and 27th of April. Crests were reached in the reach above Peoria, Ill., during the latter part of April, and in the reach below during the first few days of May. The flooding on the Meramec River in Missouri between the 18th and 28th was due to heavy rain (1.75 inches) on the 16th and 17th. Flooding was prolonged with additional rain on the 21st and 22d. This same storm also caused overflows on the Bourbeuse River at Union, Mo.

Missouri Basin.--Heavy rains (unofficial amounts of 6 inches) caused flooding in the middle fork of the Dearborn River in Montana on the 19th and 20th. Some damages resulted to farmyards, buildings, land, and bridges in the area. Three people received injuries when a car "jumped over" a washout on a bridge approach which crumbled as the car was passing over the bridge.

There was minor flooding of low level farmlands on the Big Hole - Jefferson Rivers from the 20th to the 25th. One death resulted as the high water turned over a suspension bridge at Divide, Mont., dumping a young man into the river. This flood was due to heavy rain from the 19th to the 21st and melting snow.

Rains in the Black Hills section and southwestern South Dakota caused substantial rises and lowland flooding on the lower reaches of the White and Cheyenne Rivers between the 18th and 25th. No damage was reported as the flooded area was mostly sparsely settled ranch country.

Some local bottomland flooding occurred along the South Platte River and its tributaries in Denver, Adams, Arapahoe, and Weld Counties in Colorado from the heavy rain on the afternoon of the 8th and the 9th. Heavy damage resulted to the communities of Frederick, Firestone, and Evanston in Weld County where homes had been built on dry creek beds. Three persons were drowned in a basement apartment northeast of Aurora, Colo., in the early morning of the 9th where 3 to 5 inches of rain had fallen in 24 hours swelling creeks and river above capacity. Homes, bridges, roads, sewer systems, and communication lines were destroyed or damaged. Heavy rains occurred again over the area north of Denver on the nights of the 11th and 12th causing additional flooding and damage. At Frederick, Colo., a dike broke and let in the collected water. Heavy rain and snow along and east of the divide on the 15th and 16th caused considerable damage to lowlands in some areas. The storm started as rain on the 15th, changing to wet snow and continuing through the 16th. Three to 5 inches of precipitation fell and snow ranged up to 15 inches in depth causing heavy runoff from snowmelt. Some local flooding occurred along the South Platte River, causing damage to homes, roads, bridges, and communication lines.

Light overflows with comparatively minor losses occurred locally in the Upper Republican in Nebraska, the Smoky Hill and Solomon Basins in Kansas, the Saline, Marais des Cygnes, Marmaton and Mill Creek (a Kansas River tributary) in Kansas during brief periods between the 16th and 21st. Moderate flooding occurred along the upper Marais des Cygnes while considerable inundation of lowlands occurred in northwest Kansas on Beaver and Sappa Creeks. Channel widths were reportedly about one-half mile on Beaver Creek in the vicinity of Atwood, Kans., as the overflow moved downstream with a slowly diminishing trend. Rail transportation was disrupted by washouts on Beaver Creek in northwest Kansas. Overflows were the result of heavy rains falling on soil subjected to prolonged rainfall this spring. Topsoil moisture conditions had been previously brought up to near normal.

The flooding along the Osage River in Missouri from the 25th to the 28th was a continuation of the flooding which started in the Marais des Cygnes River at Quenemo, Kans., on the 17th. Additional heavy rain occurred over the Osage on the 23d (1 to 1.5 inches) and 25th (1.75 inches).

The flooding on the Gasconade River in Missouri was due to heavy precipitation (slightly over 2 inches) on the 17th. Additional precipitation (1 inch) on the 22d and 23d (slightly under 2 inches) raised the flood peak.

The only flooding along the main stem of the Missouri River occurred in the reach below the mouth of the Osage River. The flooding was very light and exceeded flood stage by only a few tenths of a foot.

Ohio Basin.--The minor flooding on the Scioto River in Ohio south of Columbus was due to heavy thundershowers (2.25 inches) during the period from the 19th to the 22d. The heaviest rainfall reported was 5.2 inches south of Powell, Ohio, on the 19th and 20th. Flooding was limited to lowlying farmlands. Although some reseeding was required where crops had already been planted, losses were believed to be slight.

The flooding on the Green and Rough Rivers in Kentucky and the White and Wabash Rivers in Indiana was due to frequent heavy showers from the 14th to the end of the month. The rainfall was heaviest during the period from the 21st to the 23d. Rainfall in the reach of the Ohio River from Tell City, Ind., to Fords Ferry, Ky., averaged 6 inches, and over the Green in Kentucky, the Wabash and the White Rivers in Indiana during that period averaged 3 inches. Rains were locally heavier in parts of southern Illinois where Harrisburg had an estimated 10-inch fall between the 20th and 25th. At Evansville, Ind., it was the wettest month since January 1950 and the wettest May since 1935. At Indianapolis, Ind., the total rainfall for the month was the 2d highest ever recorded for the month of May. Crests in the lower White and lower East Fork were the highest since the great flood of 1950. Crests were just short of the stages which would have necessitated evacuations, but no evacuations are known to have been necessary. Many roads were closed and many fields of wheat and alfalfa were overflowed. However, the damage to crops was not nearly as great as would usually occur with such high stages because of the damage which had already been done by floods the previous month.

On the middle fork of the Saline River the gage site at Harrisburg, Ill., was flooded during part of the period between the 20th and 25th. A number of families in the flooded sections of Harrisburg had to be evacuated.

Flooding along the main stem of the Ohio was very minor and similar to the one the previous month. Losses were confined to extreme lowlands adjacent to the river, where some farmland had been prepared for planting.

White Basin.--The Black River remained above flood stage at Pocahontas, Ark., from April 5 through May 9 and at Black Rock, Ark., from April 4 through the month of May. General rains from the 10th through the 14th, which were locally heavy on the 12th and 13th caused the Black to again go above flood stage at Pocahontas from the 14th to the 16th. Another period of heavy rains, beginning on the 21st, caused the stream to go above flood stage on the 23d and to remain above flood stage through the end of the month. Heavy rains in southeastern Missouri on the 22d and 23d caused the Black to go above flood stage at Poplar Bluff, Mo., from the 23d to the 25th.

The Little Red River continued above flood stage at Judsonia, Ark., from April 27 to May 4. A period of general heavy rains beginning on the 21st caused the stream to go above flood stage at Heber Springs, Ark., on the 24th and at Judsonia from the 24th to the 28th.

At the beginning of the month the White River was above flood stage at and below Newport, Ark., from heavy rains in April. Flooding continued at Newport, Ark., until May 6, Augusta, Ark., until May 14, and in the reach below through the entire month of May. Additional heavy rains from the 22d to the 24th caused additional flooding in the reach above Newport on the 24th and 25th.

Arkansas Basin.--There were two periods of flooding in the Arkansas River and tributaries in Colorado during May. The first occurred from the 8th to the 10th and was minor in nature. The second occurred from the 15th to the 18th and was more serious and resulted in considerable lowland flooding. The first flood was due to a combination of heavy runoff from snowmelt and scattered heavy showers and thunderstorms. The precipitation ranged from 1 to 2 inches in the foothills and mountains to 0.25 to 0.5 inch over the lower portion of the basin. Most of the stream flow was from snowmelt in the lower mountain elevations. There was very little damage from the first overflow. The second period of flooding was due to general heavy precipitation plus runoff from snowmelt. Precipitation ranged from about an inch in lower elevations to about 5 inches in the Pueblo, Colo., area. Precipitation in the headwater areas of the Purgatoire, Fountain Creek, and the upper reaches of the Arkansas ranged from 1.5 to 2.5 inches. There was considerable damage to crops due to standing water. Two state highway bridges were damaged and several county road bridges and approaches are in need of repairs. A lowland dike near Avondale, Colo., was overflowed and a dike at LaJunta, Colo., was topped.

A flash flood occurred during the late afternoon and evening of the 29th on the Syracuse Creek, north of Syracuse, Kans. The creek overflowed at highest observed level in the last 35 years. The flow from this creek into the Arkansas River at Syracuse caused bankful stages for about 1 hour.

General heavy thunderstorms over southern Kansas, Oklahoma, and Arkansas during the latter half of May caused severe to record flooding in many streams in the basin. There were reports of more than 13 inches of rain in the Hennessey area and 12 inches in the Dover area in the Turkey Creek Basin (tributary of the Cimarron River) in north-central Oklahoma between 1:30 p.m. of the 15th and the morning of the 16th. The entire population of Dover was evacuated as flood waters engulfed the city. In the city of Enid, Okla., on Boggy Creek, only town square remained relatively dry. The rest of the town was under water and in some sections reached a depth of 8 feet. A few persons were rescued out of trees and from atop submerged automobiles. One person spent 5 hours in a tree before he was rescued.

The worst flood of record was reported on the 16th and 17th in the upper and middle Cimarron River. The crest at Waynoka, Okla., during the night of the 16th was about 1 foot higher than the previous highwater mark set in 1935. The bridge on which the river gage was located toppled into the river shortly before the crest occurred. The crest reached Guthrie, Okla., on the 17th, exceeding the previous record high stage of 16.5 feet set in 1935. The water reached 3 feet deep along the main street of Coyle, Okla., further downstream. Several families in the area had to leave their homes. The crest reached Perkins, Okla., during the evening of the 17th at a record stage of 19.8 feet, 2.8 feet above the October 1926 record stage of 17 feet.

Flooding occurred along the main stem of the Arkansas in the reach at and below Wichita, Kans., starting on the 16th with the crest between Morrilton and Little Rock, Ark., by the end of the month. At Bixby, Okla., the entire population of 2,300 persons was evacuated during the evening of the 18th. There were two crests at Tulsa. The first crest of 20.4 feet occurred on the morning of the 19th. The second crest of 21.5 feet (flood stage 19 feet) occurred on the afternoon of the 21st. There was no important flooding in the city of Tulsa or vicinity. Moderate to severe flooding occurred in the reach from Webbers Falls, Okla., to near Little Rock, Ark.

Red Basin.--The minor flooding on the Saline River at Benton, Ark., on the 24th was due to general moderate to heavy rains beginning on the 21st.

The rise on the Ouachita River which reached flood stage at Arkadelphia, Ark., on April 25 continued in flood at this point until May 2, and at Camden, Ark., until May 12. This stream went above flood stage again on the 24th which continued in flood until the 28th at Arkadelphia and continued in flood in the reach below as the month closed.

Heavy rains (3.5 inches) from the 1st to the 4th in the Upper Washita Basin resulted in a crest of 23.0 feet at Carnegie, Okla., on the 3d. Only agricultural damage resulted from this rise. Another rise near the middle of the month resulted in a major flood on the Washita at Lindsay, Okla., and below. Record flows were measured at both Pauls Valley and Durwood, Okla., by the U. S. Geological Survey, but stages were 2 to 3 feet lower than the previous recorded floods. The rainfall on the 16th causing this flood averaged in excess of 6 inches in the reach below Chickasha and over 9 inches in the reach from Ardmore to Lindsay, Okla. Another intense rain of 5 to 6 inches occurred over the Washita River on the night of the 24th and caused flooding at Lindsay and Pauls Valley, Okla. Substantial damage resulted to agricultural interests and to roads and bridges. One man near Lindsay, Okla., drowned while attempting to evacuate a woman from an automobile that fell through a bridge on the 18th.

Near record stages occurred at Wellington, Texas, and Mangrum, Okla., on the Salt Fork of the Red from the heavy rains that fell over the Texas Panhandle on the 15th. A near record flood also occurred on the North Fork of the Red near Carter, Okla. The bridge across U. S. Highway 66 south of Sayre, Okla., was destroyed by this flood. Two deaths from drowning occurred north of Erick, Okla., on the 16th.

There were three separate periods of flooding on the Little River in Arkansas and on the Sulphur River in Texas during May. The first rise started in April and resulted in the highest crest. The second period of flooding began around the middle of the month and the last overflow around the 23d.

The Cypress River at Jefferson, Texas, was in flood from April 26 until May 7. The Red River began flooding at Index and Fulton, Ark., on April 28 and was within its banks by the 8th and 10th, respectively. A second period of flooding began at Index on May 26 and at Fulton on May 27. In the reach below it was in flood throughout the entire month beginning from April 30. The flooding below Alexandria, La., approached in magnitude the record flood of 1945. It was only 4.5 feet lower at Alexandria than in 1945 and there was considerable flooding of unprotected areas along the east bank and up the tributaries. Portions of several parishes were inundated by the floodwaters. Farmers, ranchers, and oil companies reported considerable damage.

Lower Mississippi Basin.--The St. Francis River continued in flood at Fisk, Mo., from April 3 to May 10. Heavy rains (over 2 inches) on the 17th followed by another 2-inch rain on the 19th caused additional flooding at Fisk, Mo., starting on the 19th. The crest of 24.2 feet on the 23d was 0.1 foot higher than the crest on the 2d and the highest stage since 1950. In the reach below Fisk, Mo., at St. Francis, Ark., flooding continued from April 3 through the month of May into June.

Considerable flash flooding occurred on the smaller streams in southeast Missouri and northeast Arkansas from heavy local rains on the 23d. The water was not from the main St. Francis River, but from local streams and drainage ditches (dug some years ago so land in the area could be cultivated) which eventually enters Little River, a tributary of the St. Francis, with flow having considerable regulations at Big Lake and nearby floodways. Big Lake reached its highest stage on May 28. The damages to bridges, highways, grain crops, etc., were heavy, amounting to several millions of dollars. Substitute crops will have to be planted as it is too late to replant cotton.

The flooding along the main stem of the Mississippi at Caruthersville, Mo., from the 27th to the 31st was due to heavy rains over the lower Ohio and the middle and upper Mississippi on the 22d and 23d. The 2-day total at many stations was 5 inches or more. Scattered additional rains were reported through the 26th. The Mississippi River rose rapidly -- over 17 feet at Caruthersville, Mo., from the 21st to the 26th.

Very heavy local rains occurred in the Dyersburg, Tenn., area late on the 23d and early on the 24th and caused flash flooding in small local streams. The damage was quite large.

WEST GULF OF MEXICO DRAINAGE

Heavy rain (over 11 inches) during the last 10 days of April caused flooding along the Sabine River during the latter part of April which continued into May. Heavy rain (1.75 inches) occurred again over the Sabine from the 12th to the 14th causing the Sabine to overflow its banks again starting at Quitman and Mineola, Texas, on the 15th and Gladewater, Texas, on the 19th. At Logansport, La., the Sabine was in flood from April 26 to May 24. This was the highest water on the Sabine since 1945. The flooding was prolonged by an additional rainy period which produced 3.1 inches over the basin.

The excessive rains during the last half of April produced flooding in the Trinity River beginning at Trinidad, Texas, on April 21 and continued through the month of May. The rainfall ranged from 8 to 15 inches in the reach between Dallas and Long Lake, Texas, and from 6 to 12 inches in the reach from Long Lake to Liberty, Texas. Severe flooding continued along the Trinity through the month of May. Heavy rainfall in the upper Trinity from the 22d to the 26th produced serious local flooding in the Fort Worth, Texas, area and resulted in another major flood crest at Dallas, Texas. More than 4,000 persons were evacuated from unprotected lowlands on the West Fork of the Trinity above Fort Worth and along unprotected creeks in Fort Worth. The Trinity crested at Dallas on the 26th at a stage of 41.7 feet, 13.7 feet above flood stage for the highest crest during the April and May flooding. The crest reached Rosser, Texas, on the 29th at a stage of 38.0 feet, 12.0 feet above flood stage. There was no loss of life attributable to the flood. There was considerable damage to residential areas of both Fort Worth and Dallas. Some homes in Fort Worth could not be reoccupied for 2 weeks as discharge from Lake Worth continued to flood the low areas. There was extensive damage to streets and highways and some traffic arteries were closed for several weeks. Transportation facilities and utilities suffered moderate damage. There was extensive damage to agricultural interests with 425,000 acres inundated. There was not much direct loss of livestock, but loss of grazing in flooded lowlands was important and there was great loss of field crops, fences and levees.

Heavy rains of 4 to 6 inches over the middle and upper portions of the Guadalupe River on the 27th caused moderate flooding along the entire length of the river. The crests were 1 to 2 feet lower than in the latter part of April and the early part of May. There was much flooding on the San Antonio River in the city of San Antonio, Texas, and below Goliad, Texas, over the low flatlands to the mouth of the river. Heavy rains occurred again on May 31 and June 1 and caused another moderate rise in the Guadalupe and in the San Antonio Rivers, with flooding on the Guadalupe from Gonzales, Texas, to the mouth. There was also some flooding on the San Antonio River and in small streams in San Antonio and over the flatlands below Goliad. The material damages from these two rises were less than those of late April and early May since they followed these floods so closely and had lower crests. There was a loss of 5 lives attributed to the flood conditions.

The Colorado River below Austin, Texas, maintained high flow all month because of discharge operations at Mansfield, Texas. There was flooding of lowlands at times below Columbus, Texas, because of rain. Stages almost to flood level occurred at Columbus and Wharton, Texas, on the 28th and 29th. Serious flooding occurred along the South Concho River from torrential rains during the night of the 8th at the towns of Christoval and San Angelo, Texas. Several houses in these two towns were damaged or destroyed. There was some damage to railroads, highways, and bridges. Lake Travis reached an elevation of 707.38 feet m.s.l. on the 18th, the highest level ever reached since the dam was built. This was due to continuous runoff rains and the curtailment of discharging operations because of water in the lower river.

Considerable flooding occurred along the Nueces, Frio, and Atascosa Rivers on the 9th, 13th, 18th, 19th, and 27th. No major floods occurred along these rivers as the rains were well spaced. The most significant rise occurred after the rains on the 27th which were excessively heavy. The greatest amount reported during this storm was 7.7 inches at La Pryor, Texas, on the 27th. This latter rise which crested at Derby, Texas, at 11.3 feet, 5.3 feet above flood stage, is one of the larger floods on the Frio. Flood damages were limited to soil erosion and minor damage to roads. The greatest flood damage occurred in the upper Nueces and Frio Basins. High water kept construction at a standstill on Wesley Seale Dam near Mathis, Texas. Flooding of pasture lands continued, but benefits from rains and flood waters more than off set any sustained damage.

The frequent rains during the month from the 10th to the 29th caused 3 flood crests on the Rio Grande at Del Rio, Texas, and 5 flood crests at Eagle Pass, Texas. The flooding was confined to small areas of pasture land along the river bank. The heaviest damage in the area occurred to roads, railways, and fences over the Devils River watershed from heavy local rains. The river at Baker's Crossing, Texas, overflowed three times during the month with the highest crest of 18.9 feet occurring on the 13th.

PACIFIC SLOPE DRAINAGE

California Coast.--Heavy rain (3 to 5.5 inches) in the Sacramento River Basin in California during the late afternoon and evening of the 17th caused overflow in the bypass systems of the Sacramento River between the 20th and 24th. Overflow depth at the west end of Fremont Weir was slightly over

1 foot and there was some reflooding of Little Holland, a leveed tract in the Bypass, and of many acres of cultivated land in unleveed portions of the Bypass. All movable farm equipment and many head of livestock were moved out as a result of advance warnings, and damage was confined largely to planted crops.

Columbia Basin.--Floods in the Snake River Drainage were more pronounced in eastern Idaho, and in the Clearwater Drainage. Several hundreds of acres of farmland along the Henrys Fork at Rexburg, Idaho, were under water from the 9th to the end of the month. Along the Blackfoot River near Blackfoot, Idaho, several thousand acres were flooded by May 13 and a portion of Highway 91 south of Blackfoot was inundated. Several homes in the area were threatened when the water level reached within a few inches of the tops of the dikes. This was the highest flood of record on the Blackfoot (6.95 feet or 1,015 c.f.s.), where a bridge was washed out. The highest previous crest was 868 c.f.s. on May 21, 1921. A few homes and some pasture land were flooded along the Portneuf at Pocatello, Idaho. On the Clearwater River above Lewiston, Idaho, water was 2 to 3 feet deep on Highway 13 on May 8. Bear Creek bridge, 8 miles west of Orofino, Idaho, was washed out. The Snake and Clearwater Rivers, near Lewiston, Idaho, crested at the highest levels since 1948. About 175 persons were evacuated at Orofino, Idaho, due to the high water on Orofino Creek and Clearwater River. Volunteers were called by the National Guard for flood duty at Orofino, Kooskia, and Stiles. Several highways were closed due to the high water. Most of the flooding in the Snake River Basin was due to a combination of snowmelt and heavy precipitation. At Pocatello, Idaho, 4.33 inches of precipitation occurred during the first 23 days of May, compared to a previous monthly maximum of 4.34 inches in 1907. In the Rexburg, Idaho, area, 3.7 inches of rain occurred during May or 296 percent of the long-term normals. At Ft. Hall, Idaho, on the Blackfoot, 4.95 inches occurred which was 438 percent of normal. Precipitation at other points varied from 154 percent upward.

Several flash floods occurred in Washington and Oregon east of the Cascade Mountains from torrential showers and thunderstorms during the first part of May. Some of the towns hardest hit by the flash floods were Wenatchee and Spokane, Wash. Flash floods were also reported at Conconnully, Wash., Madros and Weston, Oreg. These flash floods did not add much water to the main streams and the only flooding reported in the lower Columbia Basin was on the Willamette at Portland, Oreg., and on the Columbia at Vancouver, Wash. Damages were confined to flooding of pastures and meadowland outside of the dyked areas and to that caused by flash floods.

FLOOD STAGE DATA

15						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

15						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

30	16	23,940	-52.3		86	21.4
20	5	26,599	-47.8			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

30-----	9	23,850	-53.4			
20-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

* 7 mb., 10 obs., 33,651 m., -38.2°C.

Note: All observations scheduled at 0300, G.C.T. except at Mazatlan, Merida and Veracruz, where they are taken near 0200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed in Table 30 appears in Monthly Weather Review, Volume 75, No. 3, March 1947, p. 47.

SOLAR RADIATION DATA

MAY 1957

Daily totals and average daily totals by weeks of solar and sky radiation plus the radiation reflected from the ground as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg

Note Langley is the unit used to denote one gram calorie per square centimeter

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

MAY 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	344	305	129	*11	294	263	332	325	303	270	*-3	379	359	398	326	202	219	407	*305	389	223	168	367	*406	*161	*303	234	310	227	*64	342	279

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

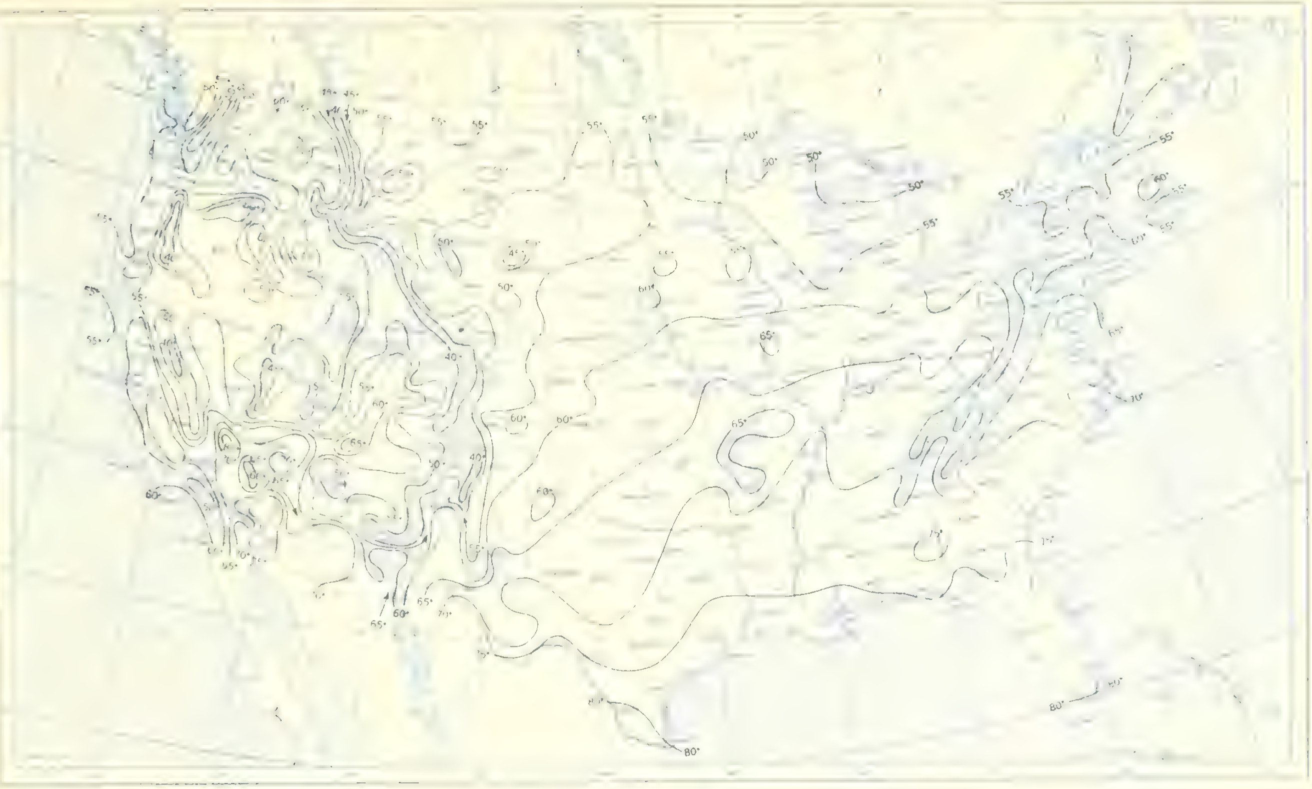
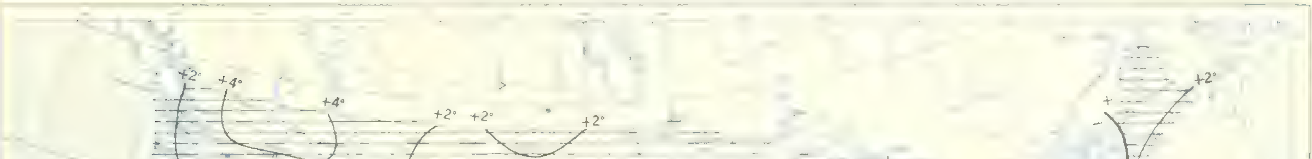
NWRC, Asheville, N. C. --- 8/15/57 --- 1900

Chart I. A. Average Temperature (°F.) at Surface, May 1957.

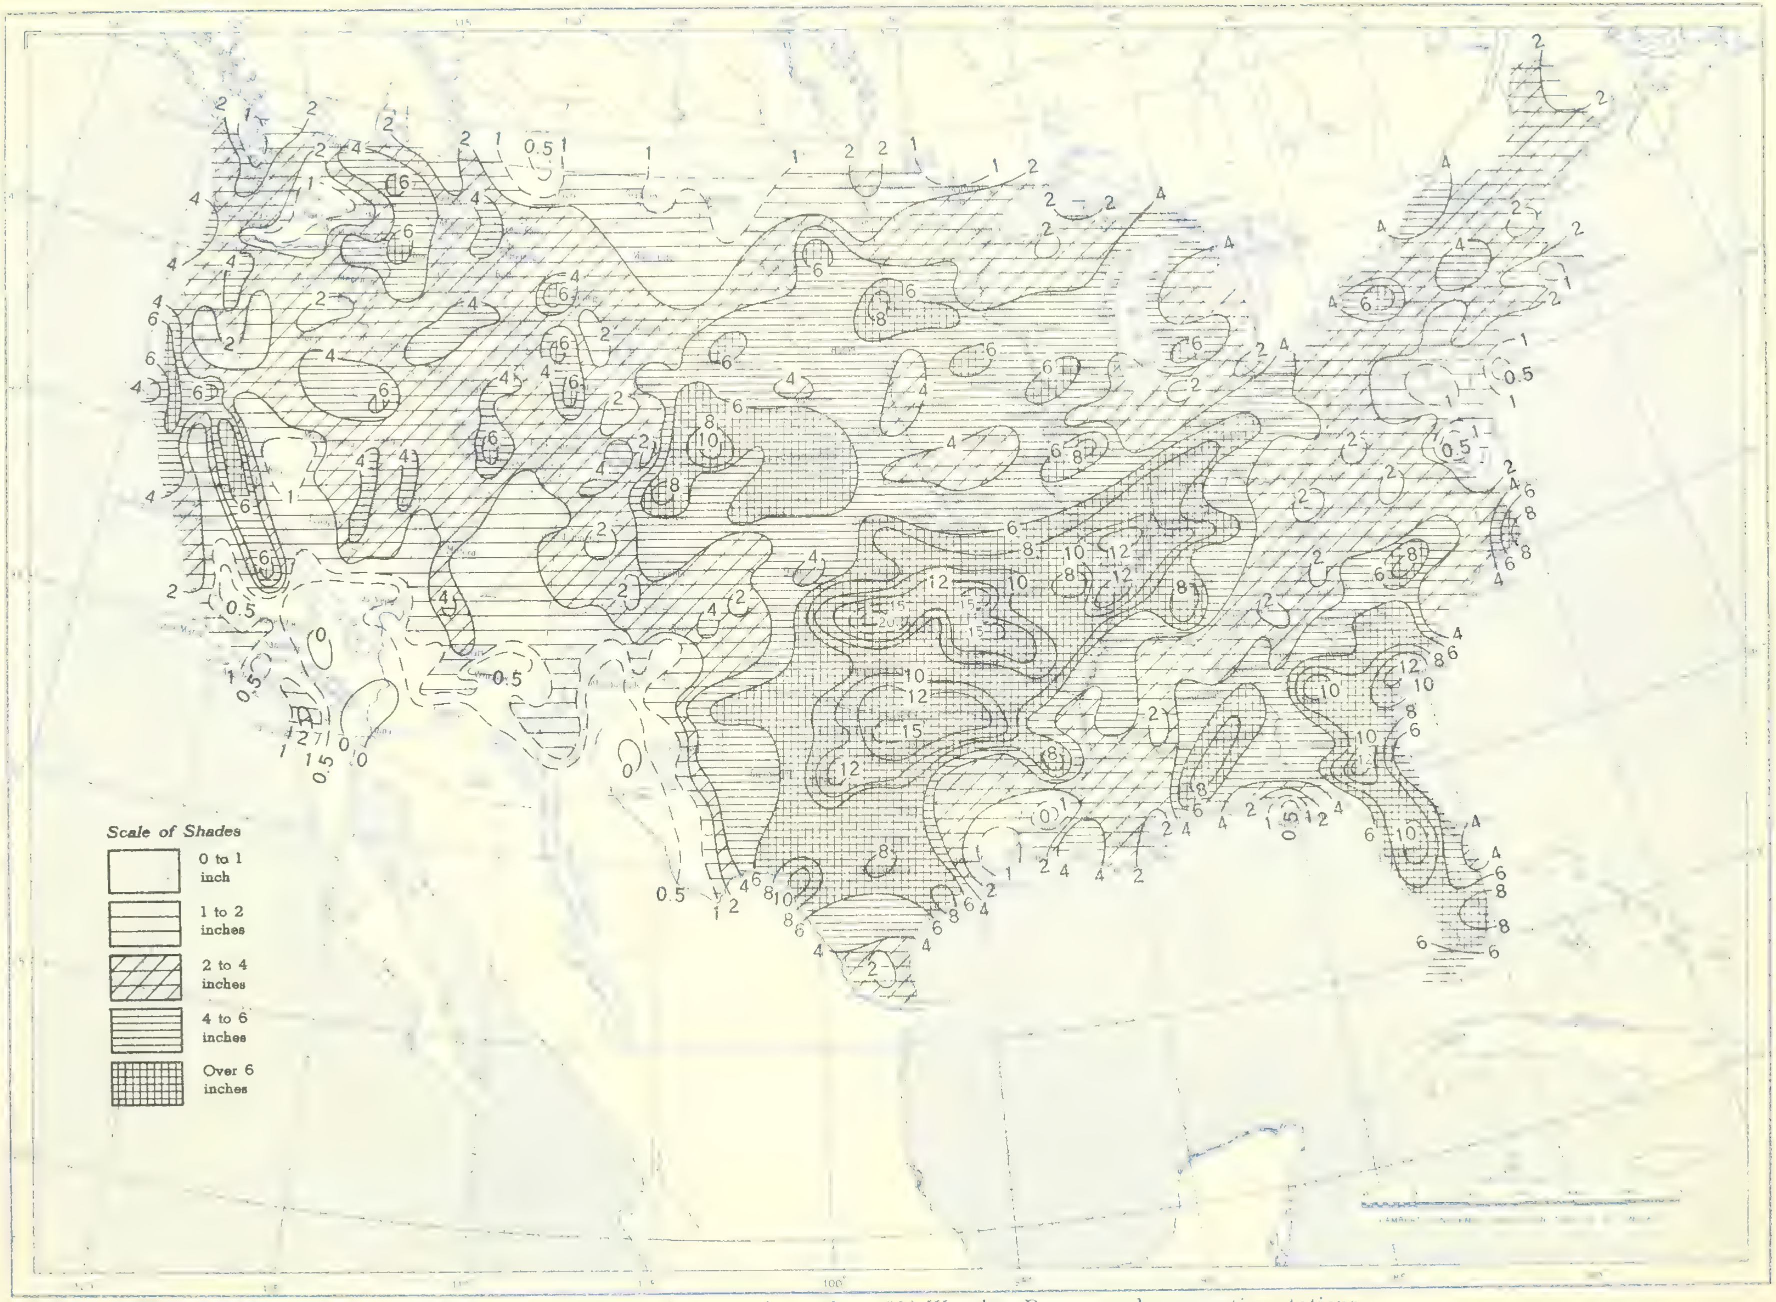


B. Departure of Average Temperature from Normal (°F.), May 1957.



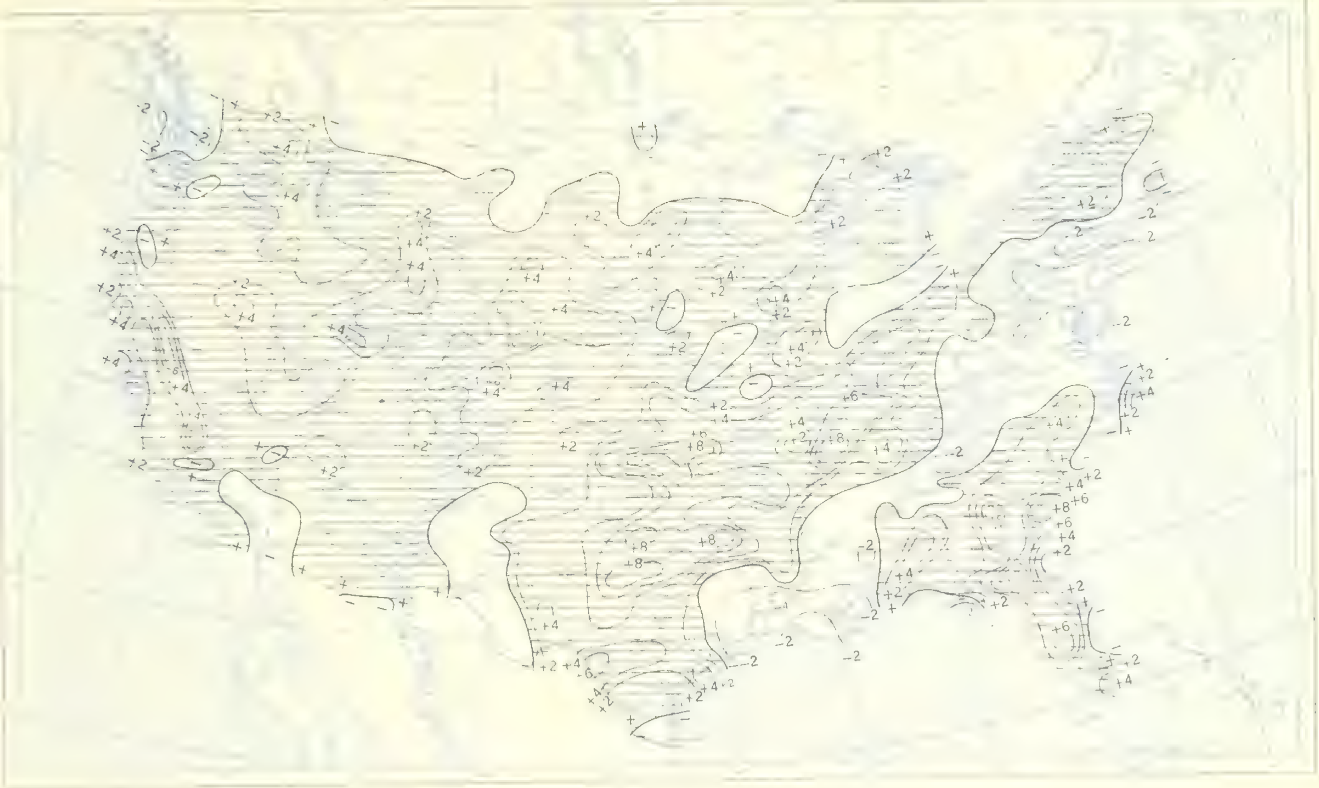
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), May 1957.

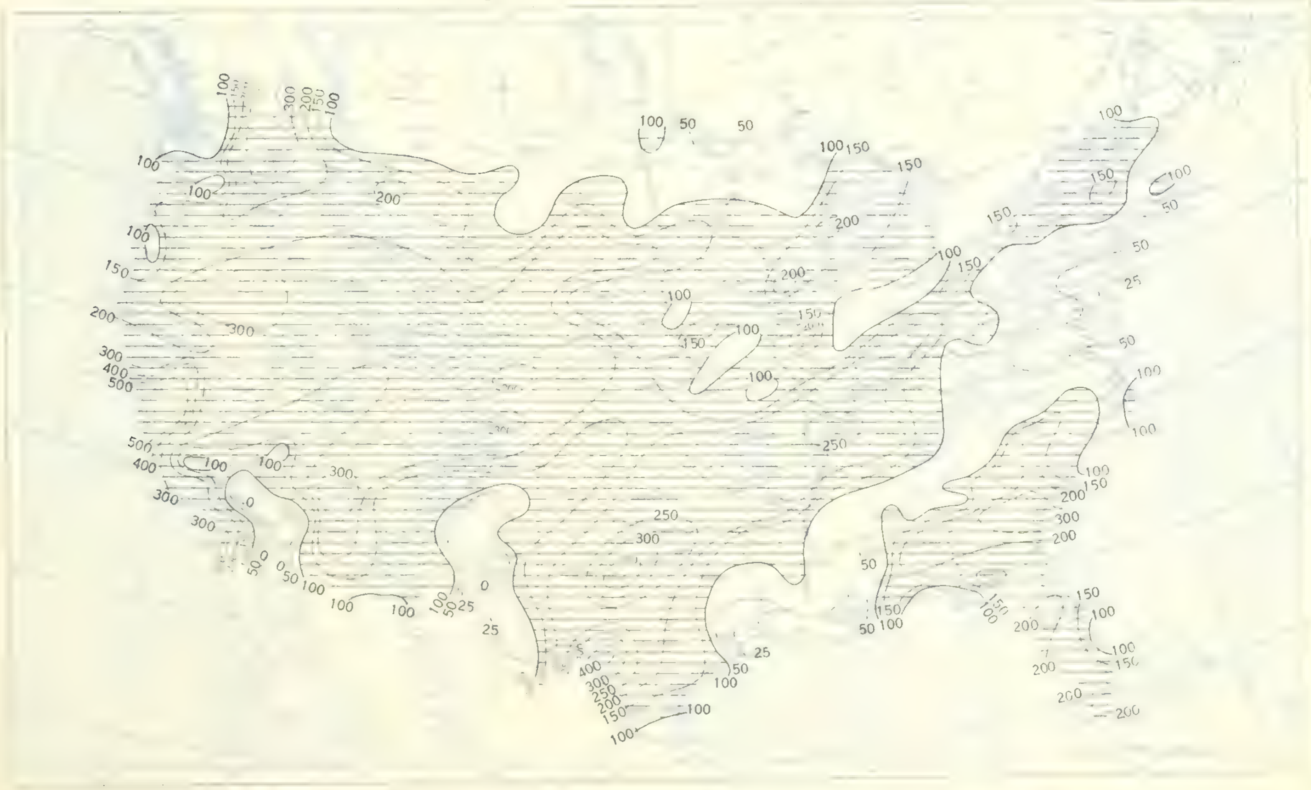


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), May 1957.

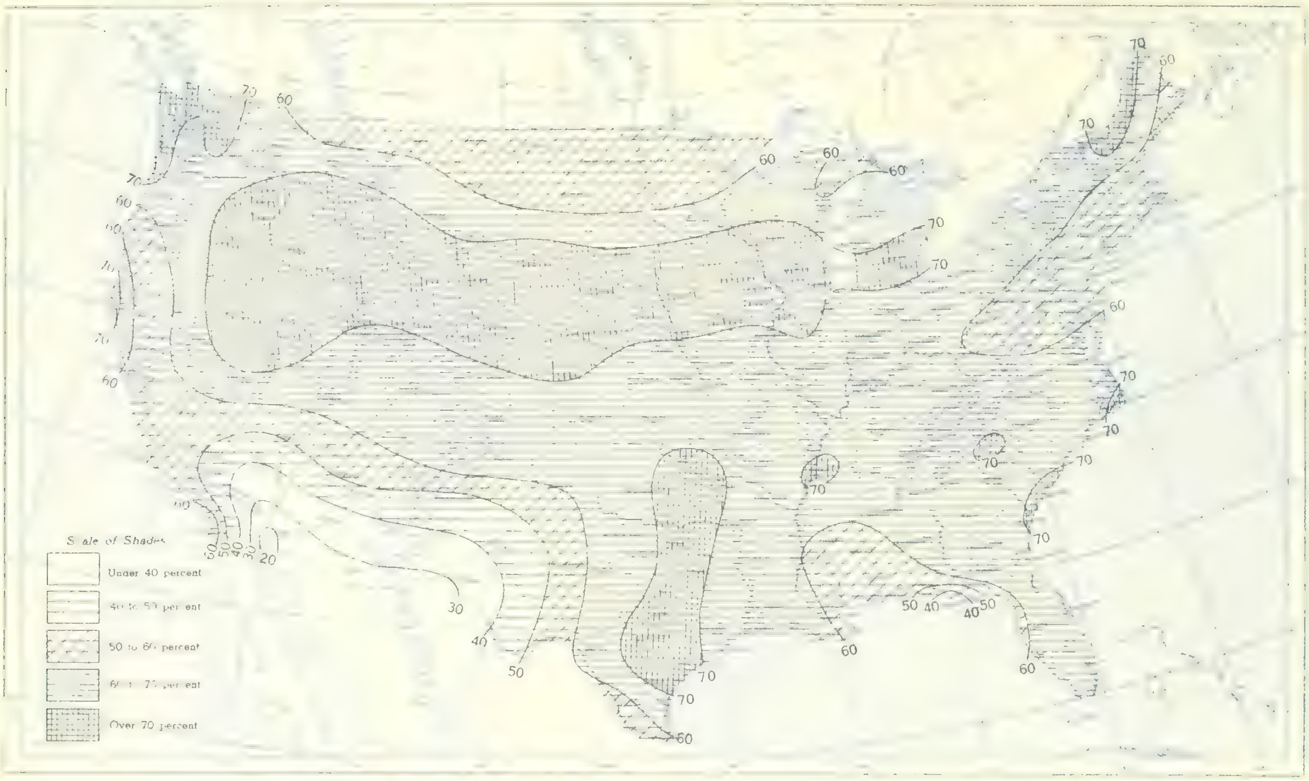


B. Percentage of Normal Precipitation, May 1957.

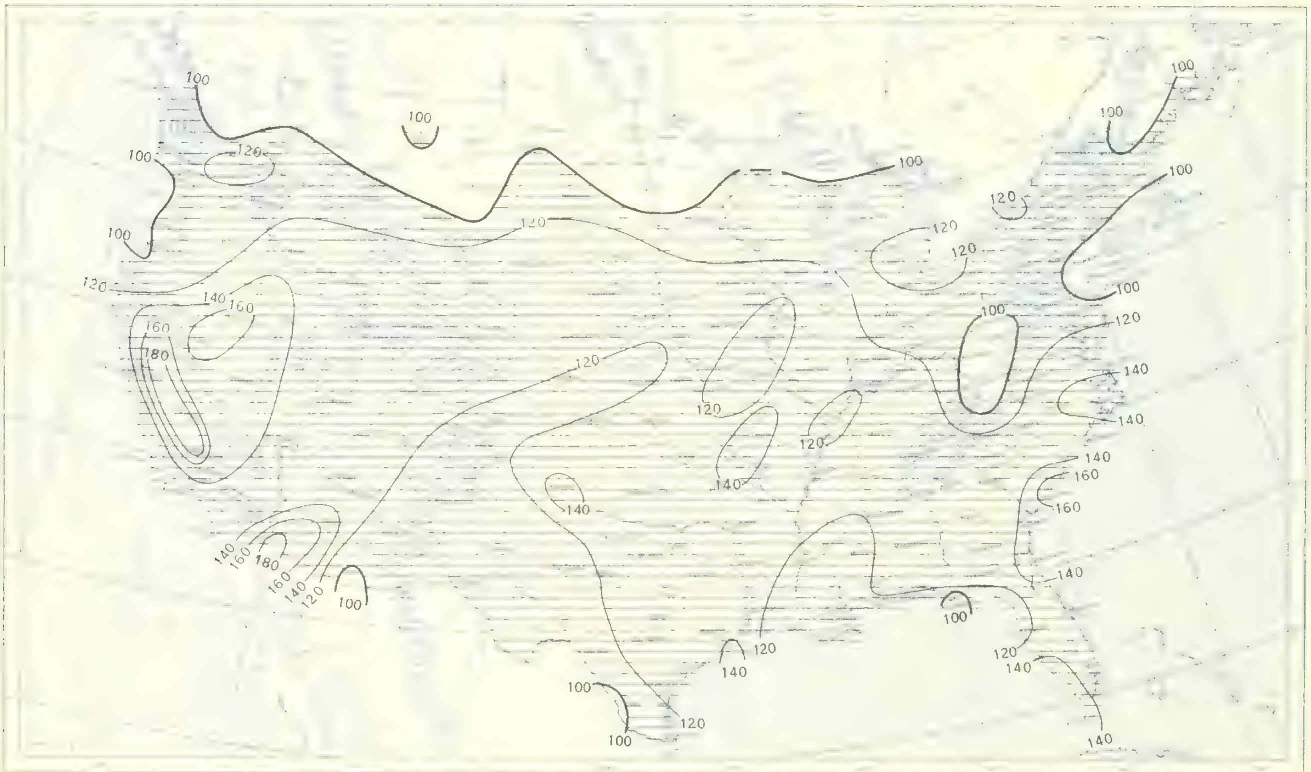


Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, May 1957.

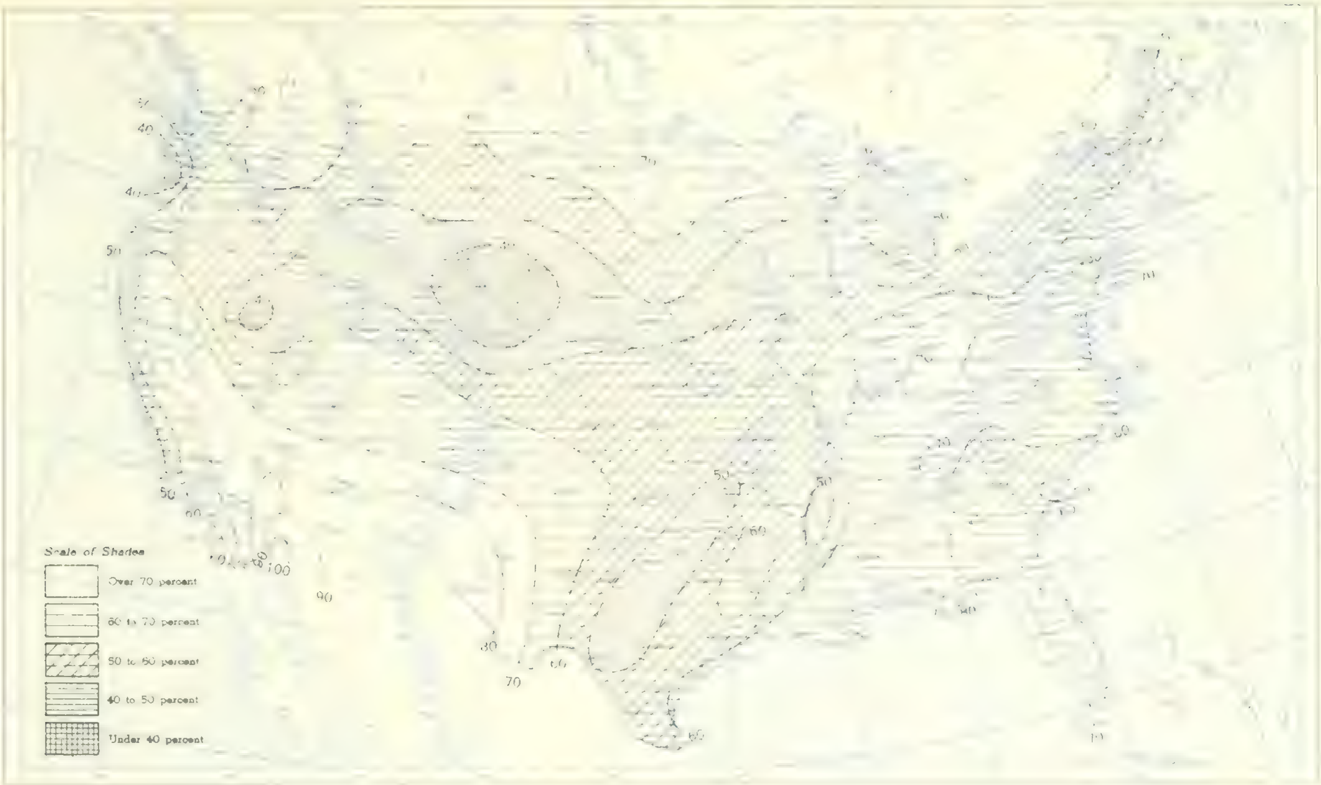


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, May 1957.

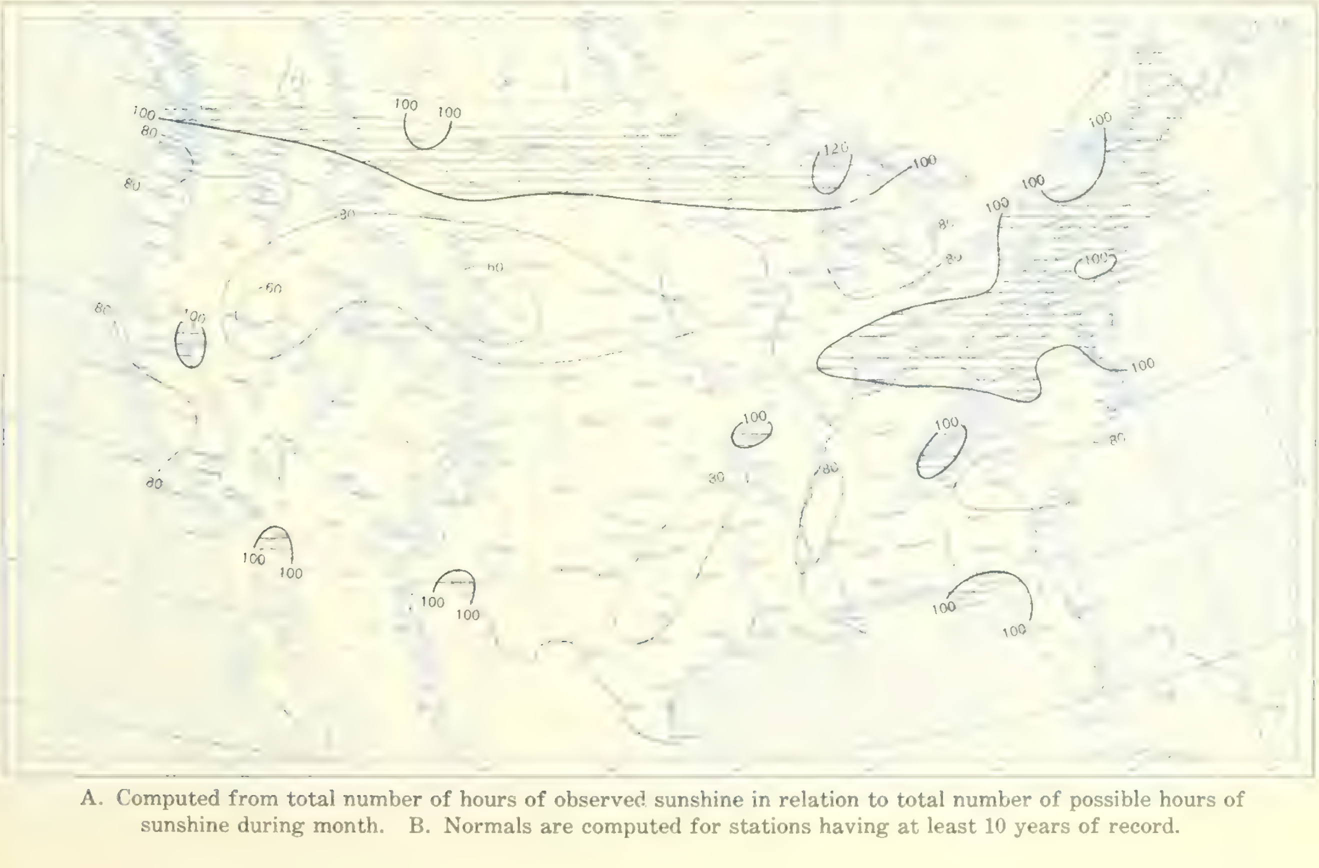


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, May 1957.



B. Percentage of Normal Sunshine, May 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, May 1957. Inset: Percentage of Mean Daily Solar Radiation, May 1957. (Mean based on period 1951-55.)

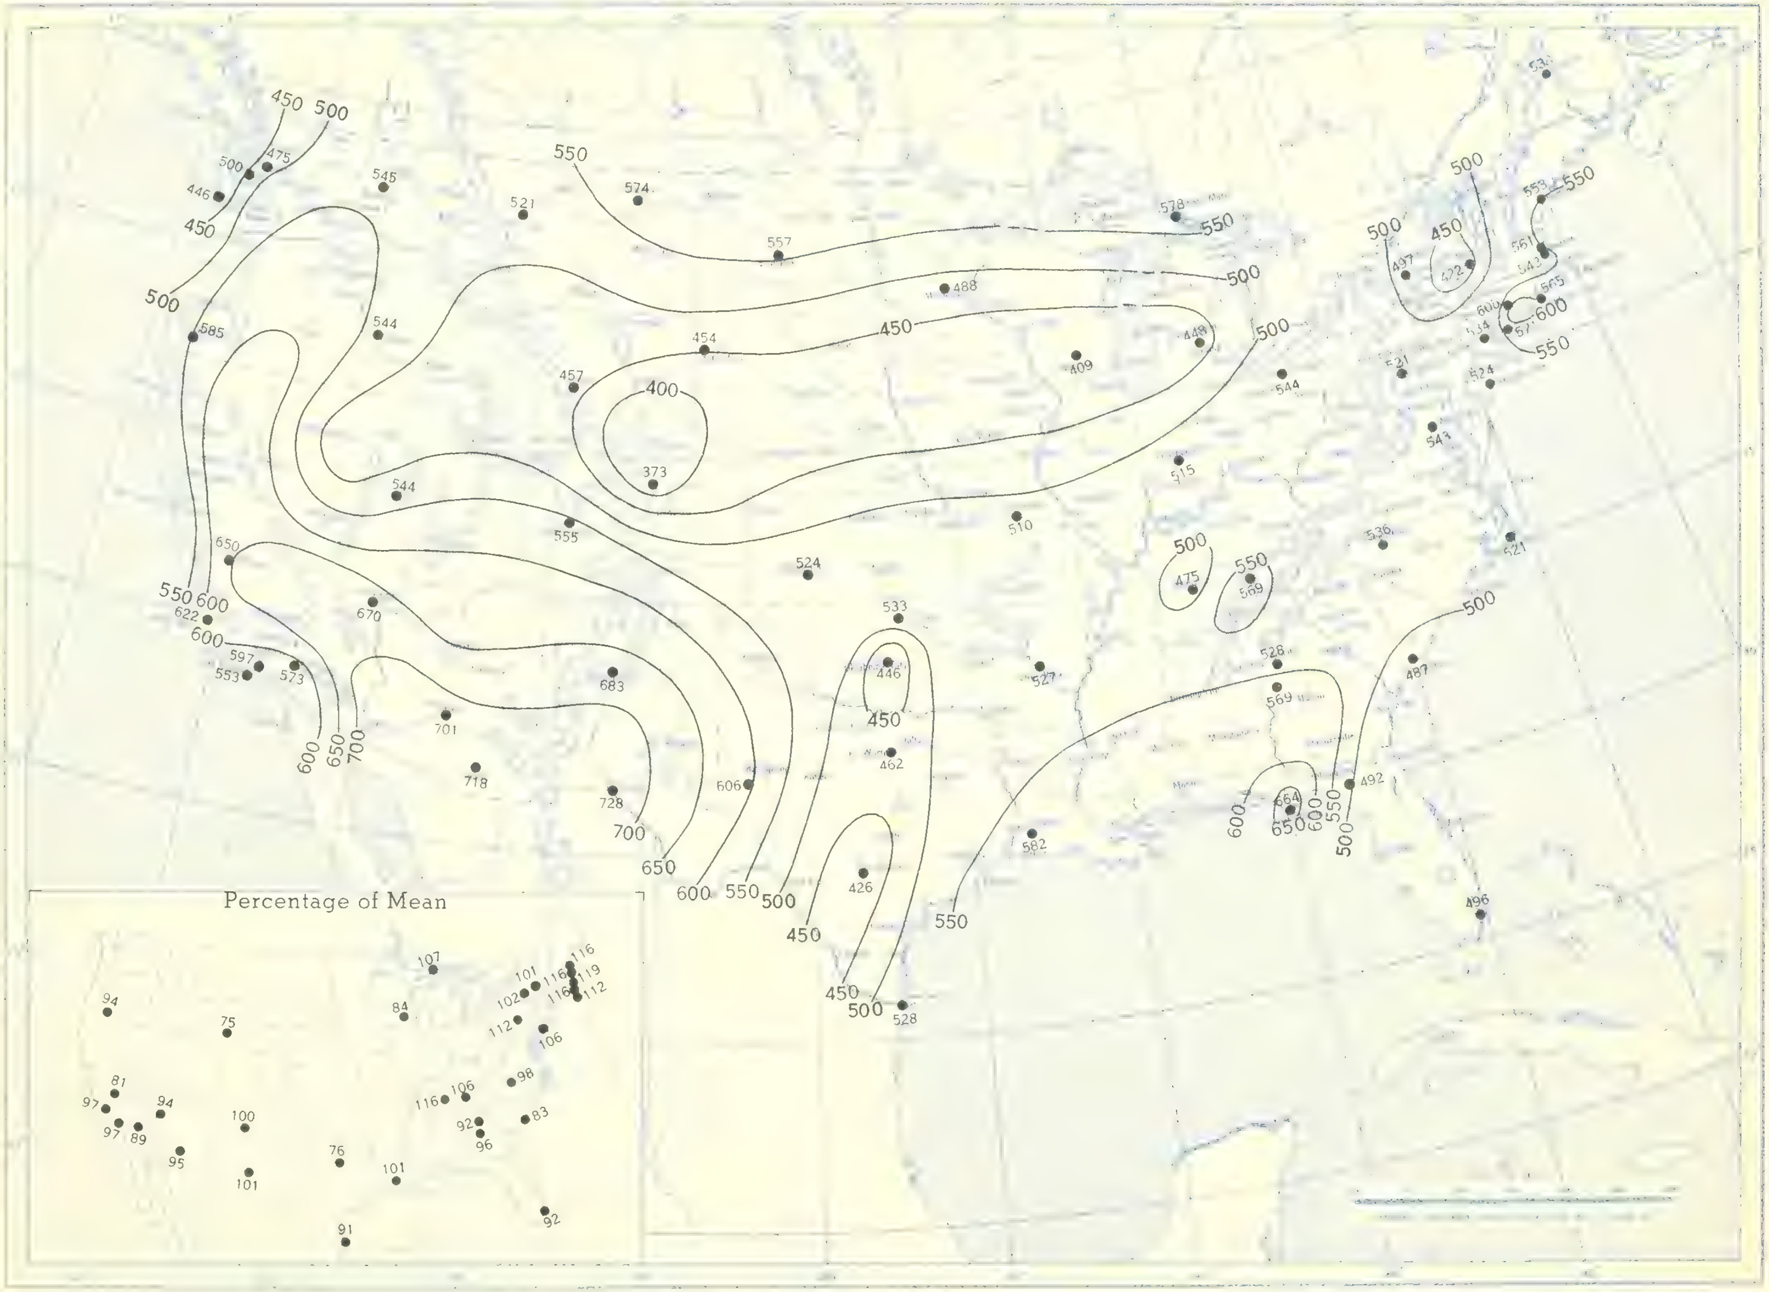


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

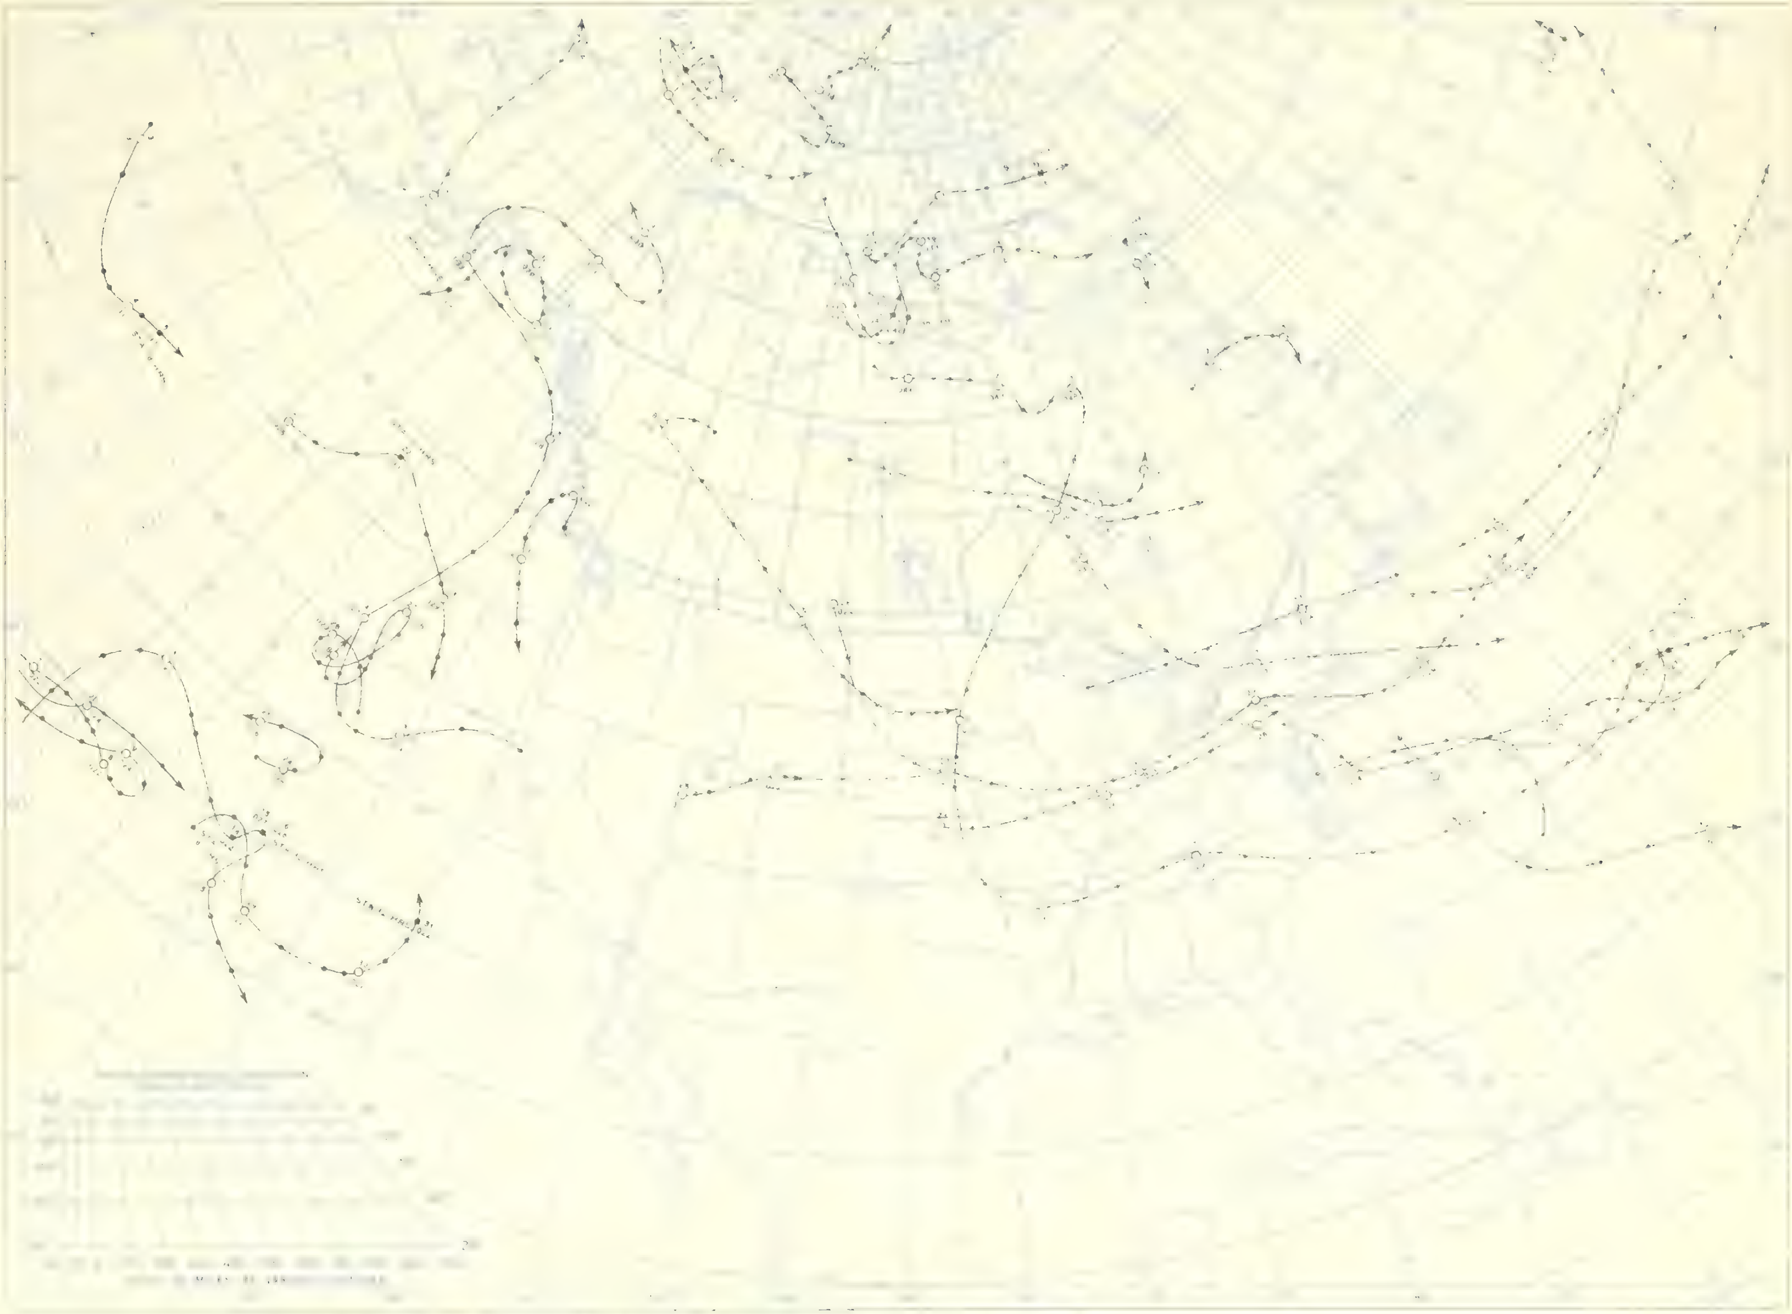
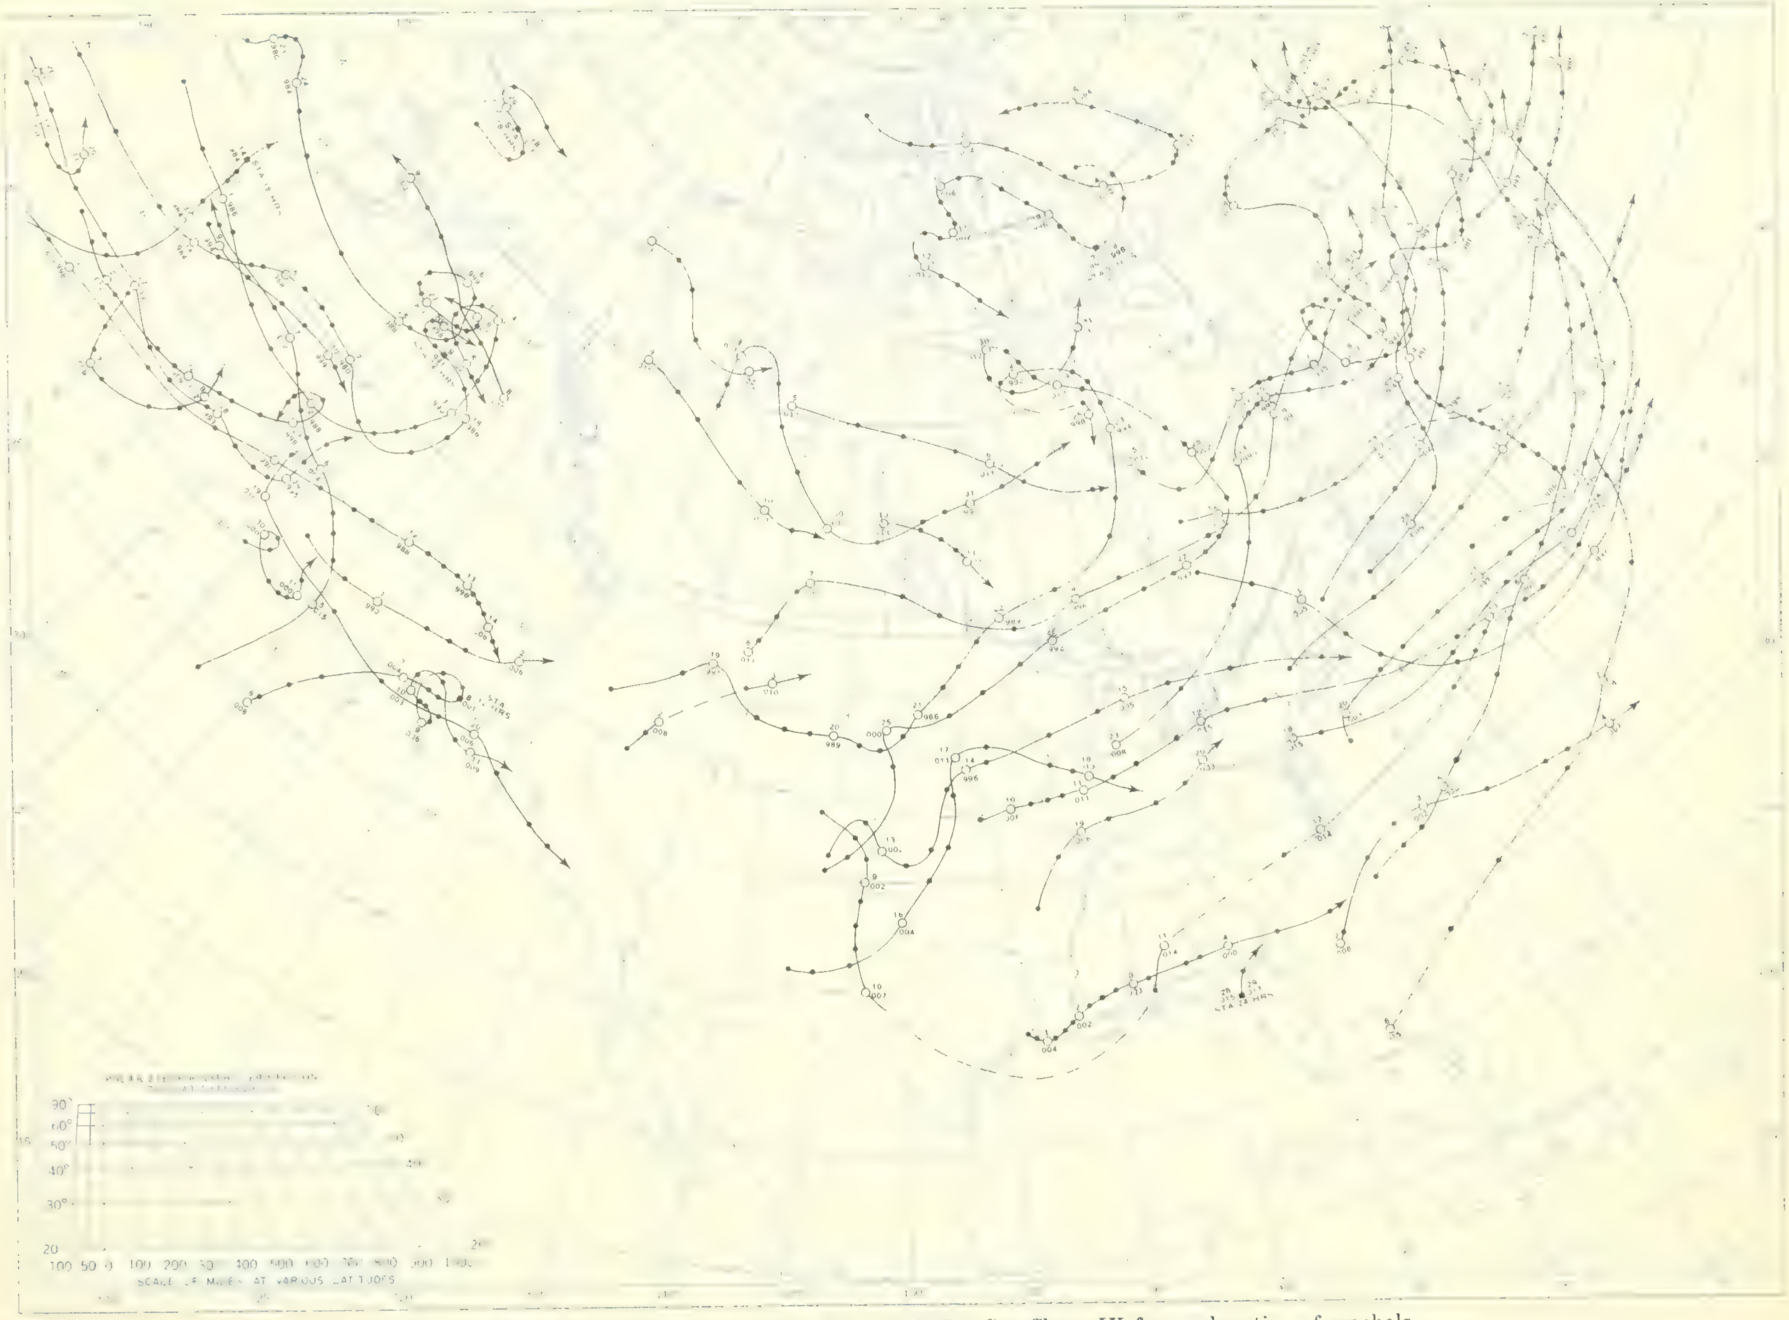


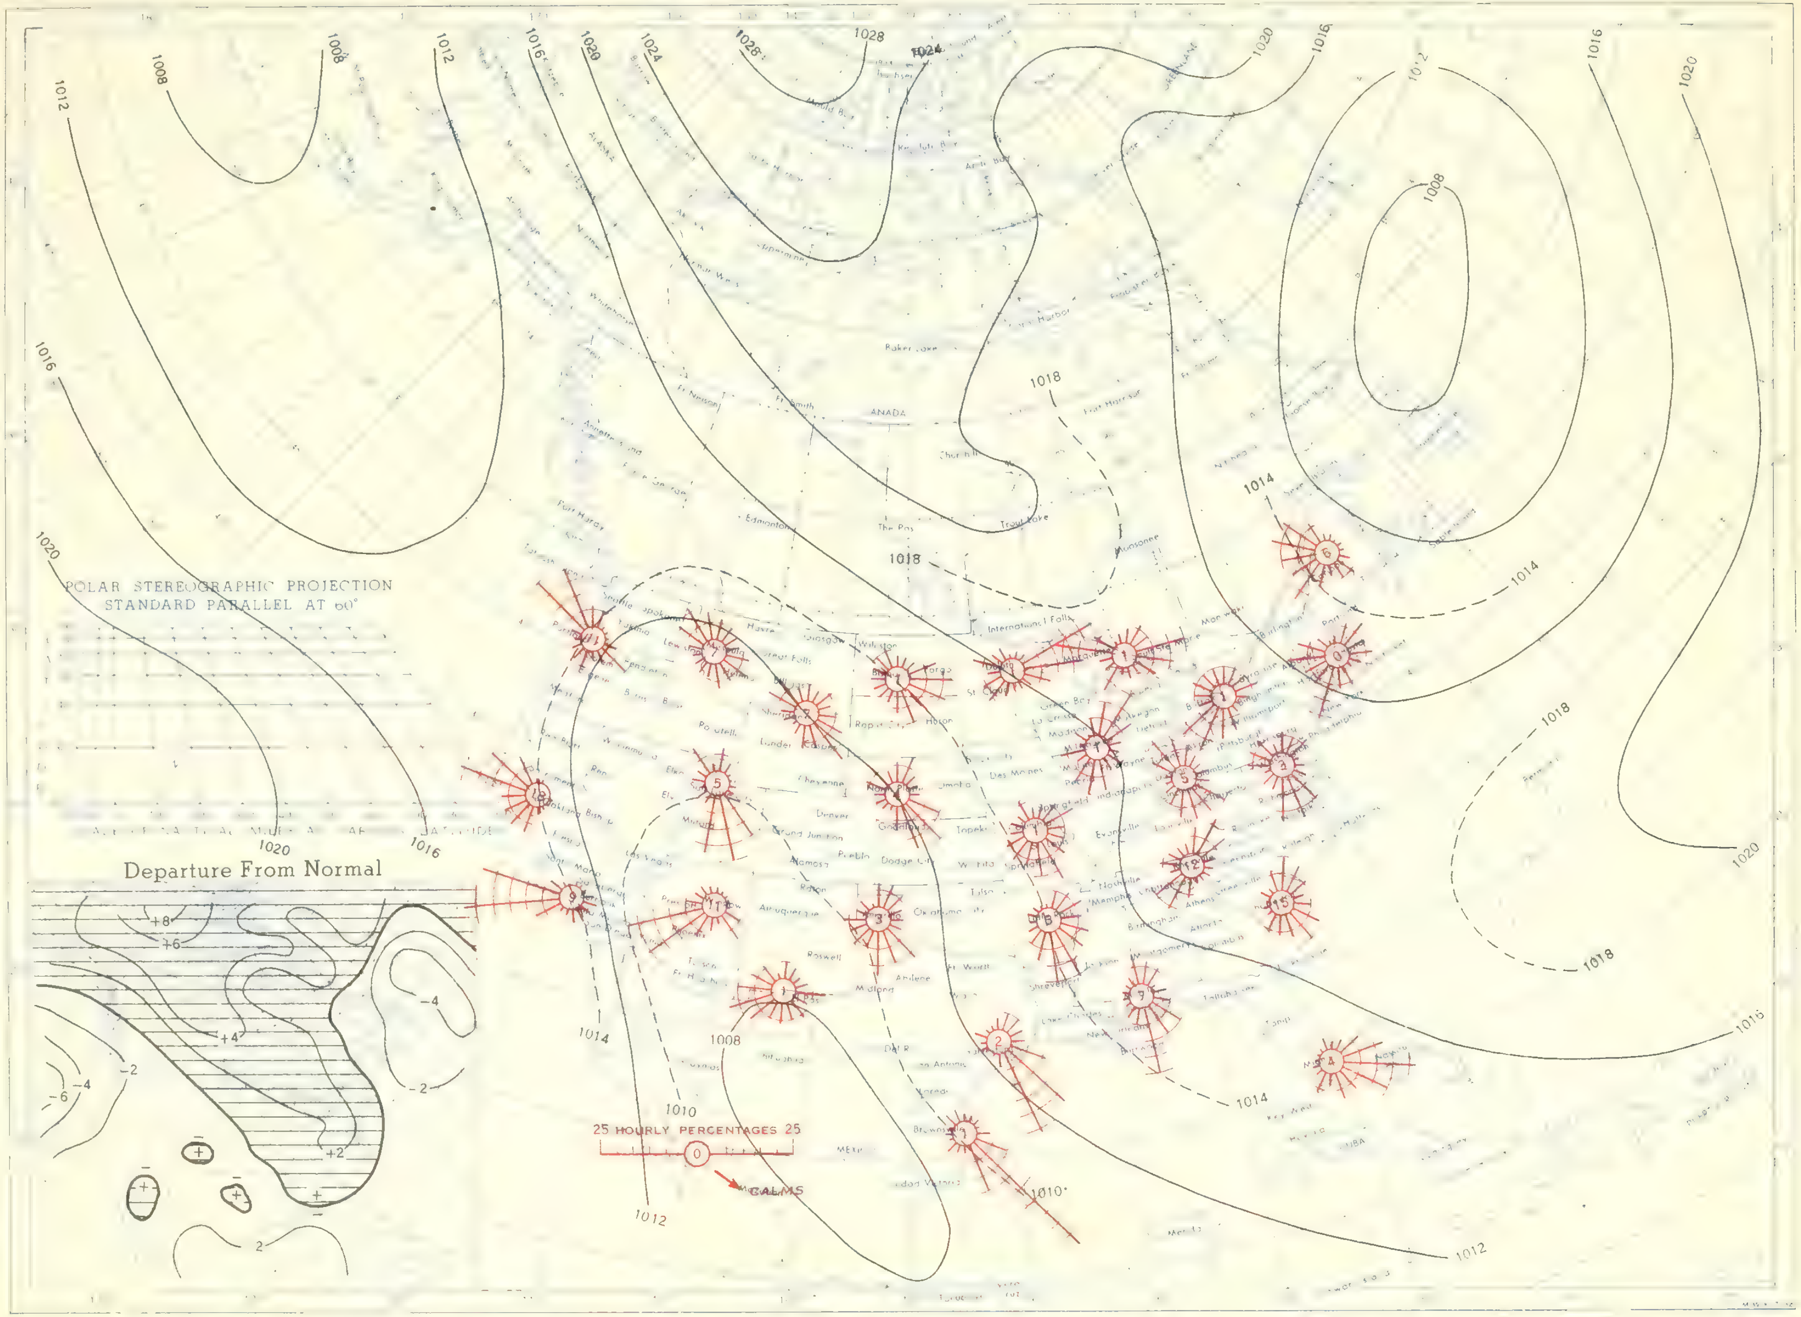
Circle indicates position of center at 7:30 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, May 1957.



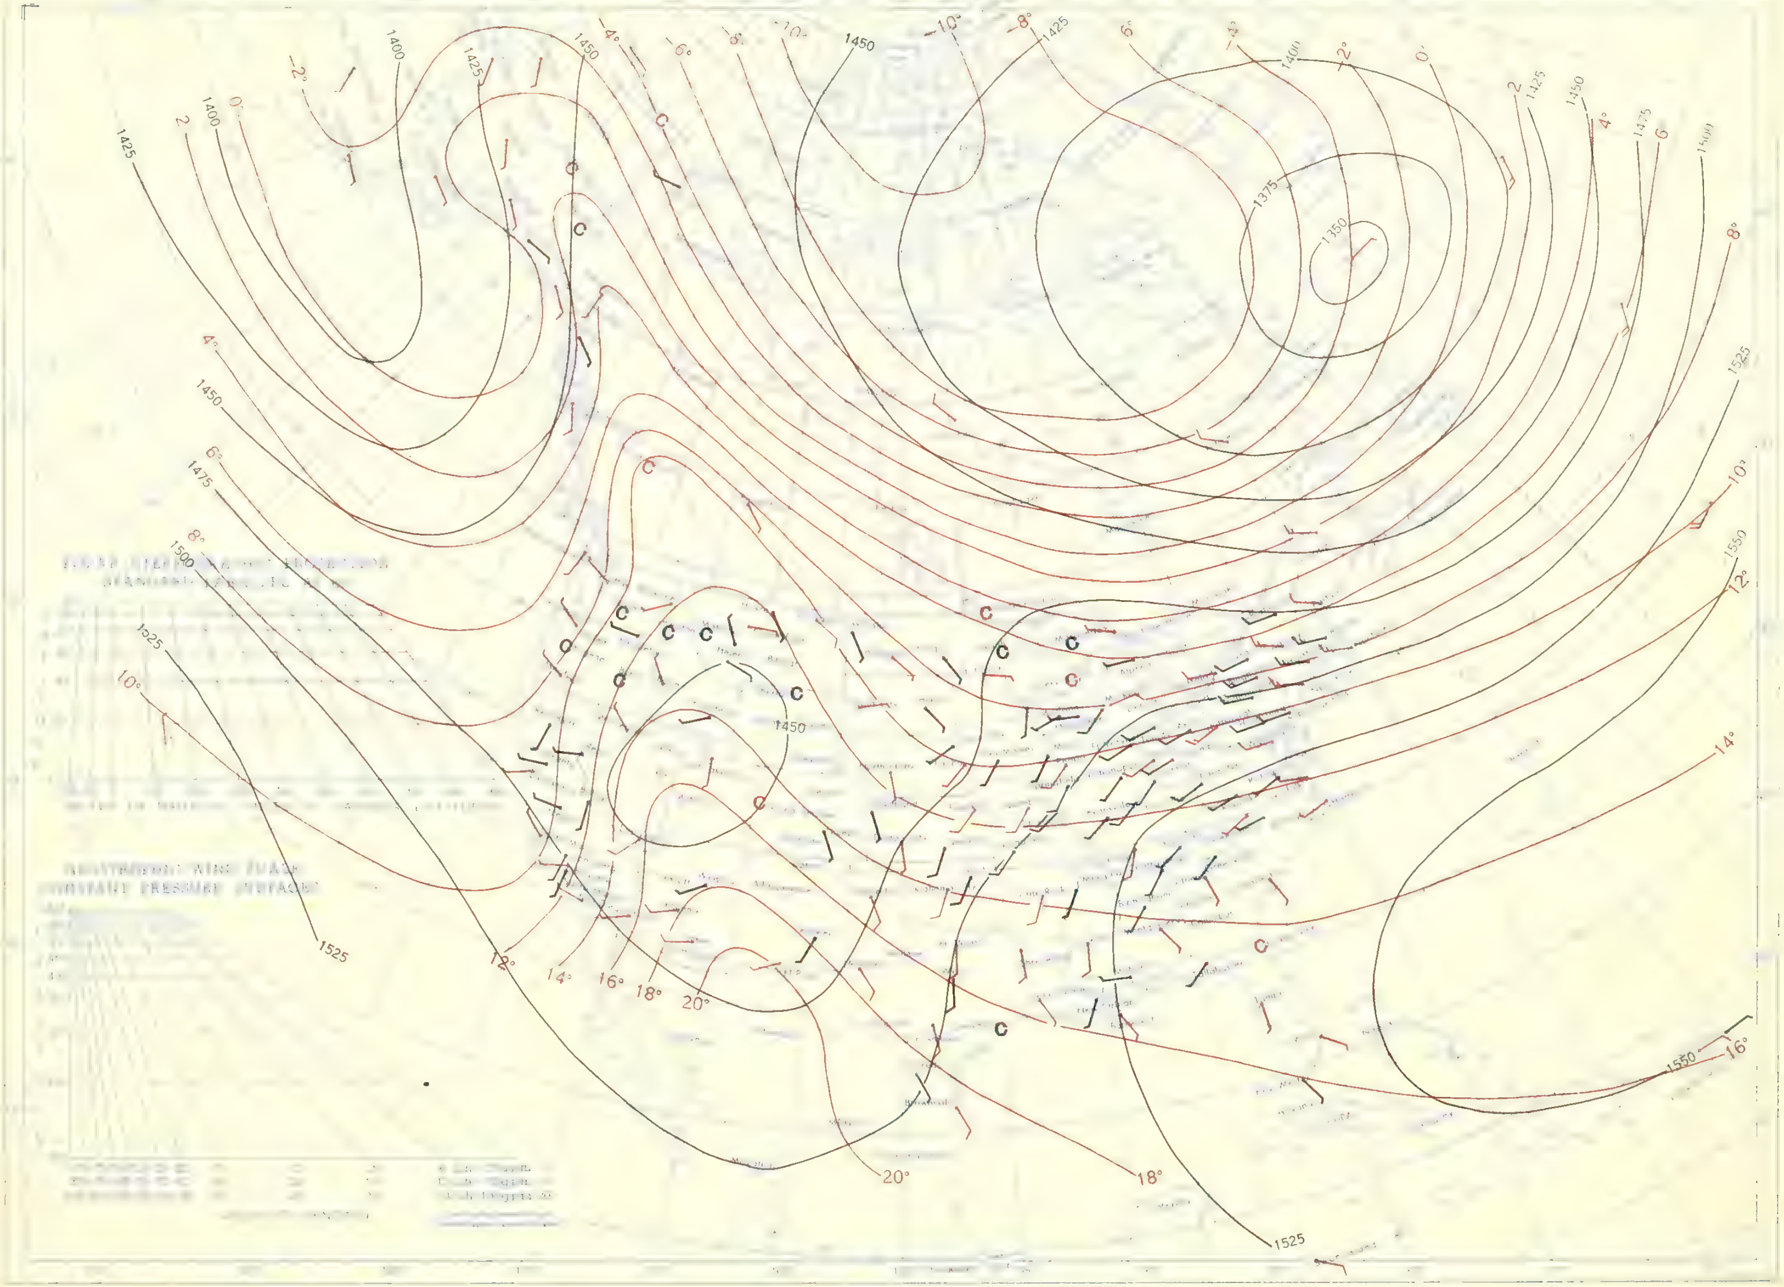
Circle indicates position of center at 7:30 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, May 1957. Inset: Departure of Average Pressure (mb.) from Normal, May 1957.



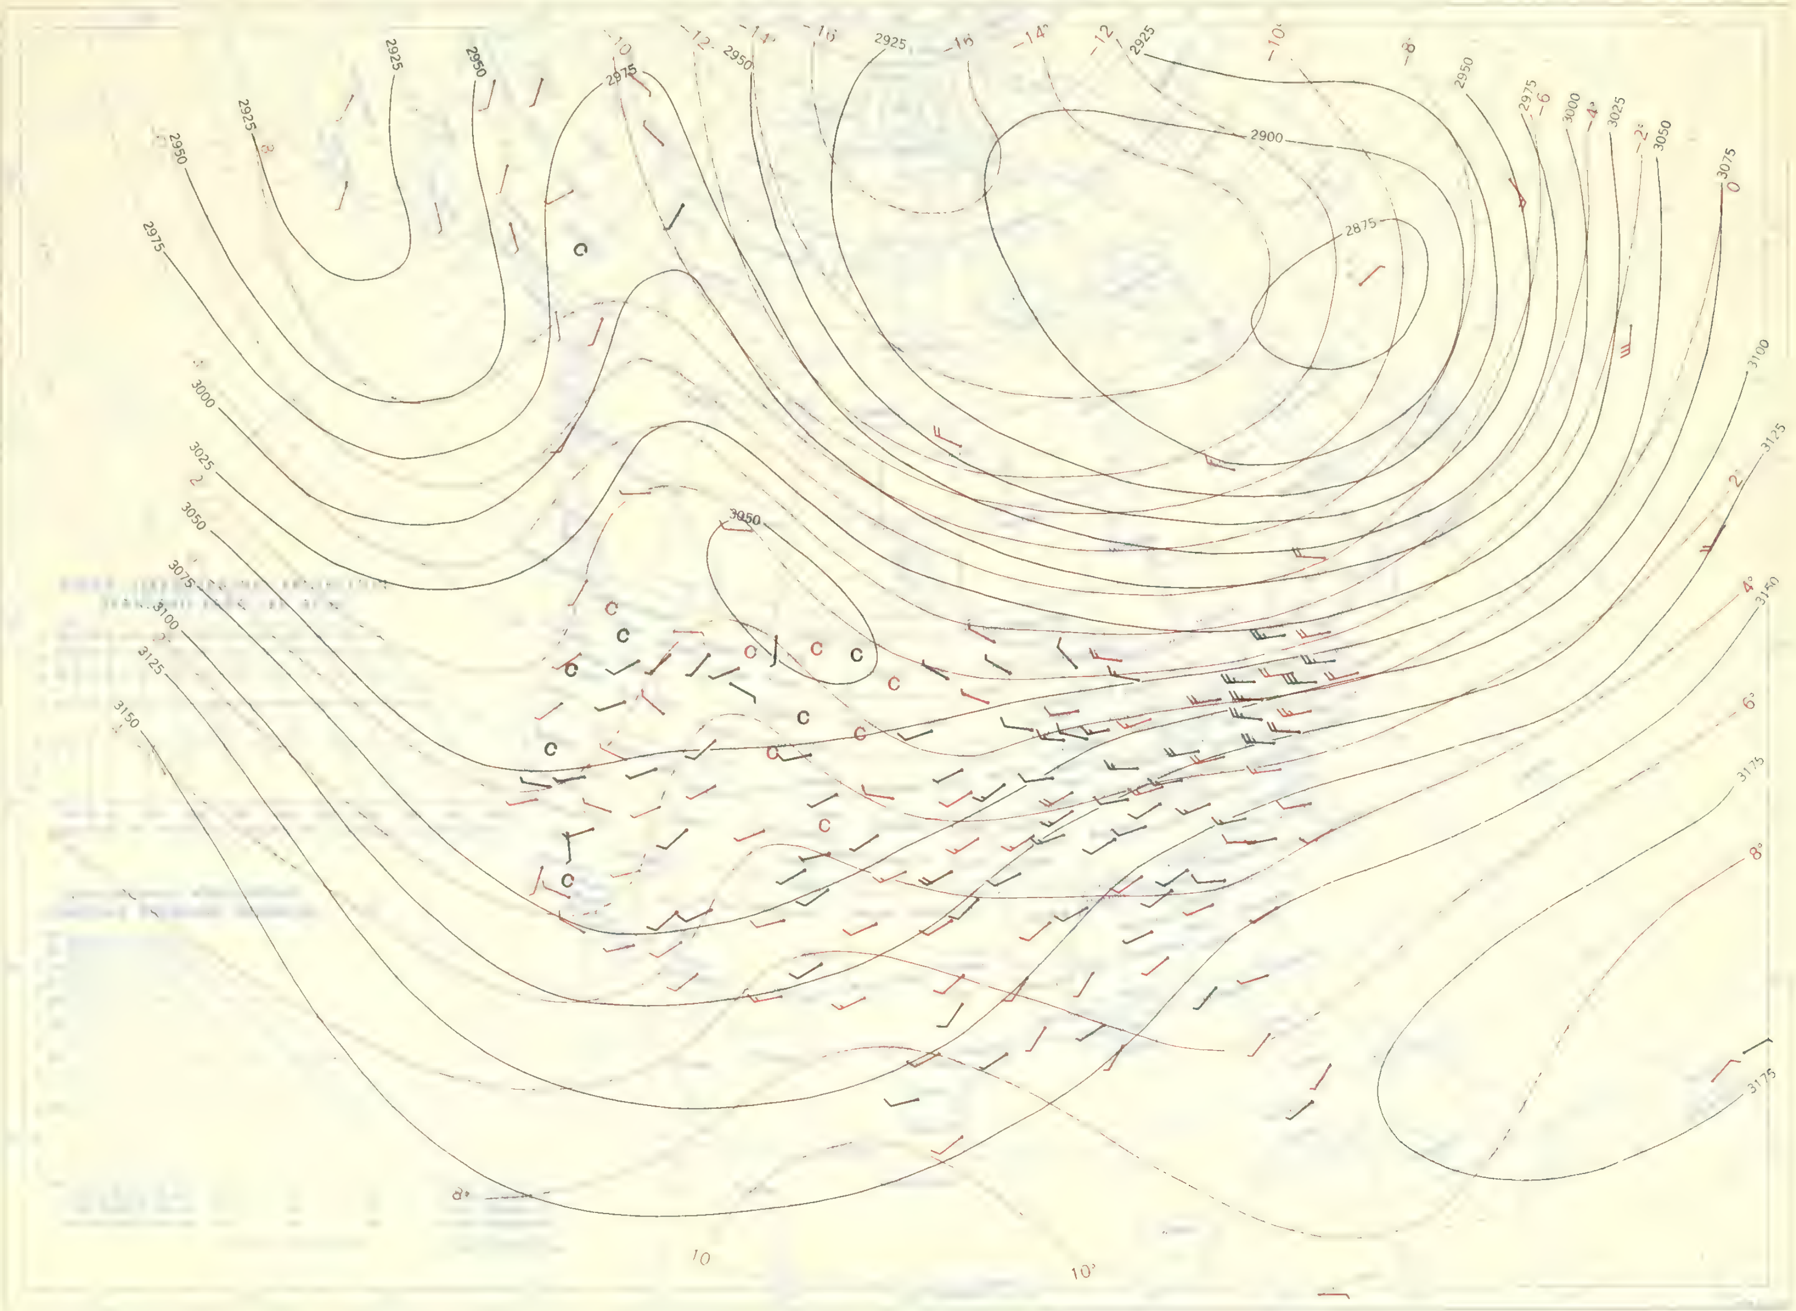
Average sea level pressures are obtained from the averages of the 7:30 a. m. and 7:30 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



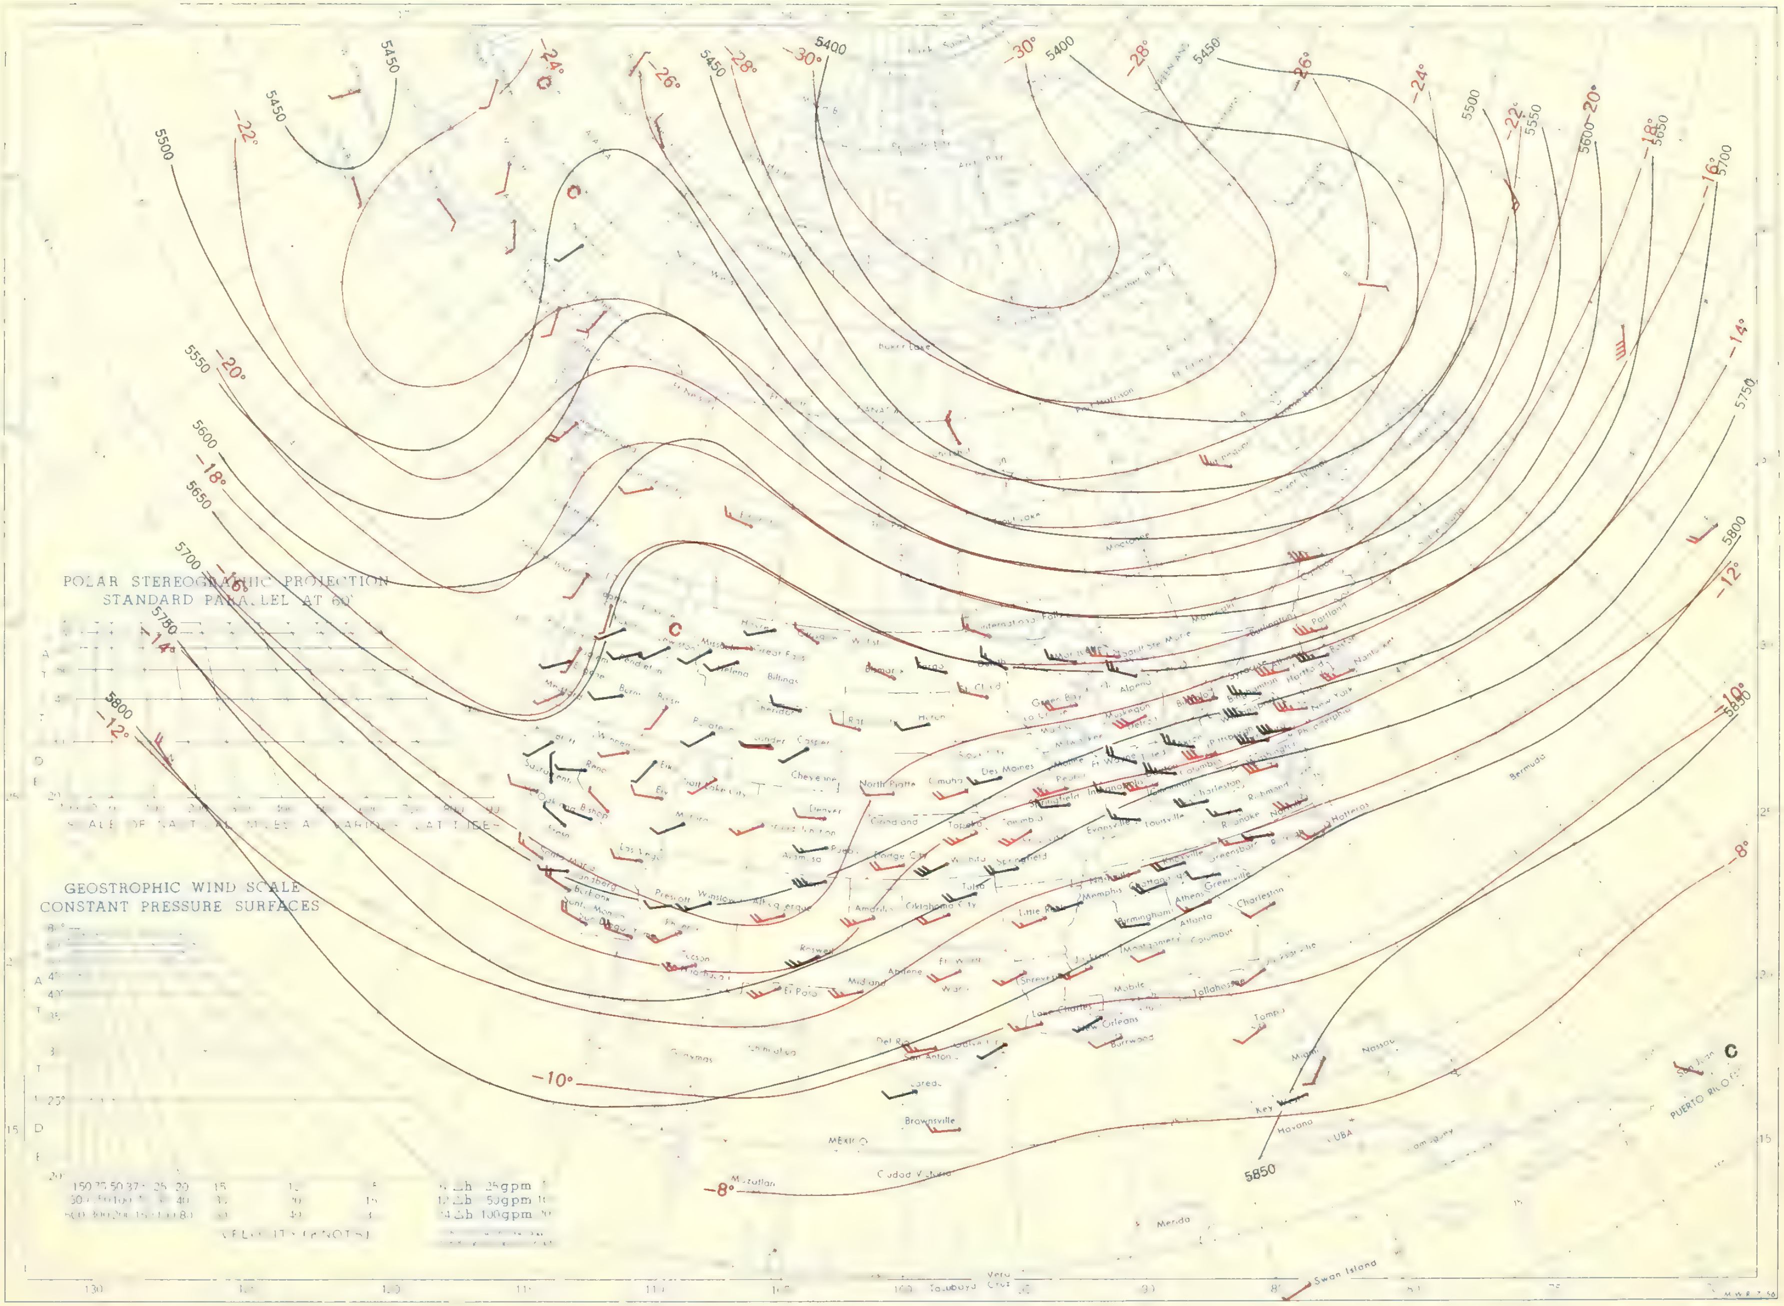
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Winds shown in red are based on rawins taken at the indicated pressure surface and time. Those in black are based

Chart XIII. 700-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



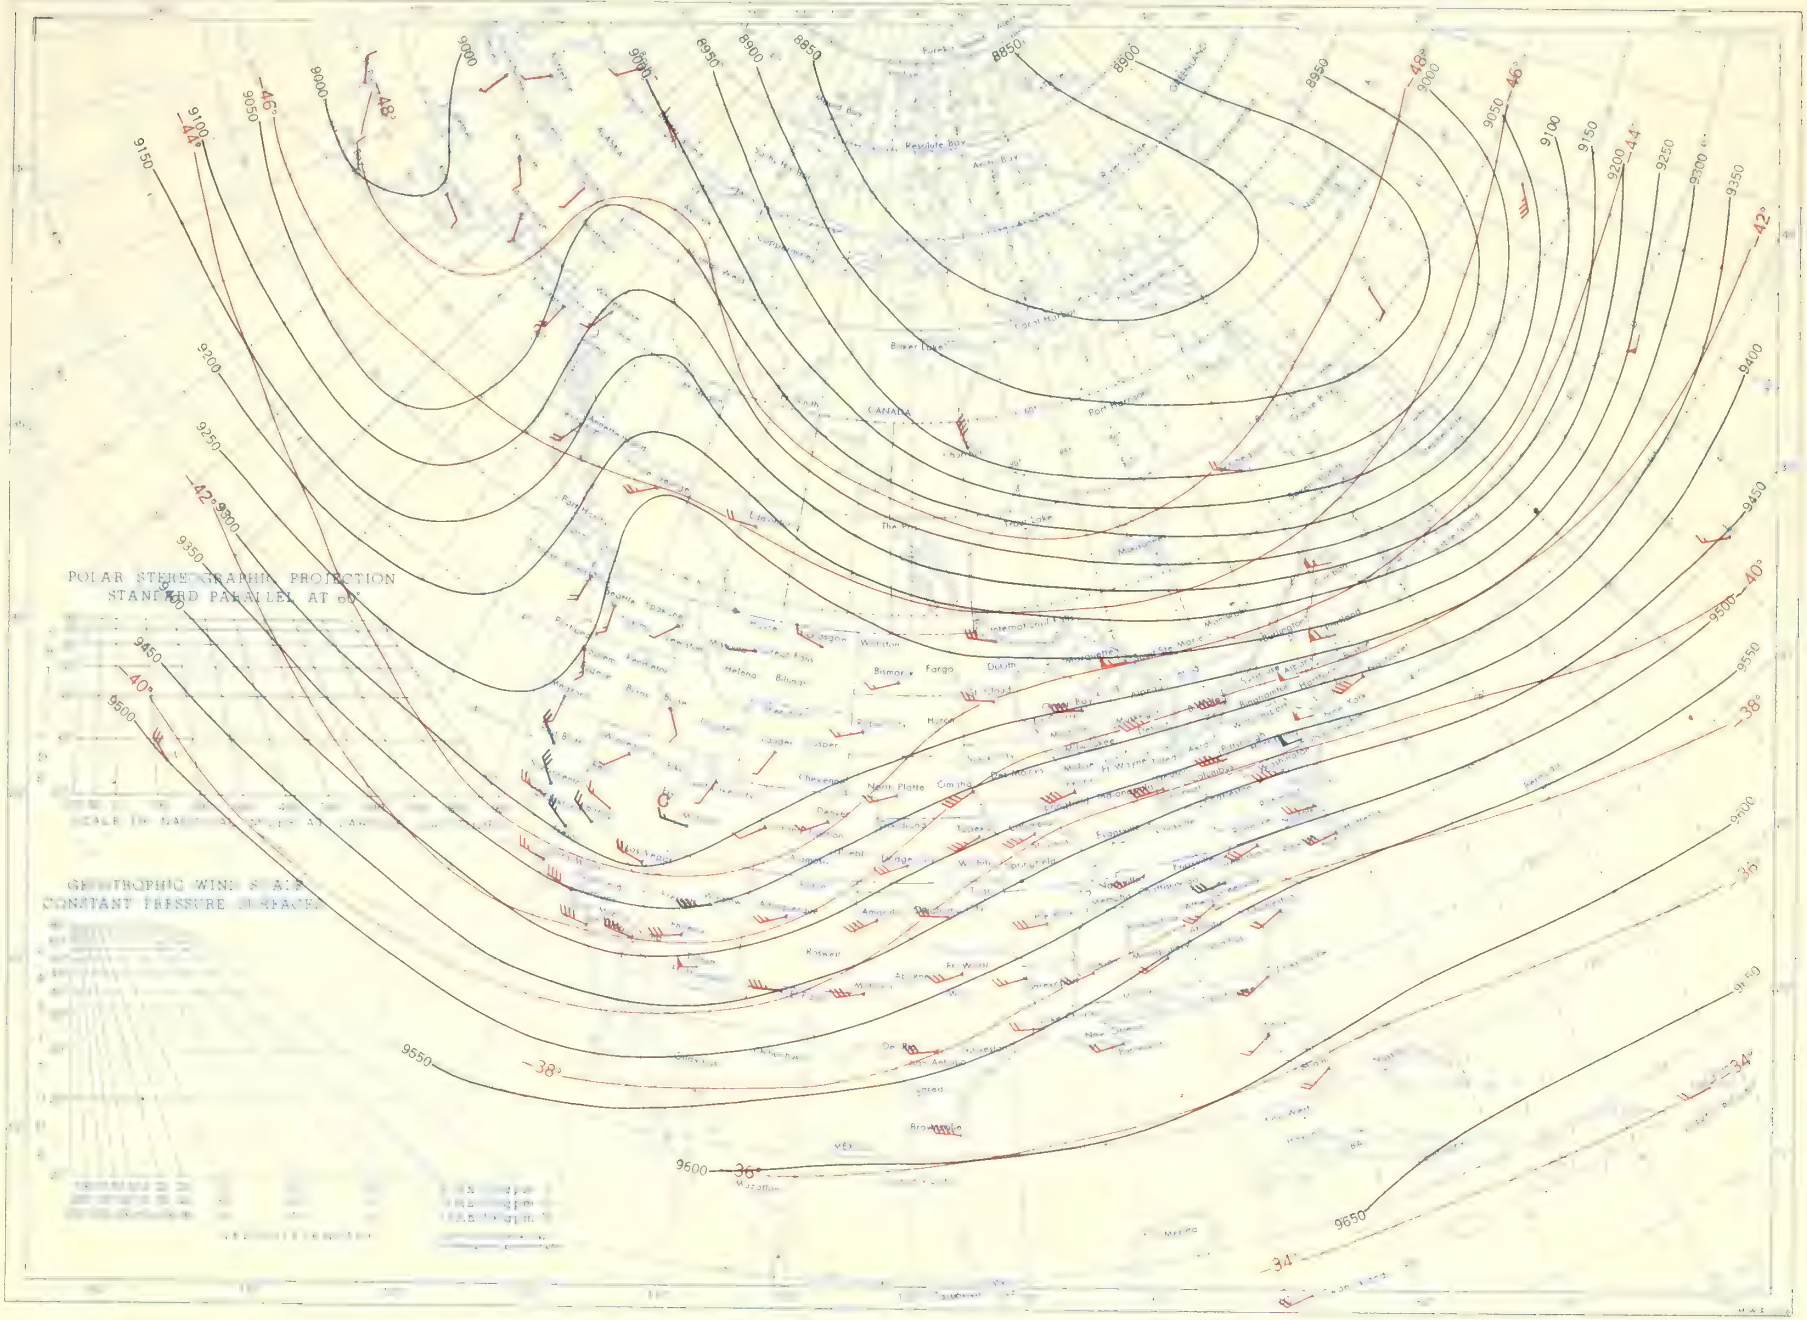
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



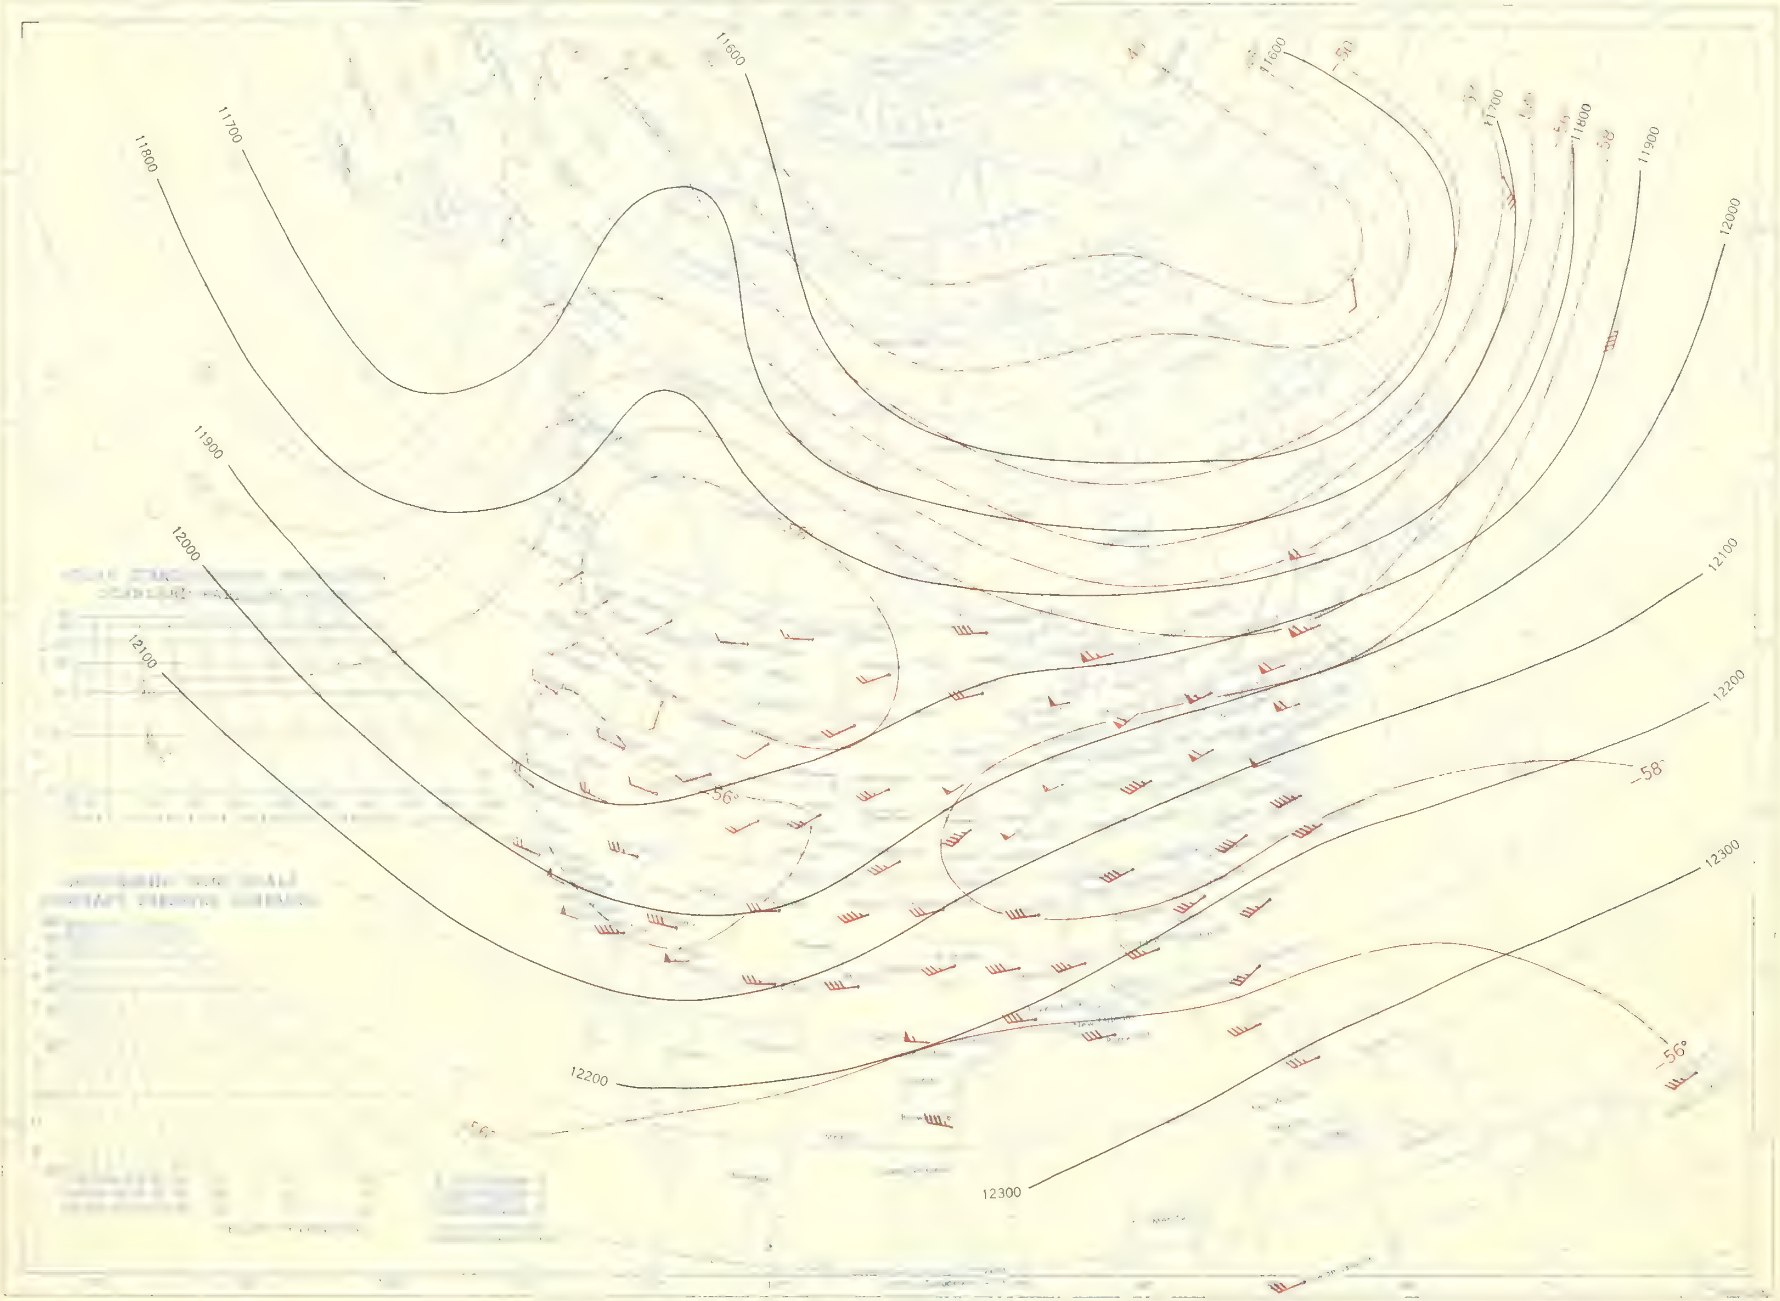
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



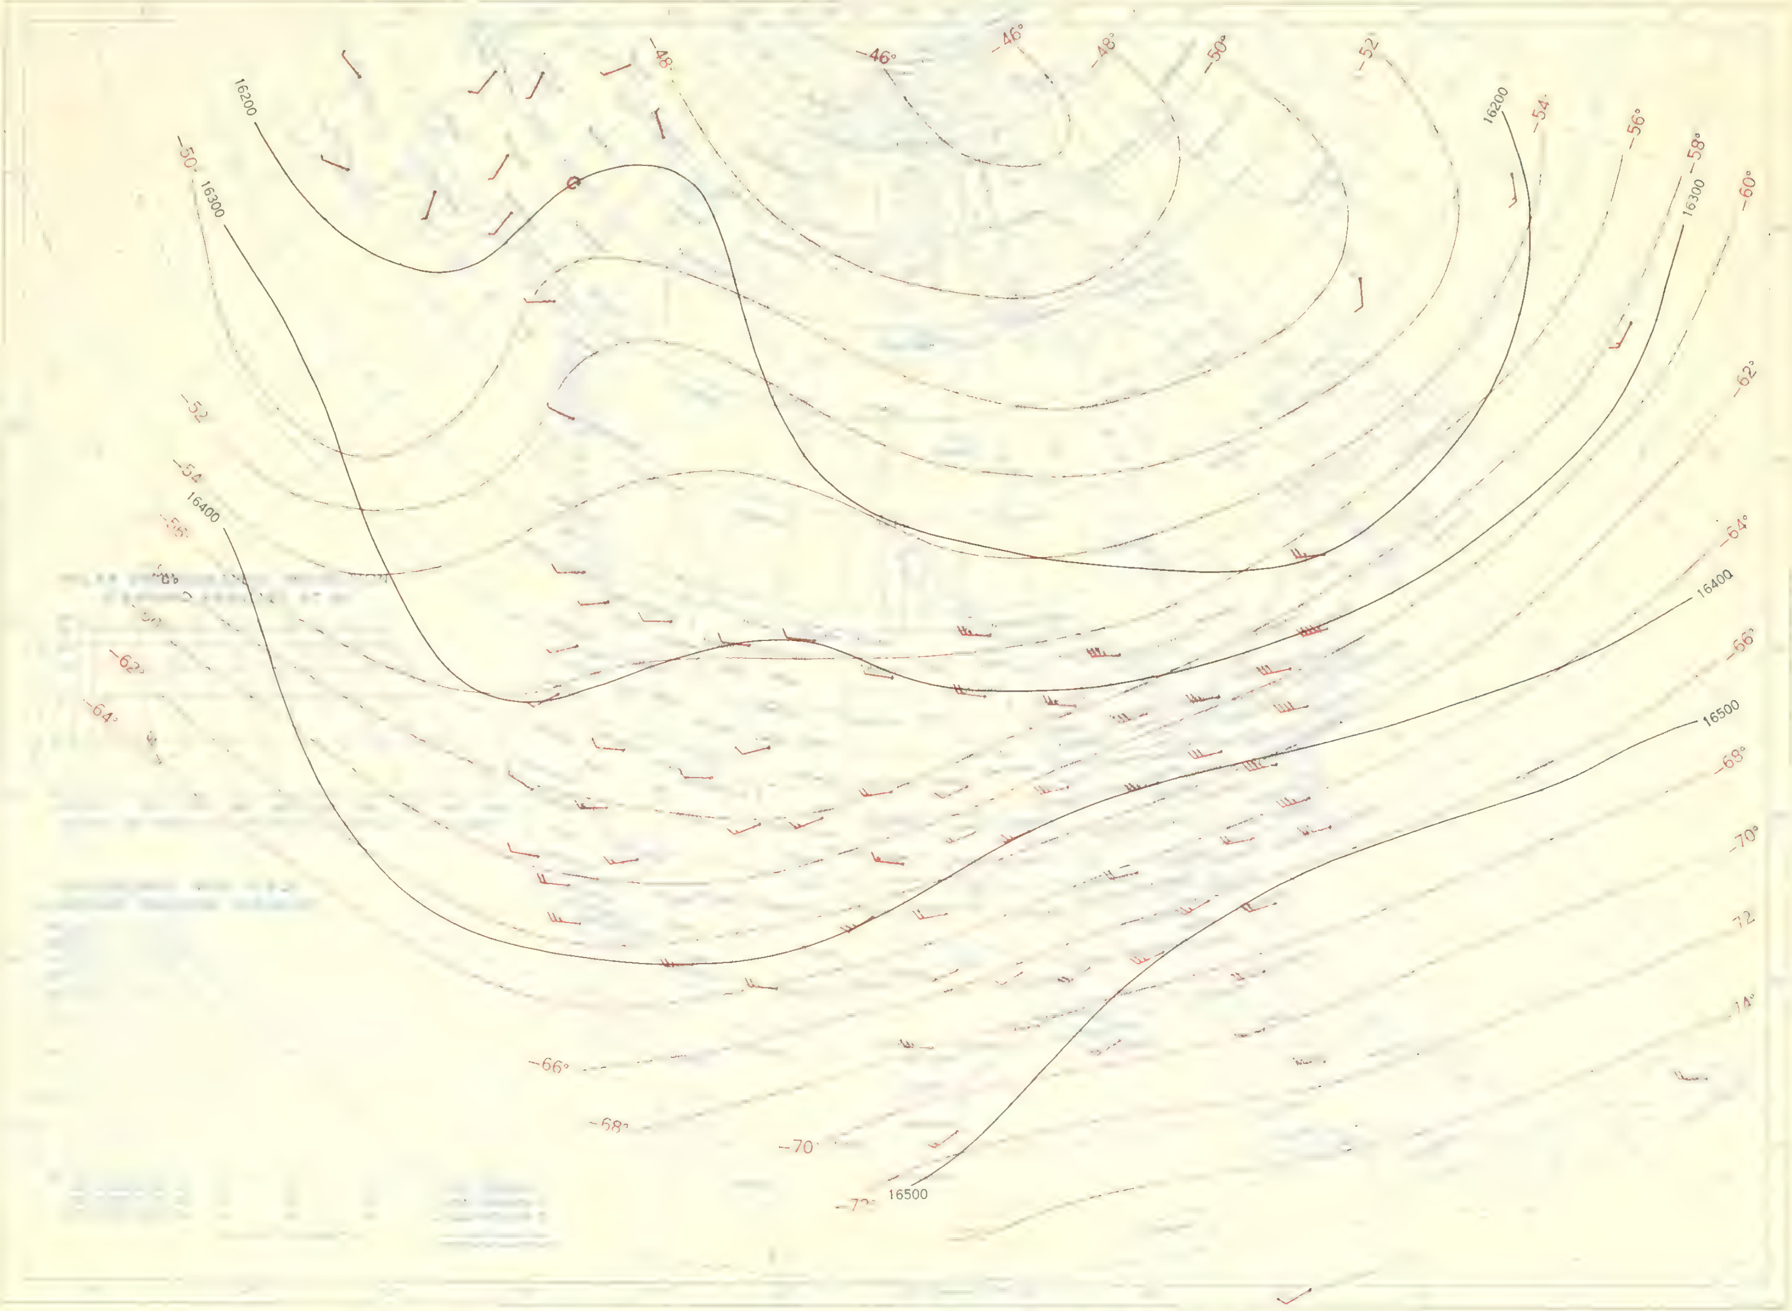
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

Chart XVII. 100-mb. Surface, 0300 GMT, May 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map. All winds are from rawin reports.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 6 JUNE 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

A hurricane disaster in southwestern Louisiana, more wet weather, floods and numerous severe local storms in the midcontinent area, continued drought in sections along the northeastern coast, a heat wave in the Northeast about the middle of the month and another in the Far Southwest during the last decade were the month's weather highlights. The month was cloudier than usual in most of the area east of the Continental Divide, while abundant sunshine in the Far West averaged 100 percent of the possible amount at Yuma, Ariz., and 93 percent at Boise, Idaho, for a new June record there.

TEMPERATURE.--Temperatures for June averaged well below normal in the Great Plains and extreme upper Mississippi Valley, well above in California, Nevada, and the Northeast, and about normal elsewhere.

In the Far Southwest temperatures were above normal almost every day along the California coast, and the month was the hottest June on record in downtown Los Angeles, Calif., where the temperature averaged 72.5°. In inland areas, however, a cold snap during the second week dropped minimum temperatures below normal levels with freezing in central and northern Nevada. Temperatures were unusually high over the entire Southwest the last week when new highs for June included 97.2° at San Diego, Calif., on the 18th, and 120° at Yuma, Ariz., on the 24th. El Paso, Tex., recorded 107° on the 28th, the highest temperature there for any month.

The heat wave in the Northeast was preceded by a cold snap in the first decade as temperatures fell to freezing on 1 or 2 days in parts of New York and New England, killing some tender plants in southern New Hampshire on the 8th and 9th and setting a new June low of 38° at Hartford, Conn., on the 10th. Rapidly rising temperatures after the 10th reached the 90° level in the middle Atlantic coastal area on the 12th and virtually the entire East by the 15th. In Washington, D.C., the mercury rose to 90° or above on 8 consecutive days (12th through the 19th), the longest June heat wave in the Nation's Capital since the 10-day record breaker in 1943 which continued from the 19th through the 28th. On the 16th the thermometer rose to 100° in Philadelphia, Pa., and 96° at Burlington, Vt., equaling the June record at the latter place.

Cool weather, without any unusual extremes, in the Great Plains was due mainly to frequent showers and much cloudiness which held daytime temperatures to below-normal levels most of the month.

PRECIPITATION.--June rainfall totaled less than one-half inch in most of the Southwest and in a few small spots along the Atlantic coast, but exceeded 2 inches elsewhere. In fact, totals exceeded 4 inches at nearly all stations from the eastern Great Plains to the Atlantic coast, and numerous stations in the Mississippi Basin reported 6 to over 10 inches. In north-central areas these totals established new records at many stations including Sioux City, Iowa, 8.67 inches; and Erie, Pa., 7.74 inches.

Rains during the week ending June 10 totaled 2 to over 4 inches in coastal areas from southeastern Louisiana to southern New Jersey. The rains helped relieve developing drought conditions in the Maryland-Virginia area and replenished soil moisture in some other dry spots in the Carolinas and Florida. The heavy rains in the Maryland-Virginia area fell on the 6th and 7th, and those farther south on the 7th and 8th.

During the following week, as a series of low pressure troughs crossed the country from west to east, almost daily rains occurred in northern and middle sections, with weekly totals exceeding 1 inch in an area extending from Arkansas and northeastern Texas northward to the Canadian Border from the Continental Divide to the Great Lakes. During the night of the 14th and 15th, 4 to over 10 inches fell in the Missouri-Illinois area in the vicinity of St. Louis, Mo. Downtown St. Louis measured 8.54 inches, Pacific, Mo., 11.75 inches, and Bellville, Ill., 13.75 inches. In Illinois the resulting floods were responsible for 10 deaths and forced 3,500 persons to evacuate their homes. On the 16th heavy rains up to 5 inches or more caused flash floods in the Big Sioux and lower James Rivers of South Dakota, and serious flooding in parts of eastern and north-central Kansas. Rains up to 5 inches also caused flooding in northeastern Oklahoma on the 11th and in central portions of the state on the 14th. On the 16th and 17th heavy rains in southwestern Minnesota caused considerable flooding in a 50-mile radius of Granite Falls and set new 24-hour rainfall records of 8.70 inches at Marshall, 8.67 at Minnesota, and 7.30 inches at Montevideo.

Heavy rains in Louisiana helped prolong flooding along the Red River in that state. About 50,000 acres of cropland along this river were expected to be lost for the season.

Heavy rains in the central and northern Great Plains and upper Mississippi Basin on the 21st and 22d in addition to those of the 17th caused flooding along numerous streams, with the greatest damage apparently in Minnesota and South Dakota. Along the Sioux and Vermillion Rivers of the latter state reports indicated 20,000 acres of crops destroyed and additional thousands damaged.

During the last week of the month rains produced by the southward movement of a front in the Midwest and the passage of hurricane Audrey from southwestern Louisiana to Lake Ontario, generally totaled over 2 inches in eastern Kansas, southern Missouri, the central Gulf States, and the Ohio Valley. On the 27th and 28th, 3 to over 11 inches falling in a belt extending from eastern Kansas to Central Indiana were responsible for floods which drowned several persons and caused heavy property and crop losses.

Large areas in the Great Plains and Mississippi Basin that were suffering from disastrous drought in June 1956 were plagued by too much rain in June 1957. Much of this area that received less than 50 percent of normal rainfall for the first half of 1956, received over 200 percent for the same period in 1957.

Due to below normal rainfall in April, May, and June, drought was becoming serious in some sections along the Atlantic coast from southern Maryland to southern New England by the end of the month.

DESTRUCTIVE STORMS.--Hurricane Audrey was by far the most destructive storm of the month as it moved from southwestern Louisiana to Lake Ontario. More than 400 persons lost their lives, and total damage was estimated at more than $50 million.

Tornadoes were again numerous, although not as frequent as in April and May. One of these storms killed at least 2 persons and damaged property to the extent of $1,000,000 in Springfield, Ill., on the 14th. Another killed at least 6 persons, injured more than a score and caused property damage estimated at more than a million dollars in Fargo, N. Dak., on the 20th.

Hail, as usual, took a heavy crop toll. The most notable storm of this type, however, occurred on the 23d, a few miles west of Fort Stockton, Tex., where 21 persons caught without shelter were injured by stones ranging up to baseball size.

CONDENSED CLIMATOLOGICAL SUMMARY

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.

* Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.

+ And also on a later date or dates.

% Peak gust. a Maximum hourly average.

# Number of days maximum 70° or above for Alaskan stations.

ø Station pressures apply to elevation shown in Table 10b of the annual issue of this publication.

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.

Note: "Heating Degree Days" has been discontinued in the June issues of this publication, the data appearing therein being shown in the last three columns of the above Table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Perrin Air Force Base (10 miles northwest of), Grayson County	1	6 a.m.			0	0			Funnel aloft	Reported moving northeastward.
TEXAS Lenz Community, Karnes County	1	10:45 a.m.			0	0			Funnels aloft	2 funnels reported moving east-southeastward.
TENNESSEE Halls (near), Lauderdale County	1	2 p.m.						1	Electrical	Lightning struck office and warehouse building 1 mile north of Halls, damaging roof and walls, knocking out a number of ventilator windows, shorting electrical system, and starting minor fire.
TEXAS Uvalde, Uvalde County	1	2:50 p.m.			0	0			Funnel aloft	Funnel aloft reported.
TEXAS Munday (2 1/2 miles south of), Knox County	1	3-3:45 p.m.			0	0			Tornado (suspected) and funnels aloft	Tornado reported touching ground and 2 funnels aloft also reported.
ALABAMA Adamsville, Jefferson County	1	Afternoon			1	1	1	1	Electrical	Boy killed at front door of home and another injured while playing in school yard.
FLORIDA West Palm Beach area, Palm Beach County	1	Afternoon			0	0			Funnel aloft	Cloud sighted 5 miles east of Airport.
OREGON Northern third of from Willamette Valley eastward	1	Afternoon - evening	300	*100			4	5	Electrical, wind, rain, and hail	Storm reached its most destructive force in central Columbia Basin, particularly southern Morrow and Sherman Counties. Hail up to 2-1/2 inches in diameter cut swath, 1/2 to 1 mile wide and several miles long, much of it through fall grain. Windows broken and roofs damaged on several farm homes and outbuildings. Lightning caused numerous power and telephone service interruptions. Winds lodged some grain and hay. Rains and wind together caused serious erosion to summer fallow fields. Lightning damage $10,000; hail $270,000; wind $20,000; rain $30,000. Storm moved northeastward.
TEXAS Colorado City (6 miles west of), Mitchell County	1	5:05 p.m.			0	0			Funnel aloft	Reported moving southward.
TEXAS Buford, El Paso County	1	5:10 p.m.			0	0			Funnel aloft	Reported moving northeastward.
TEXAS Louise (3 miles north of), Wharton County	1	7:10 p.m.			0	0			Funnel aloft	Reported moving northeastward.
TEXAS Waco (32 miles northwest of), Bosque County	1	7:12-7:30 p.m.			0	0			Funnel aloft	Reported moving northeastward.
TEXAS Maryneal, Nolan County	1	7:30 p.m.			0	0			Funnels aloft	2 funnels reported.
TEXAS Sulphur Springs, Hopkins County	1	8:15 p.m.			0	0			Tornado (suspected)	Moved northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IDAHO Cottonwood and Moscow areas, Idaho and Latah Counties	1	10 p.m. - midnight				2			Electrical	Damage to home in Cottonwood estimated at $1500. Near Moscow, lightning believed to have hit moving automobile, causing driver to lose control, resulting in heavy damage to car and injury of 2 occupants. Lightning fire destroyed unoccupied horse shed.
WASHINGTON Yakima, Kittitas, Chelan, and Douglas Counties	1	Evening					4	7	Hail, electrical, and rain	Series of thunderstorms developed along eastern slope of Cascades and moved eastward over State. Most severe hailstorms occurred in Manson and Bridgeport areas, near Lake Chelan, and in Zillah, Selah, and Tieton-Naches districts near Yakima. Extensive fruit damage in these areas. Scattered hailstorms damaged wheat and vegetable crops in other localities of eastern Washington. Irrigation ditches and roads damaged by runoff in some instances. Power and communication facilities damaged by lightning in Columbia Basin.
TEXAS Mineral Wells, Palo Pinto County	1				0	0			Tornado (suspected)	
TEXAS Sealey, Austin County	1				0	0			Funnel aloft	
	1									Minor storms also reported at Union City, Tenn.; and Kenedy, Tex.
TEXAS Galveston Bay area, Galveston County	2	8 a.m. - 7 p.m.			0	0	2		Waterspouts	Six or 7 observed, 3 a short distance offshore over Gulf of Mexico, 4 over Galveston Bay. 1 over Galveston Bay appeared to be unusually large, about 300 feet in diameter. Negligible damage in northern part of Texas City.
TEXAS Mineral Wells (4 to 5 miles south of), Palo Pinto County	2	11:57 a.m.			0	0			Funnel aloft	Reported moving westward.
TEXAS Meachum Field (southeast of), Tarrant County	2	12:40 p.m.			0	0			Funnel aloft	
TEXAS Pottsboro (4 miles north of), Grayson County	2	1:45 p.m.			0	0			Tornado (suspected) and funnel aloft	Tornado reported touching ground and funnel aloft also reported.
TEXAS Lake Medina, Medina County	2	2 p.m.			0	0			Funnel aloft

TENNESSEE Halespoint Community, Lauderdale County	9							1	Wind	Strong winds blew down trees and limbs, broke window panes and damaged 2 barns.
	9									Minor storms also reported at Birmingham, Bear Creek, Double Springs, Hackleburg, Haleyville, and in Marshall County, Ala.; at Jasper, Mo.; near Johnstown, Nebr.; at Blackwell, Enid, Guthrie, Perry, Sallisaw, Stilwell, Tenkiller Lake, Weatherford, and Woodward, Okla.; and at New Hope and in Gum Springs Community, Tenn.
OKLAHOMA Payne County	10	12:30 a.m.						1	Electrical, wind, and rain	Lightning struck at several points in Payne County. Home in Stillwater received $350 damage to electrical appliances and structure, tree, and transformer also struck. In rural areas, 4 cows killed under tree, television burned out, and wind blew tree down.
OKLAHOMA Wilburton, Latimer County	10	6:30 a.m.			1		1	1	Electrical	Lightning struck tree in Boy Scout encampment. Boy sleeping on iron cot in tent under tree killed.
SOUTH DAKOTA Brown and Spink Counties	10	7-9 a.m.					3		Hail and rain	Golf-ball sized hail damaged airplane at Redfield. Basements flooded at Aberdeen for second time in week.
OKLAHOMA McAlester, Pittsburg County	10	A.m.						0	Electrical and rain	Several lightning strikes noted and 2 roofs of business buildings collapsed from heavy rain.
MINNESOTA Winona (10 miles northeast of), Winona County	10	1:30 p.m.			0	0			Funnel aloft	Pilot reported funnel aloft, disappeared into lower clouds.
SOUTH DAKOTA Lake and Minnehaha Counties	10	1:40 p.m.			0	0			Tornado, funnels aloft, and hail	3 funnel clouds seen. 1 touched ground. Hail killed chickens and broke windows in Franklin and Buffalo Trading Post areas.
MAINE North Yarmouth, Cumberland County	10	Afternoon			0	0	1	1	Dust devil	"A freak wind" lifted a chicken shelter into air and carried it 25 feet. Shelter weighed between 600 and 1000 lbs. Landed upright with only slight damage.
NEBRASKA Gering (3 miles south of), Scotts Bluff County	10	5 p.m.	Short	Narrow	0	0	3	1	Tornado	
TEXAS Perryton (7 miles, southwest of), Ochiltree County	10	5:15 p.m.			0	0	3		Tornado	Dipped twice, 1 barn and garage damaged, 1 steel grain bin destroyed, phone lines and fences knocked down.
MINNESOTA Pease, Mille Lacs County	10	5:45 p.m.			0	0			Funnel aloft	Funnel sighted and photographed. Did not touch ground.
IOWA Keokuk (northwest of), Lee County	10	6 p.m.			0	0	4	1	Tornado (suspected)	2 barns and other farm buildings destroyed. Storm moved northeastward.
ILLINOIS Pittsfield to Philadelphia, Pike to Cass Counties	10	10:05 p.m.	50		0	0	4		Tornado	Intermittent path, with damage near Pittsfield, Concord, and Philadelphia. 6 residences damaged at Philadelphia. Roaring sound reported. Tornado moved northeastward.
	10									Minor storms also reported at Dubuque, Iowa; Fergus Falls and Minneapolis, Minn.; near Bostwick, Nebr.; and at Dustin, Okla.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ILLINOIS Springfield and Danforth Sangamon and Iroquois Counties	10-11	11 p.m. - 2:30 a.m.			0	0	4		Funnel aloft and wind	Funnel not in full contact with ground. Roaring sound reported and funnel observed. Wind damage at Danforth, more than 100 miles to northeast at 2:30 a.m. on 11th may have been continuation of this storm. Storm moved northeastward.
MISSOURI Jefferson County	11	1-1:10 a.m.							Wind and rain	Many trees uprooted, homes damaged, and power- and phone lines downed.
IOWA Creston, Union County	11	8:15 a.m.			0	0	3	1	Funnel aloft and wind	Trees and telephone circuits damaged.
IOWA Keokuk (southwest of) Lee County	11	11:33 a.m.			0	0			Tornado	Reported by GOC, but no damage given.
COLORADO Otero, Bent, Prowers, and Kiowa Counties	11	Afternoon	100		0	0			Wind, hail, rain, and tornado	Thunderstorms beginning at 1 p.m., at Fowler, followed Arkansas River to Kansas border. Classed as worst hailstorm in 31 years, with hailstones size of golf balls which beat crops into ground, damaged buildings, and killed many turkeys and chickens, and bruised livestock. Near Ft. Lyon, twister uprooted 2 trees, blew down windmill and corral. Many crops replanted. Storm moved eastward.
OHIO North Lewisburg, Champaign, County	11	3:20 p.m.			0	0			Tornado	Score of trees damaged and 1 residence unroofed.
INDIANA Morgan County	11	4 p.m.					°4	C	Rain	Rainfall of 6 inches in 7 hours in southern Washington and Baker Townships washed out many acres of crops. Basements and highways flooded.
OHIO Centerburg, Knox County	11	4:20 p.m.	1/2	100	0	0	4	1	Tornado	Storm well verified as immature tornado in that rotary winds occurred, and debris was carried aloft. Damage consisted mainly of unroofed buildings, broken trees, and structural damage by explosive effect, confined mainly to southwest part of village. No visible funnel existed and no rain fell, but debris seen to travel aloft in circular pattern. Storm moved east-northeastward.
INDIANA Daviess County	11	4:30 p.m.				2	°4	C	Wind	Railroad shop at Washington torn open by wind and outdoor-theater screen flattened. 5 small airplanes at airport turned over. At Montgomery, several roofs damaged. Power and telephone services disrupted by falling trees. Wind damage occurred at Cannelburg and Plainville.
INDIANA Knox, Vigo, Green, Dubois, Orange, and Pike Counties	11	4:30 p.m.					°5	C	Wind and rain	High wind uprooted trees, broke plate-glass windows, collapsed television antennas and cut utility services. 1 house almost totally destroyed. Several barns blown down. Many roofs damaged. Some of heaviest damage occurred at Edwardsport, Oaktown, and Bicknell. At Terre Haute, large greenhouse had many panes of glass blown out. Heavy rain damaged crops.
KANSAS Sedgwick and Butler Counties	11	4:40-9 p.m.			0	0			Hail, wind, electrical, and funnels aloft	2 thunderstorms hit Wichita area in evening. Hail up to 1-1/4 inches in diameter fell in parts of city and nearby area. Lightning set several small fires and disrupted electric service. Winds up to 70 m.p.h., broke trees and near Andale blew Highway Patrol car off road. 2 funnels aloft sighted; 1, near Maize about 5 p.m., and other north of Wichita at 8:43 p.m. Storm moved east-southeastward.
KANSAS Shawnee, Douglas, Johnson, and Jefferson Counties	11	5-10 p.m.			0	0	5	4	Wind, hail, tornadoes and funnels aloft	Severe thunderstorm conditions over these counties resulted in several damaged areas from hail, tornadoes, and severe wind. Several funnel clouds sighted. Thunderstorm with heavy rain began in Douglas County about 5 p.m. At 6 p.m., small tornado struck ground 5 miles south of Lawrence just east of Highway 59; damage limited to farms and sheds; tornado, moving northeastward, dipped to ground and rose several times. At 7:45 p.m., funnel cloud moving northwestward dipped to ground once 6-1/2 miles southwest of Topeka; loud roar attended its passage; minor property damage.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS (Cont'd.)										Funnel aloft moving northeastward seen and heard near Rock Creek 15 miles northeast of Topeka at 7:45 p.m. Near Stilwell at 7:40 p.m., hail and severe wind caused minor damages; funnel cloud moving northeastward seen and distinct whistle heard but funnel remained aloft. At 8:04 p.m., hail and windstorm with tornado in Johnson County; tornado dipped once 3 miles north and 1/2 mile west of Olathe, destroying barn and then rising into air; damage from tornado, $20,000; property damage from winds, $100,000 over northern part of county; crop losses from hail and wind $20,000; storm moved northeastward.
KANSAS Lyon County	11	6-8 p.m.			0	0			Funnel aloft, wind, and hail	At 6:15 p.m., funnel cloud observed near northwest edge of Emporia which dipped to within 100 feet of ground once. Some wind and hail caused minor damage. Storm moved northeastward.
KENTUCKY Jefferson County	11	6:15 p.m.				3	4		Wind	Winds with gusts to 73 m.p.h., downed trees, disrupted power and telephone services, damaged numerous house trailers, broke windows, and damaged cars.
MISSOURI Ray and Lafayette Counties	11	7-8 p.m.							Funnels aloft and electrical	2 unconfirmed funnels aloft reported at 7 p.m. near Lexington. Several homes damaged by lightning at Hardin.
KANSAS Anderson County	11	7:30 p.m.			0	0			Funnel aloft, wind, and rain	Funnel aloft visible for about 10 miles. Strong winds and heavy rain followed passage of funnel northeast of Garnett. Storm moved northeastward.
INDIANA Monticello (8 miles south and 1 mile east of), White County	11	8:35 p.m.			0	0			Funnel aloft	Unconfirmed tornado which did not touch ground reported.
MISSOURI Columbia area Boone County	11	8:45 p.m. -midnight			0	0			Funnel aloft, wind, and rain	Unconfirmed funnel aloft reported 5 miles west of Columbia. Trees, powerlines, and phone lines downed. Storm moved east-northeastward.
KANSAS Atchison County	11	9 p.m. - midnight			0	0			Wind, rain, hail, electrical, and funnel aloft	During 3-hour thunderstorm much wind, rain, some hail, and almost incessant lightning. Funnel cloud 3 miles south of Atchison at 9:15 p.m., appeared like large ink blot with long tail, but did not come to ground. Storm moved northwestward.
OKLAHOMA Medford, Grant County	11	9:45 p.m.			0	0			Funnel aloft	Sheriff reported tornado north of Medford moving eastward. Evidently remained aloft as no other reports received.
MISSOURI Camdenton, Camden County	11	10:30-11 p.m.			0	0			Funnel aloft, wind, rain and electrical	Trees and powerlines downed. Storm moved northeastward.
OKLAHOMA Blackwell, Kay County	11	10:43 p.m.	12		0	0			Funnel aloft and electrical	Chief of Police and Blackwell Cooperative Weather Observer reported funnel, which appeared to be 100 yards wide and just above ground, traveling east-northeastward from near Blackwell to near Newkirk. Excessive lightning noted in and near funnel.
MISSOURI Iberia, Miller County	11	10:45 p.m.			0	0	2		Funnel aloft, wind, rain, and electrical	135 chickens killed. Buildings damaged. Storm moved northeastward.
MISSOURI Montreal, Camden County	11	10:55-11 p.m.			0	0			Funnel aloft	Observers report hearing loud "roaring" sound. Funnel moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Springfield (10 miles south of), Greene County	11	11 p.m.			0	0			Funnel aloft	
MISSOURI Newburg (2 miles southeast of), Phelps County	11	11-11:20 p.m.			0	0			Hail, electrical, wind, rain and funnel aloft	Hail 1/2 inch in diameter. Observer heard roaring sound. Others saw funnel aloft. Storm moved southeastward.
INDIANA Sullivan (4 miles east of), Sullivan County	11	P.m.	2/10	70	0	0	4	C	Tornado, rain, and wind	Funnel cloud observed to hit barn and destroy grain in adjacent field. 10 telephone poles snapped off along State road 54. Heavy rain flooded basements and crops in area. Strong winds responsible for collapsing television antennas, trees, and utility lines. Storm moved eastward.
KENTUCKY Green County	11	P.m.					4		Wind	Drive-in theater suffered damage to several of its installations and equipment. Damage reported to a number of barns, and numerous trees blown down.
MISSOURI St. Louis County	11	Evening							Wind, rain, and electrical	Many trees, powerlines, and phone lines downed.
MISSOURI Riverside (2 miles north of), Clay County	11	Evening			0	0			Funnels aloft	
IOWA Polk City (northwest of), Polk County	11					1	2	1	Electrical	Lightning struck tree, injuring farmer.
KANSAS Southern Counties	11								Hail	Hail Insurance Clearing House reported many hail claims paid for wheat losses especially in Scott, Finney, Haskell, Gray, Ford, Hodgeman, Ness, Rush, Pawnee, and Barton Counties. Another area of much better wheat and consequently more and larger claims consisted of Barber, Kingman, Harper, Sumner, Sedgwick, Butler, and Lyon Counties in south-central. Labette and Neosho Counties in southeast also had numerous claims.
	11									Minor storms also reported at Davenport, Des Moines, and St. Lucas, Iowa; in Casey, Grayson, and Hardin Counties, Ky.; at Butler, Gravois Mills, Higginsville, Jefferson City, Kirksville, Marshall, Odessa, and Windsor, and in Jackson County, Mo.; and at Gustavus, Ohio.
ILLINOIS South-central portion	11-12	1 p.m.-a.m.					5		Wind	Severe squall line moved south or southeastward rapidly. Large amount of widespread damage in belt 50 miles wide extending from Jacksonville and Springfield southeastward to Lawrence County. Wind gusts to 76 m.p.h., at Springfield and 60 m.p.h., at Mattoon. Heaviest damage in Jasper and Cumberland Counties. Utilities very hard hit, as lines damaged by hundreds of falling trees. Most damage by northwest wind and some by north wind. Most structural damage minor, but a few larger buildings collapsed. Tornadic action possible, but could not be verified. Paris area had more than 4 inches of rain during night.
KANSAS South-central area	11-12	8 p.m. - 12:30 a.m.			0	0			Hail, wind, rain, electrical, and funnels aloft	Severe thunderstorm conditions prevailed over area from Scott County eastward to Barton County and as far south as Haskell and Ford Counties from 8 p.m., to after midnight. From about 9 p.m. to 12:30 a.m., storm centered from Barber-Sumner Counties northeastward to about Lyon County. Many strips of damaged crops reported in these areas. Hailstones near Scott City were as much as 1-1/2 inches in diameter; near Kinsley, 2 to 3 inches in diameter. Losses in some cases 100 percent to crops. Considerable building damage from heavy hail near Kinsley, golf-ball-sized hail, and winds gusting to 81 m.p.h., reported at Hoisington. 2 funnel clouds reported, 1 near Offerle at 11:20 p.m., and the other about 20 miles southwest of Hutchinson at 9:30 p.m. Southern Butler County crops suffered considerably from hail, winds, and heavy rains. Much baled alfalfa soaked. Some damage reported in ElDorado to powerlines from both wind and lightning.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Franklin County	11-12	Late evening-early morning							Wind, rain, and electrical	Many trees, phone lines, and powerlines downed.
OKLAHOMA Southwestern to northeastern half of State	12	Midnight-9 a.m.				1			Wind, rain, hail, and electrical	Severe squall line moved across state from southwest to northeast corners. At least 5 and possibly 2 more tornadoes developed in central and northeast sections along squall line (reported separately). Widespread destruction and damage resulted to roofs, buildings, windows, signs, trees, TV antennas, utilities, etc. Some of worst damage included $2,000 to lumber shed destroyed, $1,000 to plate-glass windows at bottling company, and $3,000 to street lights and other utilities in Altus; $7,000 to fair grounds building in Snyder; huge storage shed, awnings, and windows at surplus store in Lawton; trucks blown over at Frederick; $3,000 to sheds and feeders at feed lot, and $500 to roof of cotton gin in Hobart; $500 damage by lightning to home in El Reno; tents, displays, and signs torn down at Semi-Centennial Exposition in Oklahoma City. Woman injured while closing door and was blown down, breaking her hip at Oklahoma City. Strong winds with heavy rain and some hail caused heavy losses to the ripe wheat crop.
OKLAHOMA Bartlesville area, Washington County	12	12:30 a.m.			0	0	6		Tornado, hail, wind, and rain	Tornado dipped down momentarily at Dewey which is northeast of Bartlesville; no damage resulted. Severe hailstorm with stones up to 3 inches in diameter caused extensive damage to automobiles, roofs, and trees over area 20 miles in radius from Bartlesville. Heavy rains of up to 5 inches also caused damage and considerable flooding. Storm moved northeastward.
KANSAS Montgomery and Chautauqua Counties	12	12:30 - 2 a.m.			0	0			Wind, rain, and funnels aloft	During thunderstorm, severe winds damaged trees, etc. Heavy rain fell. 2 funnel clouds aloft reported; 1 near Caney at 12:15 a.m., and the other 6 miles west-northwest of Coffeyville at 12:50 a.m.
MISSOURI Bonne Terre, St. Francois County	12	1-1:15 a.m.			0	0	3		Funnels aloft, wind, and rain	
ILLINOIS Southwestern portion	12	1:20 a.m.					5		Wind	Severe thundersqualls affected East St. Louis area, eastward to Marion County, and southeastward as far as Pinckneyville. Mostly minor structural damage, but many falling trees broke utility lines and blocked roads. Scott AFB reported wind of 80 m.p.h. Storm moved southeastward.
TEXAS Quanah, Hardeman County	12	1:45-2:30 a.m.	100	100			3		Wind and sand	Winds estimated at 80 m.p.h., created sandstorm, knocked out windows, unroofed small building, tore doors off another, tore limbs from trees and damaged TV antennas. Storm moved eastward.
ILLINOIS Southeastern portion	12	4 a.m.					4		Wind	Severe thundersqualls destroyed 3 barns, damaged other buildings, and broke many trees with damage to utility lines in area from Harrisburg to Carmi.
INDIANA Evansville (8 miles west of), Vanderburgh County	12	4:20 a.m.			0	0	3	1	Funnels aloft and wind	2 small tornado clouds observed aloft. Wind blew down trees, utility lines, and television antennas.
OKLAHOMA Agra, Lincoln County	12	4:45 a.m.	6	440	0	0	3	1	Tornado	20 outbuildings destroyed, several homes damaged, and trees, utilities, and windows broken or damaged. Details of second funnel could not be learned. Tornado moved northeastward.
OKLAHOMA Stillwater area, Payne County	12	4:55 a.m.	7		0	0			Tornado	Tornado dipped to ground 4 miles southwest of Stillwater. Considerable damage resulted to several farmsteads. Funnel moved northeastward aloft over southern edge of Stillwater and dipped again 3 miles east where several more farmsteads damaged.
OKLAHOMA Adair to Pensacola, Mayes County	12	7:40 a.m.			0	1	4		Tornado (suspected), wind, and rain	2 trailer houses and several farmsteads received heavy damage along path of storm. 1 person injured at Adair when house trailer blown over. 1 person reported sighting funnel, but could not be contacted for details. Storm moved east-northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Dallas, Dallas County	12	8:10-8:25 a.m.		50	0	0	3		Tornado and dust	At Redbird Airport small twister struck in middle of 400-foot long steel hangar, preceded by blinding cloud of dust; pulled concrete piers 16 to 18 inches from ground in middle of hangar and damaged 3 Bonanza aircraft. Hangar built 1 year ago to withstand winds up to 120 m.p.h. Storm moved southeastward.
MISSOURI St. Charles, St. Charles County	12	Early morning							Wind, rain, and electrical	Wind hit gusts of 70 to 80 m.p.h. and heavy rains. Many trees and power- and phone lines downed.
KANSAS Cottonwood Falls (Southeast of), Chase County	12	11:50 a.m.			0	0			Funnel aloft	Funnel cloud sighted aloft.
OKLAHOMA Calumet (6 miles west of), Canadian County	12	A.m.			0	0			Tornado (suspected)	Western half of concrete-block house blown away.
OKLAHOMA Crescent, Logan County	12	A.m.			0	0			Funnel aloft	Farmer near Crescent reported sighting funnel aloft.
MISSOURI Ava, Douglas County	12	1:15 p.m.			0	0			Tornado, wind, and rain	Roaring noise heard, but no funnel seen. Possibly touched ground briefly. Farm buildings damaged.
TEXAS Killeen (30 miles southwest of), Burnet County	12	1:36 p.m.			0	0			Tornado (suspected)	
TEXAS Groom (7 miles northeast of), Gray County	12	2 p.m.			0	0			Tornado (suspected)	Reported moving eastward.
TEXAS Hutto, Round Rock, Granger, Friendship, and Taylor, Williamson County	12	2:15 to 4 p.m.	12	*10			°5	C	Wind and hail	3 buildings damaged by wind at Hutto; corn and maize crops virtually wiped out by heavy hail between Granger and Friendship; farm buildings and homes damaged by hail and wind. Barns, sheds, outbuildings in Taylor area, TV antennas, and trees damaged in varying degrees. At least 8 farmers in Friendship area had their crops completely hailed out. One farmer said it hailed for 30 minutes at his place. Winds estimated at 50 to 60 m.p.h. Storm moved eastward.
TEXAS Skellytown (southwest of), Carson County	12	2:25 p.m.			0	0			Funnel aloft	
KANSAS Geary and Riley Counties	12	3:05-3:30 p.m.			0	0			Funnel aloft	1 funnel cloud aloft observed at various points from Alida, Milford, and Riley occasionally dipping to within 100 feet of ground. Funnel traveled north-northeastward quite rapidly.
IOWA Atlantic, Cass County	12	4:30 p.m.			0	0			Funnel aloft	
OKLAHOMA Erick to Berlin, Beckham and Roger Mills Counties	12	5:15 p.m.	20	*3			2	4	Hail and rain	Hailstorm, with stones up to 1 inch in diameter caused considerable damage to crops in area. Hard rains of up to 3 inches accompanied storm which moved northeastward.
NEBRASKA Saline County (southeastern portion)	12	5:30-6:30 p.m.	5	*3-4			1	4	Hail	Hailstones 1/2 to 1 inch in diameter. Storm moved northeastward.
SOUTH DAKOTA Stanley County	12	5:41 p.m.			0	0			Funnel aloft	Pilot reported funnel-shaped cloud aloft 35 to 40 miles northwest of Pierre. Moving northeastward.
SOUTH CAROLINA Maple, Horry County	12	Afternoon			1		1	1	Electrical	
OKLAHOMA Woodward (southwest of), Woodward County	12	6:10 p.m.			0	0			Funnel aloft	Highway Patrol reported funnel aloft moving northeastward.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NORTH DAKOTA Park River, Walsh County	12	Late afternoon					4	3	Hail	Many buildings pitted by hail and gardens badly damaged. 1,700 tomato plants ruined on 1 farm.
KANSAS Dickinson County	12	6:50-7:20 p.m.			0	0	3	3	Funnel aloft and hail	Funnel cloud aloft observed 5 miles west of Herrington at 6:55 p.m., while thunderstorm in progress. Hail caused some damage 2 miles west of city. Storm moved northeastward.
ILLINOIS Tuscola, Douglas County	12	8 p.m.	1		0	0	2		Tornado	Eye witness reported tornado cloud nearly overhead, moving northeastward apparently at treetop level, with minor damage to trees and wires.
MISSOURI Hermann, Gasconade County	12	8:17 p.m.			0	0			Funnel aloft	
SOUTH DAKOTA Brown and Day Counties	12	8:30 p.m.			0	0			Tornado	Funnel cloud appeared to touch ground briefly 1 mile north of Aberdeen airport. Same formation believed sighted near Groton, Pierpont, and Waubay between 9:30 and 10 p.m. Storm moved southeastward.
KANSAS Gray County	12	9:25-9:50 p.m.							Hail	Heavy damage to wheat and barley by hail, ranging in size up to 1-1/2 inches in diameter. Many fields 100 percent loss. Storm moved northeastward.
KENTUCKY Lincoln County	12	P.m.					4		Wind	Wind damaged several buildings, felled trees, knocked down signs, and damaged powerlines.
OKLAHOMA Duke to Victory, Jackson County	12	P.m.							Hail	Hailstorm with stones up to size of hens' eggs followed narrow strip from east of Duke to west of Victory. About one-third of crops still in fields destroyed.
KANSAS south-central and eastern counties	12								Hail	Many hail claims paid for losses, with greatest concentration in south-central counties of Kingman, Harper, Sumner, and Sedgwick. Butler, Marion, Lyon, Greenwood, and Labette had some damage, but number of claims paid were fewer.
MINNESOTA Little Falls (12 miles southeast of), Morrison County	12				1		1	1	Electrical	Elderly man struck and killed by lightning.
NORTH DAKOTA Southeastern and southwestern portions	12								Hail	Total crop loss to some grain and corn fields in area 2 miles wide and about 5 miles long in northern Cass County. Other losses also on this date, mostly in southwestern part of state and in LaMoure County.
TEXAS Big Spring (north of), Howard County	12								Hail	At Tarzan community heavy hail damaged young cotton crop.
TEXAS Granger (near), Williamson County	12				0	0			Funnels aloft	2 funnels reported.
TEXAS Taylor (southwest of), Williamson County	12				0	0			Funnel aloft	
	12									Minor storms also reported in Green and Henderson Counties, Ky.; at Carthage and Crane, Mo.; Lebanon, Pa.; and near Joshua, Pampa, and Snyder, Okla.
MISSOURI St. Louis and St. Louis County	12-13	1 a.m. 12th-2:40 a.m. 13th							Wind	First storm struck about 1 a.m., on 12th. Winds hit 70 to 80 m.p.h., in gusts. Many trees downed blocking hundreds of streets. Walls of Westinghouse Company manufacturing and repair plant blown out, apparently as result of sudden drop in atmospheric pressure. Many cars, roofs, and windows damaged. Second storm hit about 6 p.m., on 12th. It was quite brief, winds up to 54 m.p.h., at WBAS. Third storm hit at 2:40 a.m. on 13th. Hail and rain accompanied winds of up to 52 m.p.h., at WBAS. 0.83 inch of rain fell there, with heavier amounts in southern St. Louis County. Many more phone lines, powerlines, and trees downed.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Spur, Dickens County	12-13	11:45 p.m. 12th - 12:30a.m. 13th	25	1900			4	C	Wind	Some damage to oats and cotton; 2 barns blown over, chickenhouse blown away; church roof damaged, about 100 TV antennas broken or bent, windows blown out, awnings downed, tree limbs torn off; roof and structural portions of cotton compress damaged. Storm moved northeastward.
MISSOURI Carthage, Jasper County	13	4 or 5 a.m.			0	0			Funnels aloft	Observer saw 2 funnels moving southeastward. Neither touched ground.
INDIANA Lawrence, Knox, Wabash, Greene, and Vigo Counties	13	5 a.m.			1		4	1	Wind	Many trees blown down which damaged property they fell on. Drive-in theater screen blown over and 3 homes damaged at Linton. In Terre Haute, man killed when tree fell on his car.
INDIANA Steuben and DeKalb Counties	13	9:10 a.m.					4	1	Wind	Trees, buildings, and utility lines damaged by high winds in scattered localities.
INDIANA Whitley County	13	9:30 a.m.					4	1	Wind	Many farm buildings damaged by high winds.
WASHINGTON Seattle, King County	13	10 a.m.					3	1	Rain	Runoff from unusually heavy rain shower centered over University district flooded basements and low areas in streets. Some property damaged and traffic delayed for short time.
MICHIGAN (Lower) Southeastern portion	13	11 a.m. - 1 p.m. and 6-10 p.m.			0	2	5	1	Wind and funnels aloft	Winds caused widespread minor damage, including many trees downed or damaged, in several extreme southeastern counties. Most damage occurred near noon, but some also reported during evening. Funnels aloft reported near Ann Arbor, Pontiac, and Utica during early evening.
INDIANA North Manchester (4 miles east of), Wabash County	13	A.m.	1/10	10	0	0	3	1	Tornado	Top of farm house destroyed and a barn damaged.
INDIANA Wayne County	13	A.m.	1/10	10	0	0	4	1	Tornado and wind	Tornado observed to strike church. Minor wind damage occurred in area.
MINNESOTA Southwestern portion	13	A.m.-p.m.					1		Hail	Crop damage reported in 10 counties.
NEW YORK Western and central portions	13	Noon - late evening			1		5		Electrical and wind	Warm, unstable air moving northeastward set off numerous severe thunderstorms in west and central N.Y. Man struck by lightning in East Randolph and killed. Garage door blown by wind severely cut foot of woman for the most serious injury reported, but numerous minor injuries also occurred. Wind damage from falling limbs and trees caused most loss, especially to utility and communications lines. Gas station and small store in Jasper ruined and some barns blown down. Olean airways observer estimated 50 to 60 m.p.h., winds in that area. Storm in Bath-Cold Springs area may very possibly have been tornadic; - it lifted garage from its foundation and hurled it 25 feet into back of house, picked up house trailer, and overturned automobile. News accounts of this storm called it a "twister", but no confirmation of tornado has been received and due to lateness of clipping service and lack of qualified meteorologists in area, no confirmation is possible. However, narrow path described and strength of wind along with visual accounts given to news sources, make this very marginal. The Jasper storm (ruining gas station and small store) also gives slight evidence of tornadic activity, but not so strong as Bath-Cold Springs storm.
NORTH DAKOTA Jamestown (40 miles south of), La Moure County	13	12:43 p.m.			0	0			Funnel aloft, electrical, rain, and hail	Heavy thunderstorm with hail and funnel aloft.
SOUTH DAKOTA Britton (6 miles southeast of), Marshall County	13	1 p.m.			0	0			Tornado	Touched ground then dissipated; moved southeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WEST VIRGINIA Weirton and vicinity, Hancock County	13	2:30 p.m.						1	Wind and rain	Trees damaged, awnings torn off, 1 window broken, streets temporarily flooded with 1.27 inches of rain in 1-1/2 hours.
ARIZONA Buckeye (17 miles southwest of), Maricopa County	13	Afternoon				1		1	Wind	Wind blew truck against bridge abutment, injuring driver.
NORTH CAROLINA Duplin, Pitt County	13	Afternoon						4	Hail and wind	Tobacco, truck, and corn damaged.
NORTH CAROLINA Cumberland County	13	Afternoon						4	Hail and wind	Tobacco crop damaged.
SOUTH CAROLINA Scattered areas	13	Afternoon			1		4	3	Hail, wind, rain, and electrical	Several severe local thunderstorms did scattered damage over State. Lightning burned tenant home and struck woman working in field near Summerton, Clarendon County. At Columbia and elsewhere in Richland County minor damage to public utilities from wind. At Leesville and Lexington in Lexington County, minor wind damage. At Greenville, Greenville County, minor wind damage. At Lamar, Darlington County, hail caused $2,000 damage to tobacco.
VIRGINIA Abingdon area, Washington County	13	Afternoon					°4	C	Wind, hail, and electrical	Severe thunderstorm, with violent wind, hail, and lightning. 9 cattle killed by lightning, damage to crops extensive. Other scattered areas of damage to buildings and trees.
IOWA Cherokee, Woodbury, and Monona Counties	13	Afternoon -evening			0	0	3	5	Rain, hail, wind, and funnel aloft	Damaged trees, crops, livestock, transportation and communication facilities. Funnel aloft reported at 3:35 p.m., 15 miles west-northwest of Sioux City.
PENNSYLVANIA Western portion	13	Afternoon -evening				2	4		Electrical and wind	Lightning fired several barns and damaged a few homes. Locally strong winds felled many trees, utility lines, and several barns. Storm moved eastward.
SOUTH DAKOTA Brown and Day Counties	13	3:30 p.m.			0	0			Tornadoes and funnel aloft	4 funnels sighted, 2 touched ground briefly. 3 dissipated while in sight. Other later spotted near Lily, not touching ground. Storm moved east-southeastward.
KANSAS Syracuse, Hamilton County	13	6 p.m.					4		Wind	Severe wind blew down tent of small circus and damaged equipment.
NEBRASKA Monroe (north and east of), Platte County	13	6:20 p.m.	Short	Narrow	0	0	3	4	Tornado and hail	Property damage by tornado, crop damage by hail. Storm moved northeastward.
NEBRASKA David City (9 miles south of), Butler County	13	6:25 p.m.	Short	Narrow	0	0	3		Tornado and hail	3 funnels observed. Property damage by tornado, some crop damage by hail.
ARKANSAS Damascus, Faulkner County	13	6:25 p.m.	1-1/4	25	0	0	3		Tornado and funnels aloft	Buildings damaged. Several persons reported seeing funnel cloud which appeared at rear edge of rain cloud after rain had stopped. 2 other funnel clouds aloft seen to south after tornado had passed. Storm moved northeastward.
ARKANSAS Pinnacle Springs Road to southeast of Guy, Faulkner County	13	6:30 p.m.			0	0			Tornado	House and barn damaged. Tornado funnel observed by several persons.
NEBRASKA Hamilton County (southwestern portion)	13	7:30-10 p.m.					1	5	Hail	Hailstones 1/2 inch in diameter.
KANSAS Chase (near), Rice County	13	11:30 p.m.			0	0			Funnel aloft	Funnel aloft sighted by Ground Observer Corps.
GEORGIA Collins, Tattnall County	13	P.m.	Short	Narrow	0	0	3	1	Tornado (suspected)	Roofs torn from buildings and trees and powerlines downed.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KENTUCKY Gallatin County	13	P.m.					4	3	Wind and hail	Wind levelled several barns and garages, tore down powerlines, felled trees, and damaged 1 home and 1 trailer home. Accompanying hail responsible for destruction of several crops of tobacco.
MINNESOTA New Ulm (near), Brown County	13	P.m.			0	0	2	1	Tornado (suspected)	Barn demolished, small buildings damaged, and some trees downed.
IOWA Carroll, Calhoun, and Greene Counties	13	Evening					3	4	Hail and rain	Damaged crops and caused local flooding.
NEBRASKA Edgar (southwest of), Clay County	13	Evening				1		1	Electrical	House struck, no fire; girl burned.
KANSAS Northwestern counties	13								Hail	Considerable number of claims for hail losses reported from Rawlins, Thomas, Sheridan, Gove, Trego, Phillips, and Rice Counties.
KENTUCKY Boone County	13						4		Wind	Roof of farm supply building completely torn off. It hit and damaged old school building. Other damage to trees, windows, and powerlines.
OHIO Northern portion	13								Wind, rain, and hail	Squall line accompanied by strong, gusty winds moved across northern Ohio causing extensive damage to trees, utility lines, etc. Accompanying thunderstorms caused minor flooding and very localized hail. Places from which reports received include Warren, Youngstown, Geneva, Massilon, Painesville, Canton, Toledo, Bellefontaine, Newcomerstown, and New Philadelphia.
	13									Minor storms also reported at Brecon and in Lamar County, Ala.; at Florence, Colo.; at Brownsburg and Mt. Vernon, near Sweetsers, and in Putnam County, Ind.; at Missouri Valley and Nevada, Iowa; in Carlisle and Graves Counties, Ky.; in Holt County Mo.; at Bellevue, Nebr.; Sallisaw, Okla.; Cleveland, Tenn.; and in Middlebourne area, W. Va.
NORTH CAROLINA Henderson County	13-14	Afternoons					4		Electrical	Severe thunderstorms on afternoons of 13th and 14th damaged power- and communications lines and a number of homes.
OREGON Northern border area	13-14	Afternoons and evenings	350	*40-50			4	3	Electrical, hail, rain, and wind	Lightning storms struck at scattered points along State's northern border on 13th, generally blanketed same area on 14th. Knocked out several power transformers and telephone stations, struck a few homes, started several small inconsequential forest fires. Accompanying hail and rain ruined remaining berries in a number of Willamette Valley strawberry fields, damaged considerable additional hay, cherries, some fall grain, and several acres of green peas in Umatilla County. Lightning damage $2,000; hail $15,000; rain $10,000; wind $1,000. Storm moved eastward.
MISSOURI Henry County	13-14	Late evening - early morning							Wind and rain	Many powerlines downed and trees uprooted. Storm moved northeastward.
MINNESOTA Renville County	13-15 -21						4	6	Hail and rain	Damage to crops also includes storms of 13th and 15th. On 13th, hail cut swath 2 miles wide south of Bird Island with intermittent damage for 50-mile stretch.
KANSAS Barber County	14	12:15-12:24 a.m.			0	0			Wind and tornado	Severe winds caused some damages in northern part of Medicine Lodge. At about same time, small tornado on ground a few miles north of Aetna. At 12:20 a.m., it was sighted 1-1/2 miles south of Medicine Lodge.
KANSAS From Saline and McPherson Counties northeastward through Brown and Doniphan Counties	14	12:30-3:30 a.m.	170	*1-15	0	0			Wind, rain, electrical, hail, and tornado	Severe wind squall moving northeastward hit Salina about 12:30 a.m.; Junction City at 1:05 a.m.; Westmorland at 2:15 a.m.; Holton at 2:30 a.m.; Horton at 2:45 a.m.; and Western Doniphan County about 3 a.m. Storm lasted only 15 to 30 minutes in some areas, while in others it continued for nearly an hour. At Salina Air Base, wind gusts rose to 93 m.p.h.; at Fort Riley, 73 m.p.h., at 1:15 a.m.; 80 m.p.h., at Lawrence Airport; and estimated at 100 m.p.h., at other points in affected area.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS (Cont'd.)										Damage included upset trailers, roofs of buildings torn off, window and store glass broken, trees uprooted, TV antennas bent, power- and transmission lines and poles broken, livestock killed when buildings blown down. Much small grain lodged by wind and rain. Incessant lightning very brilliant. Hurricane-force winds prevailed over all the area, with greatest intensities as indicated by damages near Salina, Junction City, Wamego, northwestern Jackson County through northern Brown County and western Doniphan County. Storm hit with sudden onset in most localities. Some evidence in numerous places of tornadic activity and violence, but only positive account of tornado was 4 miles south and 1 west of Junction City which struck at 1:05 a.m. Additional wind damage occurred in Shawnee and Douglas Counties and lightning damaged buildings in Leavenworth and Holliday near Kansas City. No tangible estimate of damages.
MISSOURI Nodaway County	14	3 a.m.							Rain, wind, and electrical	From 0.40 to 1.30 inches of rain in less than 1/2 hour in county. Trees, barns, and power-lines damaged. Store hit by lightning in Maryville, with damage of $3,500.
MISSOURI St. Joseph, Buchanan County	14	3-4 a.m.							Wind and rain	0.30-inch rain at St. Joseph WBAS in 5 minutes. Gusts to 52 m.p.h. at WBAS. Trees downed and a few homes damaged. Storm moved southeastward.
MISSOURI Chillicothe (2 miles northwest of), Livingston County	14	4-4:15 a.m.		300	0	0			Tornado, wind, rain, and electrical	Buildings on several farms damaged. Oats flattened in fields. Violent lightning. Storm moved northeastward.
MISSOURI Moberly area, Randolph County	14	4-5:55 a.m.			0	0			Rain, wind, hail, and funnel aloft	0.91 inch of rain in 25 minutes. Hail reported south of Moberly. Unconfirmed funnel aloft northwest of Moberly at 4 a.m.
MISSOURI Carrollton, Carroll County	14	5-9:30 a.m.			0	0			Rain	Heavy rains at 5 and 9:30 a.m.
MISSOURI St. Charles County	14	9 a.m.			0	0	3		Tornado, wind, and rain	Funnel dipped very briefly and touched ground 1 mile north of Boschertown, damaging buildings on 1 farm.
ILLINOIS Springfield, Sangamon County	14	9:30 a.m.			1				Electrical	Railroad worker killed riding work car south of city.
MISSOURI Center, Ralls County	14	Noon							Rain, hail, and electrical	2-1/4 inches of rain in 1 hour. Local flooding.
ILLINOIS Pike County	14	1 p.m.	23		0	1	5		Wind or tornado (suspected)	Possible tornado traced intermittent path eastward from Rockport to Milton, with much damage to buildings, trees, and utility lines. Same cloud formations later produced tornadoes at Jacksonville and Springfield.
OKLAHOMA Nowata (10 miles south of), Nowata County	14	1 p.m.			0	0			Funnel aloft	Funnel aloft reported moving eastward.
CALIFORNIA Millerton Lake, Fresno County	14	1:30 p.m.	1/3	10	0	0	3	1	Whirlwind	Whirlwind sounded like jet plane, lasted about 2 minutes, blew aluminum roofing and sections of roof from storage building as much as 400 yards. Storm moved eastward.
ILLINOIS Jacksonville Morgan County	14	1:30 p.m.	3		0	5	5		Wind and tornado (suspected)	Wind squalls and possible tornado struck eastern portion of business district. Storm moved eastward.
COLORADO El Paso and Elbert Counties	14	2-4 p.m.							Hail	Hailstorm struck in vicinity of Calhan, Ramah, and Simla, mowing down alfalfa and causing damage to wheat. Hail reported to be 4 inches deep 8 or 9 miles north and west of Calhan also severe at Simla and northwest of Ramah. Storm moved eastward.
ILLINOIS Springfield, Sangamon County	14	2 p.m.			2	50	6		Wind, tornado, and rain	1/2-mile wide path of heavy wind damage extending from southwest of city east-northeastward through south side of city culminated in severe tornado destruction in 220-yard by 1/2-mile area. Only scattered evidence of tornado

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
ILLINOIS (Cont'd.)										winds in other parts of damage area. Funnel obscured by heavy rain showers and rapidly advancing dark and low clouds. Scattered reports of roaring sound and report of "ear-popping". Wind gusts to 106 m.p.h., and minor damage at Capital Airport, 4-1/2 miles northwest of main path. Same storm complex that hit Jacksonville 30 minutes earlier and 31 miles to west.
ILLINOIS Aroma Park-St. Anne, Kankakee County	14	3 p.m.			0	0	4		Wind and tornado	Short northeastward tornado path 4 miles east of Aroma Park. Severe thundersqualls moved rapidly eastward, with many trees downed and buildings damaged by west wind. St. Anne had damage by northwest wind.
WISCONSIN Florence, Florence County	14	5:30 p.m.	7	100	0	0	4	1	Tornado	Tornado moving northeastward on skipping path caused intermittent destruction.
PENNSYLVANIA Philadelphia, Philadelphia County	14	Late afternoon			3		4		Electrical, wind, and hail	3 persons killed by lightning in and near city during series of storms. Much property damage by lightning. Wind damaged circus tent near Valley Forge and blew off house roof in Philadelphia suburb. Small hail reported in scattered localities, but no crop damage reported. Storm moved northward.
ARKANSAS Siloam Springs, Benton County	14	6 p.m.							Hail, wind, and rain	Hailstones up to 11 inches in circumference reported. Extensive damage to glass, roof, automobiles, and trees. Considerable water damage reported due to punctured roofs.
MICHIGAN Vienna Township, Montmorency County	14	6 p.m.	1	50	0	0	4	1	Tornado	Tornado moving northeastward smashed 1 summer cottage, damaged 2 others, and downed powerlines and many trees.
MICHIGAN Cheboygen (near), Cheboygan County	14	6:30 p.m.			0	0			Funnel aloft	Funnel passed northeastward over Cheyboygan Golf and Country Club.
INDIANA Rochester (5 miles west of), Fulton County	14	7:15 p.m.			0	0	4	1	Tornado	2 barns, home, and other buildings smashed by what may have been same storm that hit North Webster a little later. Slight damage occurred at Fletcher Lake at about same time.
INDIANA North Webster, Kosciusko County	14	7:15-7:40 p.m.			0	0	4	1	Tornado and funnel aloft	2 funnel clouds observed, with 1 touching ground, travelling along shore of Webster Lake. Cottage, boats and docks damaged.
MISSOURI Jefferson City (20 miles northwest of), Cole County	14	8:10 p.m.			0	0			Funnel aloft	
MISSOURI Fulton (7 miles southwest of), Calloway County	14	10:05 p.m.			0	0			Funnel aloft	
MINNESOTA Traverse, Swift, Chippewa, and Murray Counties	14	P.m.							Hail	Crop damage reported in counties listed.
OKLAHOMA Henryetta, Okmulgee County	14	P.m.					1		Wind and rain	High wind and heavy rain caused damage to utilities.
OKLAHOMA Muskogee, Wagoner, and Cherokee Counties	14	P.m.					1		Wind, rain, and electrical	Thunderstorms with severe winds and lightning caused widespread damage in 3-county area. In Muskogee, winds caused $1,000 damage to plate-glass windows. Also tree blown down across new car. Boats and concessions on Fort Gibson Lake heavily damaged. Water ski concession lost floating office and $2,100-cash register. Waves 5 feet high reported on lake. Many trees blown down in area.
OKLAHOMA Vinita area, Craig County	14	P.m.			0	0	1		Funnel aloft, electrical, wind, and rain	Tourist reported sighting funnel southwest of Vinita. Wind and lightning damaged utility lines in area.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	14									Minor storms also reported at Gadsden, Ala.; near Clarion and in southern portion of Iowa; at Carthage, Lentner, Salisbury, Slater, Sturgeon, Trenton, Waynesville, and in northern Callaway County, Mo.; in Catawba and Surry Counties, N. C.; and at Bartlesville, Chickasha, Lake Eucha, Okemah, and Tulsa, Okla.
MISSOURI Franklin County	14-15	5 p.m. - 5 a.m.			7				Rain	Rainfall at Gerald 6.35 inches. Much erosion and local flooding. 7 lives lost in flash flood near Spring Bluff.
MISSOURI East-central portion	14-15	Late afternoon-early morning			11	Many	6	6	Rain	Many homes damaged, either by flooding or collapsed foundations. Streets blocked by flood water and debris. Factories, warehouses, and stores damaged by floods. This storm covered area from Owensville to Litchfield, Ill.
MISSOURI Crystal City, Jefferson County	14-15	Evening - early morning							Rain and wind	Considerable flooding.
ILLINOIS St. Clair, Clinton, Bond, and Montgomery Counties	14-15	Night - morning			10	30	7		Rain	Record rains of up to 16 inches in western St. Clair County and 12 inches in Clinton County fell in about 12 hours time. Heavy rains extended eastward to about Carlyle and north to about Litchfield. More than 450 homes destroyed or suffered major damage. Crop losses heavy.
MISSOURI Jefferson Barracks to Kimmswick, Jefferson County	14-15								Rains	47 slides and washouts along Missouri-Pacific railroad.
MISSOURI Independence, Jackson County	15	12:43 a.m.							Wind and rain	Trailer court damaged. Filling station demolished.
OKLAHOMA Ada, Pontotoc County	15	12:55 a.m.							Wind, rain, and electrical	Severe thunderstorm with strong winds, heavy rain and lightning blew down trees, utilities, outbuildings, etc. Over 3 inches of rain reported in 25 minutes.
MISSOURI Prairie Hill (6 to 8 miles north of) Chariton County	15	Early morning							Hail and rains	Hail caused extensive crop damage.
KANSAS Milford (near), Riley County	15	11:30 a.m.							Hail	Oats, wheat, and other crops beaten flat by hail. Most hailstones marble to golf-ball size, with a few 3 inches in diameter. Main damaged area was about 4 square miles near Milford.
KANSAS Pottawatomie County	15	12:15 p.m.	15	*2			4	5	Hail	Hail averaging 1 inch in diameter, some as large as hens' eggs and 1 that measured 7 inches in circumference, fell from Fostoria to Wheaton. Crops and gardens ruined, much poultry killed, and many windows broken. Storm moved eastward.
NEBRASKA Hastings (southwest of), Adams County	15	12:15 p.m.	Short	Narrow	0	0	2	1	Tornado	Garage demolished.
KANSAS Northeastern counties	15	Midday							Hail	Hail Clearing House reports indicated numerous claims paid in Ottawa, Clay, Dickinson, Geary, Washington, Marshall, Riley, Pottawatomie, Nemaha, and Brown Counties.
NEBRASKA Jefferson, Pawnee and Gage Counties	15	1-2:30 p.m.	40	*4-12			6	6	Hail	All crops over 280-square mile area destroyed. Extensive roof and window damage in Wymore. Hailstones 1-1/2 to 3 inches in diameter; ground covered to 6 inches in center of storm. Storm moved east-northeastward.
NEBRASKA Burchard (6 miles northeast of), Pawnee County	15	2 p.m.	Short	Narrow	0	0	3	2	Tornado	Large barn flattened. Storm moved eastward.
KANSAS Smith County	15	4:05-4:45 p.m.	14	*1	0	0	6		Tornadoes and rain	First tornado touched ground about 4 miles south-southwest of Kensington and travelled almost northward through west side of Kensington and lifted about 10 miles north-northeast of town. Second tornado hit first about 1 mile northwest

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS (Cont'd.)										of Athol and skipped across several miles, with intermittent damage. First tornado sighted at 4:05 p.m., and apparently while it was in progress, second one formed. Reports indicate possibility of other funnels. Many farm buildings and some houses totally demolished. Cattle, hogs, and many chickens killed. Much machinery badly damaged. Extremely heavy rain followed tornadoes.
NEBRASKA Johnson County (southeastern portion)	15	4:30-5:30 p.m.	10	*4			3	4	Hail	Hailstones size of golf balls to eggs. Ground covered 3 inches in center of storm. Storm moved east-northeastward.
IOWA Central portion	15	Afternoon -evening	300	*60	1		4	5	Wind, hail, electrical, and rain	Storm moved eastward across Iowa in band from Monona, Harrison, and Pottawattamie Counties to Dubuque and Jackson Counties. Greatest damage in western part of area, where farms and basements flooded and wind and hail damage to crops and buildings considerable. Lightning killed man in Jones County and burned several buildings.
KANSAS Northwestern counties	15	Late afternoon							Hail	Hailstorm resulted in payment of many claims in Decatur, Sheridan, Norton, Graham, Phillips, Rooks, and Smith Counties.
NEBRASKA Glennville to Saronville, Clay County	15	Late afternoon	20	*4-5			3	5	Hail	Storm moved east-northeastward.
COLORADO Mesa and Delta Counties	15	5-6 p.m.	15	*1/2-3			°4	C	Rain, hail, and wind	Heavy rain accompanied by hail and wind did extensive damage to garden crops, alfalfa, and apples. Many of damaged crops are expected to come back, but fruit damage will result in downgrading. Wind damage estimated at $1,000 and hail damage at $7,500. Much of peach area escaped. 50 acres of tomatoes, 33 acres of beets destroyed. 600 acres of tomatoes and 2,000 acres of beets damaged. Storm moved eastward.
NEBRASKA Columbus (5 miles northeast of), Platte County	15	5:30 p.m.			0	0	3	1	Wind or tornado (suspected)	Possible tornado.
KANSAS Logan County	15	6 p.m.							Hail, rain, and wind	Hail and heavy rain caused damage over county. Clouds so thick that almost complete darkness prevailed at 6 p.m. Wind damage minor.
MISSOURI Shelby County	16	6 p.m.			0	0			Tornado, wind, rain and electrical	Funnel-shaped cloud seen approaching farm near Lakenan. Debris blown into air. Several farm buildings destroyed. Several head of cattle killed by lightning.
NEBRASKA Cozad (6 miles south of), Dawson County	15	6-6:30 p.m.	3	*2-1/2			3	5	Wind and hail	Hailstones 1/2 to 1-1/2 inches in diameter. Storm moved northeastward. Property damage by wind. Crop damage by hail.
KANSAS Liberal, Seward County	15	7:01-7:10 p.m.	1	100			4	1	Wind	Wind gust of 80 m.p.h. hit southwestern part of Liberal, damaging some playland equipment. City Armory and some aircraft buildings suffered damage. Storm moved northward.
NEBRASKA Beaver Crossing to Seward, Seward County	15	8-8:30 p.m.	15	Narrow	0	0	4	1	Tornado	Tornado moved northeastward.
NEBRASKA Fremont (3 miles west of), Dodge County	15	8:08 p.m.	Short	Narrow	0	0			Funnel aloft	
NEBRASKA Ithaca to Bennington, Saunders and Douglas Counties	15	8:30-9:30 p.m.	21	Narrow	0	0	4	2	Tornado	Tornado moved northeastward.
NEBRASKA Adams County (southeastern portion)	15	9:45-10:15 p.m.	17	*10			3	5	Hail	Hailstones rather small. Storm moved eastward.

See footnotes at end of table.

NEBRASKA Agnew (1 mile north of), Lancaster County	15	Evening	Short	Narrow	0	0	3	2	Tornado	Barn demolished; corn crib damaged.
NEBRASKA Brainard, Butler County	15	Evening			0	0	5	2	Wind or tornado (suspected)	Probable tornado. Storm moved northeastward.
NEBRASKA Ansley (2 miles north of), Custer County	15	Evening						1	Lightning	House struck; considerable damage.
NEBRASKA Nance County (northwestern portion)	15	Night					2		Hail	Considerable crop damage.
NEBRASKA Merrick County (southeastern and eastern portions)	15	Night	4-5	*1			3	3	Wind and hail	Wind damage scattered over county caused property damage. Hailstones 1/2 to 3/4 inch in diameter caused crop damage. Storm moved eastward.
	15									Minor storm also reported at Savannah, Mo.
NEBRASKA Brunswick and vicinity, Antelope County	15-16	11 p.m. - 3 a.m.					3	3	Hail	Hailstones 1 inch in diameter.
NEW YORK	15-19								Heat	At least 5 deaths attributed directly to unseasonable heat wave, while numerous drownings of persons at beaches due to heat reported. New York City reported 24 percent increase in death rate during hot spell. Some damage to electrical systems, due to overloading (air conditioners running overtime) reported in New York City area.
NEBRASKA Beaver City (south and east of), Furnas County	16	Midnight-2 a.m.	15	Narrow	0	0	4	2	Tornado	A few farm buildings destroyed. Tornado moved east-northeastward.
IOWA Ida, Buena Vista, Palo Alto Counties	16	6:30 a.m.	15		0	0	5	4	Tornado (suspected)	A number of farm buildings, trees, and utility lines destroyed. Storm moved north-northeastward.
IOWA Central portion	16	Forenoon					4	4	Rain	Croplands and buildings flooded.
UTAH Layton, Davis County	16	Before noon							Funnel aloft	
IOWA Rockford, Floyd County	16	A.m.					4	1	Electrical	Farm buildings and livestock burned by lightning strike.
WYOMING Albin area, Laramie County	16	2:30 p.m.			0	0			Tornado	Formed about 10 miles north of Albin near state line; moved eastward into Nebraska.
NEBRASKA Franklin and Webster Counties	16	2:30-2:45 p.m.					3	5	Hail	Hailstones up to 1-7/8 inches in diameter. Storm moved eastward.
WEST VIRGINIA Bluefield, Mercer County	16	2:30-4 p.m.		880				1	Wind, rain, and electrical	Trees blown down, roofs damaged, streets and basements flooded.
NEBRASKA Perkins County (southwestern to northeastern portions)	16	3-5 p.m.	35	*4-6			3	6	Hail	Storm moved northeastward.
NEBRASKA Deuel to Lincoln Counties	16	3-5:30 p.m.	80	*3-5			3	5	Hail	Hailstones size of golf balls. Storm moved eastward.
DELAWARE Bridgeville, Sussex County	16	3:45 p.m.					5	1	Electrical	Lightning started blaze in lumber yard.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Hooker (3 miles southwest of), Texas County	16	3:50 p.m.				5	3		Wind and dust	Severe duststorm caused 12-car pile-up. 5 persons received minor injuries.
COLORADO Morgan, Washington, Yuma, and Phillips Counties	16	Afternoon						4	Hail and rain	Scattered hailstorms throughout most of northeast damaged crops. Hailstones up to 1 inch in diameter fell around Otis and Yuma, where damage to wheat and other crops reported heavy. $50,000 crop damage in Phillips County. Storm moved northeastward.
DELAWARE Wilmington area, New Castle County	16	Afternoon						1	Electrical and rain	Lightning associated with violent thunderstorms struck at least 6 places in and around Wilmington. Power lines went down, flash floods reported, property damaged by lightning, etc.
NORTH CAROLINA Vance, Nash, and Wake Counties	16	Afternoon						4	Hail	Tobacco damaged in fields.
PENNSYLVANIA Pittsburgh and Johnstown areas Allegheny and Cambria Counties	16	Afternoon				1	5		Rain, electrical, and wind	Heavy rain caused flooding to depths of 5 feet in some basements. Lightning tore rear wall from house and winds downed many trees and utility lines. Several homes and barns burned by lightning. Storm moved eastward.
PENNSYLVANIA Scranton, Lackawanna County	16	Afternoon			3	3			Electrical	Lightning bolt struck tree at Scranton golf course under which 6 men were standing. Bolt killed 3 men instantly and burned the other 3 quite severely.
NEW JERSEY Bergen County (northern and central portions)	16	4-8 p.m.					4		Rain, wind, and electrical	Lightning struck gasoline service station and at least 9 homes. Power- and communications lines downed by falling trees and poles. Highways flooded in a few localities.
NEW JERSEY Gloucester, Camden, and Burlington Counties	16	4-10 p.m.					4		Rain, wind, and electrical	Thunderstorms, with heavy rain and high wind caused flooding of highways, especially at underpasses, and disrupted power and telephone services when utility poles and trees blown down.
MARYLAND Benson (near), Harford County	16	Late afternoon			1			1	Electrical	Bolt of lightning struck and killed man playing ball.
MARYLAND Baltimore	16	Late afternoon						1	Wind, rain, and electrical	Sudden heavy thunderstorm uprooted some trees, caused some local flash floods in city streets, and started a number of fires from lightning flashes.
PENNSYLVANIA Southeastern counties	16	Late afternoon-early evening					5		Wind, electrical, hail, and rain	Series of thunderstorms brought high winds, severe lightning, and some hail to southeastern counties. Winds flattened 2,000 boy scout tents and several shower baths at Valley Forge, in addition to damaging numerous roofs and buildings in vicinity. Lightning took its usual toll in burned-out electric transformers and house fires. Manufacturing plant at Bristol struck by lightning with $150,000 fire occurring. Heavy rain caused some flooding in homes and streets. Storm moved northeastward.
TENNESSEE White Pine to Sneedville, Jefferson County to Hancock County	16	5-5:15 p.m.					1		Hail	Severe hailstorm did considerable damage to crops, especially tobacco. Damage heavy at Russellville and Whitesburg.
NEBRASKA Chase County (northern portion)	16	5-6 p.m.	20	*5-10			2	6	Hail	Hailstones 1/2 to 2 inches in diameter. Storm moved eastward.
NEBRASKA Chase and Dundy Counties	16	5-6 p.m.	25	*1/2 to 7			3	6	Hail	Hailstones size of golf balls. Storm moved eastward.
NEBRASKA Brewster and vicinity, Blaine County	16	6-6:30 p.m.	10	880				3	Hail	Hailstones marble sized to 2 inches in diameter. Many windows broken. Considerable property damage. Storm moved northwestward.
CONNECTICUT Southwestern portion	16	6-7 p.m.					3		Electrical, wind, and dust	Violent thunderstorm during midst of heat wave caused scattered damage in greater bridgeport area. Lightning struck 3 homes in Easton and 1 in Westport. Damage estimated at $2,000 to 1 home from fire; others light damage to TV

See footnotes at end of table.

CONNECTICUT (Cont'd.)										antennas and roofs. Large tree blown on wires in Milford caused power failures; scattered failures in parts of affected area. Dust blown by winds up to 45 m.p.h., preceding rain, hampered traffic with low visibility in Bridgeport. Storm moved southeastward.
TENNESSEE Harriman and vicinity, Roane County	16	6:30-7:30 p.m.						1	Wind, rain, and electrical	Strong winds blew over TV antennas, ripped shingles from roofs, uprooted trees and blew over 12-foot high wall. Low areas and basements flooded. Lightning struck powerlines and 1 home where hole burned in hot water heater.
NEBRASKA Lexington (west of), Dawson County	16	8:15 p.m.			0	0			Funnel aloft	
KANSAS Osborne County	16	8:15-10 p.m.			0	0			Tornado, funnel aloft, and electrical	Heavy thunderstorm with very turbulent clouds prevailed from 8:15 to about 10 p.m. 1 massive funnel cloud observed to touch ground about 4 or 5 miles north of Downs in pasture momentarily at 9:25 p.m. Second funnel observed aloft about same time. Lightning flashed continuously. Storm moved northeastward.
NEBRASKA Doniphan (near), Hall County	16	8:18 p.m.			0	0			Funnels aloft	4 funnels reported moving northeastward.
NEBRASKA Hayes, Frontier, Hitchcock, and Red-Willow Counties	16	Evening						4	Hail	Hailstones up to size of baseballs. Considerable property damage.
NEBRASKA Mt. Clare (near), Nuckolls County	16	Night		Narrow	0	0	3	1	Wind or tornado (suspected)	Possible tornado.
KANSAS Northwestern and north-central counties	16								Hail	Numerous hail-loss claims paid in Cheyenne, Rawlins, Graham, Rooks, Phillips, Smith, Osborne, and Trego Counties.
MINNESOTA Martin County	16			1	0	0	3	4	Tornado (suspected), rain, and funnel aloft	5 miles northeast of Dunnell sheriff's office reported funnel cloud. 1 barn demolished. Heavy rain flooded highways and farmland. Funnel cloud aloft observed near Ceylon. Storm moved northeastward.
TENNESSEE South Holston Lake, Sullivan County	16							1	Wind	Strong winds wrecked boathouses and swamped and sank numerous boats.
	16									Minor storms also reported at Anniston, Ala.; Orange City and in Lyon and O'Brien Counties, Iowa; near Loretto and St. Paul and at Red Cloud, Nebr.; in Alexander, Catawba, Mecklenburg, Rowan, and Union Counties, N. C.; at Fountain City, Tenn.; and in Green Bay area, Wis.
MINNESOTA	16-17	A.m.-16th - a.m. 17th			3		°7	C	Rain and hail	Heavy rain accompanied by hail damaged crops, eroded farmland, and caused severe flooding throughout southwest and central and throughout parts of west-central and south-central. Record-breaking 24-hour rainfall totals fell in numerous areas; Marshall 8.70 inches, Minnesota 8.67, Tyler 8.57, Montevideo 7.30, Willmar 6.82, and Litchfield 6.80. Hardest hit community was Marshall, where $2,256,000 estimated property damage due to resulting severe flood. Numerous unofficial rainfall totals of 10 inches reported. Crop damage due to flooding and eroded soil estimated over $9,000,000. Wild life throughout area also hit quite hard. Storm moved eastward. See Climatological Data, National Summary, for June 1957 for description of resulting flood and attending damage.
SOUTH DAKOTA Southeastern portion	16-17	Noon 16th to morning 17th			4		6	6	Rain, hail, wind, and electrical	Heaviest rains on afternoon of 16th, along line from 7 miles northwest of Yankton to 6 miles north of Flandreau. Unofficial reports indicated 6 to 11 inches along this line, with greatest falls northwest of Sioux Falls. Flash floods developed, with considerable loss in Sioux Falls area. 4 deaths resulted from automobiles driving into washouts. Fifth person

SOUTH DAKOTA (Cont'd.)										still missing at last reports. Much hail damage to crops in Yankton, Turner, and Minnehaha Counties. Hail damage to buildings minor. Scattered wind damage, but no funnels were reported. Lightning damage minor.
	16-17									Minor storm also reported near Dawson, Nebr.
NEBRASKA Blair, Washington County	17	Early a.m.					4	1	Electrical	600 pair of underground telephone cable burned in 3-block area.
MISSOURI Martinsville (1 mile north of), Harrison County	17	5-5:30 a.m.				2			Electrical	2 men hit by lightning and temporarily crazed.
IOWA Widely scattered points	17	Throughout day			0	2	5	4	Wind, rain, electrical, and funnels aloft	Wind and rain in local thundershowers damaged buildings and utilities. Lightning injured farmer, and housewife. Funnel clouds reported near Storm Lake at 5:20 a.m.; north of Des Moines at 2 to 3 p.m., and south of Marshalltown, time unknown.
ARKANSAS Piggott (10 miles southwest of), Clay County	17	Noon	8	*1			4	4	Hail and wind	Hailstones averaged 1/2 inch in diameter, with some 1 inch in diameter. Considerable hail damage to crops. Wind damage to houses, barns, and trees. Outbuildings destroyed. Storm moved eastward.
TEXAS Bridge City, Orange County	17	1:29 p.m.			0	0			Funnel aloft	
OHIO Hamilton County	17	2 p.m.							Rain and electrical	Storm deposited rainfall in localized area in Cincinnati between Mt. Airy Fores and Spring Grove cemetery determined by bucket survey to range upward to 8 inches. 5 to 6 inches fell within 1 hour to give severe localized flooding as far north as Cumminsville and Mt. Healthy. Abbe Observatory, 1 mile distant recorded 2.53 inches. Several lightning fires reported.
CONNECTICUT Hartford County	17	Afternoon			0	0			Dust devil	Dust devil moving about 200 feet blew over lawn furniture and lifted lids off garbage cans in Windsor Locks. Weather at time sunny, scattered clouds, and very warm.
NORTH CAROLINA Person, Forsyth, and Cleveland Counties	17	Afternoon			1	2	3		Electrical and wind	Lightning killed 1 construction worker, injured 2 in Forsyth County. Scattered lightning and wind damage.
SOUTH DAKOTA McPherson and Edmunds Counties	17	3:30-4:25 p.m.			0	0			Funnel aloft	Funnel cloud aloft sighted between Eureka and Ipswich. Last seen near Wetonka moving eastward.
TENNESSEE Powell Community, Knox County	17	4 p.m.					4	1	Wind	Winds associated with severe thunderstorm blew down 500-foot long aircraft hangar, destroyed light airplane, and damaged 9 others. Steel beams of hangar blown from 50 to 100 feet.
TENNESSEE Oak Ridge, Anderson County	17	4:25 p.m.				1		1	Wind and electrical	Lightning struck house, causing minor damage and 1 minor injury due to flying debris. Trees downed and power service disrupted.
INDIANA Vanderburgh and Warrick Counties	17	5:30 p.m.					4	1	Rain and electrical	At Evansville, several inches of rain in short time flooded city streets, homes, and some business places. Barn near Newburgh struck by lightning and burned with loss of $20,000.
TEXAS Muleshoe area, Bailey County	17	5:45 p.m.			0	0			Funnels aloft	2 funnels reported.
TENNESSEE Cottontown Community, Sumner County	17	9 p.m.						1	Electrical	Storehouse and contents ignited by lightning and burned to ground.
KENTUCKY Shelby County	17	P.m.				1			Electrical	Man suffered burns caused by lightning.
TENNESSEE Mt. Carmel area, Sinai, Pilot Knob, and Brown Springs Community, Greene Co.	17	P.m.							Wind and hail	In Mt. Carmel-Sinai section, barn demolished, several roofs blown from barns and houses, garage blown from its foundation, and trees broken. In Brown Springs Community, hail did considerable damage to tobacco and corn, and part of barn roof blown off. At Pilot Knob, several

					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE (Cont'd.)										barns destroyed or heavily damaged and several large trees uprooted. Storm moved northward.
TENNESSEE Knoxville vicinity, Knox County	17	P.m.						1	Wind and electrical	Strong winds blew down numerous trees and limbs, causing extensive damage to powerlines. Lightning struck 2 transformers.
TENNESSEE Oneida, Scott County	17	P.m.						1	Wind and rain	Part of store roof blown off, allowing rain damage to dry goods. Several trees and TV antennas blown down.
TENNESSEE Bristol (near), Sullivan County	17	P.m.							Wind and rain	20-minute downpour with strong winds leveled corn, extensively damaged tobacco plants, and felled some trees.
INDIANA Harrison County	17				3	2	1	1	Electrical	On Blue River between Milltown and Fredericksburg, 3 boys killed and 2 injured by lightning.
KENTUCKY Marion County	17						4		Electrical	Lightning struck and destroyed school building and home.
TENNESSEE Ritta Community, Knox County	17							1	Wind	Concrete-block chickenhouse about 150 feet long demolished.
TEXAS Lamb, Hale, Swisher, and Castro Counties	17								Hail and funnel aloft	Funnel aloft reported northwest of Olton, Lamb County. Heavy hail and rain leveled uncounted acres of wheat nearly ready for cutting in the 4 counties.
TEXAS Whiteface (near), Cochran County	17								Electrical and funnel aloft	2 homes set afire by lightning and oil storage tank burst into flames as result of lightning bolt. Funnel aloft reported 2 miles southwest of Whiteface.
	17									Minor storms also reported at Grove Hill, Ala.; Hoopeston, Ill.; in Washington County, Ky.; at Fayette, Mo.; Eldorado and Weatherford, Okla.; Fountain City, Tenn.; near Abernathy and at Dimmitt, Tex.; and in Barron, Polk, and St. Croix Counties, Wis.
MICHIGAN Scattered Sections of State	17-18	Afternoon 17th-early morning 18th			2	5	5	4	Wind, electrical, hail, and funnels aloft	High winds and lightning caused scattered damage in many sections of State. Drive-in theater near Ionia nearly wrecked by winds. Hail damaged crops in a few areas. Lightning killed woman near Grand Rapids and man in Huron County. Funnels aloft reported near Flint, and Pinckney in Livingston County.
WISCONSIN Oconomowoc, Waukesha County	17-18	11:30 p.m. 17th - 1 a.m. 18th					3	3	Wind, hail, and rain	High winds, large hail, and heavy rain. Storm moved eastward.
CALIFORNIA Southern portion	17-26								Heat	Above-normal temperatures prevailed last 2 weeks of June in most areas, but unusually high temperatures and low humidity in south, resulted in considerable sunscald and heat damage to walnuts, avocados, strawberries, string beans, and avocado foliage, and increased drop of citrus set. Loss to strawberries in Oxnard district estimated at $100,000; 40 percent loss to string bean crops in San Diego County; 50 percent grape damage in Coachella Valley. At San Diego 97° maximum on 18th was highest June temperature of record, 104° at Los Angeles City Office on 18th highest June temperature since 1917, and 100° at Airport highest of June record at that station. Several stations in southeastern deserts reached 120° or higher, Cow Creek 123° on 25th and 27th. Fire danger higher than normal with several bad fires in south.
INDIANA South Bend and Mishawaka, St. Joseph County	18	1:22-3:27 p.m.					°4	C	Wind and rain	Heavy rain flooded streets and basements of communities of area, with estimated loss of $3000. Wind blew over trees which cut utility lines and crashed on houses and cars with loss of about $7,000.
NORTH DAKOTA Cavalier County	18	2:30 p.m.					1	3	Hail	Some grain fields damaged with hail as large as golf balls.
INDIANA Lagrange, Lagrange County	18	Afternoon					4	1	Wind	High winds damaged some buildings, uprooted trees, and tore down some utility lines.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NORTH CAROLINA Pitt and Beaufort Counties	18	Afternoon					4	4	Tornado (suspected), wind, electrical, and hail	Possible small tornado destroyed store and several other buildings in Pitt County. Several cattle killed by lightning. Hail damaged crops.
OHIO Marion, Marion County	18	Afternoon					5	1	Electrical and wind	While there was minor wind damage in this storm, major damage was by lightning strikes. DeKalb Hatchery hit and burned, and radio station tower damaged.
OHIO Ashtabula, Ashtabula County	18	Afternoon							Electrical	Destructive lightning fire occurred.
WEST VIRGINIA Ravenswood, Jackson County	18	4:45-5 p.m.	1	1000			4	1	Wind, hail, rain, and electrical	Roofs blown off exposing contents of residences to damage from heavy rains, trees uprooted, picture windows blown out, some damage to a church by lightning strike. Storm moved east-southeastward.
PENNSYLVANIA Eastern and southeastern portions	18	Afternoon -Evening				3	4		Electrical, hail, and rain	Several barns and homes fired and 8 cows electrocuted by lightning. Hail size of marbles fell during storm, but no damage estimate reported. Heavy rain resulted in some local flooding in streets and house basements. Storm moved eastward.
VERMONT East Franklin to West Berkshire, Franklin County	18	6:05-6:15 p.m.	4	500	0	0	5	1	Tornado	Storm destroyed 1 home and damaged many others. Many eye-witnesses to storm cloud, described by some as having "two tails." Storm attended by hail size of golf balls which broke many windows and damaged roofs. Storm moved northeastward.
ALABAMA Vernon, Lamar County	18	6:30 p.m.					4	1	Thundersquall	Damage to new stadium and other buildings, trees, and TV antennas.
WEST VIRGINIA Upshur County	18	7:20-7:40 p.m.						2	Wind and rain	Trees blown down, roofs damaged, telephone service disrupted; some hay lodged. Storm moved northeastward.
TENNESSEE Greeneville, Greene County	18	P.m.						1	Rain	Cloudburst caused flooding of roads, evacuation of 1 home, and damage to fish hatchery where 100,000 minnows lost.
SOUTH CAROLINA Greenville area, Greenville County	18	Night			1	1	3	1	Electrical, wind, and rain	Lightning struck and burned home; wind and rain damaged another.
TENNESSEE Bluff City, Sullivan County	18								Wind and rain	Power service disrupted by wind-blown trees. Wind and water caused considerable damage to crops, washing away tobacco and knocking down corn.
	18									Minor storms also reported at Cloverdale, Ala.; Flora and Metcalf, Ill.; in Murray, Pipestone, and Renville Counties, Minn.; at Clinton, Mo.; and Cleveland, Ohio.
NEW ENGLAND Central and northern portions	18-19	P.m. 18th - p.m. 19th			2	5	6	4	Electrical, wind, rain, and hail	Violent thundersqualls cut swath of destruction from western Vermont southeastward across southern Vermont, central and southern New Hampshire, southwestern Maine, and northern and east-central Massachusetts. Tornadoes which were spawned by these squalls recorded elsewhere. 2 men killed in Massachusetts when struck by lightning. Widespread damage resulted from effects of lightning and wind, and, locally, heavy losses caused by torrential downpours and hail. Slow-moving cold front and squall line moved over northwestern Vermont evening of 18th, but most of area affected in afternoon of 19th.
TEXAS Livingston (6 miles west of), Polk County	19	1 p.m.			1	1			Electrical	2 men struck by lightning, 1 killed.
NEW HAMPSHIRE, Newington, Rockingham County	19	1:35-1:37 p.m.	1/4	75	0	1	4	1	Tornado	Several witnesses saw funnel cloud. Steel screen of drive-in theatre, 50 x 100 feet, destroyed with loss of $25,000. Boy picked up by wind and carried about 40 feet, not seriously hurt but terrified. About 100 speaker posts (4 feet high) set in cement blocks downed. Storm moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MAINE and NEW HAMPSHIRE Off-Shore from York Beach, Maine to Sea-Brook Beach, N. H.	19	2 p.m.			0	0			Waterspouts and funnels aloft	Waterspouts and funnels offshore reported by witnesses. 1 observer reported 9 funnels sighted to north and east of Portsmouth, N. H. These funnels and spouts apparently developed from same squall that spawned Newington, N. H., tornado about 25 minutes earlier.
CONNECTICUT Central portion	19	2-4 p.m.	1/4	400	0	7	5	C	Tornado, electrical, wind, and hail	Violent thunderstorms, mostly in central counties and small tornado in Glastonbury, Hartford County. Tornado at 2:30 p.m., completely destroyed tents covering 70 acres of shade-grown tobacco. Large wagon driven and 500-gallon drums blown into side of curing barn, but barn damage slight. Tent poles of 6-inch diameter twisted and broken off at ground, cloth ripped beyond repair and plants ruined by hail and removal of shade covering. 5 huge trees blown over at different angles and 2 large pine trees sheared off 15 feet above ground. 2 curing barns blown in, but not unroofed or torn by wind. Driver of loaded bus facing wind claimed bus was driven back 5 feet with brakes on and in low gear. Tornado damage estimated in excess of $300,000. Bull killed by lightning in Columbia with $1,000 loss. Lightning struck dozens of homes and structures from Hartford southward to New Haven with small fires in many cases. 4 persons injured by lightning; remainder in automobile or pedestrian accidents. Hail damaged apples and truck crops in New Haven area to extent of $25,000. Numerous but short power failures throughout area. Storm moved northeastward.
MASSACHUSETTS North Sudbury, Middlesex County	19	2:47 p.m.	1	25	0	0	4	1	Tornado and hail	Discontinuous path, with main path 1/4 mile long through orchard and farm buildings. Barn deroofed, machine shed destroyed, and about 30 trees broken or uprooted. Much debris blown to north, to left of storm's path, or to northeast, in line with storm, but some went in other directions, even to southwest. 2-gang plow carried 20 feet and trees hurtled through air as far as 100 feet. Funnel sighted. Small amount of hail, up to 1/2 or 3/4 inch in diameter, fell briefly after tornado. Storm moved northeastward.
MASSACHUSETTS Lancaster, Worcester County	19	Afternoon	1-3/4		0	0	4	1	Tornado and hail	Storm said to look "something like a little smokestack" felled trees, and snapped utility poles. Several trees sent crashing against buildings. Hail up to golf-ball size fell for several minutes in and around storm area, covering ground 1/2 inch deep. Area of damage by hail 3/4 mile wide. Funnel thought to have been very narrow. Electrical power restored in 24 hours by 10 repair crews working through night. Storm moved eastward.
NORTH CAROLINA Lee, Gaston, Mecklenburg, Wake, Catawba, Rowan, Iredell, Cumberland, Wayne, Hoke, and Cabarrus Counties	19	Afternoon			2	47	5	4	Electrical and wind	Lightning killed 2 soldiers and injured 47 at Fort Bragg, set several fires, and damaged utilities in several counties. Wind damaged planes and facilities at Charlotte Airport, did scattered damage to buildings over wide area.
MASSACHUSETTS Bedford, Middlesex County	19	3 p.m.	1/2	100	0	0	2	1	Tornado	Witness reported funnel cloud touching surface. 30 x 6 foot portion of Post Office roof torn away, including 2-inch planking and 30-foot 6 x 8-inch timber beam. Tornado moved northward.
RHODE ISLAND Providence County	19	4-6 p.m.					4		Electrical and wind	Damage from violent thunderstorm concentrated in Burrillville area, northwest of Providence. Lightning-caused fires destroyed barn, including hay and machinery, and small cottage with total damage set at $10,000. Wind and lightning caused power and telephone failures to several thousand users in Pascoag-Woonsocket area. Crop damage negligible.
TENNESSEE St. Elmo, Hamilton County	19	4:30 p.m.			1		1	1	Electrical	Lightning struck tree, killing woman underneath.
TEXAS Round Rock (2 miles north of), Williamson County	19	5 p.m.			0	0			Tornado	

See footnotes at end of table.

KANSAS Johnson County	19	7:10-7:35 p.m.	12	*2				5	Hail	Hail ranging from pea to marble size fell across northeastern corner of county. Accumulated to more than 1 inch deep. Storm moved southeastward.
MINNESOTA Western half	19	P.m.					1		Hail	Hail damage reported in 19 counties. At Hallock, Kittson County, hail reported size of golf balls. Ground completely covered for short period at 6 p.m. Hail size generally 1/4 to 1/2 inch in diameter. Details from other counties not available. Insurance claims have been submitted.
NORTH DAKOTA Traill County	19	Evening					1	4	Hail	Hailstones as large as golf balls; some fields severely damaged.
	19									Minor storms also reported near Philadelphia, Pa.; in Camden area and in Spartanburg County, S. C.; and at Beaumont, Tex.
SOUTH CAROLINA Charleston County	20	Noon						1	Rain, wind, and hail	Line of thunderstorms moved over Charleston from east and southeast. Heavy rain caused flooding of streets. Trees blown down and power disrupted temporarily.
ALABAMA Brewton, Escambia County	20	1:45 p.m.			1		1	1	Electrical	Man killed on paper mill construction job.
LOUISIANA Sulphur (5 miles northwest of), Calcasieu Parish	20	2:56 p.m.							Funnel aloft	Reported by public.
LOUISIANA Over Lake Pontchartrain	20	3:28 p.m.							Funnel aloft	Reported by pilot.
WYOMING Barnum, Johnson County	20	3:30 p.m.	12						Hail and rain	Hail 4 inches deep in local areas; destroyed some wheat and alfalfa.
ARIZONA Tucson, Pima County	20	Afternoon			0	0	3	1	Dust devil	House unroofed.
NORTH DAKOTA Stutsman County	20	Afternoon					4	4	Wind and hail	7 buildings demolished on 2 farms by wind, damage $20,000. Hail damage $10,000.
NORTH DAKOTA Barnes County	20	Late afternoon					1	4	Hail	Some hailstones reported as large as baseballs.
NORTH DAKOTA Oakes (near), Dickey County	20	6:15 p.m.	2	30	0	0	4	3	Tornado and hail	2 funnels seen. Airplane and hangar destroyed. Roof of lumber company ripped off. Houses and garages damaged. 25 to 30 trees uprooted. Crops damaged by hail. Storm moved eastward.
NORTH DAKOTA Fargo (10 miles southwest of), Cass County	20	6:30 p.m.			0	0			Tornado	Tornado moved southward.
SOUTH DAKOTA Martin (southwest of), Bennett County	20	6:30 p.m.				1			Electrical	Lightning injured man mowing near tree.
NORTH DAKOTA Fargo area, Cass County	20	6:40 p.m.	30	500	10	103	7		Tornado and rain	Tornado first seen 30 miles west of Fargo at Wheatland and then Casselton. Several funnels sighted at Casselton. Tornado struck in new section in northwestern Fargo, destroying nearly all property in area of 5 city blocks wide and 20 blocks long. It narrowed somewhat as it moved eastward. 1,364 homes damaged or completely destroyed. No damage reported west of Fargo, but 3 farms east of Fargo in Clay County, Minnesota damaged and Moorhead Rod and Gun club leveled by same tornado. Heavy rain after tornado added to damage. Many lives saved by the Weather Bureau warnings.

See footnotes at end of table.

					Killed	Injured	Property (exclusive of crops)	Crops		
COLORADO Burlington, Kit Carson County	21	4-4:30 p.m.	5	*5			2		Hail and wind	Small hail to depth of 1 inch damaged crops heavily in radius of 5 miles around Burlington.
NEBRASKA Clinton (1/2 mile north of), Sheridan County	21	4:30-4:45 p.m.	2	880			1	3	Hail	Hailstones 1/2 to 1 inch in diameter. Storm moved eastward.
MINNESOTA Cottonwood County	21	5 p.m.					1	4	Rain	Crop damage due to flooded fields. Storm moved eastward.
MINNESOTA Winthrop (west of), Sibley County	21	5 p.m.							Wind	3 barns flattened, outbuildings damaged, and trees blown over on 4 farmsteads.
KANSAS Gove and Trego Counties	21	5:30-8 p.m.	20	*8				5	Hail	Some damage in all parts of county, but main loss in strip from 8 miles southwest of Collyer to 5 miles northwest of Wakeeney. Hailstones averaged 1/2 inch in diameter. Wheat, oats, barley, and sorghums sustained main loss. Storm moved eastward.
ALABAMA Morgan, Limestone, and Lawrence Counties	21	6 p.m.					3	3	Hail and wind	Hail size of hens' eggs. Crop damage by hail. Wind for 1/2 hour damaged trees and caused several power failures. Storm in Decatur, Austinville, and Cedar Lake areas.
NEBRASKA Waco to Utica, York and Seward Counties	21	6:15 p.m.	6	Narrow	0	0	5	2	Tornado	Buildings on 1 farm destroyed, and damaged on 15 other farms. Tornado moved northeastward.
KANSAS Ellis County	21	6:15-6:30 p.m.	15	*10		1	4	5	Hail, wind, rain, and electrical	Main damaged area in east-central part of county. Hail ranged from 1/2 inch in diameter to hens' egg size. Hail driven by 80 to 85 m.p.h., winds. Trees, TV antennas, roofs, and sheds damaged. Small grains and pastures beaten into ground. Newly-planted row crops washed out or covered up. Man injured by falling tree limbs. Crop loss due to hail. Property damage largely from wind. Storm moved eastward.
NEBRASKA Bellwood (4 miles west of), Butler County	21	6:30 p.m.	1	120	0	0	2	1	Tornado	7 turkey houses destroyed. Tornado moved northeastward.
NEBRASKA Friend (north of), Saline County	21	6:30 p.m.			0	0			Funnel aloft	Reported by Highway Patrol.
NEBRASKA Seward County	21	6:30-9:30 p.m.					3	3	Wind	
NEBRASKA Valparaiso (north of), Saunders County	21	6:52 p.m.	Short	Narrow	0	0	1	3	Tornado	Funnel observed over open fields moving northeastward.
MISSISSIPPI Brooksville, Noxubee County	21	7-8 p.m.					4	2	Wind	Damaged roofs and some outbuildings.
KANSAS Ford to Reno Counties	21	7-10 p.m.			1	8			Wind, hail, rain, and funnel aloft	Severe winds and hail locally from Ford County through Reno County. Tree limbs broken in Dodge City. 2 men injured when their car ran into tree when heavy rain obscured their vision at Dodge City. In Pratt, trees, powerlines, and roofs suffered damage from wind. Hutchinson experienced the greatest damage. Severe winds hit about 9:14 p.m., principally in northern part of town. 1 funnel cloud sighted close to ground west of town. Man killed when large portion of roof 100 feet west smashed into his home. His 3-year old son blown out window. Man driving into Hutchinson at 85 m.p.h., said wind-driven tumbleweeds passed him. Many buildings including State Fairground grandstand unroofed, truck terminal demolished, and many window lights broken. Many electric and telephone wires broken, resulting in some fire damage. Numerous automobiles damaged by flying debris or falling trees. Streets blocked. Storm moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS Mitchell, Jewell, and Republic Counties	21	7:30-8 p.m.			0	0			Tornado, funnel aloft, wind and electrical	Funnel cloud observed to form aloft north of Beloit and passed northward over Randall about 7:40 p.m. At about 8 p.m., tornado dipped at Norway, Republic County, uprooting long row of cottonwood trees which blocked highway, damaging barn and other buildings, and disrupting telephone and electric services. Considerable wind damage reported in Scandia and scattered areas over county. Lightning caused minor damage to house 10 miles south and 4 east of Beloit.
NEBRASKA Malcolm (5 miles north of), Lancaster County	21	8:39 p.m.			0	0			Funnel aloft	Reported by GOC.
NEBRASKA Omaha (6 miles north of), Douglas County	21	9:13 p.m.			0	0			Funnel aloft	Reported by GOC
NEBRASKA Sterling (southeast of), Johnson County	21	9:20 p.m.			0	0	3	2	Wind or tornado (suspected)	Possible tornado. Several sets of farm buildings damaged.
KANSAS Sedgwick County	21	10:09 p.m.	3	100	0	0	3		Tornado	Tornado hit ground about 4 miles west of Valley Center; moved northeastward.
MINNESOTA Knife Lake on Canadian border, Lake County	21	P.m.				2	1	1	Electrical	Lightning struck fishing camp.
NEW MEXICO Placitas, Sandoval County	21	P.m.			0	0	2	1	Dust devil	Roof on house blown off.
NEW MEXICO Grants, Valencia County	21	P.m.			0	0	2	1	Dust devil	Damage to partially finished building.
NEBRASKA York County (southwestern portion)	21	Evening	7-8	*3			2	3	Hail	Hailstones 1 inch in diameter. Storm moved east-northeastward.
KANSAS Western half	21								Hail	Hail occurred in many places over western part of State in addition to those specifically listed above. Most numerous claims paid were in Rooks, Osborne, Russell, Lincoln, Saline, Greeley, Wichita, Scott, Ness, Rush, Barton, Gray, Hodgeman, Pawnee, Edwards, Stafford, Reno, and Kingman Counties.
	21									Minor storms also reported at Centerville and in Plymouth County, Iowa; at Richmond, Mo.; and in Oakland, Osceola and Shelby areas and in Howard, and Merrick Counties, Nebr.
KANSAS Johnson County	21-22	11:30 p.m. 12:15 a.m.	8	400	0	2	5	4	Tornado	In midst of thunderstorm, tornado hit near DeSoto travelling eastward almost to Shawnee. Loud roar heard. Several houses unroofed, trees uprooted, trailer houses turned over, and 2 small houses moved off foundations.
MISSOURI Clay and Jackson Counties	21-22	Near midnight-12:30 a.m.	10-15	100	0	0	5		Tornado, wind, rain, and electrical	100-m.p.h., wind at WBAS in Kansas City. Many powerlines, telephone lines, trees, and homes damaged in Kansas City, and farm buildings in rural areas. Storm moved northeastward.
MINNESOTA Southern half	21-22	P.m. 21st -a.m. 22d					°6	C	Rain and hail	General rain averaging over 3 inches fell on top of Minnesota River Crest progressing downstream from Mankato to St. Paul. Heavy rainfall runoff resulted in higher crests. All of Minnesota Valley bottomlands inundated. Heaviest rainfall reported 5.38 inches at Coon Rapids just north of Minneapolis. Crow River Drainage had severe flooding due to this rain. Crests generally equal to or slightly over record April 1952 flood. Hardest hit community on Crow River was Delano. Some overflow also on Rum River. Crow and Rum Rivers drain into Mississippi River north of Minneapolis. Storm moved eastward. See Climatological Data, National Summary for June 1957 for details.

See footnotes at end of table.

MINNESOTA Beltrami, Clearwater, Red Lake, and Polk Counties	21-23	P.m. 21st -a.m. 23d					°6	C	Rain	Several days of rain climaxed with excessive rain on 21st and 23d, heaviest 24-hour amount reported 5.42 inches at Itasca State Park, resulted in severe flooding on Clearwater and Lost Rivers. Minor to moderate flooding occurred along Red Lake River from confluence of Clearwater River to downstream from Crookston. Storm moved eastward. See Climatological Data, National Summary, June 1957 for further description.
OKLAHOMA Wann (4 miles east of), Nowata County	22	1 a.m.					5	1	Electrical	Lightning caused fire which burned packing company.
OKLAHOMA Pawhuska (southeast of), Osage County	22	5 a.m.			0	0			Funnel aloft	Funnel aloft reported moving eastward.
MINNESOTA Albert Lea (near), Freeborn County	22	A.m.			0	0			Tornado (suspected)	Cooperative observer reported small twister; no damage.
OKLAHOMA Manchester Grant County	22	A.m.						1	Electrical	Lightning caused fire which burned garage, family car, tools, and laundry equipment.
OKLAHOMA Oklahoma City, Oklahoma County	22	A.m.						1	Wind and rain	Wind and rain caused 90 x 60 foot roof to collapse. Building was under construction.
TENNESSEE Buladeen Community Carter County	22	1 p.m.	1	1760			1		Hail	Crops heavily damaged. Ground white with hail which lasted for more than an hour before melting.
NORTH DAKOTA New Town (near), Mountrail County	22	1:15 p.m.			0	0			Funnel aloft	Reported moving southward.
TENNESSEE Corryton Community, Knox County	22	2:45 p.m.						2	Wind and electrical	Strong winds deroofed 1 house and either totally or partially deroofed several barns and sheds. Lightning killed 1 cow and injured 2 others.
MICHIGAN Hudsonville, Ottawa County	22	4:30 p.m.	Short	Narrow	0	0	4	1	Tornado or wind	Onion warehouse and contents destroyed. Nearby buildings not damaged.
MICHIGAN (Lower) Southern portion	22	Late afternoon -evening					5	4	Wind and hail	High winds caused damage in several counties. Hail also occurred in a few localities.
MICHIGAN Berrien and Cass Counties	22	5:05 p.m.	12	50	0	0	4	1	Tornado and hail	Funnel developed near Eau Claire, moved east-northeastward and lifted several times along its path. Several rural buildings destroyed or damaged and many trees uprooted.
MICHIGAN Dumont Lake, Allegan County	22	5:10 p.m.	1		0	0			Tornado	Small funnel moved northeastward over Lake and dissipated soon after hitting shore.
INDIANA Ardmore and Lydick (near South Bend), St. Joseph County	22	5:28-8:50 p.m.					3	1	Wind	Windstorm blew some trees down and caused minor damage to utility wires. Wind reached 51 m.p.h. at South Bend Airport.
IOWA Sioux City, Woodbury County	22	6-8 p.m.							Wind	Strong wind.
TEXAS Amarillo (80 miles north of), Sherman County	22	9:42 p.m.			0	0			Funnel aloft	
TEXAS Plains (7 miles south of), Yoakum County	22	9:47 p.m.			0	0			Tornado	Reported moving northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
TEXAS Littlefield (north of), Lamb County	22	10:02 p.m.			0	0			Funnels aloft	2 funnels reported.
TEXAS Plainview (5 miles north of), Hale County	22	10:18 p.m.			0	0	3		Tornado	Smashed truck and car. Occurred in rural area.
KENTUCKY Warren County	22	P.m.				1	4		Wind	Roof of tobacco building blown off, home damaged, power- and telephone lines knocked out, trees damaged, and TV antennas toppled.
OKLAHOMA Panhandle Counties	22	P.m.			0	0			Funnel aloft (suspected), hail, wind, and rain	Radar indicated possible funnel as a loud roar heard over Texhoma, Texas County. Spotted severe hailstorms caused extensive damage to crops in Panhandle. Areas affected included near Beaver River in Cimarron County, west and south of Texhoma in Texas County, and strip 10 miles long and 4 miles wide between Guymon and Hooker in Texas County. Just west of Texhoma, hail as large as golf balls fell for 45 minutes without any rain. Heavy rains with high winds throughout most of area helped to beat down and wash out crops.
OKLAHOMA Harper County	22	P.m.							Wind, rain, and hail	Thunderstorms caused scattered damage over County. Crops flattened and losses up to 50 percent reported. In Buffalo, wind blew over seven 60-foot light towers, and damage estimated at $400. Heavy rains caused considerable flooding and washing.
TENNESSEE Athens, McMinn County	22	P.m.							Wind	Wind snapped small trees, unroofed 1 or 2 buildings, and flattened cornfields.
MICHIGAN Bay City (near), Bay County	22	Evening	Short	Narrow	0	0	3	1	Tornado	Tornado wrecked barn and downed trees and utility lines.
ALABAMA Rutledge, Crenshaw County	22					1	1	1	Electrical	Details not available.
KENTUCKY Fayette County	22				1	2			Electrical	Lightning struck golf cart on which men were riding, causing death and injuries.
TEXAS Amarillo (30 miles north of), Potter County	22				0	0			Funnel aloft	
	22									Minor storms also reported at Goshen, Ind.; in Polk and Story Counties, Iowa; near Quenemo, Kans.; at Sedalia, Mo.; and at Guthrie, Stillwater, and Tulsa, Okla.
COLORADO Baca County (southeastern portion)	22-23	Night							Rain	Heavy rain caused flooding which washed out thousands of acres of row crops.
KANSAS Morton County (southern portion)	23	2-3 a.m.	20	*7				5	Hail	Damage mostly to small grains. Hailstones averaged 1/2 inch in diameter, but some as much as 2 inches in diameter. Storm moved south-southeastward.
OKLAHOMA Altus, Jackson County	23	7:20 a.m.			0	0			Funnel aloft	Public reported tornado which evidently remained aloft as no damage reports received.
COLORADO Stratton, Kit Carson County	23	8 a.m.			0	0			Funnels aloft	5 funnel clouds observed in vicinity of Stratton moving northward. None observed to reach ground.
OKLAHOMA Broken Arrow, Tulsa County	23	9:30 a.m.				1			Electrical	Lightning struck home causing damage to floor, cabinets, and counter top. Woman slightly injured by shock and bits of linoleum were buried in her chin.
OKLAHOMA Ellis County	23	A.m.							Wind, rain, hail, and electrical	Severe thunderstorms caused widespread damage to buildings, trees, crops, etc. 1 farmer lost 7 head of cattle when lightning struck shed. Heaviest damage reported in northern part of County. Heavy rains up to 6 inches caused considerable flooding and washing.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Payne and Pawnee Counties	23	A.m.							Wind, rain, and electrical	Thunderstorms caused damage to roofs, trees, TV antennas, utilities, etc. Lightning struck at least 2 buildings and several TV sets reported burned out. Storm flattened ripened crops and caused losses.
TEXAS Fort Worth, Tarrant County	23	Noon			1				Electrical	Woman struck by lightning, died of injuries.
TEXAS Terminal, Midland County	23	1:12 p.m.			0	0			Funnel aloft	Reported moving westward.
TEXAS Midland, Midland County	23	1:15-2 p.m.	15	*12			4		Wind and rain	Accompanied by heavy rain. Gusts to 74 m.p.h. Short-wave radio tower blown down, window glass broken, phone lines downed, sewer pump burst. Storm moved southward.
TEXAS Waxahachie (4 miles west of), Ellis County	23	1:50 p.m.			0	0			Tornado	
TEXAS Wink (north of), Winkler County	23	2-3 p.m.			0	0			Funnels aloft	3 funnels reported moving eastward.
TENNESSEE Bristol, Sullivan County	23	2:30 p.m.				1			Rain and electrical	Heavy rain flooded portion of city and damaged phone cables and crops. Lightning suspected as cause of fire in vacant paper mill. Woman treated for shock after near miss by lightning.
TENNESSEE Karns Community, Knox County	23	2:30-2:50 p.m.					3		Wind and electrical	Winds leveled 100-foot tool shed and destroyed granary. Lightning struck 60-foot oak tree, splitting it from top to bottom.
VIRGINIA Lebanon and Bristol areas, Russell and Washington Counties	23	2:34-5:40 p.m.					4	C	Rain and electrical	Heavy thundershower caused flash flooding. Estimated worst rainstorm in 10 years. Little Cedar Creek flooded, 2 miles east of Lebanon on Route 19. Damage to streets, roads, and buildings, and 1 footbridge washed out. Lightning set fire to 1 building in Bristol.
TEXAS Wink (40 miles southwest of), Reeves County	23	3:20 p.m.			0	0			Funnel aloft	
TEXAS Ft. Stockton area, Pecos County	23	4-4:25 p.m.	12	*5	0	26	5	5	Hail, wind, and tornado (suspected)	Storm moved southward, with center 7 miles west of Fort Stockton. Over 60-square mile area hail, average diameter 1-1/2 inches, largest 4-1/2 inches, fell heavily. Heavy damage to irrigated cotton crops; roofs damaged, windows broken, automobiles dented and glass broken, and livestock injured, a few killed. Heavy winds slammed hail through windows and property, snapped powerlines and trees. 19 farm laborers trapped in open fields unable to escape to shelter, several rather seriously injured. Other injuries caused by broken glass. Unconfirmed tornado reported 5 miles west of Ft. Stockton at 4 p.m.
KANSAS Rawlins County	23	5:30-6 p.m.	7	*2			3	4	Hail and wind	Major damage in areas about 8 miles northeast of Atwood. Hailstones varied from 1 to 1-1/2 inches in diameter. Hailstorm sounded like a stampede of buffaloes. Much damage to buildings, but some 6 or 7 sections of 40-bushel wheat ruined. Storm moved southeastward.
TEXAS Boerne (10 miles west-southwest of), Kendall County	23	7:10 p.m.			0	0			Funnel aloft	
TEXAS San Antonio (25 miles northwest of), Bexar County	23	7:50 p.m.			0	0			Funnels aloft	3 funnels reported.
NEW HAMPSHIRE AND VERMONT Upper Connecticut Valley	23	Evening					3	1	Electrical and wind	Violent thunderstorms raked area, causing widespread power and telephone service interruptions. Loss primarily due to felled trees and branches falling onto wires. A number of homes damaged by lightning-set fires.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
PENNSYLVANIA Susquehanna and Lebanon Valleys	23	Evening					5		Electrical	Near Lebanon, lightning fired large building of chemical plant which was completely destroyed as well as contents; total value $400,000. Numerous small fires occurred in homes and other buildings from Williamsport to Lebanon and electrocuted 10 cows at Beechwoods.
NORTH CAROLINA Forsyth and Yadkin Counties	23				2		5	4	Rain	Near cloudburst in Winston-Salem and over parts of Yadkin River Basin caused flash flood in city, on Yadkin and local tributaries. 2 persons drowned. Heavy damage in low areas.
TEXAS Fort Worth, Tarrant County	23				1				Wind	Strong winds reaching 50 m.p.h., overturned boat on Lake Worth, occupant drowned.
TEXAS Lamesa, Dawson County	23						1		Hail and wind	Accompanied by driving wind; damaged cotton crops in area. Storm moved southward.
	23									Minor storms also reported at Anniston, Gadsden, and Jasper, Ala.; in southwestern Dundy County, Nebr.; at Alva, Geary, Helena, Ringling, Vinita, and Watonga, Okla.; in Lancaster area Pa.; and at Moscow, Mt. Solon, and Staunton, Va.
TEXAS Jefferson County Airport (10 miles south of), Jefferson County	24	10:32 a.m.			0	0			Funnel aloft or waterspout (suspected)	
NEW JERSEY Fort Dix, Burlington County	24	Midafternoon				3			Electrical	3 soldiers injured when lightning struck emergency communications pole they were erecting on rifle range. Men treated for shock and superficial body burns.
MASSACHUSETTS Attleboro, and North Attleboro, Bristol County	24	Afternoon					4	1	Electrical and rain	Storm lasted 2 hours. Many buildings struck and some damaged by lightning. Streets flooded. Damage to stored merchandise by water amounted to $3,000.
RHODE ISLAND Providence County	24	Afternoon							Electrical and rain	Squall line resulted in locally heavy rains. Automobiles stalled by flooding of streets in Woonsocket and greater Providence. Lightning struck 2 homes in Woonsocket, with damage limited to toppled chimneys and electrical wiring. Minor power interruptions.
PENNSYLVANIA Statewide	24	Afternoon-evening			0	22	5		Electrical, rain, and wind	Lightning fired numerous structures throughout State while torrential rain caused local flooding to homes and streets. Trees and utility lines hard hit by strong winds. At Indiantown Gap, 22 Army reservists injured by lightning. Large tent near Philadelphia ripped to shreds. Storm moved eastward.
MONTANA Powder River and Carter Counties	24	6 p.m.	50	*1-1/2			3	5	Hail	Hailstones up to 2 and 3 inches in diameter near Olive. Some crops a total loss. Storm moving southeastward ended near Boyes.
TEXAS High Island (11 miles east of), Galveston County	24	8 p.m.			0	0			Waterspout	Reported about 2 miles offshore, moving westward.
	24									Minor storms also reported in area from Skowhegan to Waterville, Maine; at Silver City, N. Mex.; and at Bearden, Tenn.
SOUTH DAKOTA Beadle, Kingsbury, Lake, and Moody Counties	24-25	Night						4	Hail	Hail damaged crops crops. Damage estimates incomplete.
NEBRASKA Fillmore County (southern portion)	25	6-7 a.m.	10	*4-5			1	4	Hail	Hailstones small. Storm moved northeastward.
KANSAS Washington and Marshall Counties	25	7:15-8:30 a.m.	16	*5				4	Hail	Hail damage from northeastern Washington County southeastward into Marshall County, south of Marysville. Not much wind and most hailstones less than 1-1/2 inches in diameter.

See footnotes at end of table.

LOUISIANA New Orleans (5 miles east of), Orleans Parish	25	3 p.m.							Funnel aloft	Reported moving south-southwestward.
IOWA Rockwell City, Calhoun County	25	3:09 p.m.			0	0			Funnel aloft	Reported moving northeastward.
NORTH CAROLINA Davidson County	25	Late afternoon					4	4	Rain	Over 4 inches of rain caused flash flood in Lexington and vicinity; washouts, street damage and flooded basements in low areas.
MINNESOTA Minneapolis Hennepin County	25	7 p.m.					3		Rain and wind	Streets and basements flooded as storm sewers backed-up. Wind gusts up to 68 m.p.h., recorded at WBAS.
MINNESOTA Alden, Freeborn County	25	8 p.m.			0	0	3	3	Wind, hail, and tornado (suspected)	Trees uprooted, steel grain bin overturned, and tractor damaged. Growing crops damaged by hail. Farmer stated "it sounded like a bunch of bombers going over". Storm moved southeastward.
KANSAS Halls Summit, Coffey County	25	9:12 p.m.			0	0			Funnel aloft	Funnel cloud aloft sighted.
IOWA Winnebago County	25	9:30 p.m.					1	4	Hail	Crops destroyed.
MINNESOTA Norman County (central portion)	25	P.m.			0	0			Tornado (suspected)	Finley radar reported tornado. Trucker sighted funnel cloud.
MINNESOTA Southwestern half	25	P.m.							Hail	Loss reported in 15 western counties.
	25									Minor storms also reported at Pure Air, Mo.; near Coleridge, Nebr.; in Passaic County, N.J.; and at Lamont and Watonga, Okla.
MISSOURI Centerview, Johnson County	26	1 a.m.							Hail, wind and rain	Hail size of walnuts. Fruit trees, corn, wheat, and barley damaged.
MISSOURI Warrensburg area, Johnson County	26	1-1:30 a.m.			0	0			Funnel aloft and hail	Hail size of walnuts at Glendale, 8 miles southwest of Warrensburg. Funnel aloft 3 miles northeast.
MISSOURI Golden City Barton County	26	6:30 a.m.			1				Electrical and rain	Barn set afire by lightning. 1 man killed.
NEW JERSEY Union County	26	Midday				2			Electrical	2 golfers injured when struck by lightning. Both men treated for shock.
MARYLAND Baltimore	26	Afternoon			1	3			Electrical and rain	Youth killed as he took shelter from rain under tree on property of Maryland Training School Boys. 3 others stunned.
NEW JERSEY Maple Shade, Burlington County	26	3:30 p.m.			1	1			Electrical	Construction worker killed and another knocked unconscious when both struck by lightning.
MISSOURI Harrisonville, Cass County	26	4:30-7 p.m.							Rain and wind	3.63 inches of rain at Harrisonville from 4:30-7 p.m., caused local flooding.
NEBRASKA Chase County (western portion)	26	9:30-10:30 p.m.	16	*3			4	6	Hail	Hailstones 1 to 3 inches in diameter. Ground covered 2 to 4 inches deep. Storm moved southeastward.
NEBRASKA Dalton (southeast of), Cheyenne County	26	Evening	7	*2			1	5	Hail	
	26									Minor storms also reported at St. Charles, Mo.; in Bergen County, N. J.; at Bartlesville, Okla.; and at Watertown, Wis.
KANSAS Cheyenne and Rawlins Counties	26-27	Near midnight	20	*6					Hail	Hail fell over both counties. 1 strip in Cheyenne County from northwestern corner to central part which was the most damaging. Another strip extended from Yuma County, Colorado, to 6 miles southwest of St. Francis. Hail across central part of Rawlins County. Storm moved southeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KANSAS South-central counties	26-27								Hail	Hail loss Clearing House records indicated many losses paid in Rooks, Pratt, Reno, Kingman, Harper, Sumner, and Cowley Counties for hailstorms on these dates.
TEXAS Galveston, Chambers, Jefferson, and Orange Counties	26-27				9	450	°7	C	Hurricane "Audrey"	Hurricane Audrey formed in southwestern Gulf on June 25 some 350 miles southeast of Brownsville. Storm moved northward, with storm center reaching Gulf Coast just east of Sabine Pass morning of June 27. 7 persons lost their lives in sinking of fishing boat M/V Koturah of Pensacola which was under tow in heavy seas off Galveston. 1 person drowned in heavy undertow at Galveston Beach on 26th and an electrician killed as he sought to repair high-voltage lines during storm at Orange. Hurricane rains extended northward in Texas along eastern tier of counties, but tapered off sharply as storm left immediate coastal area. Flooding largely local in nature from inadequate drainage. Storm rain totals were, Jefferson County Airport - Beaumont 7.57 inches; Port Arthur 5.75 inches; and Orange 5.10 inches. As storm moved northward in Gulf, tides 3 to 4 feet above normal in Corpus Christi - Port Aransas section which caused some minor damage to beach installations and roads. Tide of plus 6.0 occurred at Galveston at 4:35 a.m., June 27. This elevation caused water 6 to 12 inches in depth on parts of Galveston Municipal Airport. Extensive advance evacuation of persons from Bolivar Peninsula southwest of High Island and almost complete evacuation of persons from Sabine Pass section. Tide at Sabine Pass was plus 8.3. 2 miles of State Highway No. 87 east of High Island destroyed. Eye of storm passed east of Sabine Pass, moving northward, and City of Orange was in western half of eye between 9 and 10 a.m., June 27.
LOUISIANA Micheaud, Orleans Parish	27	10 a.m.		25	0	0	4	1	Tornado	Occurred during passage of hurricane. Seen on radar; moved northeastward.
NORTH DAKOTA Fargo (25 miles southwest of), Cass County	27	10:25 a.m.			0	0			Tornado (suspected)	Unconfirmed tornado on ground reported.
NORTH DAKOTA Grand Forks (60 miles northwest of), Grand Forks County	27	12:30 p.m.			0	0			Funnel aloft	Funnel cloud observed by Highway Patrol moving northwestward and dissipating.
MINNESOTA Kittson County	27	2 p.m.			0	0			Funnels aloft	Several funnel clouds observed. 1 near Hallock, 3 near Humboldt, and 2 by pilot of light plane.
NORTH DAKOTA Pembina (near), Pembina County	27	2 p.m.			0	0			Funnel aloft	
ALABAMA Ryland, Madison County	27	2:30 p.m.					4	1	Wind	School unroofed by wind during "howling windstorm" which lasted 20 minutes. Large smokestack also blown down across part of building.
NEBRASKA Between Holbrook and Arapahoe, Furnas County	27	2:55 p.m.			0	0			Funnel aloft	Reported by GOC.
ARIZONA Douglas, Cochise County	27	Afternoon			0	3	5	1	Dust devil	C-47 aircraft blown off runway on take-off and then destroyed by fire.
MINNESOTA Alexandria (20 miles north-northeast of), Douglas County	27	3 p.m.			0	0			Tornado (suspected)	Barn destroyed.
MINNESOTA Ottertail (2 miles east of), Otter Tail County	27	3 p.m.			0	0			Tornado	Funnel cloud reported touching ground.
NEW JERSEY Bergen and Passaic Counties	27	3-8 p.m.					4		Wind, electrical, and rain	Winds to 55 m.p.h., downed trees and utility poles leaving several communities without power for 6 hours or longer. Telephone service also disrupted. Lightning struck church and

NEW JERSEY (Cont'd.)										numerous houses. Heavy rain flooded storm sewers, streets, and highways in a few areas.
ARKANSAS El Dorado, Union County	27	3:45-4 p.m.					3	1	Hurricane Audrey	Minor roof damage reported in northeastern section of City. This was the only damage attributed to the hurricane in Arkansas and was limited to area only 600 x 900 feet in size. Highest wind at El Dorado Airport was 26 knots, with gusts to 37 knots at 5:58 p.m., and 26 knots with gusts to 35 knots at 7:58 p.m.
MICHIGAN Saginaw, Saginaw County	27	4:30 p.m.			0	0			Tornado	Funnel developed just southwest of Saginaw, but showed little movement and dissipated 1/2 hour later. Witnesses said funnel moving northeastward dipped to surface briefly over Tittabawassee River.
NEBRASKA Nuckolls and Thayer Counties	27	7 p.m.	10	Narrow	0	0	4	2	Tornado and funnels aloft	2 sets of farm buildings badly damaged. 4 other funnels observed in adjacent areas. Storm moved east-northeastward.
NEBRASKA Between Shickley and Davenport, Fillmore and Thayer Counties	27	7:05 p.m.			0	0			Tornado and funnels aloft	3 funnels moving northeastward reported by Highway Patrol, 1 touched ground.
NEBRASKA Crete (west of), Saline County	27	7:46 p.m.			0	0			Funnel aloft	Reported by Highway Patrol.
MISSISSIPPI Philadelphia, Neshoba County	27	8:30 p.m.	4	50	0	9	4	4	Tornado	3 homes destroyed, 5 badly damaged; stockyards unroofed; much minor damage. Tornado moved northward.
ILLINOIS Prairie City, McDonough County	27	9:30 p.m.					4		Electrical	Large barn and contents burned.
MISSISSIPPI Houston (4 miles north of), Chickasaw County	27	10:10 p.m.			0	0	4	2	Tornado	Trees uprooted, some roofing damage.
LOUISIANA Arnaudville, St. Landry Parish	27	10:30 p.m.	Short		0	0	4	1	Tornado	Occurred during passage of hurricane. Several homes damaged, trees uprooted. Tornado moved northeastward.
TENNESSEE Dyersburg (near), Dyer County	27	P.m.			0	0		1	Tornado	At Big Boy Junction, 7 miles west of Dyersburg, Tornado destroyed sawmill, barn, and several small buildings. Couple reported seeing tornado's tail skip along ground for a few seconds before pulling back up into clouds.
IOWA Cherokee and Ida Counties	27	Evening					1	4	Hail	Crops destroyed.
VERMONT AND MASSACHUSETTS Central portions	27	Evening					4	1	Rain and electrical	A few places struck by lightning, but most damage caused by locally torrential rains which caused many road washouts, landslides, local floods, etc. In Tunbridge, Vt., barn collapsed and garage seriously undermined due to raging waters.
MISSISSIPPI Kosciusko, Attala County	27				1		3		Wind	Man electrocuted when he tried to upright utility pole downed by windstorm.
	27									Minor storms also reported at Gadsden and Talladega, Ala.; Wilford, Idaho; and in Allentown and Wilkes Barre areas, Pa.
LOUISIANA Entire State	27-28	A.m. 27th - a.m. 28th			400	1000	8	7	Hurricane Audrey	Center of Hurricane Audrey moved inland over southwestern corner of Louisiana during morning of June 27, 1957, and plowed diagonally across State into northwestern Mississippi by midnight. Center passed over Vinton, DeRidder, Winnfield, and Monroe. Eye of hurricane was about 35 miles in diameter as it moved inland, gradually closing in until it lost its identity near Winnfield. Entire State swept by winds of hurricane and tides rose along entire coast. Highest winds and heaviest damage extended from Atchafalaya River westward into Texas and northward from coast to LaSalle Parish, mainly within eastern semicircle. As hurricane approached coast, sea water rose over low-lying shoreline reaching height of 10.6 feet above mean Gulf level at Cameron on

See footnotes at end of table.

					Killed	Injured	Property (exclusive of crops)	Crops		
LOUISIANA (Cont'd.)										eastern edge of eye. Winds of gale force extended far eastward and winds up to 105 m.p.h., churned sea water over Cameron and most of Vermilion Parishes and whipped through Calcasieu, Jeff Davis, Beauregard, and Allen Parishes. Winds of near hurricane force reported as far north as LaSalle Parish. Heaviest rains extended northeastward in diverging path from hurricane center from Cameron and Calcasieu Parishes to East Feliciana Parish and on into southwestern Mississippi. Hurricane rainfall exceeded 10 inches in Jeff Davis and Acadia Parishes. Estimated 4,500 homes destroyed or irreparably damaged, with 95 percent of homes in Cameron and lower Vermilion Parishes in this category. About 100,000 homes suffered varying but lesser damages, mainly to roofing, with 90 percent of homes in some towns west of Atchafalaya suffering roof damage. Structural damage widespread in area 70 miles eastward from center inland for 100 miles. Large acreage of rice inundated by salt water, while corn blown down and lost over State except extreme southeast and extreme northwest. Cotton suffered loss from water in heavy rain area. Estimated 50 million feet of timber destroyed, with heaviest losses in Jeff Davis, Allen, Evangeline, and LaSalle Parishes. 40 to 50 thousand head of cattle perished, mostly by drowning. Estimated 400 persons lost their lives in Cameron and Vermilion Parishes (latest count of bodies 311), mostly by drowning, while 1 died in Alexandria and 1 in Jonesville as result of hurricane. About 1,000 persons injured in Cameron, Vermilion, Calcasieu, Jeff Davis and Acadia Parishes. Total damages derived from following estimates: Rice, Corn, cotton, and truck crops $6,000,000; timber 10,000,000; cattle 5,000,000; communication and powerlines 2,000,000; oil installations 20,000,000; buildings, shipping, automobiles, farm equipment, etc. 75,000,000; fur-bearing animals 2,000,000.
MISSISSIPPI Entire State	27-28	Night 27th - a.m. 28th					6	6	Hurricane Audrey	Greatly-weakened hurricane Audrey moved across northern portion of Mississippi through Greenville, Minter City, Oxford, and Corinth during night. Highest recorded wind speed 52 m.p.h., at Jackson and Greenwood. While some damage occurred on immediate Gulf Coast from winds and tides, southeastern and northwestern corners of State received very little damage from hurricane. Elsewhere squally weather swept State, blowing down corn, cotton, and beans, uprooting trees, breaking TV antennas and windows, snapping communications and powerlines and damaging roofs. These squalls were localized, but widely scattered. Hurricane spawned 4 tornadoes. Heaviest rains occurred in southwestern corner (4 to 6 inches) from Woodville to Bay Springs as heavy rain squalls moved northeastward from southwestern Louisiana in line diverging from path of hurricane. Damages including $565,000 from 4 tornadoes, listed separately, are based on best available data as follows: Crops (cotton, corn, beans) $4,000,000; communications and powerlines 500,000; timber 1,000,000; buildings and other property 3,500,000.
ILLINOIS South-central portion	27-28	Night			2		6		Rain	Rainfall of 5 to 10 inches in area 20 to 40 miles wide from Carlinville and Mt. Olive eastward through Pana and Windsor to Paris and into Indiana. 10 to 13 inches in southwestern Edgar County. Slow runoff from level land reduced damage. At Paris, more than 10 inches of rain flooded sewerage and water facilities, destroying reservoir dike. Crop losses heavy.
ALABAMA Northwestern half	28	Midnight - noon			2	1	5	5	Hurricane Audrey	High winds did widespread minor damage to roofs, trees, TV antennas, etc., with no heavy concentrations of damage. Man killed by "live wire" downed by falling tree in Birmingham, and woman killed when bus overturned 20 miles southwest of Birmingham on wet shoulder. Woman injured when wind caused vehicle to run off road. Most notable local damage was at Leighton, Colbert County, where barn destroyed and several houses suffered roof damage in 15-minute squall at 3:30 to 4 a.m. Crop damage mostly to wheat, corn, and peaches.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
MISSISSIPPI Brooksville, Noxubee County	28	12:32 a.m.	10	50	1	10	5	4	Tornado	Touched down 2 miles southwest, lifted and down again in town; 4 homes destroyed, cheese plant demolished, and several homes badly damaged; corn blown down and other crops destroyed. Moved northeastward across open country.
MISSISSIPPI Clara, Wayne County	28	6:30 a.m.	10	50	0	0	5	3	Tornado	Touched ground several times before striking town of Clara and several times afterward. Several buildings demolished, numerous homes and brick school badly damaged. Tornado moved northeastward.
TENNESSEE Giles County	28	6:40 a.m.						1	Wind	Winds from dying Hurricane Audrey blew limbs from trees and blew down phone and powerlines.
ALABAMA Clarke County	28	7:30 a.m.			0	0			Tornado (suspected) and rain	Thomasville Times reported that many small fish fell at Magnolia Terminal, near Thomasville, during shower of rain. This report verified by cooperative observer at Thomasville. Crayfish and tiny frogs also part of precipitation. The country southwest of Thomasville and over most of Washington County is sparsely settled and heavily wooded, and tornado could easily escape notice.
TENNESSEE McMinnville, Warren County	28	8 a.m.				1	4	1	Wind	Strong winds from dying Hurricane Audrey collapsed walls of factory under construction. Workman slightly injured.
ALABAMA Whatley area, Clarke County	28	8:30 a.m.	3	100	0	0	3	2	Tornado	Skipping path, touched in 7 places. On Indian Ridge Road, just east of Whatley, severe damage to 2 houses. Garage and considerable timber destroyed. Tornado moved northeastward.
ALABAMA Oakhill, Wilcox County	28	8:50 a.m.	2	35-100	0	0	4	1	Tornado	Church reduced to rubble, and furnishings not distinguishable. Other damage was to timber. Tornado moved northeastward.
ALABAMA Montgomery and Lowndes Counties	28	9:35 a.m.	13	120	0	0	4	1	Tornado	Path northeastward from 3 miles south of Hayneville to about 3 miles southwest of Hope Hull. Path mostly through pasture and wood land, with damage mostly to houses and barns. Man in house which was damaged beyond repair said house at the time it was hit was filled and surrounded by dark mist which looked like smoke.
ALABAMA Conecuh and Butler Counties	28	9:45 a.m.	20	150	0	0	5	3	Tornado	Tornado path northeastward, skipping from 4 miles southeast of Skinnerton, Conecuh County, to about 4 miles west-southwest of Liberty, Butler County. Path variable in width, ranging up to 400 yards when in weakened condition. Worst damage 3 miles south of Butler Springs, where 7 houses destroyed.
ALABAMA Excel, Monroe County	28	9:51 a.m.			0	0			Funnel aloft	Funnel cloud moved northeastward over town about 5 minutes before it was hit by tornado.
ALABAMA Monroe County	28	9:55 a.m.	10	100	0	4	5	3	Tornado	Began 1 mile south of Frisco City, moved northeastward. Skipping path ended near Bermuda. Most damage at Excel, where 4 persons injured. Timber damage in Bermuda area about $4,000. Eyewitness living about 200 yards from path of storm told of seeing cloud pass over his house about 5 minutes earlier.
TENNESSEE Cleveland, Bradley County	28	10 a.m.			1	1		1	Wind	Strong winds from dying Hurricane Audrey blew down 12-foot brick wall at construction project, killing 1 workman and injuring another.
ALABAMA Lowndes and Montgomery Counties	28	10-11 a.m.	35	150	0	8	5	3	Tornado	Path skipping, and at times rather broad, with scattered fallen trees occasionally as far as 200 yards from center of path. About $60,000 of total damage was at Devenport, on Highway 331, where all injuries occurred. Path began about 2 miles south of Fort Deposit, moved northeastward, and ended at Sprague Junction. Storm reached Sprague Junction at 11 a.m., about an hour after its beginning.
ALABAMA Montgomery County	28	10:03 a.m.			0	0			Funnel aloft	Eastern Air Lines plane reported tornado cloud west of Montgomery spotted by radar.
ALABAMA Butler County	28	10:15 a.m.	14	125	0	0	5	3	Tornado	Tornado moved northeastward. Path began about 6 miles southwest of Greenville and ended about 6 miles east-northeast of city. Bulk of damage to junior college just southeast of Greenville and in Kolb City, south-southwest of Greenville.
ALABAMA Conecuh County	28	10:25 a.m.	10	150	0	0	4	3	Tornado	Storm first sighted 4 miles west of Middleton Airport, Evergreen. Path began 5 miles west of Evergreen, and passed northeastward to 1-1/2

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ALABAMA (Cont'd.)										miles north of city. Path through woods and fields, on ground about 50 percent of time. House and store destroyed and barn damaged.
ALABAMA Conecuh, Covington, and Butler Counties	28	11 a.m.	12	200	0	2	4	2	Tornado	Began in Conecuh County, about 1-1/2 miles southwest of Brooke, Covington County, moved northeastward, and ended near Oaky Streak, Butler County. Path skipping. About $30,000 of damage in Brooke Community.
ALABAMA Crenshaw County	28	11:50 a.m.			0	0			Tornado	Reported by Highway Patrol who followed storm in progress moving northeastward toward Luverne. Sparsely-settled unproductive country, with damage confined to woods.
ALABAMA Conecuh County	28	Morning	1	Narrow	0	0	3	1	Tornado	Aerial inspection of path of tornado near Middleton Airport listed above revealed path of this storm about 500 yards northwest of main path being tracked. Barn and some timber destroyed. Tornado moved northeastward.
ALABAMA Montgomery County	28	Morning	Short	100	0	0	3	1	Tornado	Short path of fallen trees lying in opposite directions to ones on other side of path, across U.S. Highway 331, 1 mile north of Sellers. Tornado moved northeastward.
ALABAMA Montgomery County	28	Morning	5	150	0	0	3	1	Tornado	Tornado crossed U.S. Highway 231, then crossed U.S. 82 4 miles west-northwest of Downing, and ended about 3 miles northwest of Downing. Path northeastward through woods and pastures. House and barn destroyed. Path apparently on ground about 75 percent of time.
GEORGIA Most of State	28	All day					(4)	(4)	Wind, rain, and electrical	Strong winds and heavy rains associated with fringe affects of Hurricane Audrey caused minor but widespread damage over most of Georgia. Some areas hit by severe thunderstorms, causing even stronger winds. Damage to crops included blown over corn and peaches blown from trees. Many roofs damaged and electric and telephone services disrupted for thousands of people by falling trees and branches. North Georgia hardest hit, but extensive damage suffered as far south as Albany, Tifton, Fitzgerald, and Augusta.
OHIO Entire State	28	All day							Rain	Hurricane Audrey dropped large amounts of rain over State. Amounts greatest in broad band oriented southwest to northeast across middle of State where averages exceeded 2 inches and ranged locally to more than 4 inches. Smallest amounts, generally less than 1 inch fell in southeast. It was generally an all-day rain ending in early evening.
ALABAMA Barbour County	28	12:30 p.m.			0	0			Funnel aloft	Passed about 2 miles north of path of tornado which hit in late afternoon. Funnel cloud seen near Mt. Andrew moving northeastward.
NEBRASKA Sheridan County (northeastern portion)	28	Afternoon	20	*1			2	5	Hail	Crop losses 10 to 90 percent in storm area. Storm moved northeastward.
NORTH CAROLINA Eastern portion	28	Afternoon					5	4	Wind	Violent local thunderstorms scattered over eastern half of State, some damage most counties.
SOUTH CAROLINA Scattered areas	28	Afternoon			1	10	5	5	Electrical, wind, and rain	Series of severe local thunderstorms, apparently associated with squall line, moved northeastward across State. Minor damage widespread, with more extensive damage in Columbia area and Beaufort. Some of heavier damage reported included: at Columbia, 6 injured, power and communications disrupted; at Beaufort, severe storm lifted 2 trailers 50 feet, injured 1 person; at McColl, 1 injured; at Anderson, 1 injured; at Sumter, 1 injured; at Spartanburg, Barnwell, Walterboro, Florence, Olanta, McCall, Greenville, Cheraw, Bennettsville, Moncks Corner, Darlington, Timmonsville, Bishopville, Yemassee, Kingstree, Lake City, and Orangeburg damage reported to roofs, powerlines, etc., mainly resulting from trees felled by wind.
ALABAMA Barbour County	28	5:45 p.m.	14	100	0	1	4	2	Tornado	Began about 8 miles northeast of Brundidge. Last trace of it was when it passed over Batesville, without doing any damage. Path was northeastward, skipping over sparsely-settled country. 2 houses, 4 barns, other small buildings, and considerable timber destroyed.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
VIRGINIA Richmond area, Henrico County	28	8:27 p.m.							Wind	Severe thunderstorm with high winds. Trees and utility lines downed. Wind reached 56 m.p.h., at WBAS, Richmond.
ARIZONA Willcox, Cochise County	28	Evening					1		Hail	Hail caused heavy crop damage.
COLORADO	28						5		Flooding	Warm temperatures caused rapid snow melt in the mountains, resulting in high water. Low land inundated and bridges and roads damaged by flooding. Buena Vista estimated $100,000 damage, when Cottonwood Creek overflowed its banks. Peak apparently reached night of June 28. $100,000 property damage at Buena Vista, other areas not estimated.
FLORIDA Lake Worth, Palm Beach County	28				0	0			Wind or tornado (suspected)	Damage minor, tornadic action suspected.
INDIANA Cross Plains, Ripley County	28				0	0	4	1	Tornado	Tornado damaged several houses and a school.
KENTUCKY Madison County	28				0	0	3		Wind and tornado (suspected)	Residence damaged and 2 outbuildings demolished. Large tree uprooted. Funnel reported sighted, but damage does not appear to be such as caused by tornado.
TENNESSEE Claiborne County	28						1		Wind	Winds from dying Hurricane Audrey resulted in severe crop damage.
TENNESSEE Great Smoky Mountains National Park	28							1	Wind	Strong winds from dying Hurricane Audrey uprooted many trees, causing severe damage.
TENNESSEE Chattanooga Hamilton County	28							1	Wind	Strong winds from dying Hurricane Audrey shattered plate-glass windows, blew down trees, and caused much damage to powerlines.
TENNESSEE Sweetwater, Monroe County	28							1	Wind	Strong winds from dying Hurricane Audrey blew down north wall of new concrete-block building, blew roofing from buildings, and blew down limbs and trees.
TENNESSEE Conasauga, Polk County	28					1		1	Wind	Construction worker injured by wind-blown plank as remnants of Hurricane Audrey passed through.
TENNESSEE Wayne County	28						1		Wind	Winds from dying Hurricane Audrey resulted in severe crop damage.
	28									Minor storms also reported at Hallock and Kennedy, Minn.; and Decatur, Tenn.
PENNSYLVANIA Statewide	28-29	P.m. 28th - a.m. 29th					5	3	Rain, wind, and hail	Hurricane spawned thunderstorms caused local flooding mostly in west. Winds which reached 65 m.p.h., at Pittsburgh and somewhat lesser speeds elsewhere played havoc with trees and utility lines as well as several house roofs throughout State. In Philadelphia, tent at outdoor music festival extensively damaged, while winds downed many boy scout tents at Valley Forge. 1/4-inch hail fell near Williamsport, resulting in some crop damage. Storm moved northeastward.
NEW YORK	28-29	P.m. 28th - p.m. 29th			9		5	3	Wind and rain	Reintensified Hurricane Audrey brushed State with resulting wind damage. Highest winds in most places on 29th after passing to north of center. 2 persons drowned in Oneida Lake when boat disappeared, 2 drowned while swimming during high winds, 1 washed from capsized boat near Coney Island, 1 Jet pilot killed in crash, 1 electrocuted by fallen live wire, 2 killed in automobile accident caused by skidding on wet pavement. Scores of minor injuries, but few major injuries. Village of Black River without water from tree falling to snap hydrant. 125,000 customers lost power, as hundreds of breaks resulted from falling trees and limbs. Some crop damage from winds, but moisture on dry soil likely of greater benefit. Some building damage from falling trees and limbs, but greatest single loss item would be power company loss through fallen wires. Large circus tent blown down near Skaneateles.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WEST VIRGINIA Northern and central portions	28-29						4	2	Wind and rain	High winds attending passage of Audrey evening and night of 28th continued on 29th as result of regeneration of storm. Electrical utilities disrupted in a few places, trees damaged, at Stewart Airport near Parkersburg 2-place Cessna airplane wrenched from its moorings and damaged to extent of $10,000 to $15,000, 8 heavy plate-glass windows blown out in airport observation room, and some damage done to hangar door and shed. Storm moved northeastward.
INDIANA Central Portion	28-30				6		6	7	Rain	Up to 10 inches of rain on June 28 and 29 resulted in floods in central Indiana, drowned 6 persons, damaged 1,282 homes, flooded 125 business places, washed away approximately 1/2 million acres of crops, and knocked out highway and railroad bridges. 8 to 10 inches of rain fell in area from Rockville to Whitestown, northwest of Indianapolis. Areas flooded which were unknown to have been flooded before. Families vacated homes along streams in central Indiana from Vigo and Vermillion Counties in west to Jay County in east. American Red Cross reported that 1,010 persons given aid in 13 counties, 1,282 homes damaged, and 125 business places suffered losses. Dollar value of loss estimated at $1,250,000 to homes and business places. 6 deaths attributed to high water. Girl drowned while wading at edge of river in Indianapolis. Man attempting to rescue girl also drowned. 2 women drowned when bus slipped off road into creek at Zionsville. Other passengers escaped through roof of bus. Man drowned in his basement, attempting to procure a tool. Man drowned in rescue operation. Losses by railroads amounted to $1,200,000. 18-car work train of Pennsylvania Railroad fell into Big Walnut Creek near Reelsville when bridge collapsed after being weakened by flood water. Bridges and tracks washed out badly. More than 20 state and federal highways closed by flood water. Many bridges and roads washed out. About 1,000,000 acres of crops flooded.
CONNECTICUT AND RHODE ISLAND	29	2-8 a.m.							Wind	Winds of 40 m.p.h., and gusts of 50 m.p.h., from remains of hurricane Audrey tore small boats from moorings and drove 2 barges onto beach in Long Island Sound and Narragansett Bay. Falling limbs caused widespread but brief power failures in affected areas of both states. Winds shifted tent poles, causing postponement of Musical Theatre performance in Warwich, R.I., and large canopy of restaurant blown down at Coventry, R.I.
KANSAS Seward County	29	2:15 a.m.			0	0			Wind and funnels aloft	High wind tore roof from Power and Light Building in Liberal and a number of trees broken. 3 funnels aloft reported.
KANSAS Marshall County	29	Early a.m.							Electrical	Fire resulting from lightning caused loss of several thousand dollars to store building and contents.
KANSAS Shawnee County	29	7:20 a.m.			0	0			Funnel aloft	Small funnel cloud aloft reported from near Big Springs, 12 miles east of Topeka.
MISSOURI Chillicothe, Livingston County	29	8 a.m.						3	Hail, wind, rain, and Electrical	Many hailstones size of golf balls; some 9 inches in circumference. Windows, roofs, and many neon signs damaged.
NEBRASKA Brainard, Butler County	29	8:45 a.m.					2	2	Hail	Hailstones 2 inches in diameter.
VERMONT AND MASSACHUSETTS	29	All day				1	4	1	Wind	Principal damage resulted from wind-felled trees bringing down telephone and electric powerlines. Gust of 80 m.p.h., clocked at Army Aircraft Center at St. Albans. Storm was tail-end effect of Hurricane Audrey. Felled powerline seriously burned man at Millers Falls, Mass.
MISSOURI Harg, Boone County	29	12:30 p.m.			0	0			Funnel aloft	Witnesses heard roaring sound and saw apparent funnel.
MISSOURI Ripley County	29	Late afternoon							Rain, electrical, hail, and wind	1.41 inches of rain in 20 minutes from 5:40-6 p.m., at Doniphan. Minor damage to homes, trees, power- and phone lines.
ARIZONA Marana and Tucson areas, Pima County	29	5 p.m.	23				5	5	Hail, wind, and dust	Hail damaged crops near Marana and wind damaged homes in Tucson suburb. Storm moved northwestward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Kansas City, Jackson County	29	6:50-8 p.m.							Rain, wind, and electrical	0.95 inches of rain at WBAS in 30 minutes. Local flooding. Power- and phone lines downed. Several homes hit by lightning.
WEST VIRGINIA Elkins, Randolph County	29	7.30 p.m.	1/2-1/4	30	0	0	5	1	Tornado and rain	Tornado moved south-southwestward. Houses and business buildings unroofed, trees uprooted and limbs blown off, electrical services disrupted. Greenish cloud formation reported, also funnel-shaped cloud. Believed this tornado resulted from or was associated with intensification of Hurricane Audrey as it moved up Ohio Valley.
TENNESSEE Gibson County	29	8 p.m.				1			Wind and electrical	Wind, accompanying severe electrical storm, caused extensive damage to crops, roofs, trees, and TV antennas. At Trenton, automobile agency partially unroofed and lost portion of brick annex. 1 man injured by flying debris.
KANSAS Lyon County	29	10-11:15 p.m.	12	*4-1/2			3	4	Winds	Crops suffered mostly from severe winds across central part of county. Storm moved eastward.
TENNESSEE Ridgely, Lake County	29	P.m.						1	Rain	Heavy rains brought several inches of water into downtown buildings.
KANSAS Tribune (8 miles west of), Greeley County	29	Evening			0	0			Tornado	Tornado touched ground in open country.
KANSAS Collyer, Trego County	29	Evening			0	0			Tornado	Small tornado caused minor damages.
NEBRASKA Nuckolls County	29	Night					1	4	Hail	In scattered areas over County.
KANSAS South-central and north-central counties	29								Hail	Hail Loss Clearing House reports indicated many claims paid in Republic, Washington, Clay, Pottowatomie, and Dickinson Counties in north-central. Southern counties with losses were Barton, Rice, Stafford, Reno, Kingman, Sedgwick, Harper, Sumner, and Cowley.
	29									Minor storms also reported near Herington, Kans.; at Flat River, Potosi, and Salem, Mo.; in Pawnee County, Nebr.; and at Paris, Tenn.
MISSOURI Callaway County	29-30	3 p.m. - 1:30 a.m.	20	*10					Rain	Very heavy rains in northern Calloway County. Highway 40 blocked east of Kingdom City. Unofficial 7.50 inches of rain near Williamsburg. McCredie Experimental farm had 4.26 inches. Much soil erosion and local flooding.
TENNESSEE Dyersburg, Newbern, Ayers, Emmaus, Lane, and Maxey, Dyer County	29-30	6:29 p.m. - 6:30 a.m.			2	1			Wind	At Dyersburg, limbs and trees blown down, causing extensive damage to power- and phone lines and damage to several houses. 2 boys electrocuted upon contact with fallen wires. Several plate-glass windows blown out, 1 of which resulted in severe arm injury. At Newbern, many trees and limbs blown down, causing major damage to 2 homes and 2 automobiles. At Ayers, several roofs and singles blown off, TV antennas twisted, and power- and phone lines damaged. At Emmaus, many trees, garage, and barn blown down. At Lane and in Maxey community, many farm buildings blown down.
MISSOURI Gasconade, Franklin, Osage, and Montgomery Counties	29-30	8 p.m.- 2 a.m.					5	4	Rain and electrical	Unusually heavy lightning. Frene Creek at Hermann crested higher than 1952 flood. 3.00 inches at Chamois, 6.00 at Rhineland, 8.00 at Berger, and 8.50 at Bay. Heavy damage to homes and business buildings from flooding. Many fields badly eroded and farm ponds washed out. Many highways blocked. Train service delayed by washed-out tracks. Storm moved northeastward.
MISSOURI Gasconade, Franklin, Iron, Jefferson, Washington, Bollinger and St. Francois Counties	29-30				7				Rain and electrical	Family of 7 drowned near Ironton as Pilot Knob Creek rose around their home. Sample rainfall totals for this storm; Hermann 9.00, Potosi 7.00, Union 3.50, Sullivan 6.08, Owensville 4.42, Farmington 5.42, and Marble Hill 5.05 inches. Heavy damage to roads, bridges, homes, business buildings, and fields by flooding.
TENNESSEE Union City Obion County	30	4 a.m.						1	Rain	Heavy rains caused flooding of 11 homes and several business houses. Damage estimated in thousands of dollars.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Bootheel area	30	4-5 a.m.							Wind, rain, electrical, and hail	Squall line moved through Bootheel area, accompanied by severe thunderstorm activity. CAA Station at Malden had gusts to 70 m.p.h. Rains of 2.50 to 4.50 inches with storm. Houses, trees, farm buildings, power- and phone lines damaged over wide area in Bootheel.
MISSOURI Caruthersville area, Pemiscot County	30	6-8 a.m.			0	0	4		Funnels aloft, wind, rain, and electrical	Unconfirmed funnels observed near Caruthersville.
OKLAHOMA Woodward (north and east of), Woodward County	30	A.m.							Wind	Farm buildings and trees demolished or severely damaged.
OKLAHOMA Okeene area, Blaine County	30	A.m.							Wind and electrical	Outbuildings damaged and trees and TV antennas broken in and around Okeene. Lightning caused structural damage to church and power plant had $1500 damage to switchboard.
SOUTH DAKOTA Gettysburg (18 miles northwest of), Potter County	30	Noon				1	2		Electrical	Lightning injured man who was touching water faucet. Cow killed.
NORTH DAKOTA Williston (20 miles north of), Williams County	30	3 p.m.			0	0			Funnel aloft	Reported moving east-northeastward.
CONNECTICUT AND RHODE ISLAND	30	Afternoon				7			Electrical, wind, and hail	High winds accompanied squalls, mostly along Fairfield County coast of Long Island Sound and Narragansett Bay. Two 19-foot sailboats capsized endangering lives of 7 persons. Barge turned over in Bridgeport Harbor. Berthing of aircraft carrier delayed at Quonset Naval Station, R. I. Radio and TV stations interrupted a few hours by power failures in Rhode Island. Light hail reported in Fairfield County, Conn., but crop damage negligible.
MASSACHUSETTS AND NEW HAMPSHIRE	30	Afternoon			1	7	3	3	Wind, electrical, and hail	Scores of small boats capsized by thundersqualls in Massachusetts and Cape Cod Bays. Many timely rescues. Some hail damage to vegetable gardens in Worcester County, Mass. Storm's single fatality occurred when mast of yawl snapped in wind and struck victim. Youth struck by lightning "revived" 5 minutes after heart stopped beating. Lightning strikes in many parts of storm area.
TEXAS Dalhart (25 miles southwest of), Hartley County	30	5 p.m.			0	0			Funnel aloft	
SOUTH DAKOTA South-central portion	30	5-11 p.m.			0	1	4	5	Tornado (suspected), wind, hail, rain, and electrical	Farm buildings 4 miles west of Winner shattered, apparently by tornado. Other high winds moved across Tripp County accompanied by hail that caused serious crop damage. Baseball-sized stones were reported with 6-1/2 inch rains along White River, about 6 p.m. Other large hailstones fell south of Winner. Over 17 buildings in area damaged or destroyed. 2 men swept away in flash flood, were rescued. Much of Gregory flooded by heavy rain, with a number of basements completely filled. Lightning injured a man and killed livestock.
KANSAS Seward County	30	7:45 p.m.			0	0			Wind and funnel aloft	Some minor damages from high winds. 1 funnel observed aloft over Liberal. Storm moved northeastward.
NORTH DAKOTA Dickinson (30 miles southwest of), Slope County	30	7:57 p.m.			0	0			Funnel aloft	Lowered, then receded into cloud.
OKLAHOMA Panhandle and Northwestern Counties	30	8 p.m. - midnight							Wind, rain, hail, and electrical	Severe squall line with winds measured up to 90 m.p.h., heavy rain, and spotted hail swept across area. Crops flattened and utilities and trees damaged. Some buildings damaged. Barn worth $6,000 destroyed near Alva.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JUNE 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons Killed	Number of persons Injured	Estimated damage by categories † Property (exclusive of crops)	Estimated damage by categories † Crops	Character of storm	Remarks
KANSAS Attica (12 miles southeast of), Harper County	30	11:05 p.m.			0	0			Tornado	Tornado on ground moving northeastward reported by Ground Observer Corps.
MISSOURI Grubville, Jefferson County	30								Rain	Flash flood marooned 14 persons who were fishing on tributary of Big River near Grubville; they clung to trees 9 hours before being rescued.
TENNESSEE Rives, Obion County	30							1	Rain	Heavy rains caused breaking of levee at about noon. Streets and several homes flooded.
VIRGINIA Williamsburg area, James City County	30						3		Wind and hail	Severe thunderstorm accompanied by winds estimated to 60 m.p.h., and hail; some stones as large as hens' eggs. Considerable damage to Jamestown Corporation's Amphitheatre where 25-foot 'prop' ship sunk. A number of trees downed in area. Some hail damage to buildings.
	30									Minor storms also reported near Springview and in Garden County, Nebr.; at Cedardale and Minco, Okla.; in Aiken and Lexington Counties, S. C.; at Athens and Franklin, Tenn.; and Mingo, W. Va.
DELAYED REPORTS										
NORTH CAROLINA Brunswick, Duplin, Jones, Pender, Edgecombe, Lenoir, Sampson, Cumberland, Hoke, Scotland, and Stanly Counties	6	Afternoon					3	5	Hail	Widespread hail in connection with frontal thundershowers. Most damage to tobacco in fields, mostly in Coastal Plains.
NORTH CAROLINA Jones, Scotland, and Henderson Counties	8	Afternoon						4	Hail	Scattered damage to corn and tobacco in widely separate areas.
NORTH CAROLINA Madison County	10	2:30 p.m.						3	Hail	Light scattered damage over 3 square miles.
NORTH CAROLINA Greene County	11	4 p.m.						4	Hail	Heavy damage to tobacco in limited area.
NORTH CAROLINA Jones, Pender, Hoke, Sampson, Richmond, and Ashe Counties	13	Afternoon					4	5	Hail	Heavy damage to tobacco in Hoke and Sampson Counties, scattered damage elsewhere.
NEW YORK Germantown to Livingston, Columbia County	14	5:30-5:50 p.m	10	*3					Hail, rain, and electrical	Hail averaging 1/2 inch, maximum 1-1/2 inches, completely covered ground. No estimates of damage received. Storm moved northeastward.
NORTH CAROLINA Cumberland County	15	5 p.m.						4	Hail	Damage mostly to tobacco in fields.
MARYLAND Mount Airy area Carroll County	16						4	1	Electrical	Lightning destroyed barn valued at $10,000 and set fire to dwelling with damages estimated at $500.
NORTH CAROLINA Beaufort County	17	5:15 p.m.					3	4	Hail	Corn and tobacco damaged.
NORTH CAROLINA Bertie, Hartford, and Martin Counties	18	2-5 p.m.						4	Hail	Tobacco and some corn damaged.
VIRGINIA Independence area, Grayson County	18	Afternoon					3		Rain	Foundation block wall of nearly finished house pushed out by mud and water from cloudburst and house collapsed into basement excavation. 10 persons in house escaped injury. House had to be taken apart and rebuilt.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MARYLAND Royal Oak and Easton, Talbot County	18								Rain and hail	Very severe thunderstorm struck area between Royal Oak and Easton, accompanied by heavy rainfall and hail up to 2 inches in diameter. Hail confined to narrow path about 10 miles long.
NORTH CAROLINA Jones, Lenoir, Lee, Robeson, Wilson, Caswell, Person, Bertie, and Alamance Counties	19	Afternoon					3	4	Hail	Widespread hail damage, mostly to tobacco in fields.
NORTH CAROLINA Durham County	20	3 p.m.						3	Hail	Tobacco and small grains damaged.
COLORADO Wages area, Yuma County	21	1:15 a.m.			0	0			Tornado	Tornado damaged buildings on 2 farms in Wages area. 2 steel granaries destroyed, windows pushed out of house, causing damage to interior.
COLORADO Baca County	22-23	Night 22d - early a.m 23d			0	0			Tornado, rain, and hail	Tornado hit ranch southwest of Campo, demolishing barn and chickenhouse. Heavy rain and flooding of row crops. Spotted hail damage in southeastern Baca County.
COLORADO Southwestern portion	25-30								Rain	Heavy rain of 25th and 26th above Vallecito Dam filled dam to overflowing, causing flooding in Pine River Valley from 28th through 30th. Water system at Ignacio heavily damaged, approaches to bridges washed away near Bayfield and many families evacuated from their homes.
NEW YORK Pleasant Valley, Dutchess County	27	6-7 p.m.	1/2	440				4	Hail	Hail fell over about 50 to 60 acres of land which included portion of fruit orchard. 15 to 20 acres of orchard, hit with estimated $10,000 damage. Storm moved northeastward
COLORADO Holly, Prowers County	29	Afternoon					3		Wind and hail	High winds showing evidence of cyclonic movement blew out windows, tore down TV antennas and caused other minor damage. No damage by hail reported.
COLORADO La Junta (28 miles northeast of), Otero County	29	5:35 p.m.			0	0			Funnel aloft	Funnel cloud sighted.
VIRGINIA Craddockville-Belle Haven-Quinby area, Accomack County	30	2-2:30 p.m.	10	*5		12			Hail	Hailstones egg-shaped up to 2 inches in length. More than 5,000 windows broken. Automobiles, roofs, and boats damaged. Extensive damage to crops, especially tomatoes and sweet corn. About a dozen persons painfully but not seriously injured. Storm moved eastward.
COLORADO Northeastern portion	30	Afternoon			0	0			Tornadoes, hail, and rain	2 tornadoes in Cheyenne County, 1 north of Firstview completely destroyed barn. The other 16 miles southeast of Cheyenne Wells destroyed barn and did minor damage around farm. Heavy rain and some hail accompanied storm. Same afternoon, twister in vicinity of Stratton tore limbs off trees, upset hay racks and other farm implements. It was accompanied by heavy rain and some hail. Hail did considerable damage to crops in eastern Logan and Phillips Counties in Fleming and Haxtun areas. In Yuma County, tornado did extensive damage to farm southwest of Eckley by demolishing barn, damaging house, blowing down windmill, and uprooting trees.
SOUTH CAROLINA Marion (2 miles east of), Marion County	30	Afternoon				1	3	1	Electrical	Lightning burned home. Storm moved northeastward.
NORTH CAROLINA Anson County	30	3:30 p.m.						3	Hail	Cotton crop damaged.
SOUTH CAROLINA Gapway Community, Marion County	30	6 p.m.	2	Narrow	0	0	3	3	Tornado	Tornado moving southeastward destroyed barn, struck another, and caused considerable damage to field of tobacco.

* Miles instead of yards.
** Yards instead of miles.
° Includes crop damage.
C Crop damage.
† Storm damages are placed in categories varying from 1 to 9 as follows:
1 Less than $50
2 $50 to $500
3 $500 to $5,000
4 $5,000 to $50,000
5 $50,000 to $500,000
6 $500,000 to $5,000,000
7 $5,000,000 to $50,000,000
8 $50,000,000 to $500,000,000
9 $500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

JUNE 1957

Record to near record floods occurred in several drainage areas at different times during the month. The overflows in the Saline, Solomon, Republican, and Blue River Basins were the most widespread in the past 6 years. One of the most severe floods on record occurred on Skunk Creek and the Big Sioux River in South Dakota. It was the highest flood in Sioux Falls, S. Dak., in the last 50 to 75 years. Record to near record floods occurred in the Minnesota River Drainage due to excessive rains. Several streams in the Colorado Basin in Colorado reached record to near record stages during the 1957 "spring runoff". A record crest occurred on the Atchafalaya due to wind and tide effects from hurricane "Audrey". Severe flash flood occurred in the St. Louis, Mo., area with the loss of 10 lives.

ST. LAWRENCE DRAINAGE

The only flooding in the St. Lawrence Drainage during the month occurred on the St. Marys River at Decatur, Ind., on the 29th and 30th. The flooding was light and no damages were reported. The monthly total of 6.67 inches of precipitation recorded at Ft. Wayne, Ind., during June was the greatest on record since 1911. It was 3.11 inches above normal.

ATLANTIC SLOPE DRAINAGE

Serious flash flooding occurred on the extreme upper reaches of the White River in Vermont on the 27th due to locally heavy rain. The flooding was local, as a few miles downstream at Chelsea, Vt.; no flooding was reported.

Minor flooding occurred on the Cape Fear River at Elizabethtown, N. C., on the 10th and 11th from the numerous showers and thundershowers during the first 10 days of June. Precipitation during that period averaged 3 inches.

General rains of from 2 to 4.5 inches on the 4th and 5th over the Yadkin River Basin caused some minor flash flooding on small streams in the Carolinas. Additional rain on the 8th and 9th of from 1 to 2.5 inches filled the reservoirs and some spilling resulted. The Rocky River at Norwood, N. C., rose rapidly during the night of the 9th from a stage of 4.8 feet to 19.0 feet from rain that averaged 2.5 inches over the headwaters. No damage was reported as only the very low unoccupied areas were inundated for a few hours.

Flooding along the Broad River in South Carolina and the Catawba in North Carolina was due to rains of up to 5 inches in the headwaters from the 4th to the 6th. No damage was reported.

The Satilla River at Waycross, Ga., exceeded flood stage by 1.1 feet on the 17th and remained above flood stage for a total of 5 days. No damage of any consequence resulted.

EAST GULF OF MEXICO DRAINAGE

Heavy rainfall on the 28th and 29th associated with hurricane "Audrey" caused flash floods on small streams in several east-central Alabama Counties. Streets and roads were inundated for several hours and yards and homes were flooded. Considerable damage was reported to crops and farmlands. No floods occurred along the main rivers in Alabama.

The slight overflow of Oldtown Creek at Tupelo, Miss., on the 5th was due to locally heavy rains. No damage was reported.

Heavy rains from hurricane "Audrey" on the night of the 27th produced local flooding on the Pearl River at Monticello, Miss., on the 29th and 30th. No damage was reported.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--Minor flooding developed on Leech Lake River in the reach below Leech Lake Dam and Mud Lake, Minn., due to the failure of part of Leech Lake Dam on the evening of the 4th. This dam was undergoing repair at the time of the break. Closure of the break was completed on the 27th. No flooding occurred along the main stem of the Mississippi River from the high flow coming out of the Leech Lake River. The highest stage reached at Aitkin, Minn., on the 29th was 8.0 feet (flood stage 12 feet).

The severe flooding on the Crow River at Rockford, Minn., beginning on June 22 was due to heavy rain (5 inches) on the 21st and 22d. Runoff was heavy as this storm was preceded by 1- to 3-inch rainfall amounts on the 16th and 17th. The flooding in the reach at and above Rockford, Minn., was greater than in April 1952. In the reach below it equalled or was slightly lower than in 1952. The flooding on the Rum River at St. Francis, Minn., was comparatively light.

The record to near record flooding in streams in the Minnesota River Basin developed from the excessive rains (8 to 10+ inches) during the 24-hour period ending on the morning of the 17th. The storm that produced these rains moved into southwestern and central Minnesota early on the morning of the 16th. The heaviest amounts occurred between 4 p.m. of the 16th and the early morning of the 17th. Several 24-hour rainfall records were broken. For example the previous 24-hour record at Marshall, Minn., of 3.35 inches established in 1946 was topped by a new 24-hour record of 8.07 inches. At Montevideo, Minn., the old record of 3.75 inches in 1926 was topped by a new record of 7.3 inches. The runoff from these rains was heavy and the height of the flood in the area of heaviest rainfall equaled and in many instances was much greater than the April 1952 and the April 1951 floods which were all time maximum floods for most locations. As the crest of the Minnesota River was approaching New Ulm, Minn., on the 21st, another heavy rainstorm fell over the flooded area in southwestern and central Minnesota. The rainfall amounts were again excessive with the heaviest amount of 5.38 inches reported at Coon Rapids, just north of Minneapolis. These rains resulted not only in another flood rise at Marshall and other tributaries of the Minnesota River but also to and along the Minnesota River from Mankato to St. Paul, Minn. The only flooding along the main stem of the Mississippi was at St. Paul. Isohyetal maps showing the areas affected are given in figures 1 and 2. The accompanying Comparative Flood stages table depicts the severity of this flood.

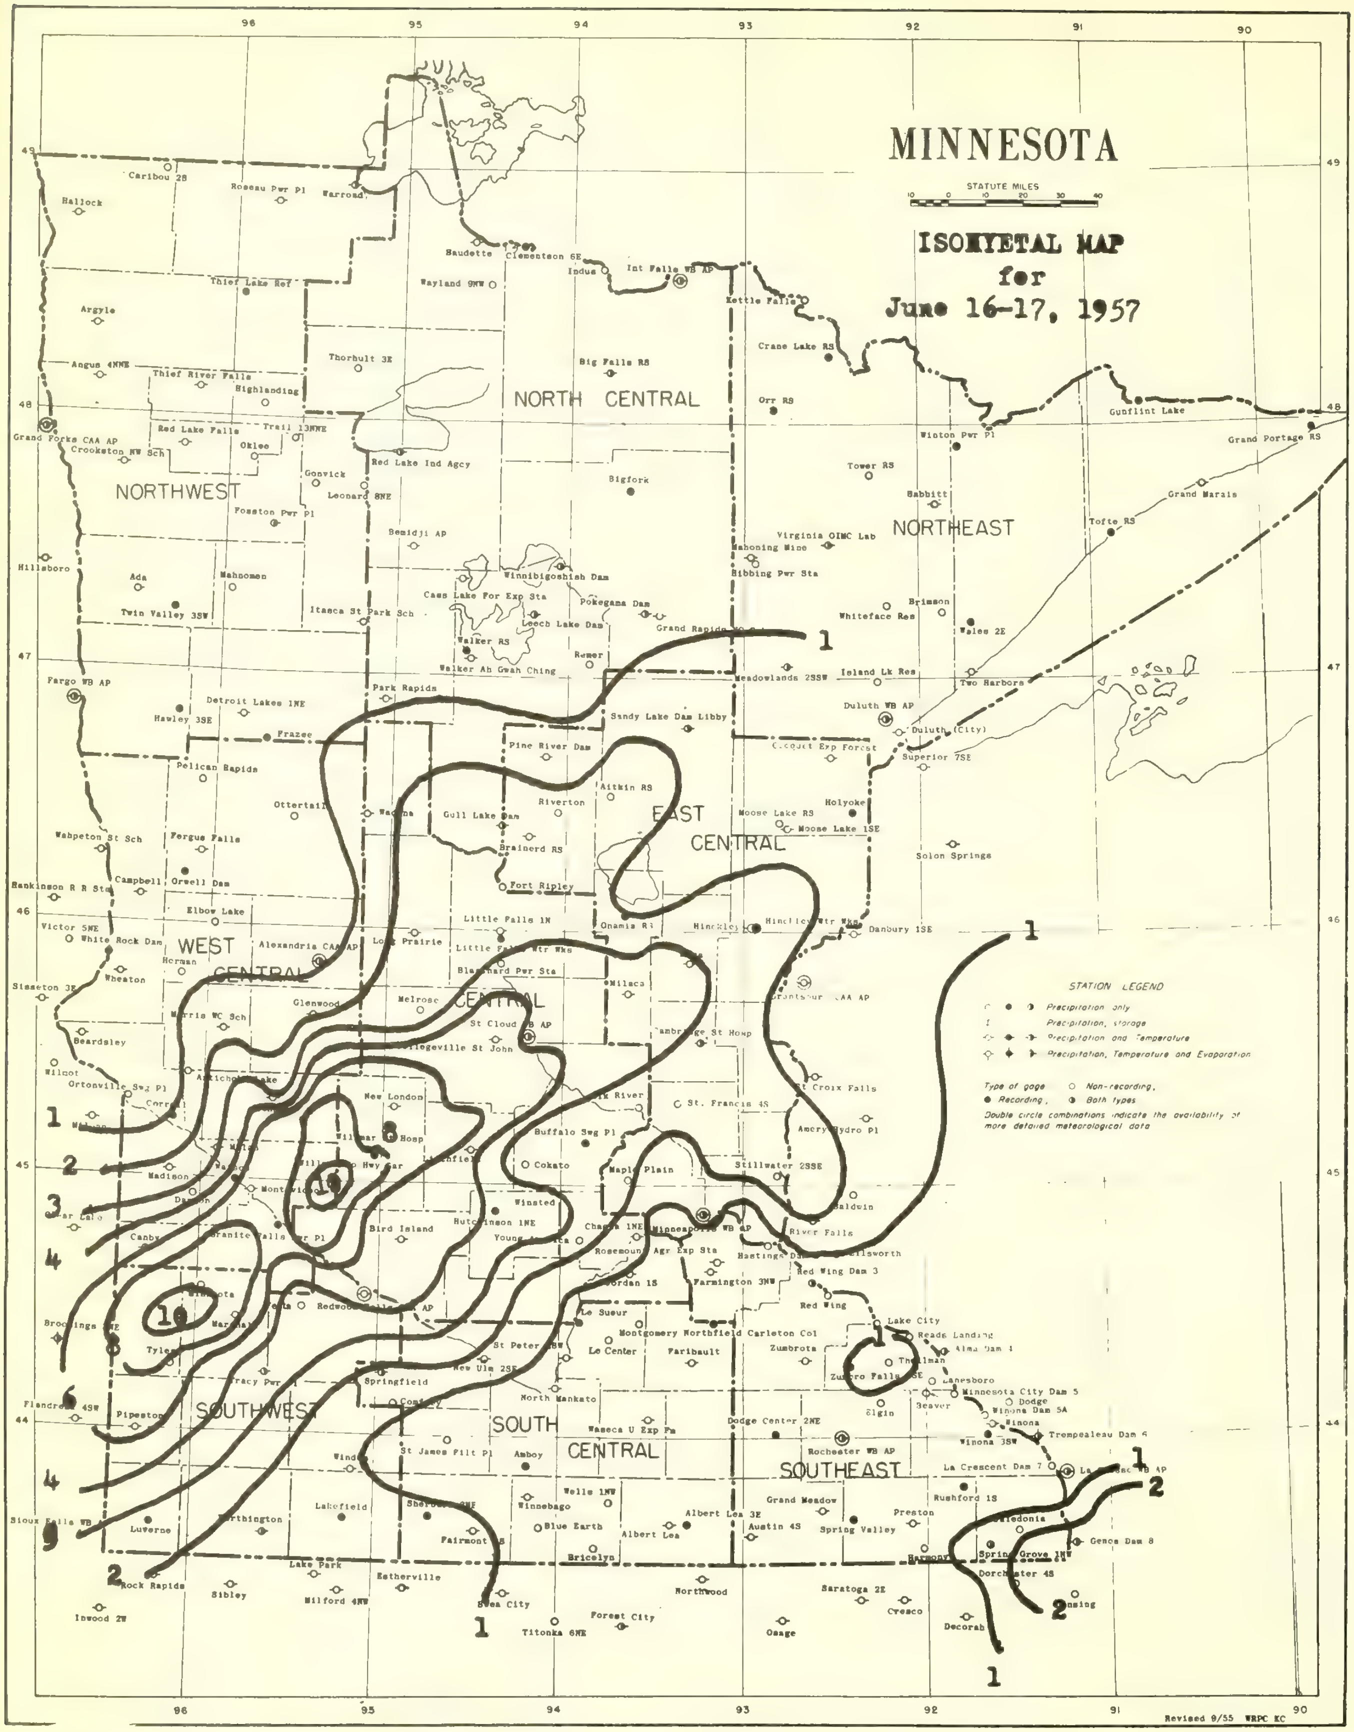

Figure 1 - ISOHYETAL MAP for June 16-17, 1957

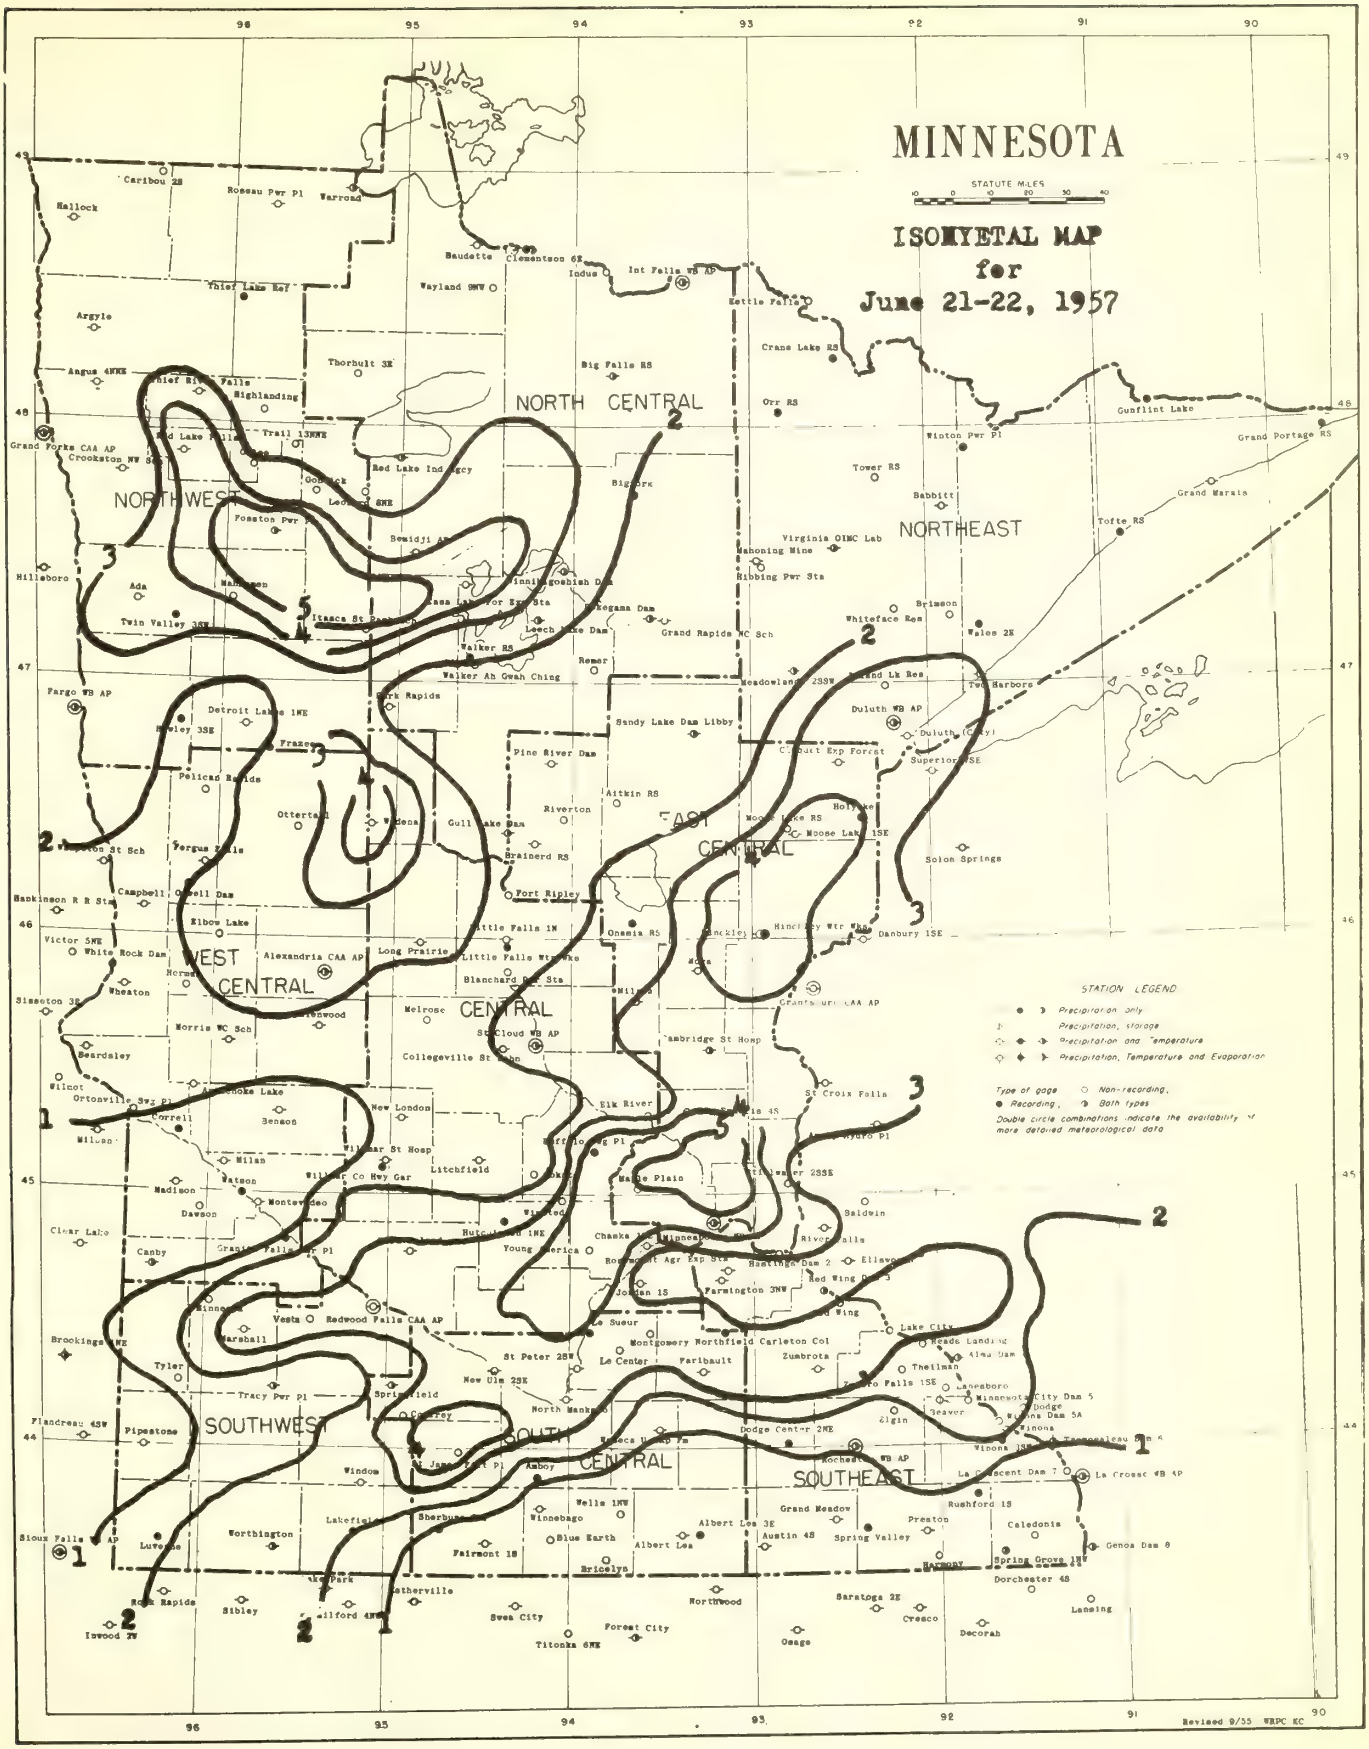

Figure 2 - ISOHYETAL MAP for June 21-22, 1957

COMPARATIVE FLOOD STAGES

* 6 inches higher than April 1952

No damage of consequence resulted from the slight flooding of lowlands along the Salt River at New London, Mo., on the 14th and 15th.

There were three periods of flooding on the Meramec River in Missouri. The first was due to rains (2.25 inches) on the 7th and 8th with the only overflow being at Pacific. The second rise was due to torrential rains during the night of the 14th and 15th averaging over 8 inches. Severe flooding resulted on the lower Meramec with flood stage exceeded by 12 feet. This same storm caused severe flooding along the Bourbeuse River between the 15th and 17th. The third rise was due to additional rains of 1.5 inches on the 29th - 30th and resulted in flood crests on the Meramec of 2 to 4 feet higher than the second rise.

Flash floods occurred in the St. Louis, Mo., area during the night of the 14th from rainfall totalling 8.54 inches in 12 hours. More than 2,000 persons were evacuated from their homes and many more were rescued from automobiles trapped by waters from flooded creeks and rivers. Damage was extensive throughout the metropolitan area. Thousands of basements were flooded. The main stem of the Mississippi rose from a stage of 5.6 feet to 21.7 feet (flood stage 30 feet) by 7 a.m. of the 15th.

Missouri Basin.--The third week of May was characterized by general heavy rains over the Yellowstone drainage basin and these together with the warm weather during the last week of May and the first week of June started the annual spring snowmelt runoff into the Yellowstone River and its tributaries. The Yellowstone River at Livingston, Mont., reached flood stage on the 4th and continued slightly above through the 7th. At Billings, Mont., flood stage was reached on the 5th and continued above until the 8th. Some property damage resulted from the flooding and high water along the main stem of the Yellowstone, but most of the damage occurred on the tributaries. Property damage was especially heavy in Greybull, Wyo., from the high water in the Greybull River. Major damage along these tributaries was confined to roads, bridges, and bank erosion with only a small percentage of farm property involved. Two fishermen lost their lives due to high water on the Stillwater River.

Heavy rain in southwestern North Dakota on the 21st and 22d caused slight flooding on the Cannonball River at Mott and the Heart River west of Dickinson. Rainfall during the 2-day period ranged up to 8 inches. Some farmland was flooded, and property damage was light.

Flash floods occurred in several tributaries of the Elkhorn River and Omaha Creek due to heavy thundershowers over northeastern Nebraska from the 13th through the 16th. Three to 4 inches of rain occurred in the Pender and Winslow, Nebr., area on the 14th and 15th causing overflow on the tributaries of the Logan Creek at Pender and Uehling. Six to 8 inches occurred over Bazile Creek on the 15th-16th from Clearwater, Nebr., northeastward to Brunswick and Creighton. Flash flooding occurred in the town of Creighton on the 16th and 17th. Three to 5 inches of precipitation occurred over Omaha Creek on the 13th-14th causing severe flooding in the lower parts of the towns of

Walthill and Winnebago. Rains averaging 4 inches fell over Pebble Creek on the 15th-16th, causing flash flooding in the town of Dodge, Nebr., on the morning of the 16th. Damage was confined mostly to farmlands. Rainfall over Union Creek totaled 4.55 inches at Creston, Nebr., on the 15th-16th, flooding 1,500 acres of farm and pasture land between Creston and Stanton, Nebr.

Elm and Shell Creeks overflowed some farmland on the 16th at Platte Center, Nebr. Some local overflow occurred in the late afternoon on the 16th at Fullerton and Genoa, Nebr. Locally heavy thunderstorms on the 15th and 16th caused some local overflow in the Iowa River and on the Boyer River from Woodbine to Logan, Iowa. On the 21st and 22d, the upper reaches of the Little Sioux River around Spencer, Iowa, reached bankfull stage but remained mostly within its banks.

Skunk Creek and the Big Sioux River at Sioux Falls, S. Dak., experienced one of its most severe floods on record during the period from the 16th to the 19th due to the heavy rains on the 16th and 17th. Rainfall varied from 5 to 10 inches and fell mostly in 12 hours. This was the highest flood at Sioux Falls, S. Dak., in the last 50 to 75 years. There is a probability that the snowmelt flood in 1881 may have been of the same magnitude, but there is no data on that flood to make a comparison. Several residential sections and trailer courts were flooded, and heavy flood damage occurred in the downtown section of Sioux Falls. Flood losses in the Sioux Falls area could have been much larger had it not been for the improved conditions arising from channel improvement and new levees built within the past year. The Sioux Falls airport did not flood this time as it did in 1952, although the crest in this flood was 1.5 feet higher than in the earlier one. A secondary crest of 14.3 feet occurred along the Big Sioux at Sioux Falls, S. Dak., on the 19th and was about 0.2 of a foot lower than the record flood of 1952. Lowland flooding spread from Sioux Falls to the mouth of the Big Sioux at Sioux City, Iowa, as the crest moved downstream. Lowlands were completely flooded, and growing crops were a total loss. The first crest of 19.8 feet at Akron, Iowa, was about 0.2 foot lower than the record stage set in June 1954. Agricultural losses were heavy along the main stem of the Big Sioux, from Flandreau, S. Dak., to Sioux City, Iowa, and along creeks and small drainage areas from Sioux Falls upstream. The total area flooded may exceed 75,000 acres, most of which is cropland. The heaviest urban damage was in the Sioux Falls area where the damage may exceed 1 million dollars.

The Rock River which has its source in southwestern Minnesota overflowed north of the Iowa-Minnesota state line from the heavy rains on the 16th and 17th and ran bankfull in Iowa. Most of the damage was confined to Pipestone County in Minnesota.

Widespread flooding occurred along the Vermillion River in the Centerville-Parker-Lennox, S. Dak., area between the 16th and 23d from the rains on the 16th and 17th. Rainfall varied from 4 to 7 inches over much of the area. Crop losses and road and bridge damages will run into several hundred thousands of dollars.

A flash flood occurred on Marne Creek in the vicinity of Yankton, S. Dak., due to rain (about 5 inches) on the evening of the 16th. Ten to 12 city blocks of the residential and business sections were flooded and losses will run into a few hundred thousands of dollars. Widespread flooding occurred along the Vermillion River in the Centerville-Parker-Lennox, S. Dak., area from rains of 4 to 7 inches on the 16th and 17th. Crop losses and road and bridge damages will run into several hundred thousands of dollars.

Overflows in the Saline, Solomon, Republican, and Blue River Basins were the most widespread in the past 6 years. The Saline River crest of 25.8 feet near Wilson, Kans., on the 18th was the highest since records were started in 1929 and lacked 1 foot of equalling the high water mark of July 1928. Downstream at Tescott, Kans., the highest crest of 29.55 feet on July 1 approached within 0.5 foot the record 1951 crest of 30.06 feet. Major flooding occurred along the Solomon River in Kansas. The crest of 34.47 feet on the 19th at Beloit (flood stage 20 feet) was about the same magnitude as the 1935 flood and ranks as the fifth greatest flood in the past 53 years. There was considerable flooding on the upstream tributaries as well as along the main stem. Flash flooding of unusual severity occurred on Big Creek, a Smoky Hill River tributary. The business section of Ellis, Kans., was under 4 feet of water with one death from drowning. Some portions of Hays, Kans., were inundated, and in the village of Mungor, Kans., there were 3 deaths from flood-induced explosion. The stage of the U. S. Geological Survey gage near Hays, Kans., was about 0.5 foot higher than in the May 1951 flood. Considerable flooding occurred on Republican tributaries in Kansas. The main stem of the Republican at Guide Rock, Nebr., reached a crest of 15.7 feet on the 16th which was the third highest stage since records began in 1931 and is the only overflow of importance since construction of Harlan County Dam. The crest at Scandia, Kans., of 13.9 feet on the 18th was the 4th highest stage of record, while at Concordia, Kans., the peak of 13.4 feet on the 18th was the highest in the last 10 years. The crest on the upper Big Blue River at Seward, Nebr., of 22.3 feet on the 18th exceeded the highest stages in the memory of local residents with a major overflow continuing downstream through Beatrice, Nebr. Flooding on the Little Blue Channel was the heaviest since 1951.

The only flooding along the main stem of the Missouri was at St. Joseph, Lexington, and Waverly. The flooding was light and occurred between the 18th and 20th.

Ohio Basin.--Flash floods occurred on many small streams and tributaries of the upper Allegheny River above Franklin, Pa., due to rains associated with hurricane "Audrey" on the 28th. Rainfall amounts during the 6- to 8-hour storm varied from 1.25 to 3.44 inches over the upper Allegheny Basin; 2 to 3.05 inches over French Creek Basin; 2 to 2.66 inches over Beaver River Basin, and 0.5 to 1 inch over the Monongahela River Basin. State Civil Defense authorities who were alerted early in the afternoon of the 28th assisted and directed in the evacuation of many vacationers from cottages and summer resorts along French Creek and the Edinboro and Conneaut Lake areas during the night. French Creek at Meadville, Pa., rose 9 feet in 12 hours and crested about 1 foot below flood stage. Only slight rises were reported on the upper Allegheny River.

Light flooding occurred in the upper Scioto River between June 29 and July 2 due to rains (3 inches) during the 3-day period from the 27th to the 29th. Damage was limited. Flash flooding occurred at Bourneville, Ohio, on the 29th with slight damage to small acreage of farmcrops. Although the Creek rose 3.5 feet above flood stage it was out of its banks for only a few hours.

Extensive flooding occurred on small headwater streams on the Whitewater River in Indiana and the Miami River in Ohio on the 28th and 29th. Several families in the low-lying areas along the Miami River near Dayton, Ohio, were evacuated from their homes.

Excessively heavy rains (5 to 8 inches) occurred over the Wabash and White River Basins in Indiana on the late afternoon and evening of the 27th and 28th, causing the greatest floods of record on the Embarrass River, and Eagle and Raccoon Creeks. On the Wabash River the crest of 14.35 feet at Bluffton, Ind., was the highest since 1950, and at Clinton, Ind., the crest of 27.5 feet was one of the four greatest floods of record. On the White River at Anderson and Noblesville, the crests were the highest since 1943. At Indianapolis, Ind., the crest of 14.2 feet was only 0.6 foot short of that of May 1956. In the Eagle Creek drainage thousands of acres of crops were flooded with up to 6 or 7 feet of water. At least 1,500 persons were evacuated from their homes. Many business establishments were flooded. At Zionsville, Ind., a bus was swept from the highway and two of the occupants were drowned. At Speedway, where the bulk of evacuations occurred, two deaths were reported. About 40 homes in the $20,000 to $30,000 class had to be condemned and many other homes and furnishings received heavy damage. Heavy damage occurred to railroads, bridges, and crops in the Raccoon Creek Drainage, and record high water necessitated numerous evacuations. Three hundred and twenty carloads of fill were required to repair the damage to one railroad washout alone, the tracks having dropped as much as 20 feet. In the Greencastle, Ind., and other areas the water supply was overflowed and all drinking water had to be boiled. In the Big Walnut Creek drainage an entire work train of the Pennsylvania Railroad composed of 18 cars plunged into the creek near Reelsville when a flood-weakened bridge collapsed. In the Wabash Basin, numerous people were evacuated from their homes in Clinton, Ind. In the White Basin, numerous homes in the Ravenswood area, River Edge Estates in Indianapolis and other areas were surrounded by water or evacuated, and some streets and roads were closed by overflow from the White River; two lives were lost. The total overflow of croplands in the White and Wabash Basin was estimated at 1-1/3 million acres. It is possible that this flood may have been the most damaging of record because of the great amount of crops overflowed so late in the crop season, and because the damage to bridges, railroads, highways, and dwellings was also significantly large.

Arkansas Basin.--The Little Arkansas was slightly above bankfull from the 28th to the 30th but no damage resulted. The Ninnescah River was rising again near the end of June, but was nearly 3 feet lower than the mid-May flood. The highway was closed at Belle Plaine, Kans., for about 24 hours but little if any property damage resulted. The Salt Fork, Caney, Bird Creek, and Verdigris at Claremore and Inola, Okla., were higher this month than during May, while the Cimarron and Arkansas were considerably lower. No records were broken; however, the Caney at Bartlesville, Okla., rose to within 0.6 foot of the record stage. Two lives were lost by drowning on the Verdigris River at Coffeyville, Kans., on the 10th. Little or no damage occurred on the Neosho River in Kansas and Oklahoma. The Deep Fork Creek near Dewar, Okla., was above flood stage the entire month. Heavy rains (up to 7 inches) during the night of the 22d caused local flooding on Otter Creek at May, Okla.; Wolf Creek had the Maximum flow of record near Fargo, Okla., and Fort Supply Reservoir on Wolf Creek rose to the highest elevation since its completion in 1942. At Woodward, Okla., the North Canadian rose to its highest level since 1951. There was considerable agricultural and rural road damage in the affected areas. Local flooding occurred over the Middle Deep Fork, the North Canadian from Oklahoma City to Shawnee, Okla., and the South Canadian from Union City to near Ada, Okla., from heavy rain (2 to 4 inches) on the evening of the 14th. There were numerous instances of traffic stoppages, some isolation of homes and localized flooding of stores and residences.

There was considerable flooding along the upper reaches of the Arkansas from the headwaters to below Canon City, Colo., during the latter part of the month from snowmelt. There was some lowland flooding in the reach from Canon City to below Pueblo, Colo. This flood was described by longtime residents as one of the longest periods of high water and flooding along the upper reaches of the Arkansas during the past 10 to 20 years. Lower streets in Leadville, Buena Vista, and Canon City, Colo., were inundated and a portion of U. S. Highway 50 near Cotapaxi, Colo., was covered for a time, though kept open. A small bridge about 6 miles west of Salida, Colo., was washed out, and an old bridge in Salida was dismantled to keep it from washing downstream and damaging a more important bridge. Buena Vista, Colo., (on Cottonwood Creek) was probably the hardest hit community with considerable damage reported to buildings and streets. The Arkansas, in the reach from Hutchinson, Kans., to Ralston, Okla., began overflowing between the 28th and the end of the month. In the reach below from Muskogee, Okla., to Dardanelle, Ark., the Arkansas was above flood stage the entire month. It is believed that this is the longest period of consecutive days that the Arkansas has been above flood stage. The high stages were maintained by releases from reservoirs upstream.

Red Basin.--The Ouachita River continued above flood stage at Camden, Ark., from May 26 to June 13th and at Monroe, La., from May 7 to June 11.

The Black River at Jonesville, La., went into flood on the 4th and remained in flood through July 11. There were two crests, one on the 22d and the other on the 28th. The latter crest of 52.3 feet (flood stage 50 feet) was due to excessive rains from hurricane "Audrey".

Considerable damage resulted to roads and levees along the Little and Red Rivers not only during this month but also in the 2 previous months. Extremely heavy rains in Oklahoma and Texas above Denison Dam filled Lake Texoma, and water ran over the spillway for the first time. This is said to be an occurrence calculated to take place once in a hundred years. The water going over the spillway and that released through the flood gates along with the general heavy rains, produced prolonged flooding at every river gage station on the Red River except Shreveport, La.

Lower Mississippi Basin.--The St. Francis River was in continuous flood at St. Francis, Ark., from April 3 through June 25. There were five crests at this point during that period. The highest crest, 22.9 feet, occurred on May 27 and was 1.3 feet higher than the crest of 21.6 feet in early June. The 22.9-foot crest at St. Francis was the highest crest since the 23.4-foot crest on January 14, 1950. There was very little change in stage at Fisk, Mo., and St. Francis, Ark., from June 1 to 13 due to regulation at Wappapello Dam which was held at about 10,000 c.f.s. until conditions permitted a gradual reduction. The overflow was confined, primarily, to areas inside levees and floodways, except in unprotected areas near St. Francis (much of it swampy) near the mouths of a few tributary streams and near Parkin, Ark. Some damage occurred to highways, fences, etc., but the main damage was to crops, such as cotton, soybeans, corn, pastures, truck, and small grain.

No flooding occurred along the main stem of the Mississippi, but bankfull stage was approached by 0.1 foot at Baton Rouge and Plaquemine, La. At New Orleans, La., the crest of 15.7 feet on June 10 was within 1.3 feet of the 17-foot flood stage.

Atchafalaya Basin.--The Atchafalaya River remained in flood at Atchafalaya, La., from the 6th to the 18th. The crest of 29.3 feet on the 12th was 0.3 foot above flood stage. Downstream at Morgan City, La., it was in flood on four different occasions. The crest of 11.4 feet on the 27th was 1.75 feet above the previous record crest of 9.65 feet on June 10, 1927. This record crest was the result of wind and tide from hurricane "Audrey".

WEST GULF OF MEXICO DRAINAGE

The flooding on the Mermentau River at Mermentau, La., and the Calcasieu at Old Town Bay and Lake Charles, La., during the latter part of the month was due to heavy rain on the 27th-28th associated with hurricane "Audrey". These heavy rains also caused the Sabine to go above flood stage in the lower reach at Bon Wier and Deweyville, Tex. Some of the heavy rainfall amounts reported were: Basile, La., 10.63 inches; Mermentau, La., 9.85 inches; Lake Charles, La., 6.89 inches; Oldtown Bay, La., 5.46 inches; Bon Wier, Tex., 5.34 inches, and Deweyville, Tex., 6.8 inches. No abnormal flooding occurred as a result of these heavy rains.

The excessive general rains that started in the upper Trinity Basin about April 16 began slackening off about June 5. Precipitation after that date was in the form of scattered showers, and the flooding was largely due to continued releases from the reservoirs on the upper Trinity watershed. The Trinity from Dallas to Long Lake continued above flood stage throughout the month, making this the longest period that this stream has remained in flood during the period of record. Little additional damage occurred in June other than prolonged loss of grazing land and delay in repair of May damages.

Rains of 4 to 6 inches fell over the Little River Basin (below Belton Dam) in Texas from the 1st to the 5th, resulting in flooding at Cameron from the 2d to the 6th. Additional rains of up to 6 inches occurred over the basin on the morning of the 13th, causing additional flooding on the 13th and 14th.

Local rains of up to 11 inches on May 31 and June 1 over the Nueces Basin in Texas caused considerable flooding and closed low water crossings on the upper and middle Nueces. Rainfall over the Frio and Atascosa was considerably lighter and ranged from 1 to 2 inches. Most of the flooding was confined to ranch- and farmlands, but reports indicate that the benefits from increase in soil moisture greatly exceeded the flood damage to the land. The flooding since April has resulted in a 6 months delay in completion of the Wesley Seale Dam.

The Rio Grande reached and slightly exceeded bankfull stage at Lobatos Bridge, Colo., on the 9th, 12th, and from the 28th to the 30th and at Albuquerque, N. M., on the 2d and from the 8th to the 10th. The area around Lobatos Bridge is barren wasteland and no damage was reported. There was no damage from undercutting in the Albuquerque area, but reports of slight damage in this respect have been reported in other parts of the middle Rio Grande Valley.

Heavy rains on May 31 over the Rio Grande in the Langtry, Tex., area caused a rise to near bankfull stage in the reach from Del Rio to Eagle Pass, Tex. The crest at Del Rio was 13.4 feet on the 1st, 1.6 feet below the flood stage of 15 feet. At Eagle Pass, the crest was 15.1 feet on the 2d, 0.9 foot below flood stage.

GULF OF CALIFORNIA DRAINAGE

Colorado Basin.--Several streams in the Colorado River Basin reached record or near record stages during the 1957 "spring run-off" which ran 2 to 4 weeks later than usual. The Eagle River at Eagle, Colo., reached a record stage of 7.4 feet exceeding the former record stage of 6.8 feet in 1933 by 0.6 foot. The Gunnison River at Delta, Colo., reached a record-peak stage of 13.5 feet on the 6th, exceeding the previous record stage of 12.7 feet in 1941 by 0.8 foot. The Colorado River reached a near record stage of 12.1 feet at Grand Junction, Colo., on the 9th, 0.9 foot lower than the record 13.0 feet stage in 1917. At Fruita, Colo., the Colorado approached within 0.3 foot of the previous record stage. Overflows which caused some damage also occurred on the Crystal, Roaring Fork, and Frying Pan Rivers and some higher creeks in Colorado and on the Green River at Ouray, Jensen, and Green River, Utah.

These floods were caused by the melting of the heavy winter snows in the mountain watersheds where the previous winter's precipitation was much above normal. It is believed that a period of cool weather over western Colorado beginning about the 10th prevented more severe flooding, at least at Delta and Grand Junction. However, the unseasonably cool April and early May, during which almost no snowmelt occurred at high levels, no doubt contributed much to the excessive volume of runoff.

Several homes and a tourist court were flooded at Delta, Colo.; several bridges and bridge approaches and roads were washed out. Much preventative dike work and rip-rapping was required in several of the affected communities.

GREAT SALT LAKE BASIN

Limited flooding occurred in the upper Bear River in Wyoming, the upper Provo River (above Deer Creek Dam), the upper Weber River (above newly constructed Wanship Dam), and the Beaver River on the Big Cottonwood Creek in Utah during the first week in June. No extensive damage was reported and flood waters did not persist more than a few days. Most areas flooded were pasture lands at the higher elevations. There was some damage to roads, bridges, picnic areas, and campsites. Considerable work was expended in preventing further damage. These floods were caused from the melting of a record snowpack.

A flash flood occurred on Lake Creek near Heber, Utah, on the 10th due to heavy rain: one-half mile of the newly installed cement canal lining was destroyed and will have to be replaced. The course of the river was changed by as much as 300 feet in some places.

PACIFIC SLOPE DRAINAGE

Columbia Basin.--Intense, widely scattered showers and moderately warm temperatures temporarily halted the slow recession in rivers east of the Cascades, the middle and lower Columbia, and Willamette below Oregon City, Oreg. The total rise in the lower Snake River Basin did not amount to over 3 feet. The highest stage on the Columbia at Vancouver, Wash., and the Willamette at Portland, Oreg., during June was 21.9 and 21.6 feet, respectively, and occurred on the 5th. The highest stages at these points during the spring rise was 23.3 feet and 23.0 feet on May 23.

TROPICAL STORMS JUNE 1957

Compiled by H. C. Sumner
Weather Bureau
Washington, D. C.

UNNAMED TROPICAL STORM OF JUNE 8 - 12, 1957

Unsettled conditions, accompanied by abnormally low pressure, prevailed over the southwest Gulf of Mexico and the Yucatan area on June 7. Late that day and during the morning hours of June 8, pressure changes indicated that a depression with a poorly defined circulation existed over the Gulf. At 10 a.m. (c.s.t.) on the 8th it was centered 200 to 250 miles south of Mobile, Ala. Although aircraft reconnaissance on the 8th was unable to locate a definite center, observations from ships in the area indicated that the storm had an exceptionally fast forward movement of about 25 m.p.h. It crossed the mainland east of Apalachicola, Fla., and during the night of the 8th moved northeastward through northern Florida and southern Georgia.

Rainfall was heavy over most of northern Florida. During the 2-day period between noon of the 7th and noon of the 9th, Cross City, Fla., reported over 8 inches of rain and Panama City, Fla., over 5 inches. Winds of about 35 m.p.h. were maintained during passage over Florida, Georgia, and South Carolina. Having lost its tropical storm characteristics the extratropical LOW crossed the east coast a short distance south of Charleston, passed eastward over the Atlantic, and reached the vicinity of Bermuda during the morning of the 12th of June. No loss of life or severe property damage has been reported.

HURRICANE AUDREY JUNE 25 - 28, 1957

Highlights

Hurricane Audrey, one of the most destructive June hurricanes recorded, reached the coastline near the Louisiana-Texas border on the morning of June 27, 1957. A late count indicates that the storm claimed 353 lives and wrought damage estimated at about $150,000,000. Extreme tides of more than 10 feet and winds in excess of 100 m.p.h. accompanied the hurricane as it moved onto the coast. Rainfall exceeded 10 inches in Jefferson Davis and Acadia Parishes, a maximum of 10.40 inches falling at Jennings, La., during passage of the storm. Greatest damage extended from Sabine Lake to Cote Blanche Bay with extensive damage from the Atchafalaya River westward and northward into La Salle Parish. The cities hardest hit were Cameron and Lake Charles, La., and Port Arthur, Tex.

History of the Hurricane

The existence of a tropical depression in the southwestern Gulf of Mexico was first suspected when upper air winds showed evidence of a weak circulation over the Bay of Campeche on June 24, 1957. Later in the day additional confirmation came in an observation received from a boat of the shrimp fleet. At 10:30 p.m. (c.s.t.), with the strongest winds associated with the storm 35-40 m.p.h., the Hurricane Warning Center at New Orleans issued the first public bulletin.* During the night the circulation increased rapidly in intensity and by the following morning aircraft reconnaissance reports and an observation from the S.S. TERRIER indicated that the storm, while remaining almost stationary in location, had increased to hurricane intensity.

The hurricane, now known as Audrey, began a northward movement as it increased in size and intensity. Moving forward at a speed of approximately 15 m.p.h. the center crossed the coastline during the morning of June 27 near the Texas-Louisiana line, at a point about midway between Beaumont, Tex., and Lake Charles, La. The center of the storm passed east of Sabine Pass, with the City of Orange, Tex., in the western portion of the eye between 9:00 and 10:00 a.m. (c.s.t.).

From this point the storm moved northeastward across Louisiana and into northwestern Mississippi losing strength as it progressed. The center passed over Vinton, Hackberry, De Ridder, Winnfield, and Monroe, La., on the 27th and over Greenville, Minter City, Oxford, and Corinth, Miss., during the morning of June 28. The eye of the hurricane was approximately 35 miles in diameter as it moved across the coast gradually closing until it lost its identity in the vicinity of Winnfield. Moving on a northeastward course the storm reached northern Louisiana on the morning of the 28th and became extratropical. It continued to move northeastward along the West Virginia-Ohio border and passed through the western portion of Pennsylvania and New York, crossing Lake Ontario during the night.

Pressure

A low pressure of 958 millibars (28.30 inches) was observed by the Fish and Wildlife Service at Hackberry, La., at 9:45 a.m. (c.s.t.) on June 27. The lowest pressure observed at a Weather Bureau Station was 966 millibars (28.52 inches) at Port Arthur, Tex., which at the time was in the western edge of the hurricane eye. The Weather Bureau Airport Station at Lake Charles, La., reported a low of 972 millibars (28.69 inches) at 11:40 a.m. (c.s.t.)

A tabular listing of low pressures and high winds and tides reported during the passage of Audrey is given as table 1. The tracks of this hurricane and the tropical storm that occurred earlier in June are shown in figure 3.

Wind

Gusts of wind near or exceeding 100 m.p.h. were reported at a number of locations along the coast. A maximum gust of 105 m.p.h. at 9:40 a.m. (c.s.t.) was recorded on the Cities Service Corporation's wind dial located 10 miles to the west of Lake Charles. A gust recorder chart from the Drill Barge "Vinegarroon", a portion of which is reproduced as figure 1, shows that a gust in excess of 100 m.p.h. was recorded at that location before the wind indicator failed shortly after 6:00 a.m. (c.s.t.) on June 27.

---

*A complete listing of official warnings, advisories and bulletins issued by the Weather Bureau in connection with hurricane Audrey is given in a preliminary report "Hurricane Audrey" dated July 8, 1957. This report can be secured by request made to the U. S. Weather Bureau, 24th and M Streets, N. W., Washington 25, D. C. Attention: Publications Section.

The Sabine Pass Coast Guard Station reported a fastest mile of 85 m.p.h., with gusts of 100 m.p.h. from the northwest. At the Weather Bureau Airport Station at Lake Charles, the fastest mile was recorded as 69 m.p.h. from the south-southeast, accompanied by gusts between 90 and 100 m.p.h. There were an unusual number of tornadoes and local storms that accompanied Audrey as she moved northeastward across Louisiana and Mississippi.

Tides and Inundation

Tides rose along the east Texas and entire Louisiana coastline reaching 6 feet or higher from Sabine Lake to Cocodrie, La. The highest tides were 10.6 feet above m.s.l. measured from a water mark inside a building at Cameron and 9.5 feet above m.s.l. at Pecan Island. High tides caused the Atchafalaya River to rise to a height of 8.5 feet above m.s.l. at Morgan City, which exceeded the previous record by 1.7 feet.

Tidal salt water covered all of Cameron and most of Vermilion Parishes and penetrated far inland in Terrebonne, La Fourche, and Jefferson Parishes. Along the Texas coast flooding was largely local in nature due to inadequate drainage. Storm tides were, however, 3 to 4 feet above normal in the Corpus Christi-Port Aransas section, causing some minor damage to beach installations and roads. At Galveston, a tide of slightly over 6.0 feet above m.s.l. caused flooding to depths of 6 to 12 inches over parts of the Galveston Airport.

Figure 2 indicates the extensive coastal area that was inundated by salt water during the passage of Audrey. At some points inundation extended 20 to 25 miles inland.

Loss of Life and Property Damage

A recent survey indicates that the loss of life attributed to hurricane Audrey reached a total of 353, with most of these fatalities the result of drownings in inundated areas along the western Louisiana and eastern Texas coasts. Some lives were lost in other areas, as a result of tornadoes, and 7 deaths were reported in the sinking of the fishing boat M/V KOTURAH which was under tow in heavy seas off Galveston.

Many lives were saved through mass evacuations in which a reported 75,000 persons moved from low-lying coastal areas to higher ground. There was extensive advance evacuation of persons from the Bolivar Peninsula southwest of High Island and almost complete evacuation from the Sabine Pass section.

Total damage resulting from Audrey has been estimated at $150,000,000, -- $120,000,000 in Louisiana, $9,000,000 in Mississippi, $8,000,000 in Texas and lesser amounts eastward and northward as far as Canada. Major property losses included the destruction of, or severe damage to, 90 to 95 percent of all buildings in Cameron and lower Vermilion Parishes and to thousands of automobiles and much farm equipment; while farther inland roof damage, shattered windows, and downed trees and power and communication lines were extensive. About 4,500 homes were destroyed or irreparably damaged in Louisiana, with 100,000 in Louisiana and 50,000 in Mississippi suffering lesser damage. Salt water inundation of a large rice acreage, corn blown down, and flooded cotton fields were the chief crop losses, which have been roughly estimated at $50,000,000 for Louisiana and Mississippi combined. Thousands of cattle drowned or starved and the trapping industry was probably wiped out for years. Scattered wind damage occurred over the northwestern half of Alabama on the night of the 27th and the morning of the 28th with no concentrated damage. There were a few instances of structural damage to buildings, the most notable being the unroofing of a school building near Ryland in Madison County. Maximum recorded wind gusts were 71 m.p.h. at Birmingham, 60 at Mobile, 55 at Muscle Shoals, and 48 at Montgomery. Hurricane damage in Alabama has been estimated at $200,000.

In addition, over an area south of Montgomery, Ala., an outbreak of 8 tornadoes occurred between 8:30 a.m. and 11:00 a.m. (c.s.t.) on the 28th as a result of atmospheric conditions associated with Audrey at a time when the storm was centered near the northwestern corner of the State. Fourteen persons were injured in these tornadoes, with property damage estimated at about $600,000. The area in which these tornadoes occurred extends from Clarke, Monroe, and Conecuh Counties northeastward into Montgomery and Bullock Counties. Following the northeastward course taken just prior to reaching the coast, the storm became extratropical as it reached the Tennessee-Kentucky area about midday on the 28th. In this area and in Ohio, the generally minor wind damage which occurred was concentrated to the east of the storm path. Strongest gusts observed were near 50 m.p.h. at Chattanooga, Knoxville, and Crossville. Flooding was minor and restricted mainly to small tributary streams and low-lying farmlands where runoff was excessive due to heavy antecedent rains.

The storm which had been weakening over the Mississippi and Ohio Valleys reintensified considerably over the Great Lakes area, due to extratropical processes. Flood and wind damage was reported from widespread areas in the States bordering the Great Lakes.

Over Illinois, rains of 8 to 10 inches along a line from Pana to Paris caused severe flooding of farmlands and placed many highways under water for 1 to 3 days. Rains up to 10 inches fell over central Indiana on June 28 and 29, resulting in floods that drowned 5 persons, damaged over 1,000 homes, flooded 125 business places, washed away approximately a half million acres of crops, and knocked out highway and railroad bridges. Losses by the railroads are estimated at $1,200,000. An 18-car work train fell into Big Walnut Creek near Reelsville when a bridge, weakened by flood water, collapsed. During this storm, areas were inundated where previous flooding was unknown. Total damage in Indiana has been set at $2,450,000.

Damage in Pennsylvania, confined mostly to the western portion, was relatively light and resulted mostly from thunderstorms and gusty winds associated with the storm as it moved across the northwestern portion of the State. Winds reached 65 m.p.h. in the Pittsburgh area and an estimated 40 to 50 m.p.h. at Harrisburg. Damage was confined mostly to trees, utility lines, and a few house roofs. One person was killed by lightning and another injured by a falling tree.

Damage in New York State was almost entirely a result of wind effects. The greatest damage occurred in western and central counties near and

CLEMSON

south of Lake Ontario. Winds reported at 95 to 100 m.p.h. at Jamestown resulted in a general power failure in the area. There were some 150 separate breaks in main powerlines over the western counties.

At the Buffalo Airport, winds over 50 m.p.h. were observed. Over the north-central counties south of Lake Ontario, damage was almost entirely from winds as dry soils prevented flooding. In some areas there is evidence that the heavy rains probably counter-acted other damage in their relief to crops.

Along the shores of Lake Erie, there was considerable damage to small boats as the wind raised the water level 3 feet above normal. There was no flooding of consequence, but a marked rise in the Niagara River caused damage to sight-seeing facilities and river docks below the falls. Overall damage in New York State is estimated between $250,000 and $500,000 and there were 4 deaths attributed to the storm.

HISTORICAL GULF COAST STORMS

The passage of hurricane Audrey is reminiscent of an equally fatal storm which, on the night of August 10, 1856, completely devastated the fashionable hotel and pleasure resort on Last Island, or Isle Derniere as the French call the dot of land lying off the Louisiana coast, 150 miles east of Cameron. During the earlier hurricane, a storm tide swept an estimated 400 persons to their deaths. Last Island is now only a haven for pelicans and other sea birds, mute testimony to the fury of the storm that struck a century ago.

The development of storm tides on the low-lying coasts of the Gulf of Mexico is not unusual with hurricanes. When a hurricane approaches the coast slowly in a direction nearly normal to the coastline, as in the case of Audrey, the storm tide is often the most destructive feature of the hurricane. Some other notable hurricane-caused tides in Gulf coastal areas are the following:

(1) Sept. 16, 1875, Indianola, Tex.; disastrous inundation from Matagorda Bay; wind estimated 100 m.p.h.; 176 lives lost.

(2) Aug. 19, 1886, Indianola, Tex.; water in the bay rose rapidly; not a house remained undamaged; the town was not rebuilt.

(3) Oct. 1, 1893, New Orleans, La.; the storm was accompanied by a tidal wave and caused a loss of approximately 2,000 lives.

(4) Sept. 8, 1900, Galveston, Tex.; the water rose at a steady rate from 3 p.m. until about 7:30 p.m. when there was a sudden rise of about 4 feet; approximately 6,000 persons lost their lives.

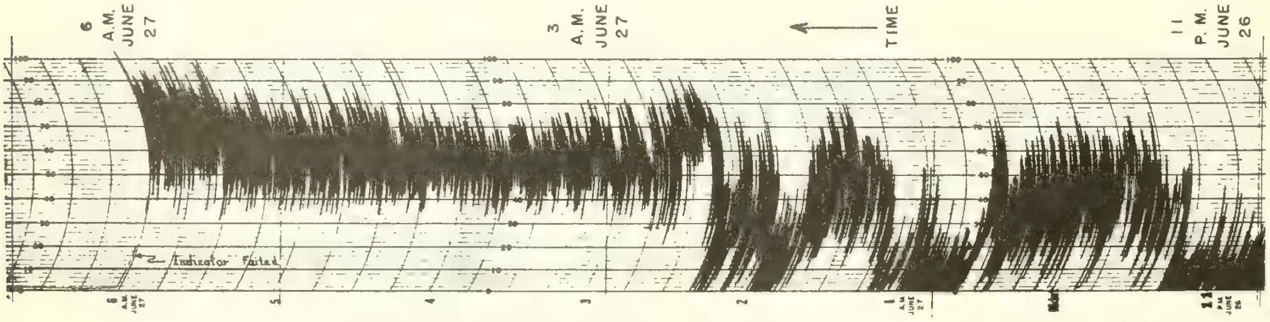
(5) Aug. 17, 1915, Galveston, Tex.; the tide at Galveston was 12 feet above normal; extreme wind speed was 120 m.p.h.; 275 lives lost; property damage estimated at $50,000,000.

(6) Sept. 29, 1915, Mississippi Delta; highest tides of record (to that time) observed on delta; extreme wind speed was 140 m.p.h.; 99 out of 100 houses destroyed in Leeville; 275 deaths reported.

(7) July 5, 1916, Mobile, Ala; tide was 11.6 feet above normal; wind reached 107 m.p.h.; 4 deaths and $3,000,000 property damage in Mobile.

(8) Oct. 25, 1921, Tampa, Fla.; tide at Tampa rose to 10.5 feet; 6 deaths and $3,000,000 property damage.

(9) Oct. 4, 1949, Freeport, Tex.; storm tide exceeded 11 feet at Freeport; $5,000,000 damage to Texas rice crop.



HURRICANE AUDREY, Gust Recorder Chart from the Drill Barge VINEGARROON. - Period: 11:00 p.m. June 26 through 6:00 a.m. June 27, 1957. Approximate Location: Lat. 29° 38' N., Long. 93° 05' W.

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

15						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

15																									5	28,679	-43.7			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

20-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

* 7 mb, 7 obs., 34,079 m., -32.3°C.

15	9	28,850	-39.3															

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

SOLAR RADIATION DATA

JUNE 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg

Langleys---------	286	307	273	218	202	155	135	225																

Note: Langley is the unit used to denote one gram calorie per square centimeter

Values adjusted to conform with the International Scale of Pyrheliometry July 1, 1957

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

JUNE 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	321	404	*374	340	*172	*186	392	203	*	*231	306	420	429	407	442	414	383	307	*375	363	429	401	405	427	*246	*91	323	*353	415	391		343

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

CLEMSON

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

CORRECTIONS

	Month:	November 1956
page 415:	Denver, Colo.	10 mb. level-height should be 31,444 m., and 7 mb., 33,830 m.
	Rantoul, Ill.	10 mb. level-height should be 31,495 m.
	Month:	December 1956
page 449:	Ithaca, New York	data for July, August and September are reprinted as corrected data.
	Month:	February 1957
page 49:	Burns, Oregon	accumulated degree days period July through this month should be 5229; for March, pg. 73, 6042; for April, pg. 104, 6630; for May, pg. 164, 6972.
page 49:	Houston, Texas (U)	accumulated degree days period July through this month should be 736; for March, pg. 73, 854; for April, pg. 104, 891; for May, pg. 164, 892.
	Month:	April 1957
page 104:	Valentine, Neb.	heating degree days should be 670, 6923 and 6704.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

200	12	11,973	-59.2		266	70.7

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

30-----																			7	23,684	-60.3									

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

30	11	23,700	-57.9			
20	6	26,297	-48.3			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

20						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

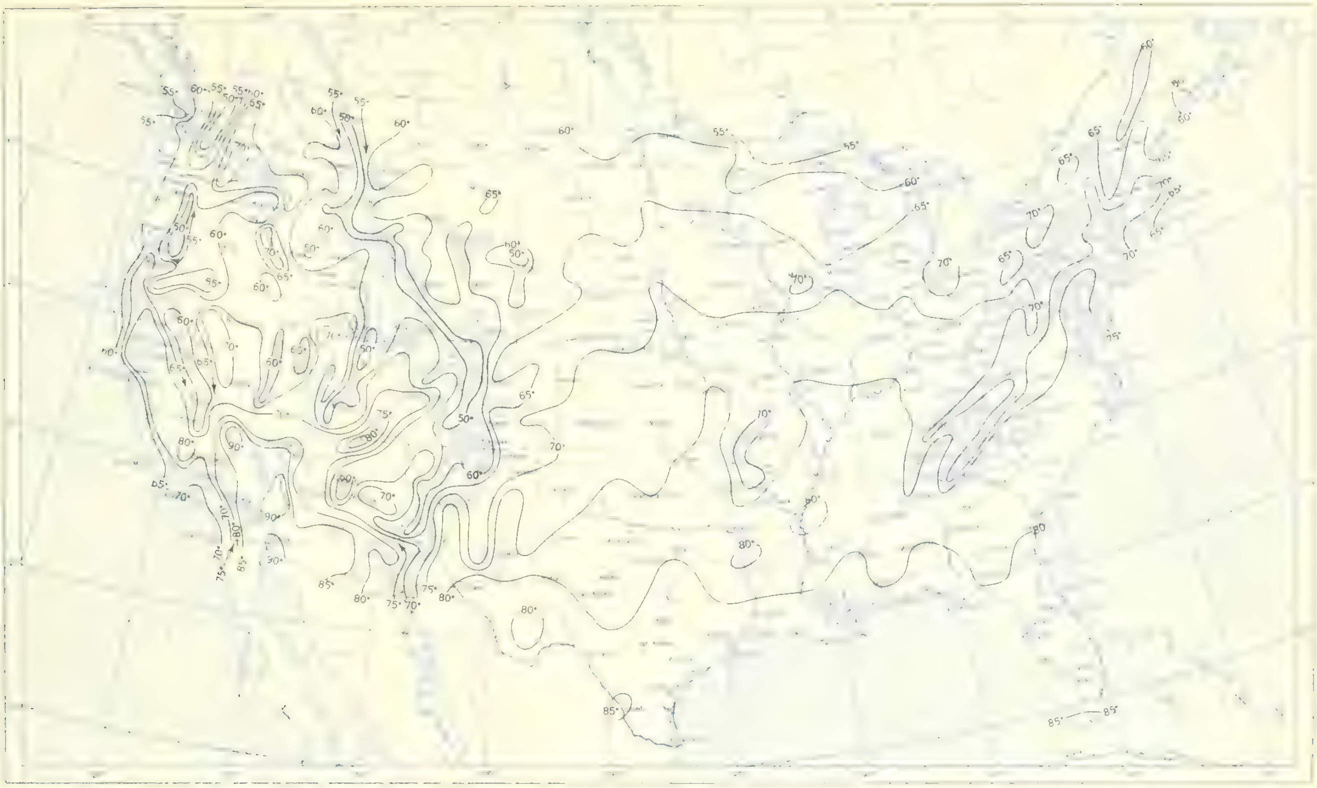
Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

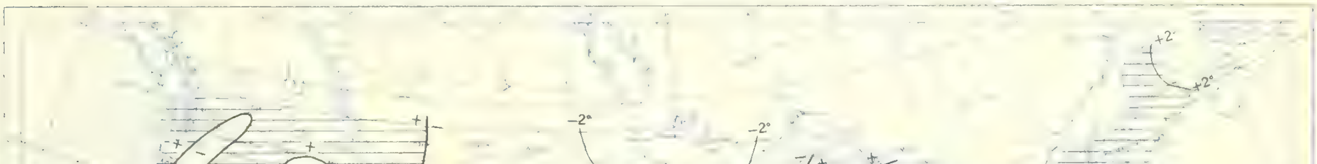
* Corrected Data

NWRC, Asheville, N. C. --- 9/19/57 --- 1900

Chart I. A. Average Temperature (°F.) at Surface, June 1957.



B. Departure of Average Temperature from Normal (°F.), June 1957.

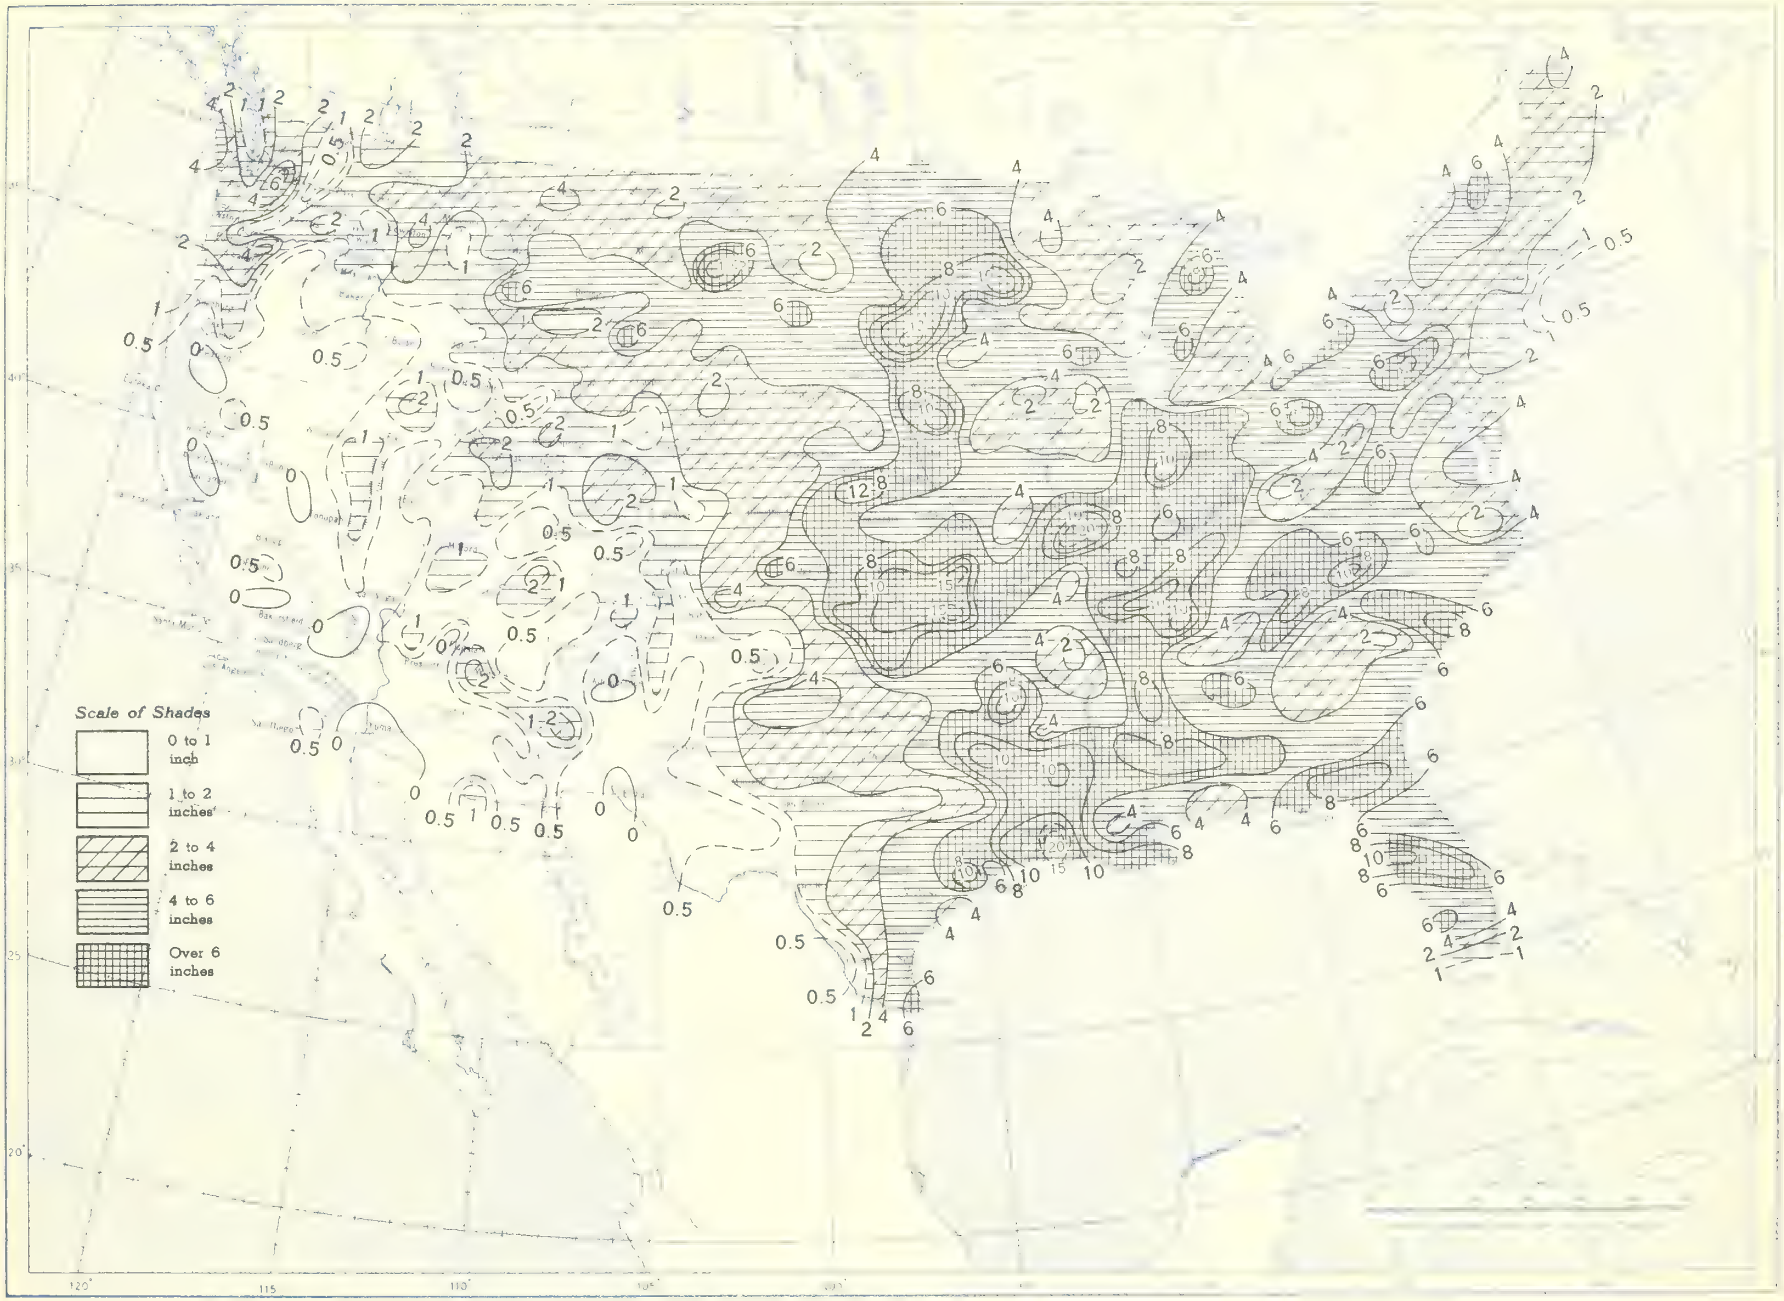


A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.

B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

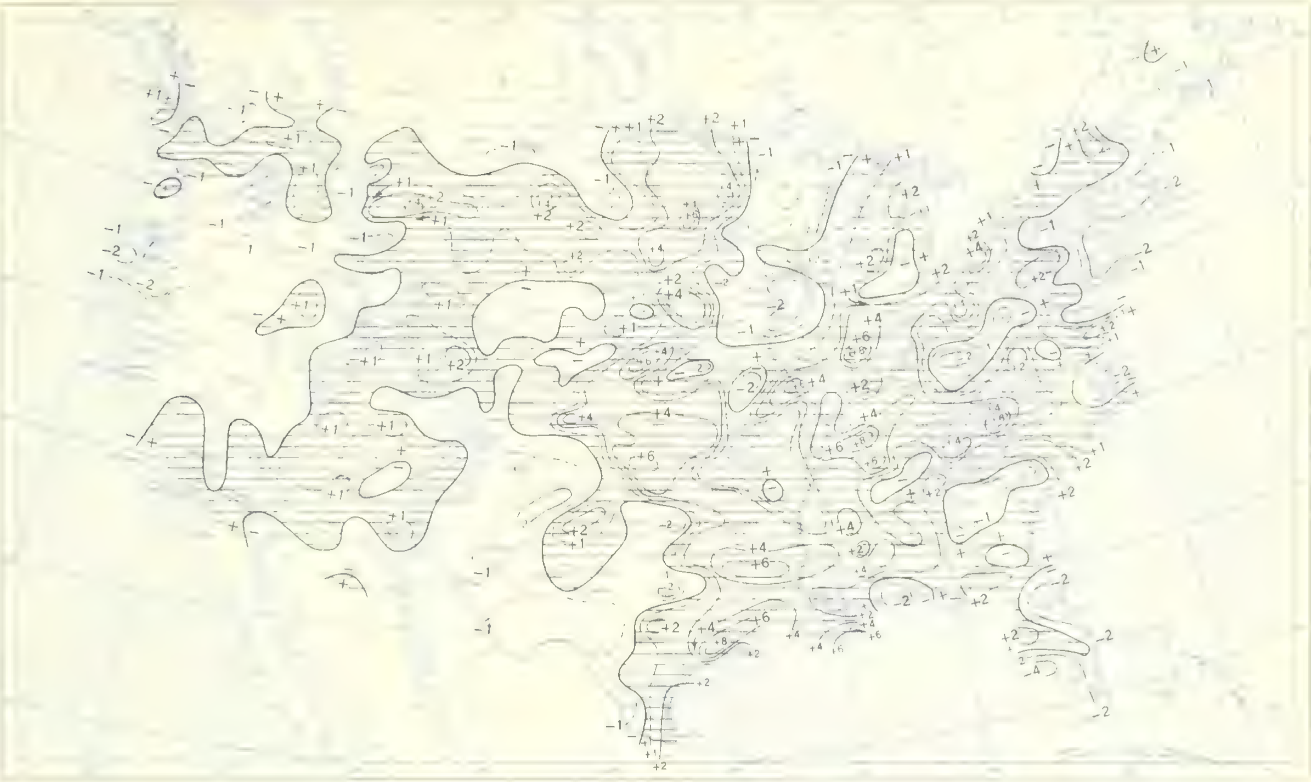
CLEMSON COLLEGE LIBRARY

Chart II. Total Precipitation (Inches), June 1957.

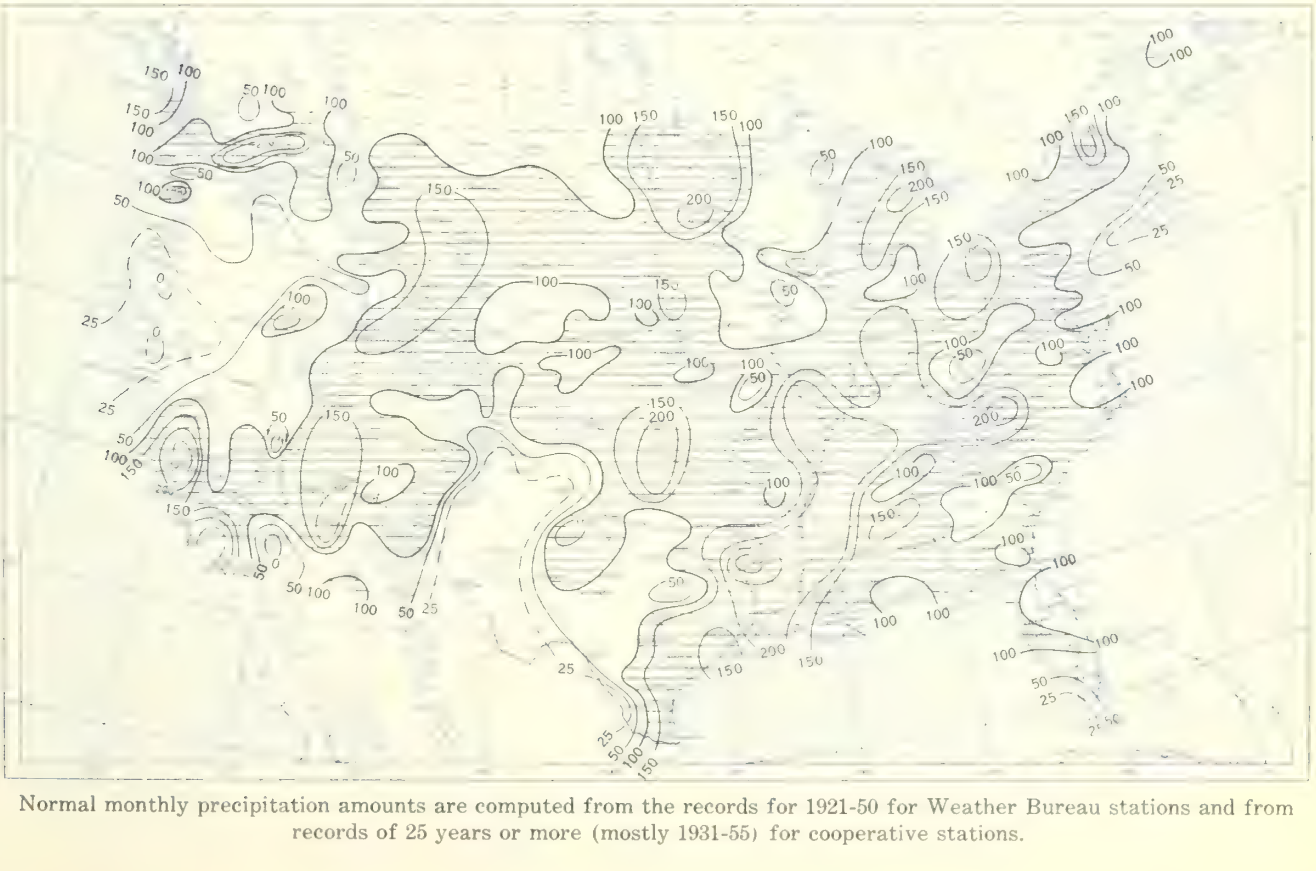


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), June 1957.



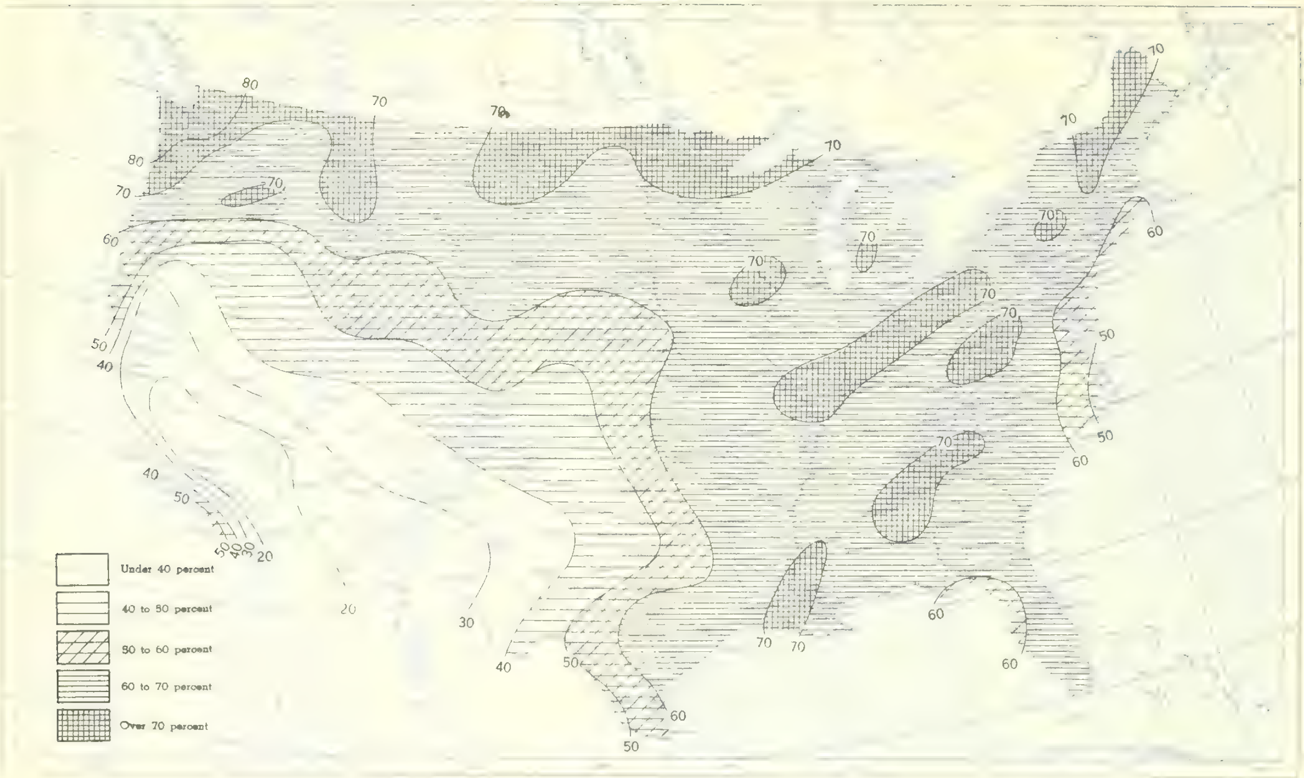
B. Percentage of Normal Precipitation, June 1957.



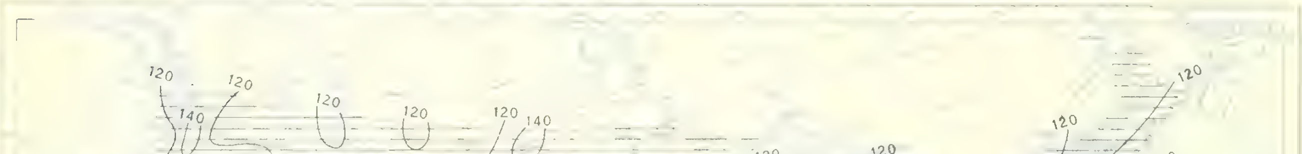
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

CLEMSON COLL

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, June 1957.

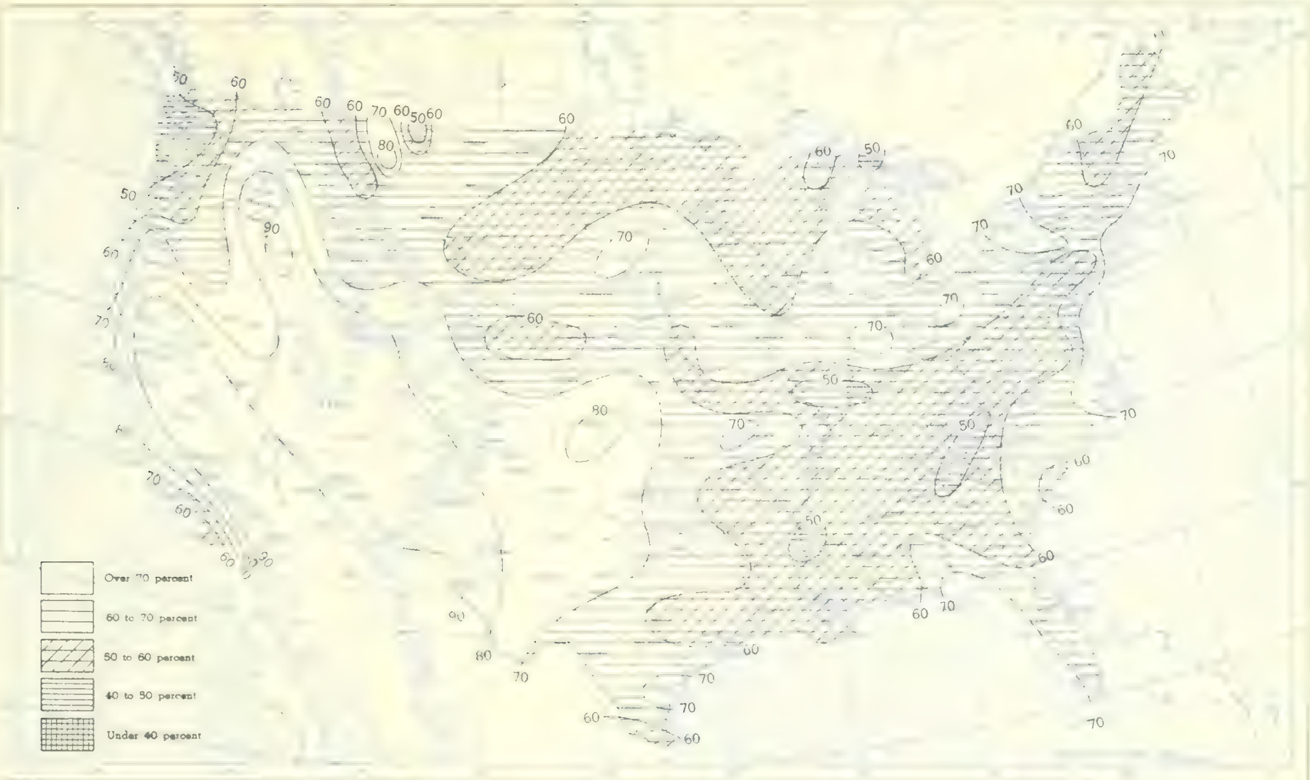


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, June 1957.

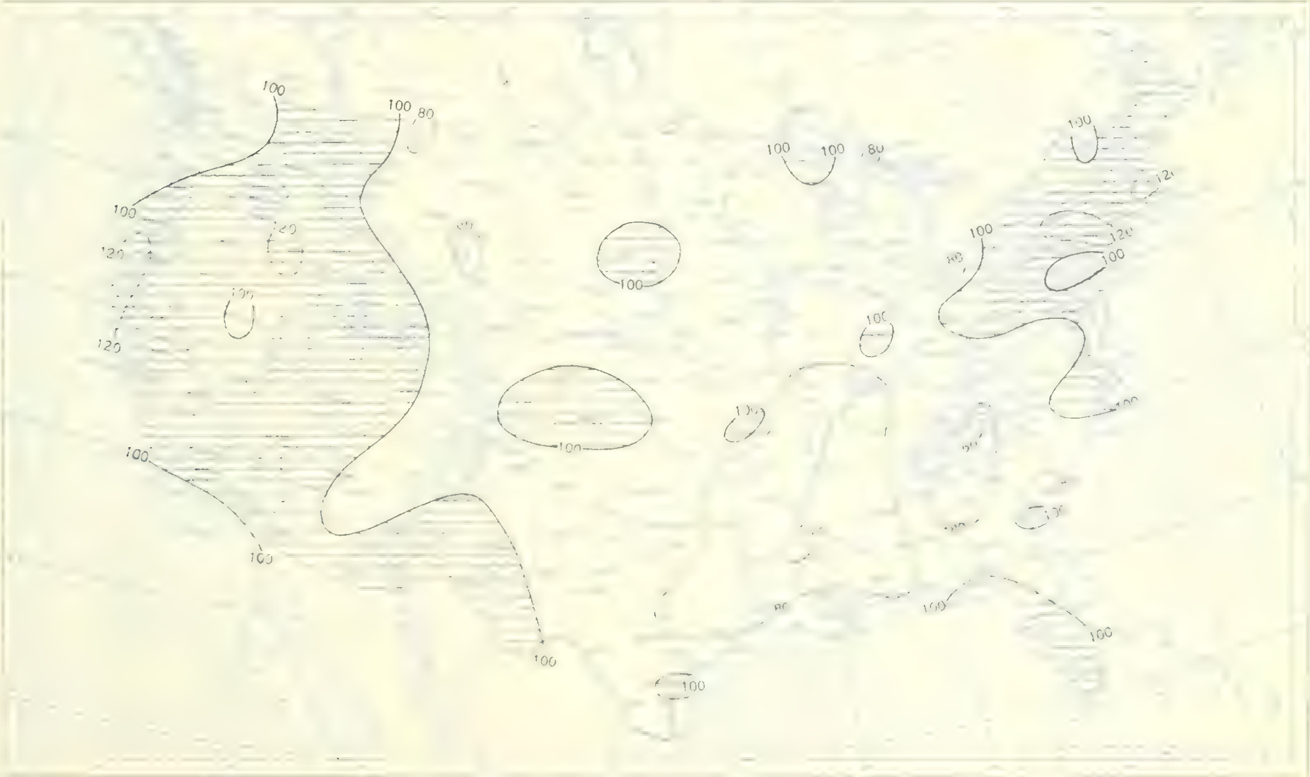


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, June 1957.



B. Percentage of Normal Sunshine, June 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

CLEMSON COLLEGE LIBRARY

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, June 1957. Inset: Percentage of Mean Daily Solar Radiation, June 1957. (Mean based on period 1951-55.)

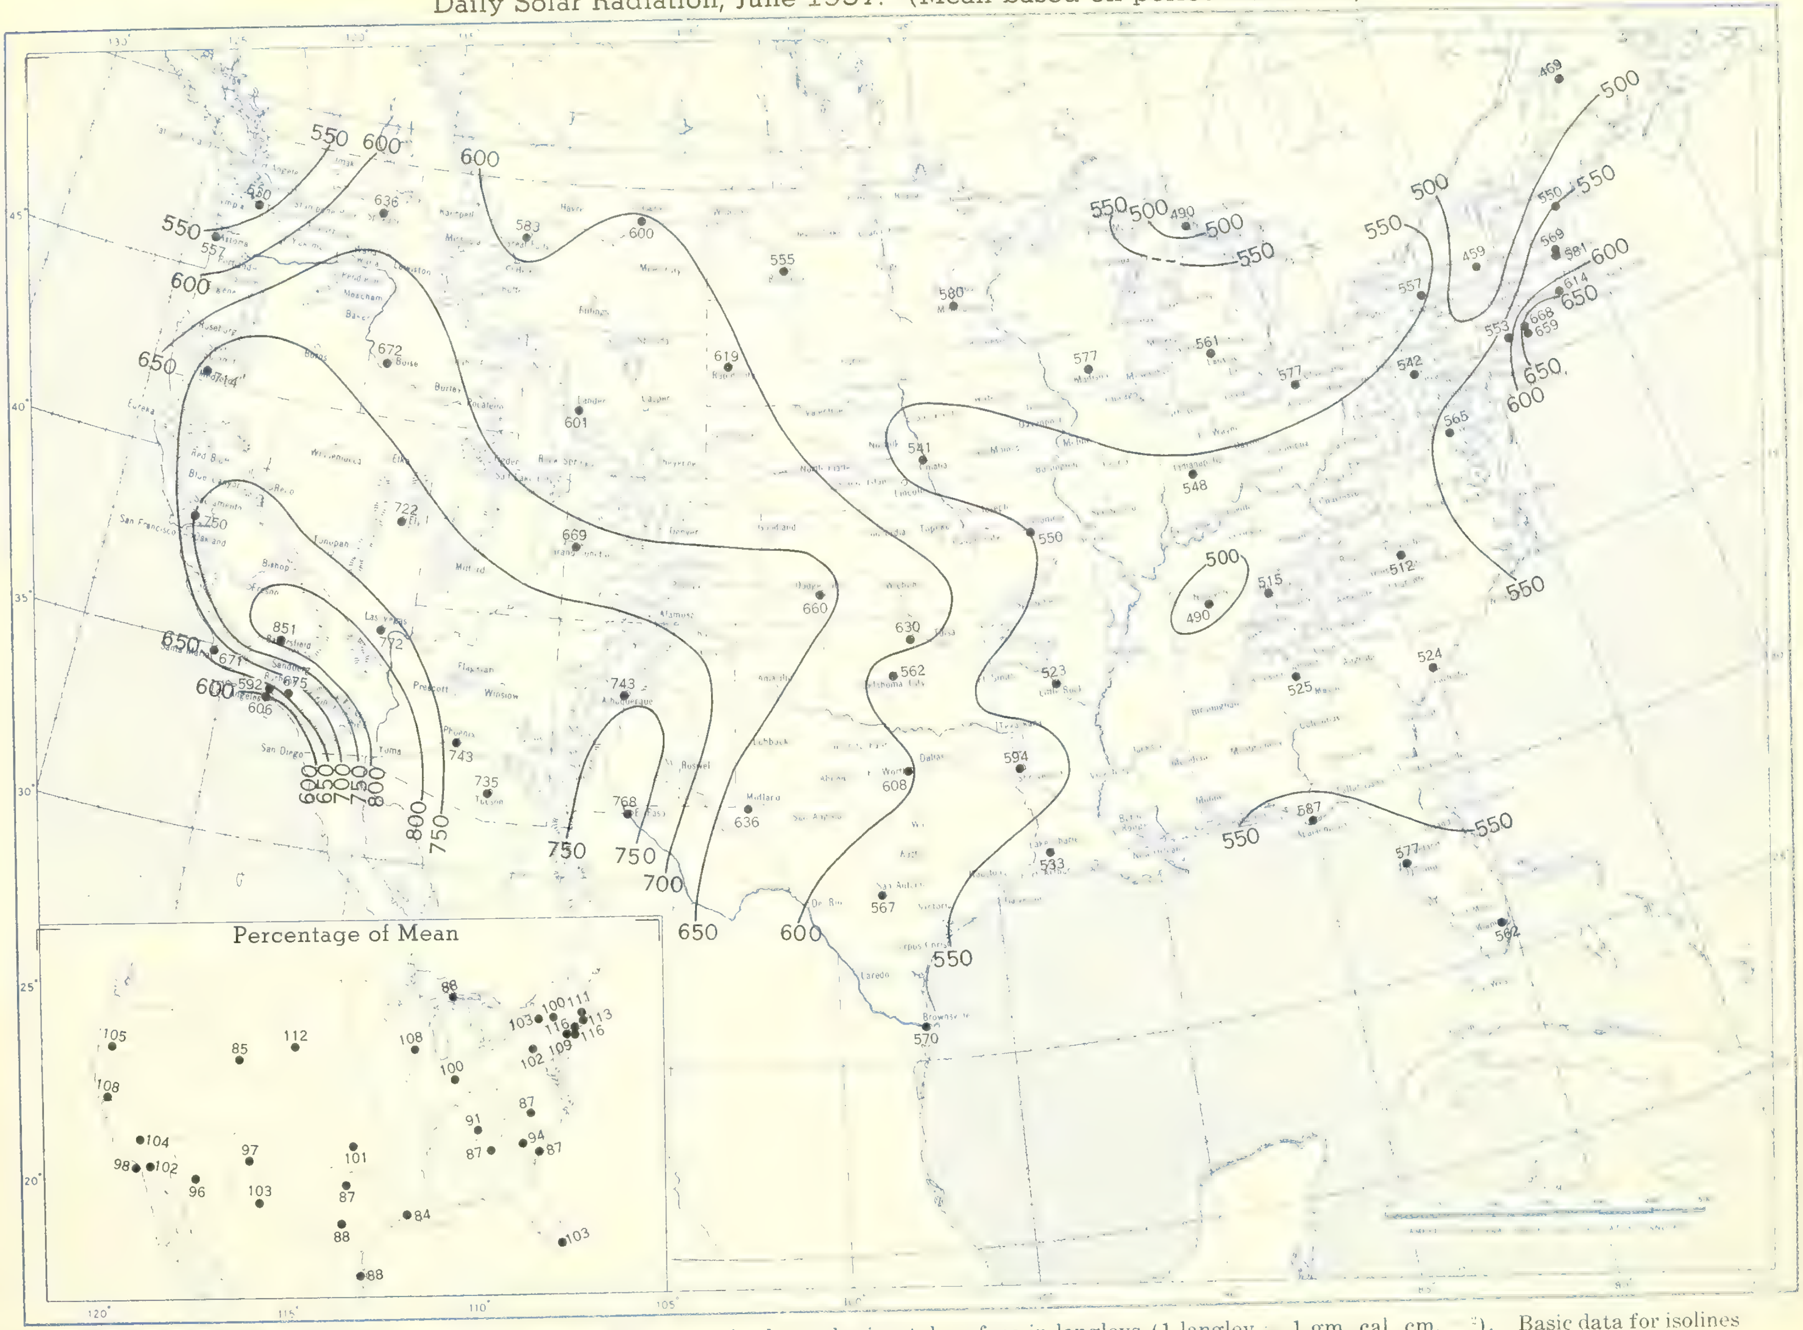


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

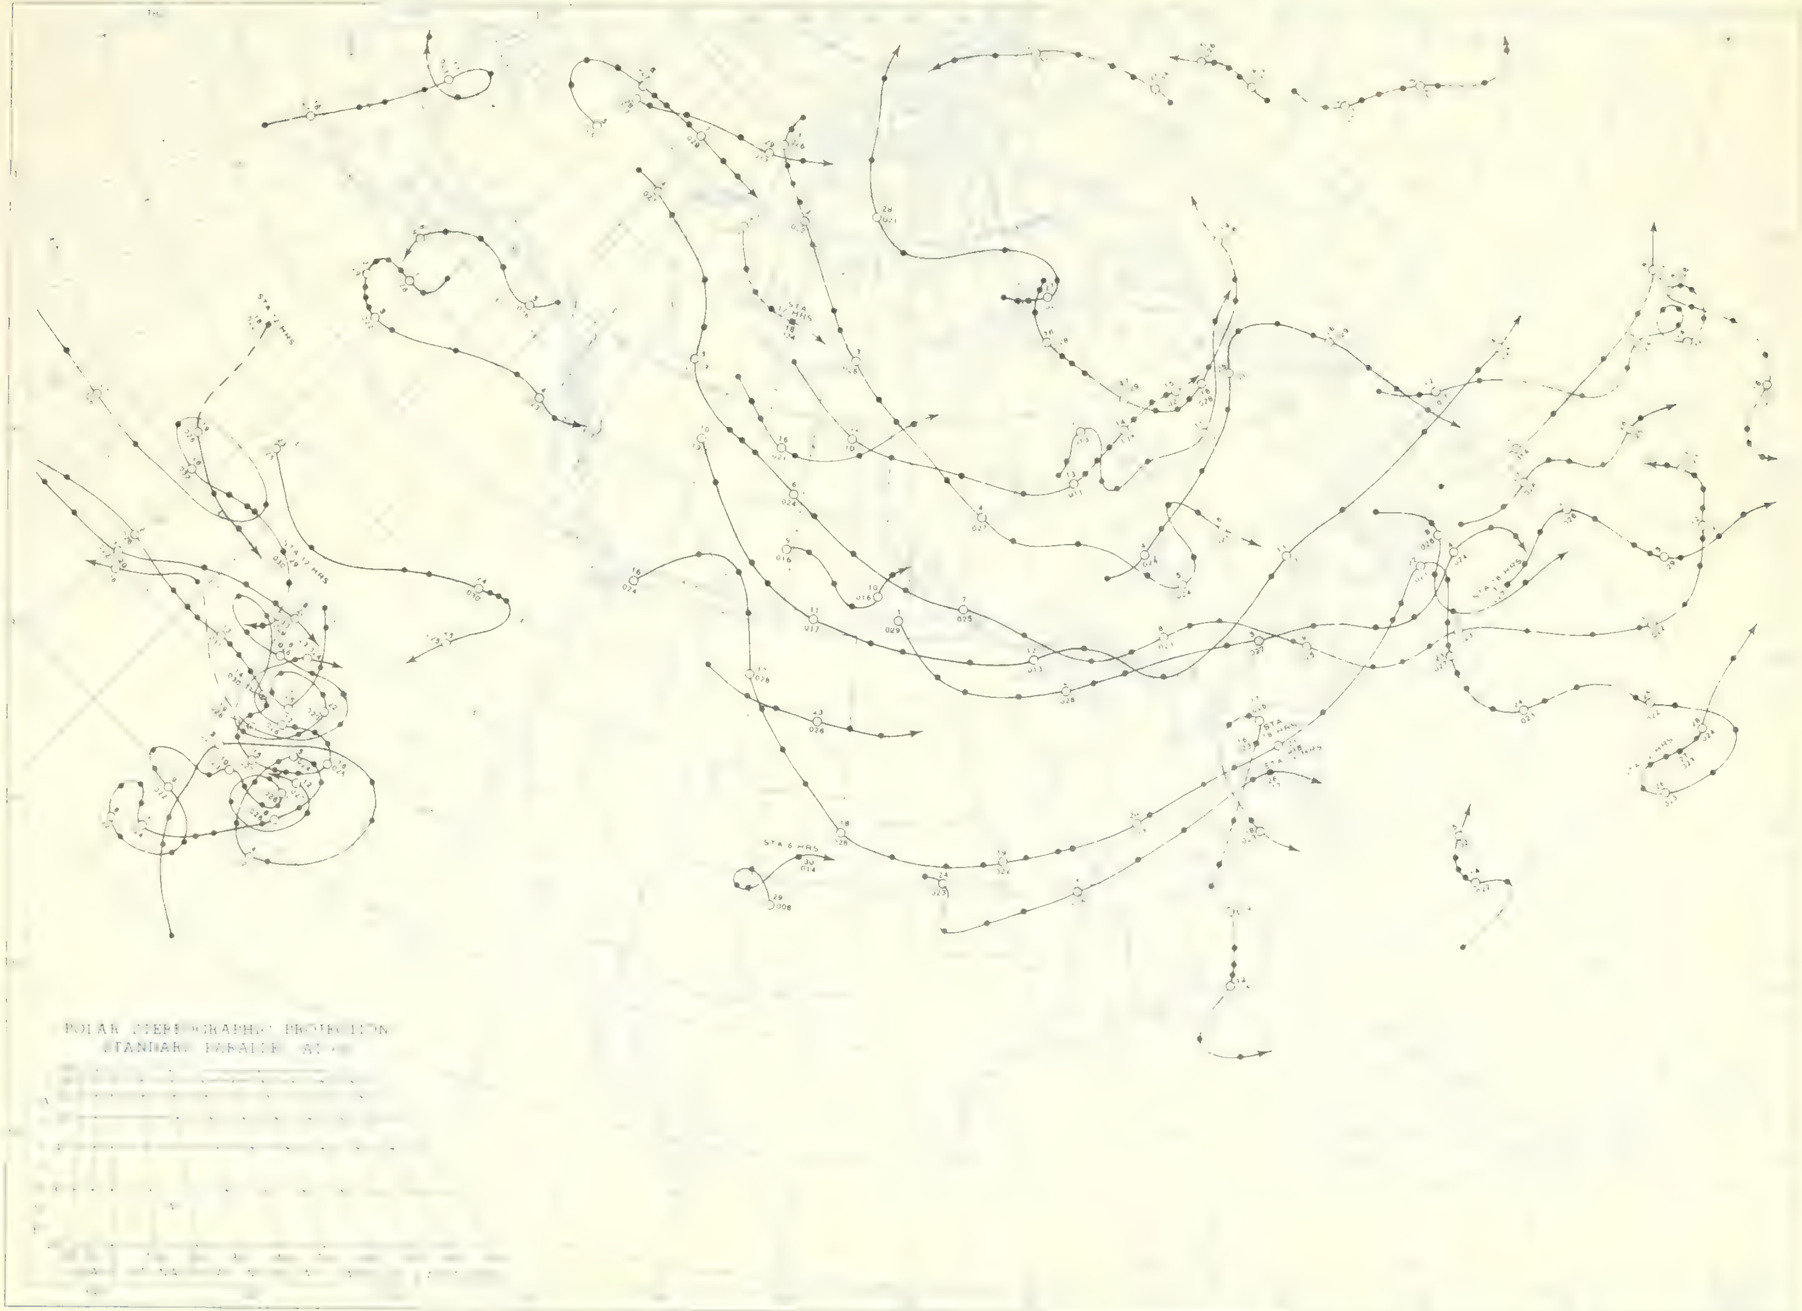
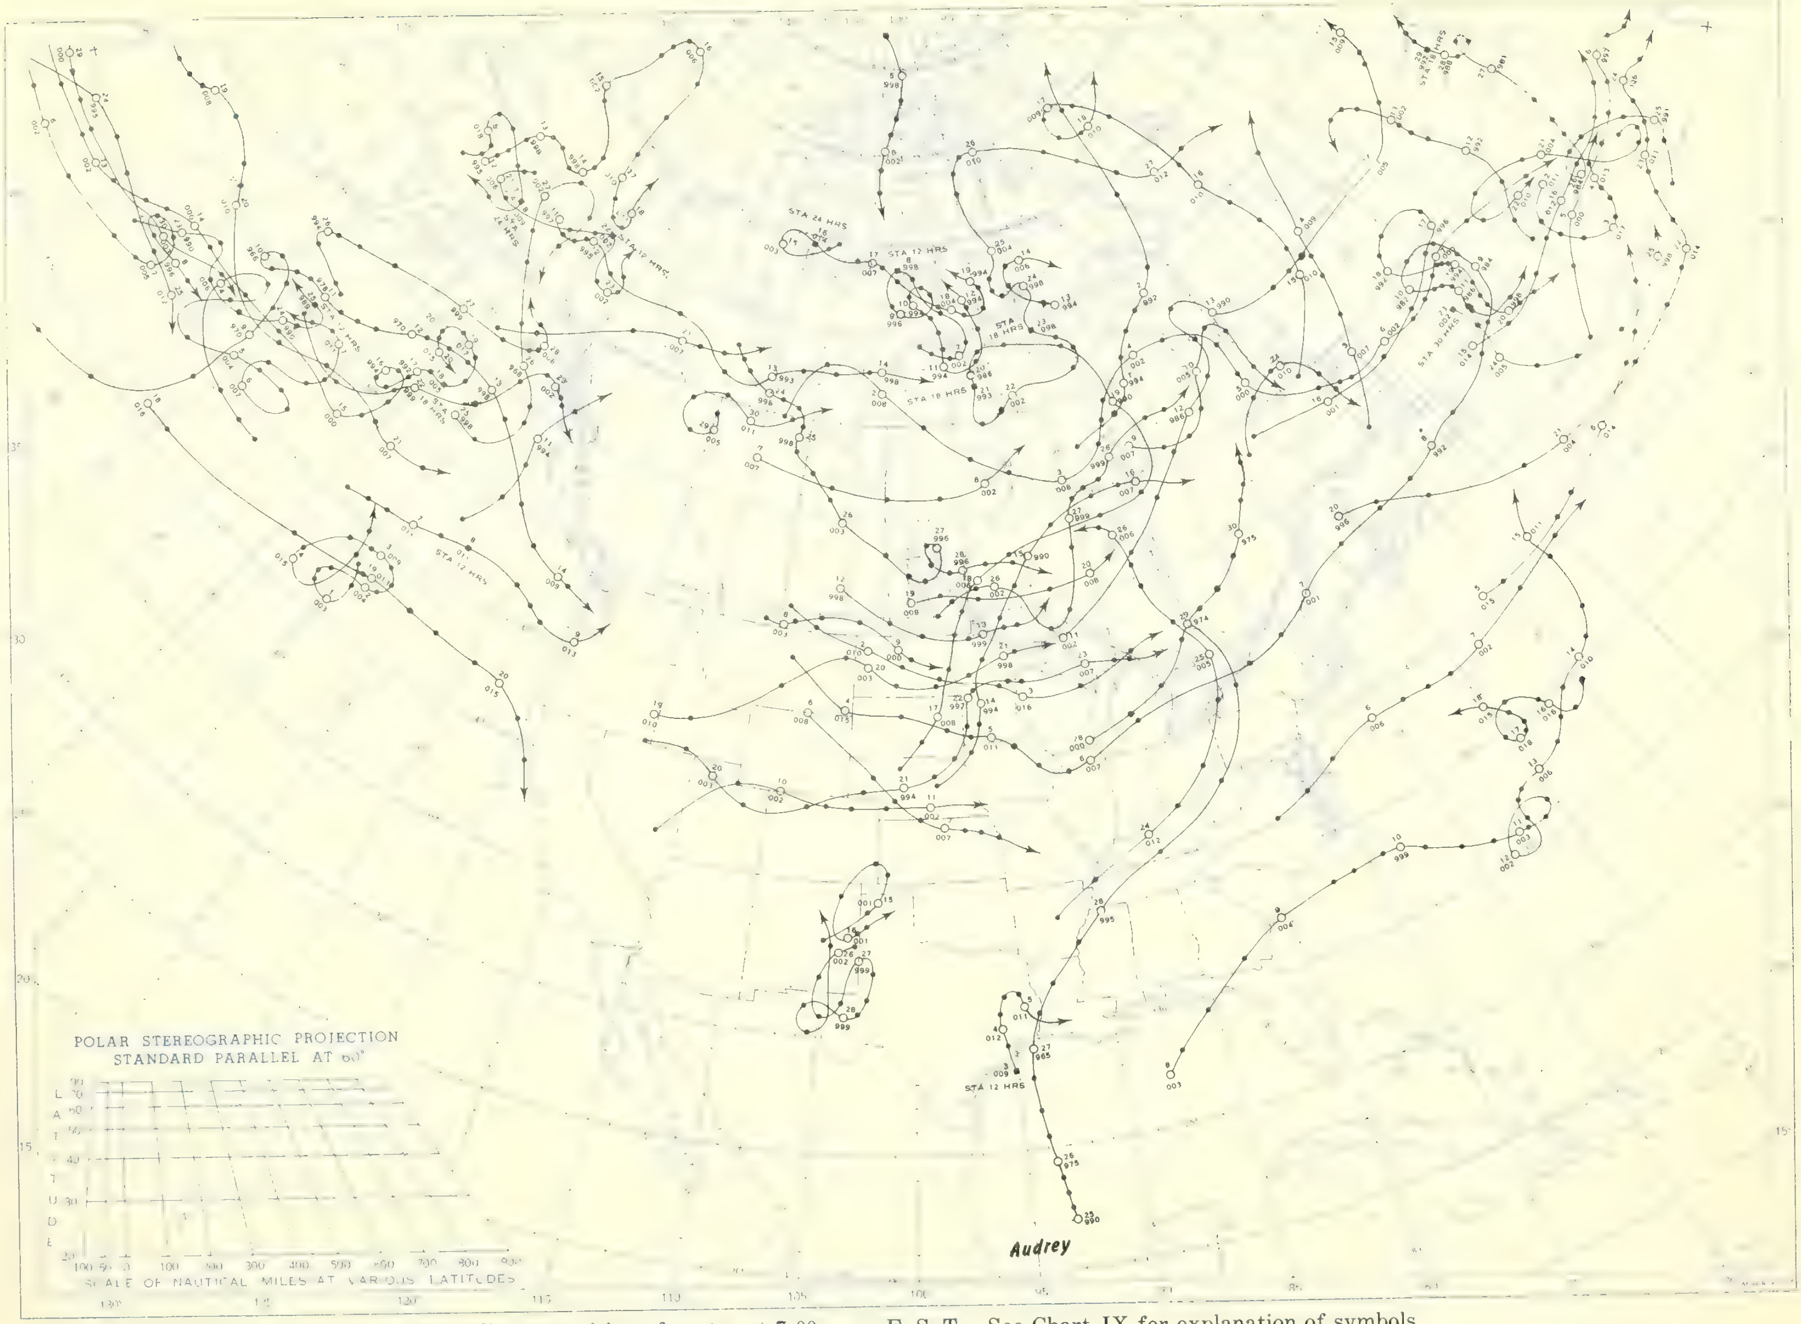
Chart IX. Tracks of Centers of Anticyclones at Sea Level, June 1957.



Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

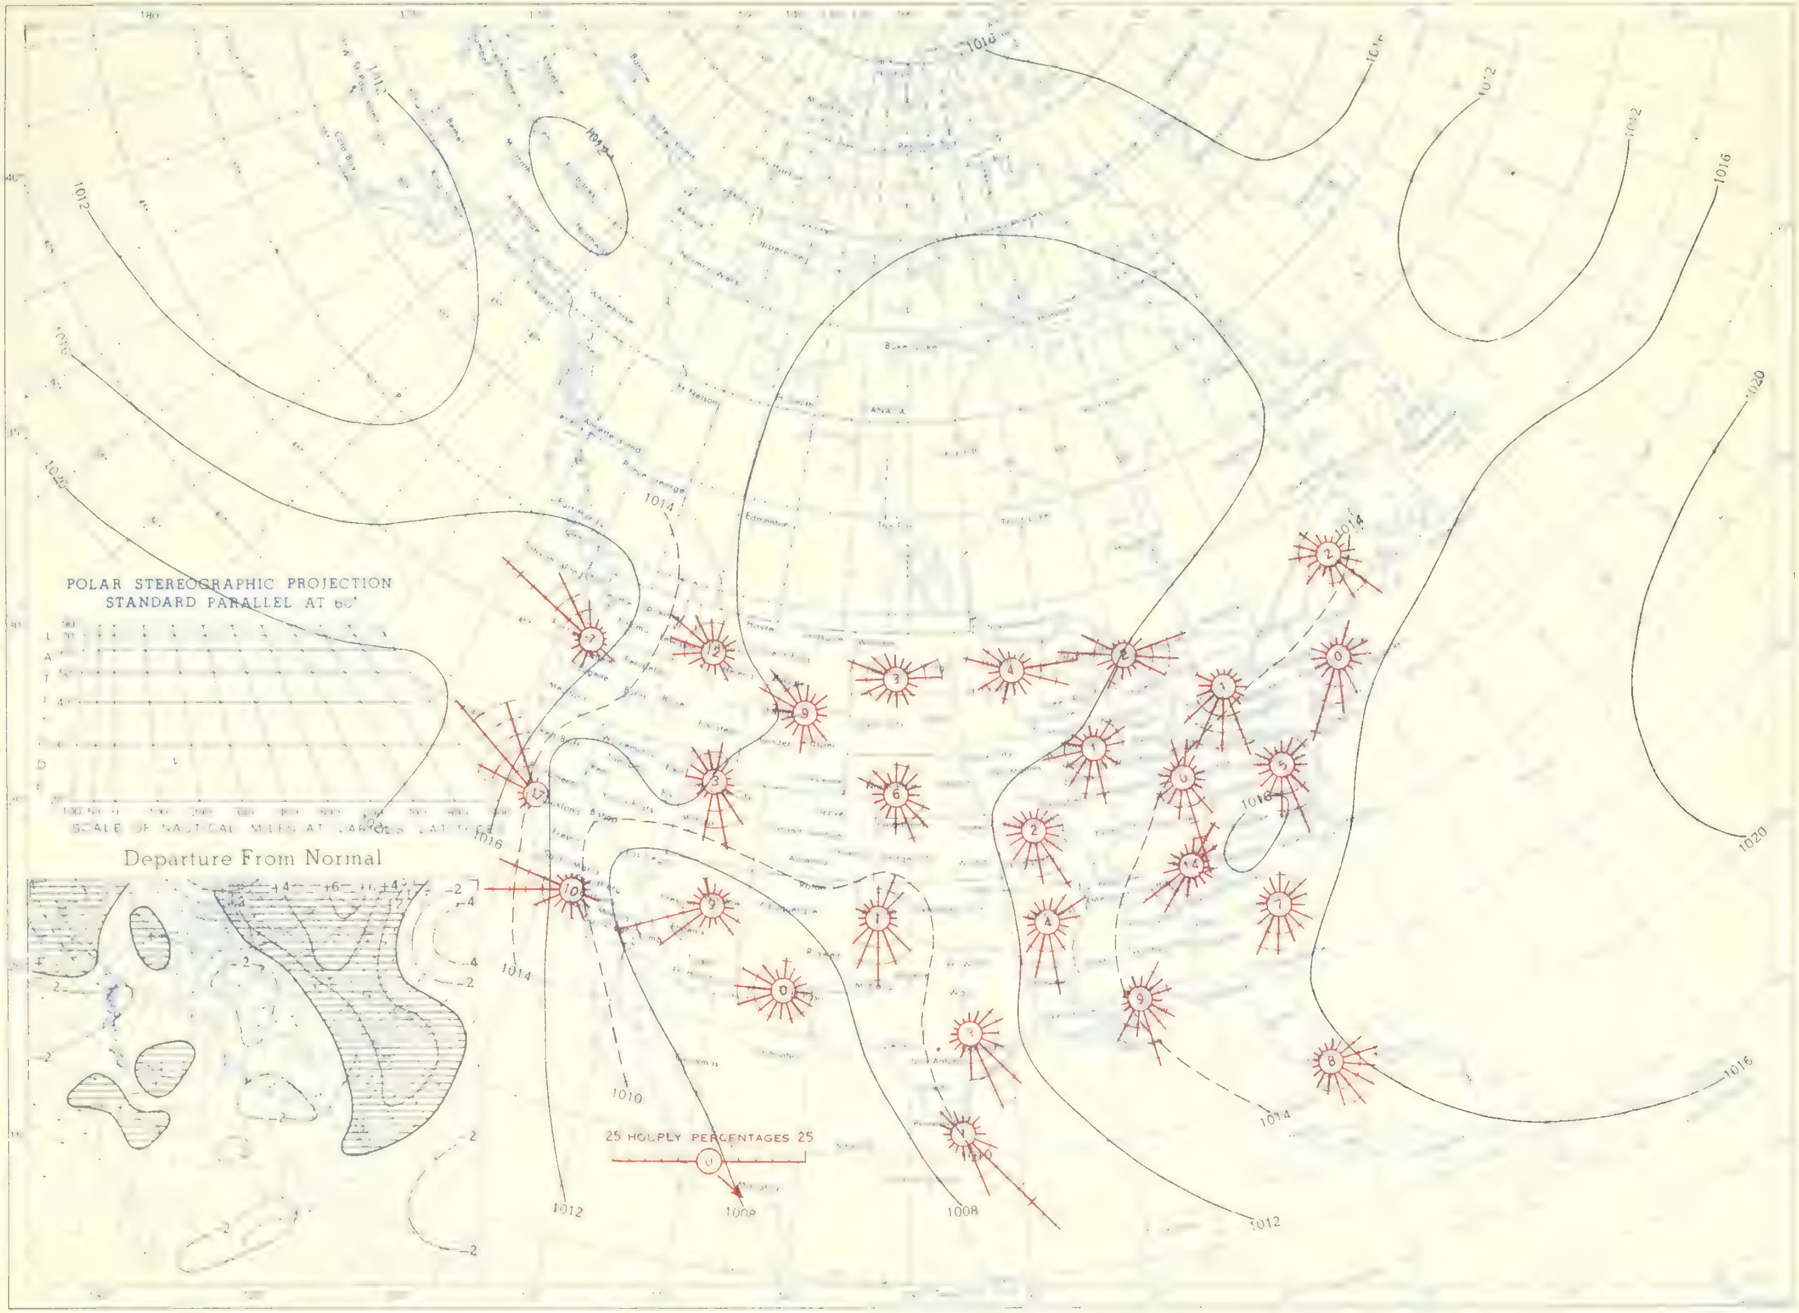
CLEMSON COLLEGE LIBRARY

Chart X. Tracks of Centers of Cyclones at Sea Level, June 1957.



Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

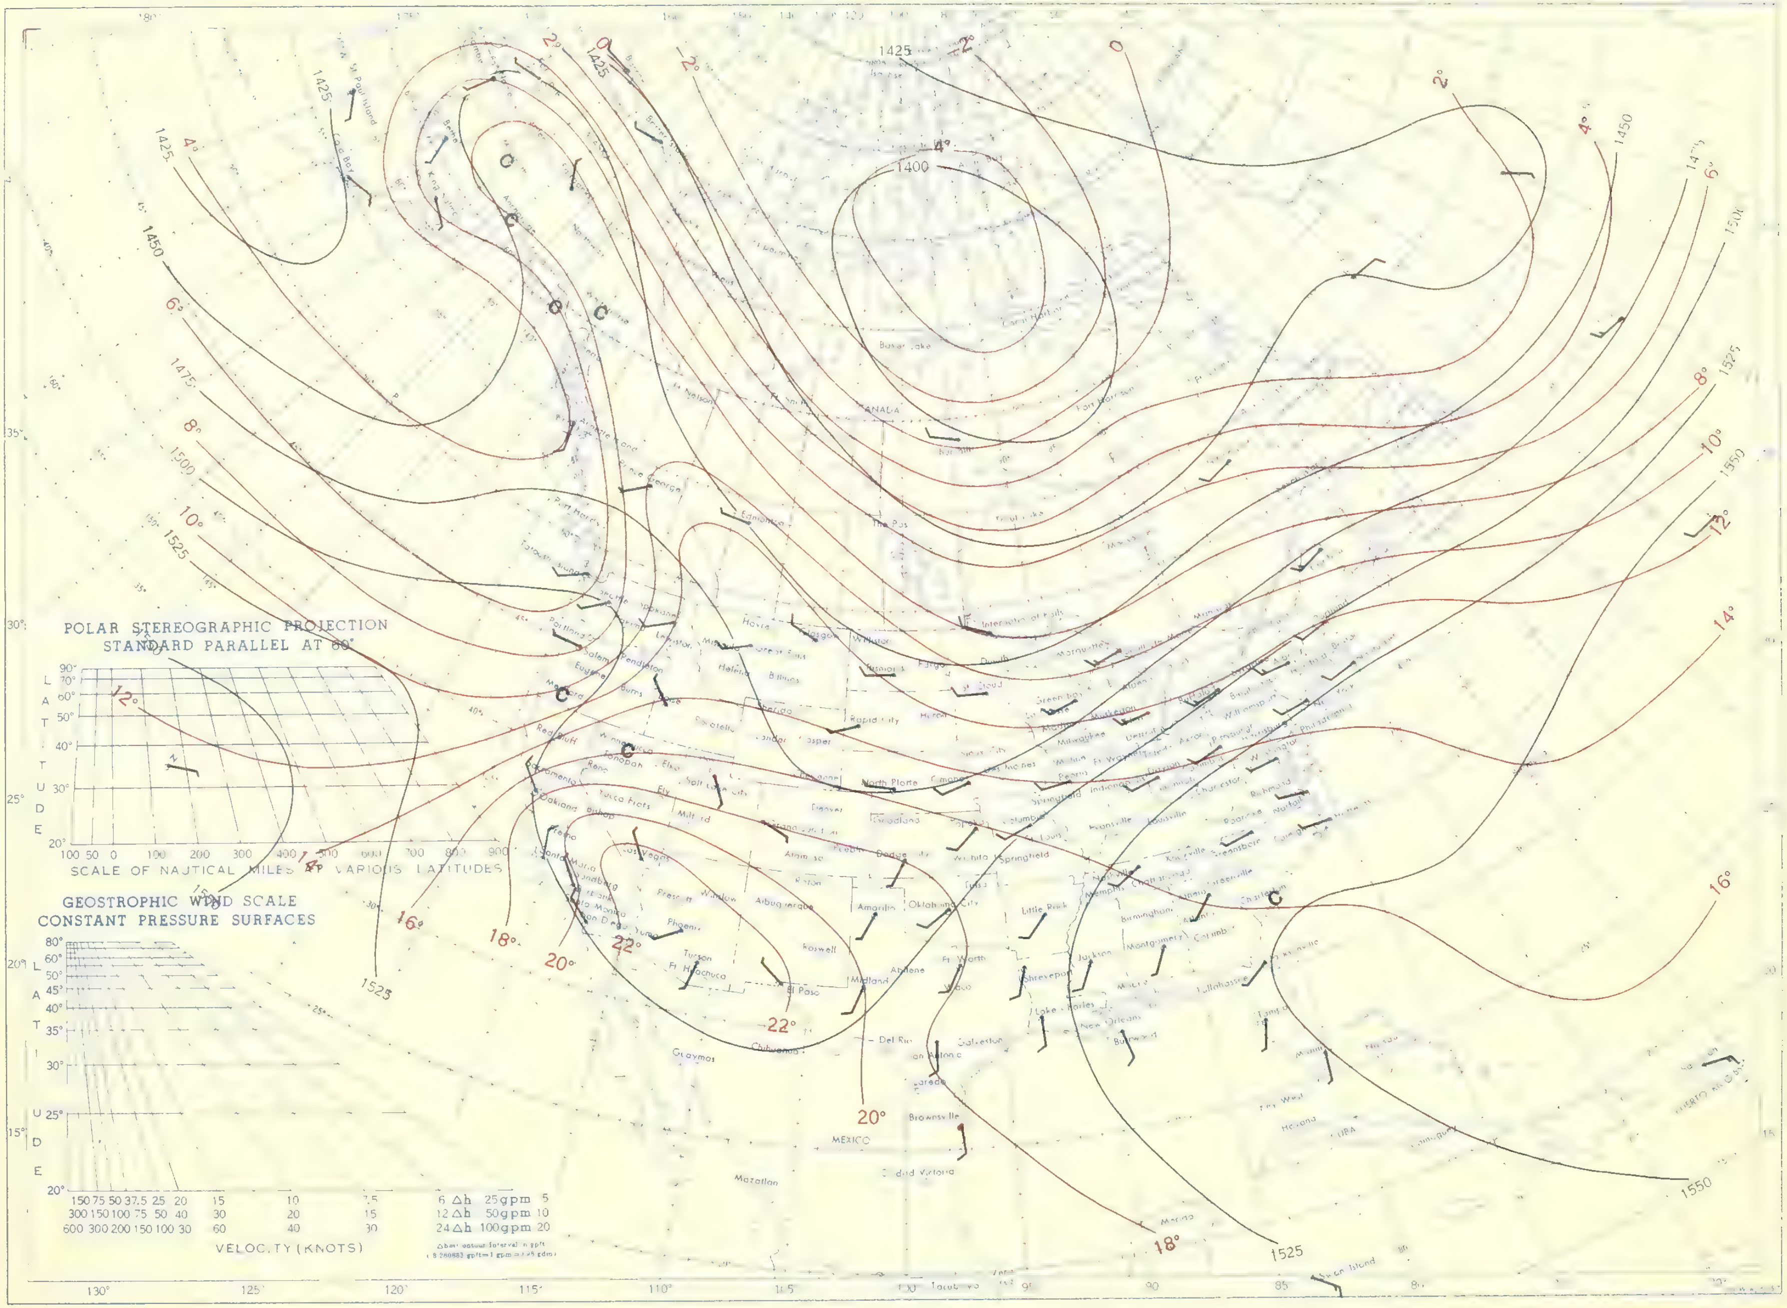
Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, June 1957. Inset: Departure of Average Pressure (mb.) from Normal, June 1957.



Average sea level pressures are obtained from the averages of the 7:00 a. m. and 7:00 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

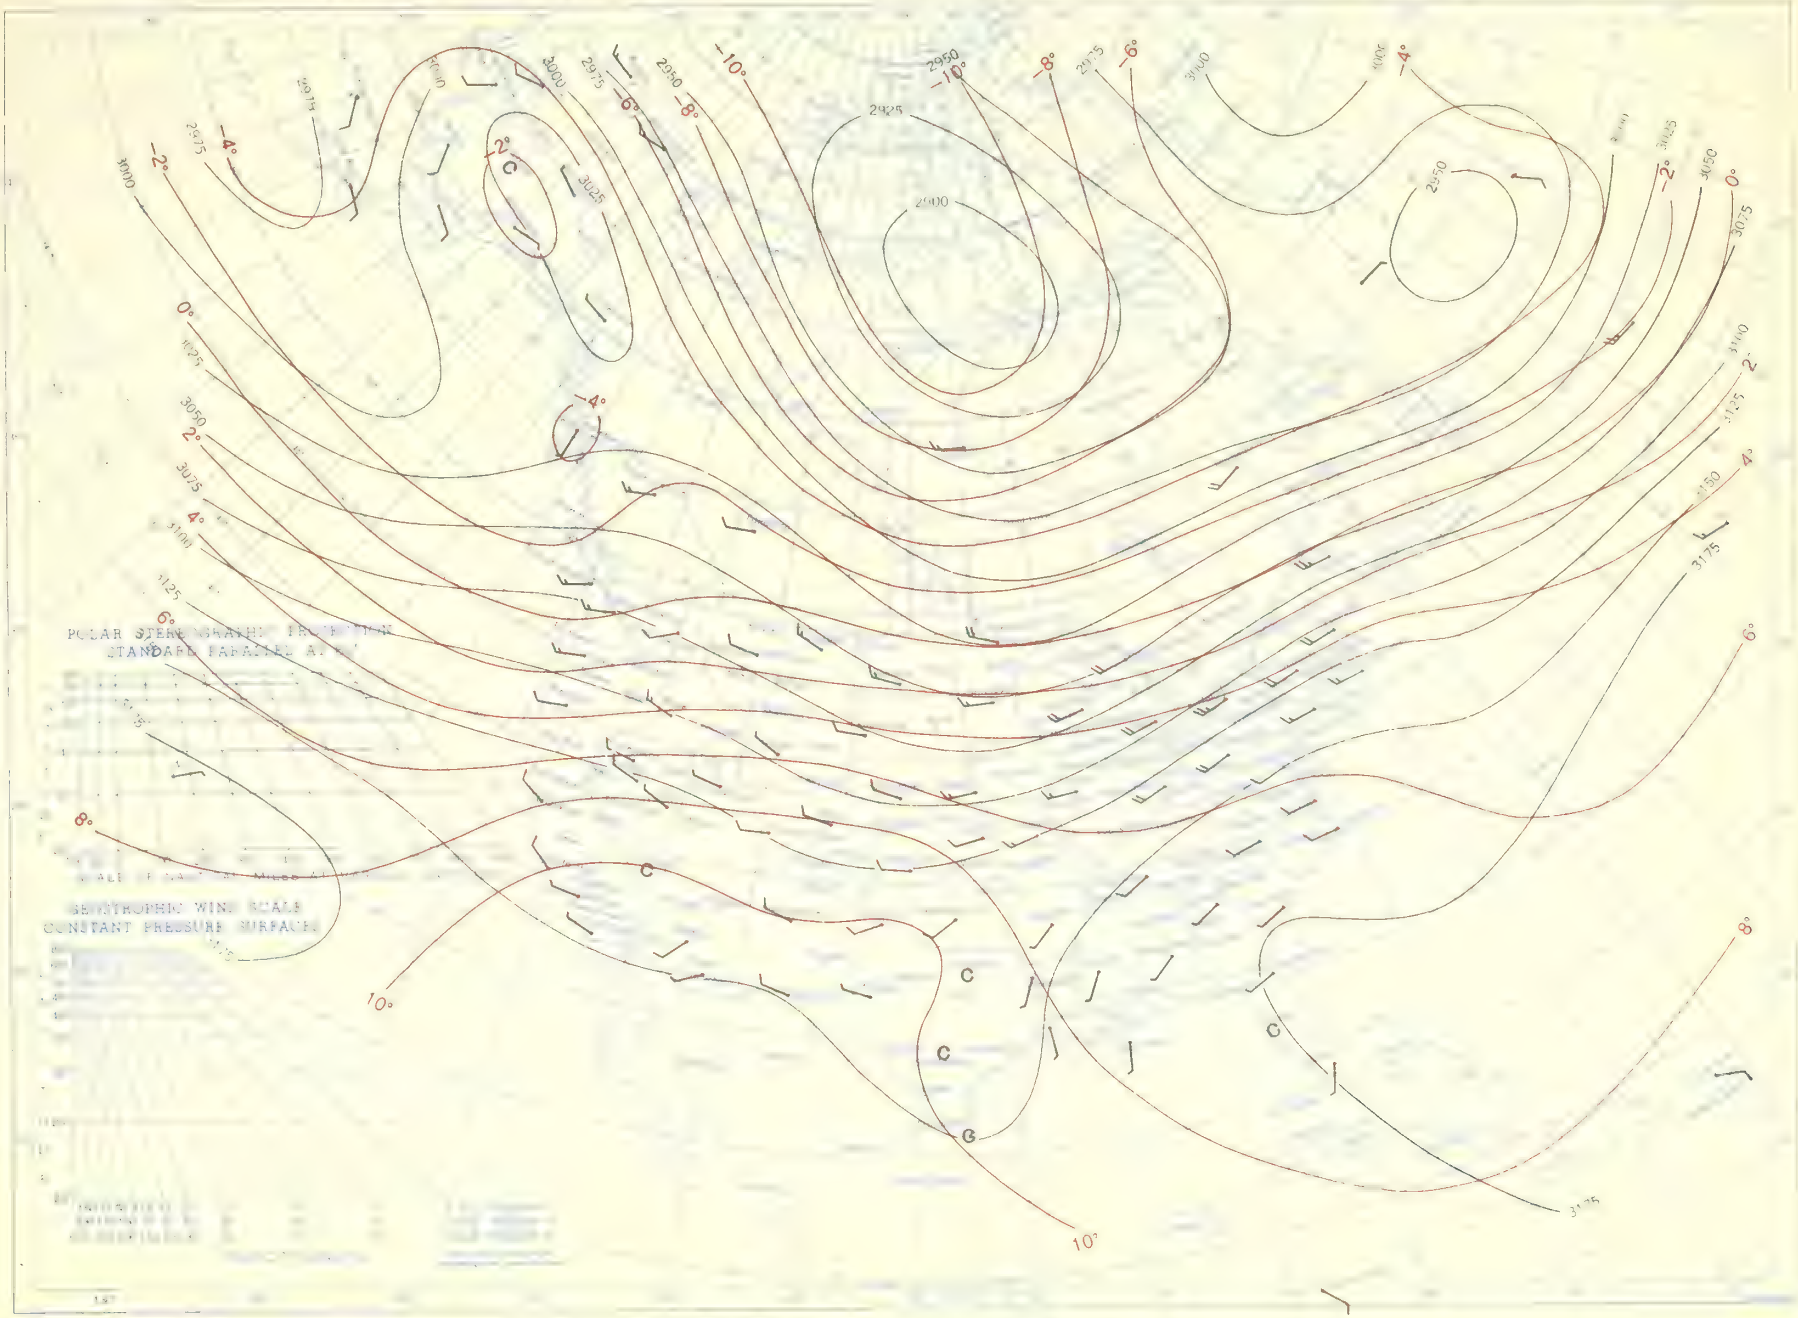
CLEMSON

Chart XII. 850-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



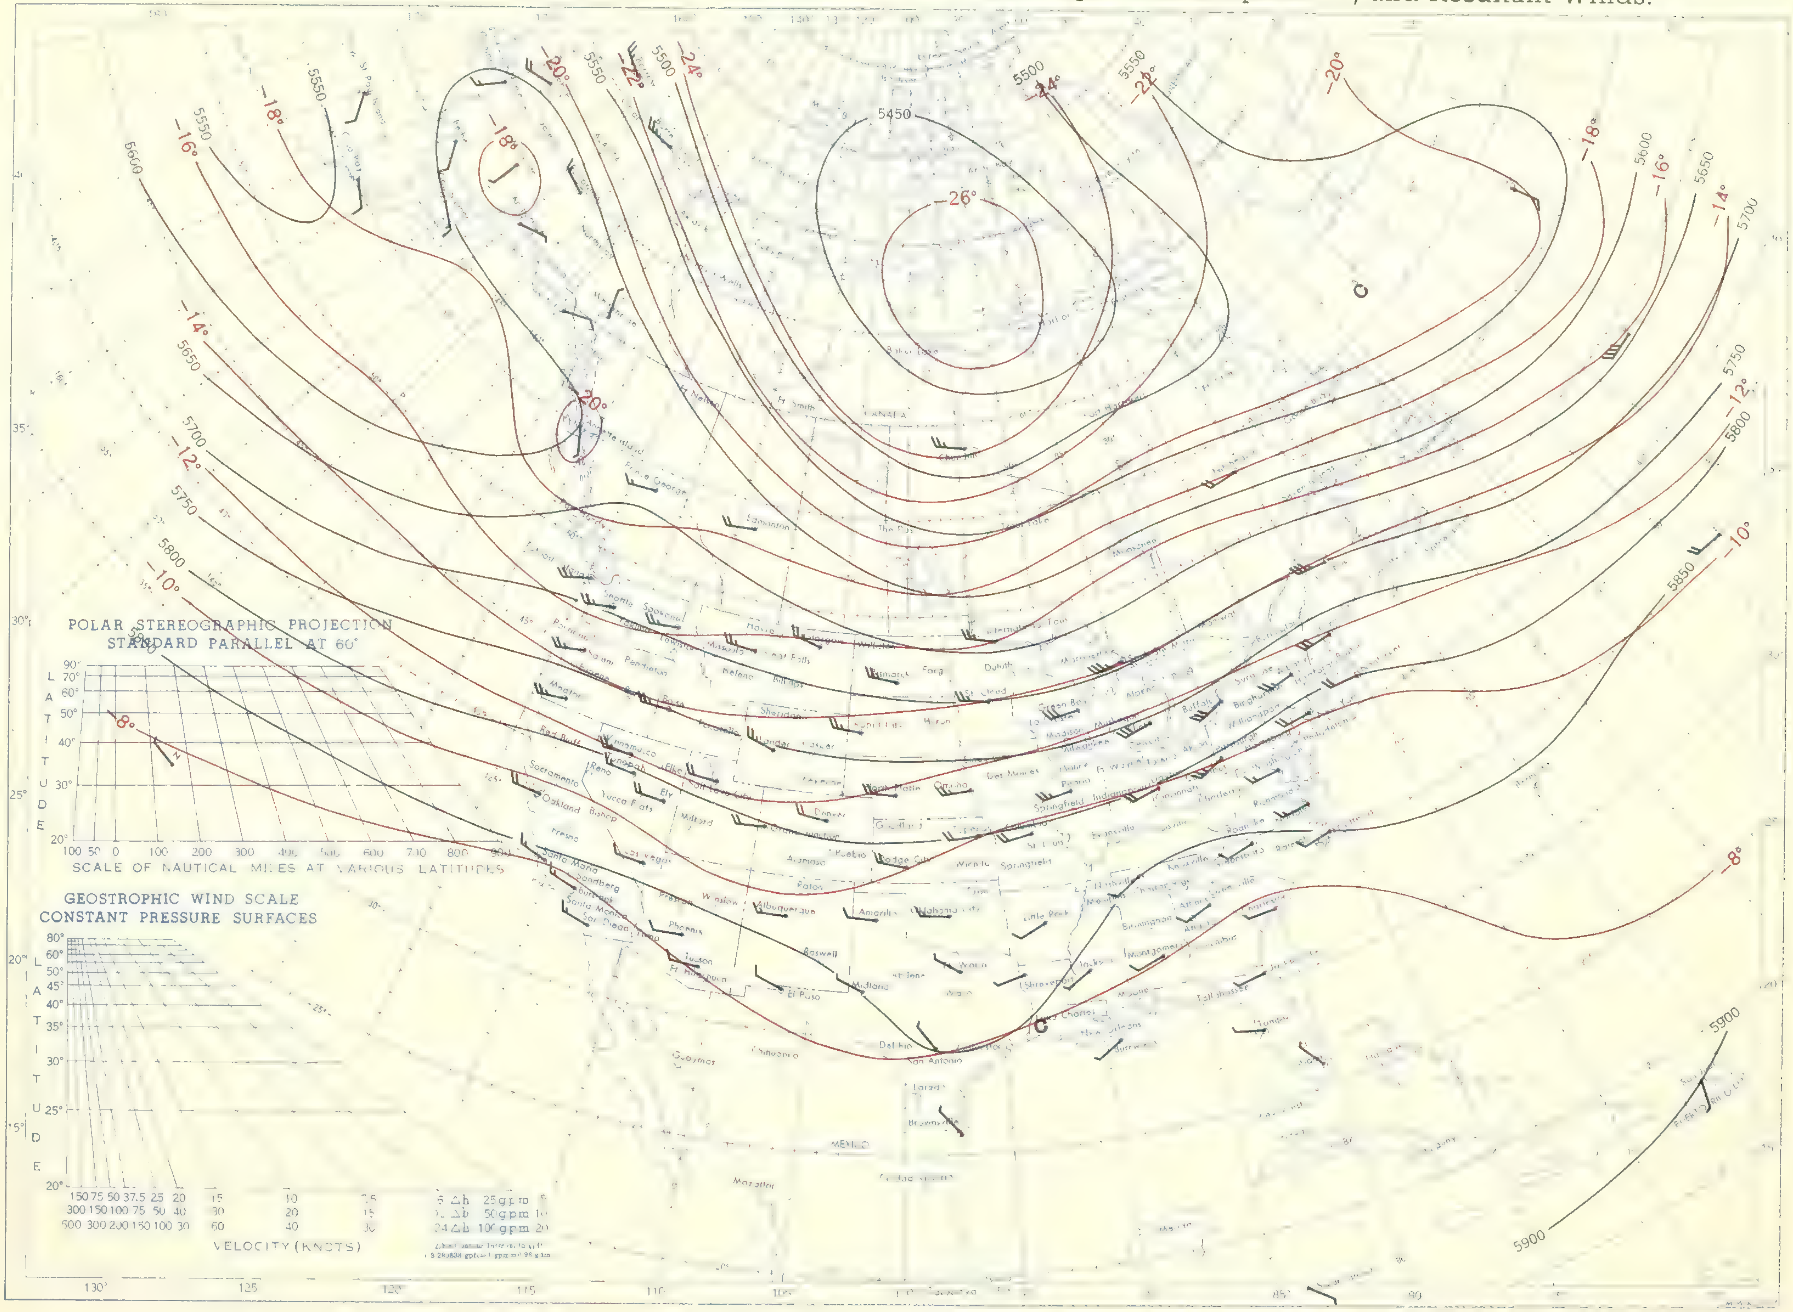
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



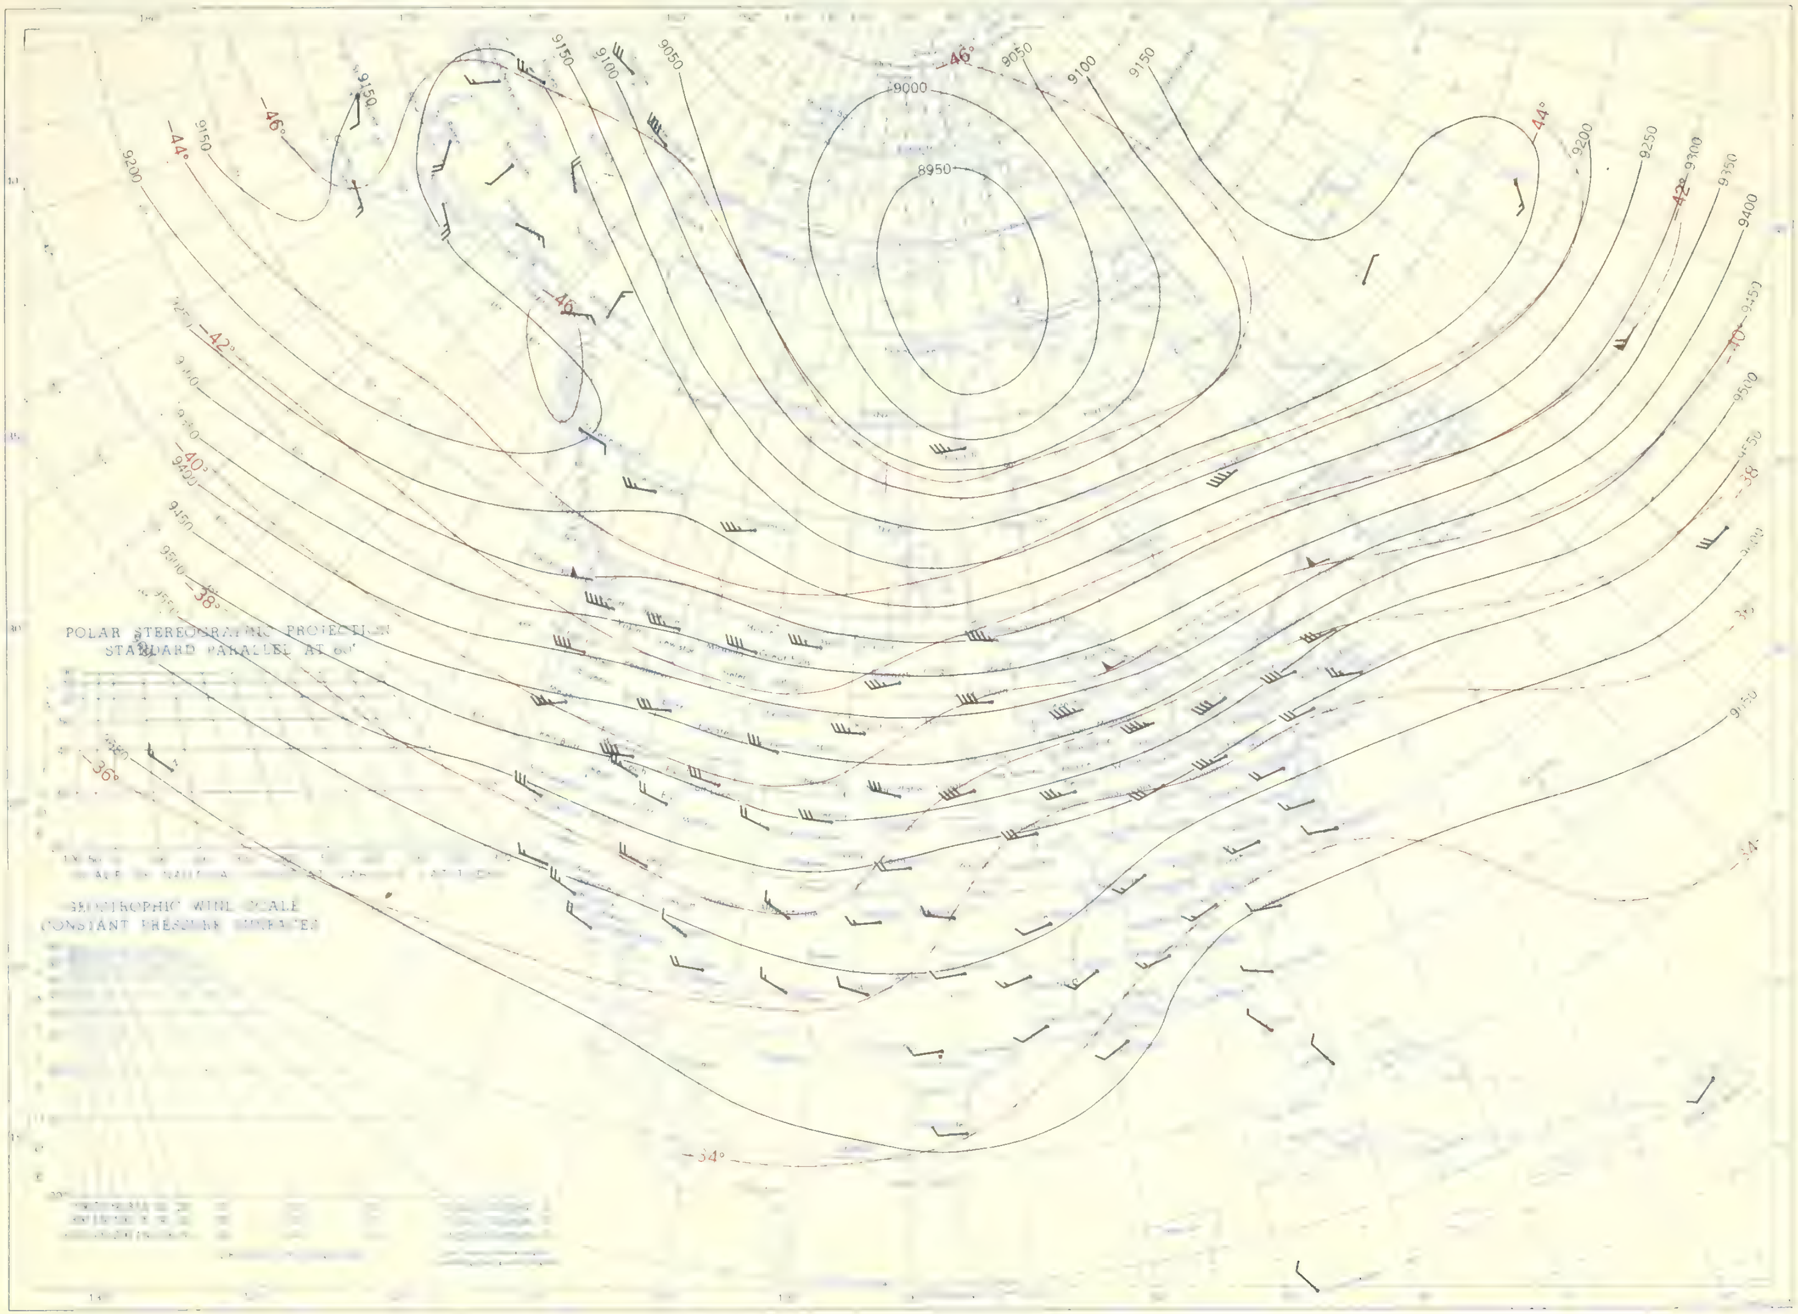
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



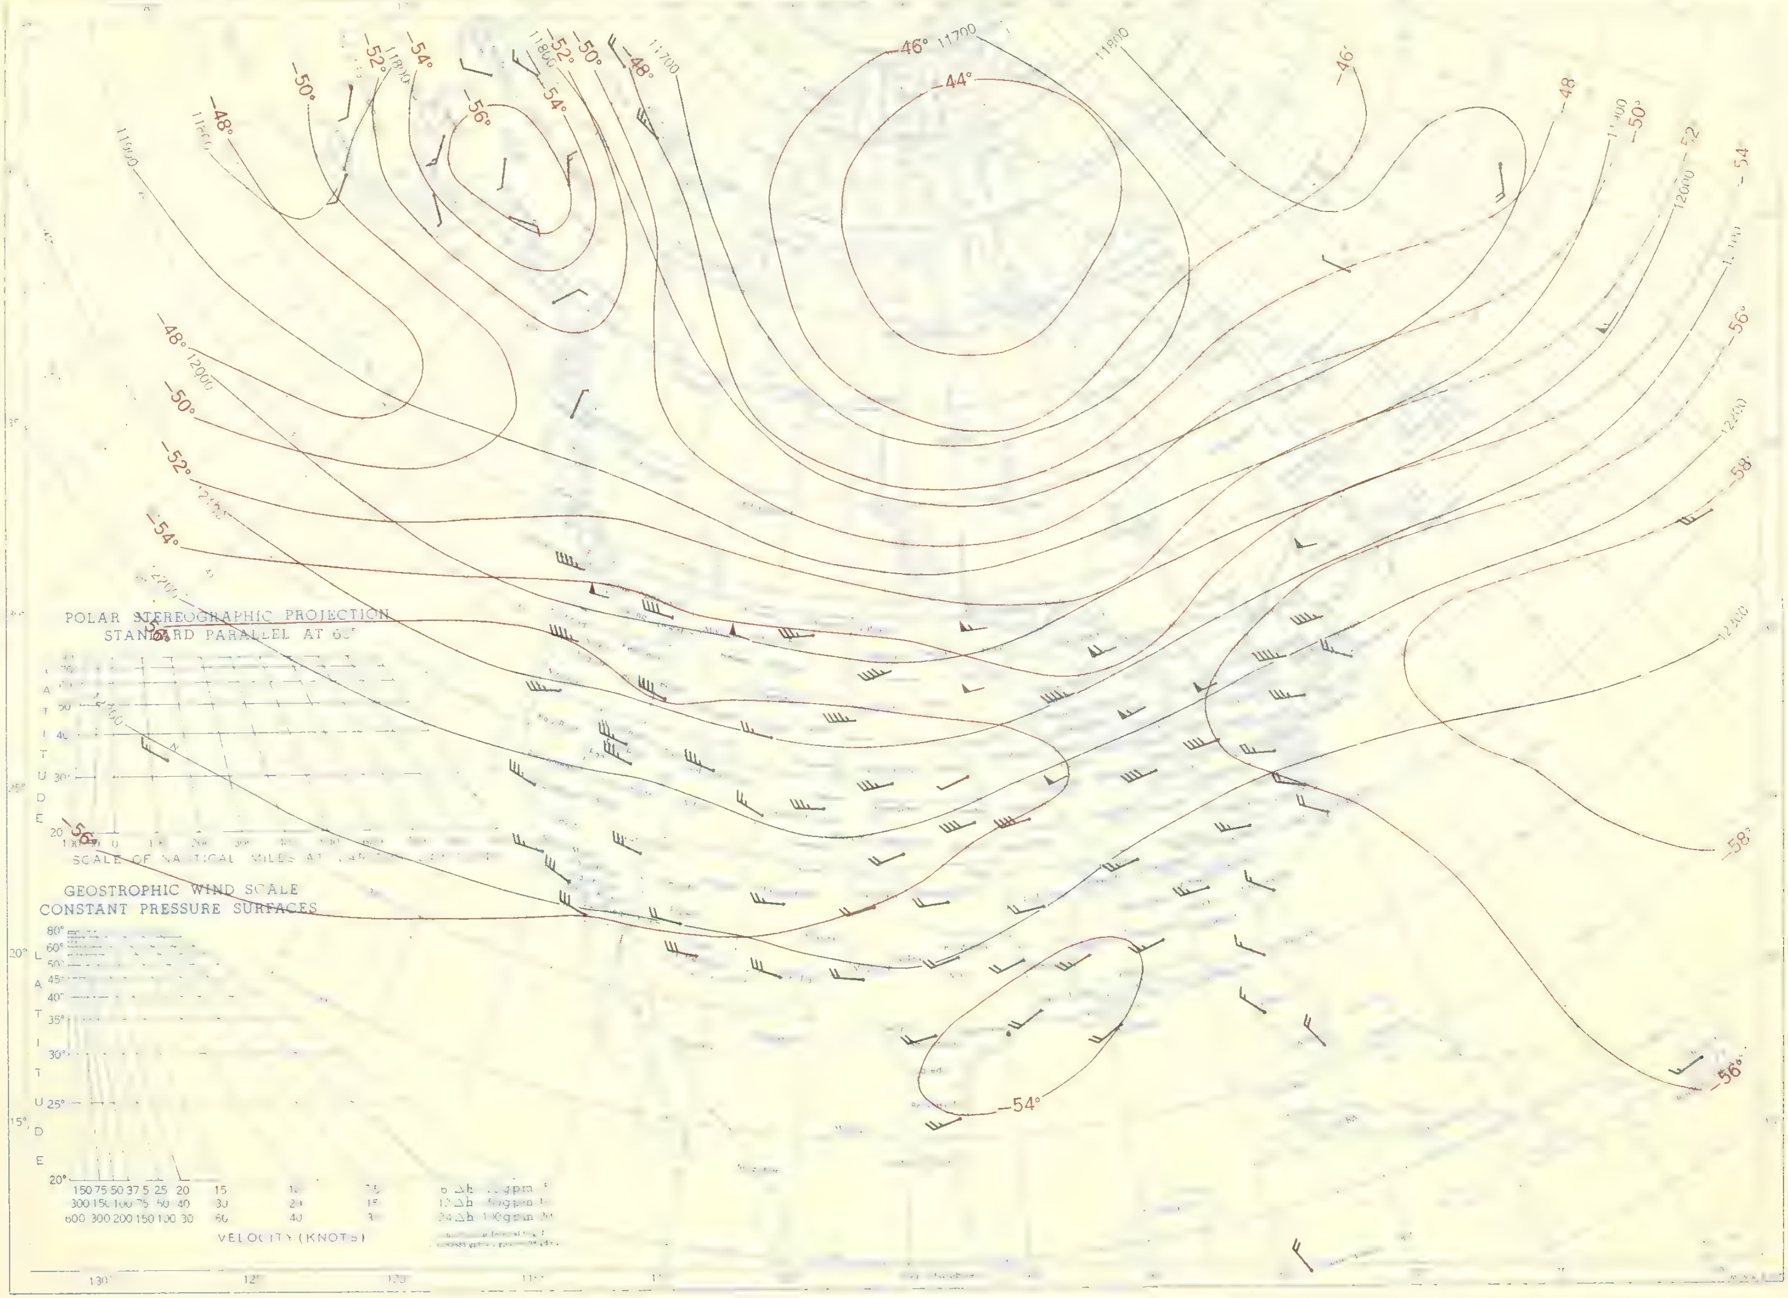
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



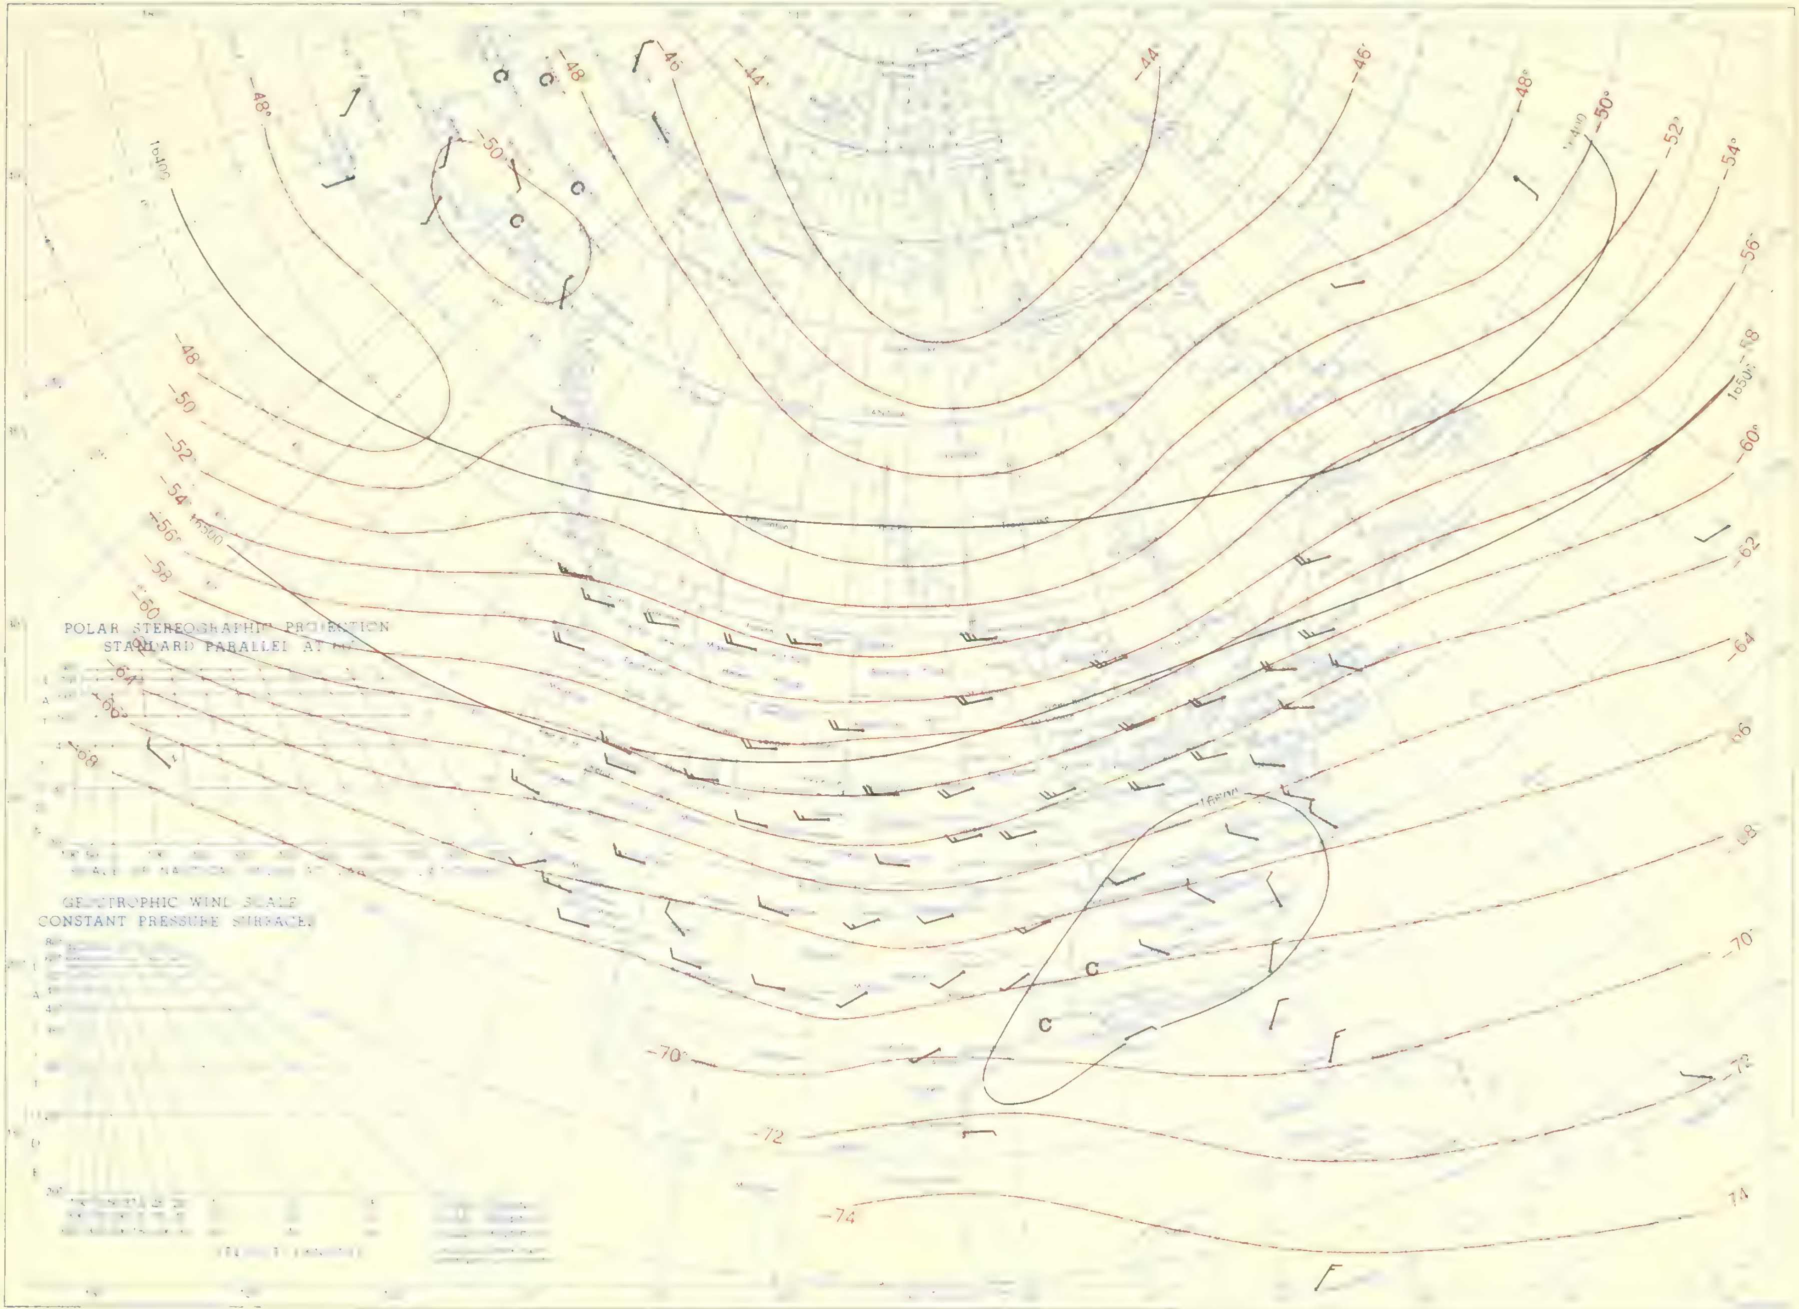
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, June 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to "Superintendent of Documents, Government Printing Office, Washington 25, D. C."

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 7 JULY 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

Continued dry weather and drought along the Atlantic coast from Virginia to southern New England was the outstanding weather event of the month. In the upper Mississippi Valley heavy local rains again caused numerous flash floods, the most notable occurring in the Chicago area. In the western States the weather was drier than usual except in the lower Rocky Mountain region where more than the usual amount of July rain fell after the beginning of the thunderstorm season the second week. Crops did well, however, owing to good soil moisture reserves built up by spring and early summer rains and adequate irrigation water in most sections. The month was extremely dry in Texas and Oklahoma, in sharp contrast to heavy rains of the three previous months.

Temperaturewise the month was unusually warm in the Far Southwest and lower Great Plains, and on the cool side in the Pacific Northwest. In most of the country the range of temperature fluctuations was less than usual.

TEMPERATURE.--Temperatures averaged slightly above normal between the Rocky Mountains and the Mississippi River, along the California and Gulf coasts, and along the middle Atlantic coast, and slightly below elsewhere. Extreme temperatures for the month ranged from 122° at Cow Creek, Calif., on the 5th, to 21° at Wayan, Idaho, on the 21st.

Above normal temperatures were most persistent along the lower California coast, and both San Diego and Los Angeles reported an unusually hot month, with temperatures in the latter city above normal every day. In the far southwestern interior temperatures were at unusually high levels early in the month. In New Mexico, Albuquerque recorded an all-time high of 104° on the 3d. At Yuma, Ariz., the temperature for the month averaged 96.3° and maximum temperatures averaged 110.8°, both new records; also, the maximum reached 110° or higher on 21 days.

Above normal temperatures also persisted in the Great Plains until the last week when they dropped below normal in some sections for a few days. In the northern Plains the daily maximum reached or exceeded 100° at many stations on several days during the second decade. In Oklahoma and Texas the month was among the hottest of record, although daily extremes were not unusual. In the latter State daily maxima equaled or exceeded 90° at virtually all stations on 20 days or more during the month.

In the coastal areas from Virginia to southern New England temperatures for the month averaged only slightly above normal, but some unusually hot days occurred during the latter part of the month. The hottest period in most of this area occurred on the 20th, 21st, and 22d. In the Nation's Capital maximum temperatures on these days were 95°, 101°, and 101° downtown. Trenton, N. J., registered 100° on the 21st and 22d, the first such consecutive occurrence since 1936.

On a normal basis the Pacific Northwest was the coolest part of the Nation. The monthly maximum for the State of Washington was 102°, the lowest on record. However, the relatively cool weather in this area had no adverse effects upon crops.

PRECIPITATION.--Precipitation generally was very light and below normal west of the Continental Divide, and in Montana and northern Wyoming, Texas and Oklahoma, and the lower Appalachian region, and along the middle Atlantic coast. Elsewhere monthly amounts ranged from about normal to much above. The heaviest amounts generally were recorded in the Mississippi Basin, the Great Lakes region, and Florida. Extreme monthly totals for the month ranged from 16.52 inches at Daytona Beach, Fla., to none at all at over 300 stations in the Far West.

The month's worst dry area extended from eastern North Carolina to southern New England, where rainfall deficits for the year ranged up to 10 inches. Severe drought gripped Rhode Island, southeastern Massachusetts, and parts of Connecticut, New Jersey, extreme southeastern Pennsylvania, Delaware, central and eastern Maryland, and much of eastern Virginia. In this area periods of high temperatures and less than 50 percent of normal precipitation greatly reduced some crop prospects, particularly corn and tobacco.

In the southern Appalachian region rainfall for July was also less than 50 percent of normal and signs of developing drought were showing up in some sections by the end of the month. Conditions, however, were not yet critical in this area due to soil moisture reserves built up by good rains in previous months.

In Texas and Oklahoma, an extremely dry month with less than an inch of rain in many sections and persistent high temperatures depleted topsoil moisture and rain generally was needed by the end of the month. Subsoil moisture, however, enabled crops generally to make good growth.

In the Mississippi Valley and Great Lakes region monthly rainfall totaled 10 inches or more at several stations and over 2 inches at most stations. Numerous local heavy rains were responsible for prolonged flooding in the Indiana-Illinois area and a number of flash floods in this and surrounding areas. Many of these flash floods occurred during the second week from Kansas to Michigan, the most damaging, perhaps, occurring in the Chicago area where 6 to 10 inches of rain fell on the 12th and 13th. On the 12th 5.50 inches fell at Chicago in a 6-hour period and 6.24 inches in a period of 12-1/2 hours, both new records. Damage from resulting floods was estimated in the millions of dollars.

SEVERE STORMS.--Damaging storms were not nearly so numerous in July as in the 2 previous months, and damage was less than usual except in north central areas where frequent thunderstorms occurred. A high fire hazard existed in the Far West and fires started by lightning caused hundreds of thousands of dollars damage in the Tonto National Forest in Arizona on the 6th and 7th.
